Sen. Edward Kennedy, Mass.
Senate Office Building
Washington, D. C.

Hon. Dear Sir:

Thank you for sending me the amendment to the Indian Education Act. I must say that I agree with most of it and hope that it will pass before the Indian people can begin to plan to accomplish some of the points covered.

However, I disagree with the plan for a four year Indian college at Santa Fe. These are my reasons: 1st, our Indian students need the competition offered by non-Indians as well as the integration which offers additional learning experience away from the classroom; 2nd, Haskell Indian junior college learned that a library is very important in order to gain status as an approved institution of higher learning and it is difficult to build up a library; 3rd, there is a struggling Catholic 4-year College of Santa Fe across the street which a few Indians already attend; and 4th, Indian Studies are now being started and planned at many universities which no doubt is the object of the Indian college.

Some minority groups are obtaining land at Davis, California to establish an Indian-Chicano 4-year college. Indian could go to this one if they plan to major in Indian Studies. Of course I definitely favor an Indian junior college to assist them in their unique problems before they enroll at the large universities. I have written articles on the problems of Indian students at our colleges and these point out the need for junior colleges.

I have also written to Mrs. Fred Harris telling her my views on this amendment. Members of the American Indian Education Association should all voice their opinions, I have much faith in this Indian group. Mr. Mondale, Mr. Harris and I am sure you are well familiar with this organization.

Thank you again.

Sincerely,
Joe Bendo

Senator Edward M. Kennedy
Senate Office Bldg.
Washington, D.C. 20510

Dear Senator Kennedy:

Mr. Patrick Renick from Ukiah sent a copy of your letter dated March 5, 1971 for any comments I may have on Indian Education. Mr. Renick and myself are board members of the Indian Teacher Education Program at Humboldt State College, Arcata (Humboldt County) California, he is chairman and I am vice-chairman.

First, speaking of our area (Northern California) I believe a National Education Board, then local boards consisting of Indian parents separate from the Bureau of Indian Affairs. Speaking from experience our area does not benefit through the Bureau unless you are from Hoopa where the Bureau is located.

Second, in our County of Humboldt we are the minority group, so there is discrimation expecially with the police force. I am a secretary for California Indian Legal Services so through the office I have seen the complaints. If there were programs with training for counselors, on job training for offices in City and County departments, a adult education program taught by a Indian to help other Indians complete their high school education, this way more Indians could qualify for job openings in our area. At the present time the Humboldt County Schools is writing a title III, ESEA proposal that will involve Indians (they say up to this point it hasn't) and hire some for this program, but you should read the qualifications they should come down to earth and have on the job training which would bring them up to the level required by the County Schools.

Thank you for your time spent in our behalf.

Sincerely,
Colleen E. Johnson (Yurok)

EDWARD M. KENNEDY
WASHINGTON,
MAR 31 10 56 AM '71

March 20, 1971
Box 23
Belcourt, North Dakota

Senator Edward Kennedy
United States Senate
Washington D. C.

Dear Senator Kennedy:

In refrence to Bill S.659 and Amendments: Our comments as grass roots members of the Turtle Mountain Indian Reservation, Belcourt, North Dakota. As follows:

Sec. 305, Page 5, Sentence 19. That all services for which assistance is sought be administered through Tribal Council or Special Educational Committee.

Sec. 305, Page 5, Sentence 25. Such present planning involves a pilot program for foster home care in which mentally disturbed or mentalyy retarded children would be housed in seperate communities within the reservation instead of being moved to strange inviornments outside the reservation for care. The community would consist of cabins staffed by specially trained personnel, i.e., psychiatrists and social workers.

Sec. 305, Page 6, Sentence 25. That Tribal Council or Tribal Educational Council also have access to records concerning funding.

Sec. 305, Page 7, Sentence 25. That pessons utilized be comprised from all national tribes.

Sec. 305, Page 8 Sentence 3. That we no longer request professional help for the purpose of planning federally administered programs. Instead, that such planning be turned over to tribal members as they are the individuals affected by such programs. It has been our experience in the past that when professionals administer a program intended for helping or aiding the interests of Indian children, that little if any concern as to the needs of these children had been taken into concideration, and many of the children subsequently went without the benifits they were intended to receive.

Sec. 810, Page 14, Sentence 22. That local tribe should teach their Indian children tribal culture,history, and language, as a part of the educational curriculum.

Sec. 810, Page 15, Sentence 3. That a licensed dietician be responsible for the planning of meals in Indian schools, and that the use of government comodities in the preparation of these meals be discontinued.

Sec. 810, Page 17, Sentence 3. That outside contracts to private individuals or organizations be approved by tribal members prior to

Sec. 810, Page 17, Sentence 3 (cont.) the aproval of the Commissioner.

Sec. 314, Page 22 Sentence 20. That tribal communities and individuals be contacted in order to ascertain the degree of intrest in programs such as Adult Education.

Sec. 314, Page 24, Sentence 1. That each Indian Tribe in the U. S. be required to submit a candidate for the National Board, and that all candidates have a minimum of twelve years of education. Also, that the Deputy Commissioner of Education be an Indian.

Sincerely,

Mary Cornelius

Re: Indian Education
(your letter;3-5-71)

The Honorable Edward M.Kennedy
United States Senate
Washington,D.C, 20510

Dear Senator Kennedy,

I find it difficult to concentrate, to think about and evaluate any more 'hopeful' programs for Indians since it was made offical here in Calif. of the abandonment of our Indian college and university students by the folding of the EOP, this will not be forgotten nor forgiven.....

Well, to the business at hand.. These are my suggestions for improving the currently proposed bill:

(1). The National Board of Directors should be completely divorced from the BIA, further, the Indian Board should have the power to act on it's own.

(2). This National Indian Education Board Must be elective NOT appointive; elected by secret ballet by the rank and file of people belonging to all of the recognized Indian organizations in the U.S.

(3). Educational funding should include plans for ALL phases of higher education, Not just vocational type training.

(4). I urge Federal funding for the D.Q. University northwest of Davis,Calif.. the Black people have had a history of state and Federal help for their schools, can Congress do less for the Native people of this land?

Respectfully,

William Robert Cooke,R.P.T.
(member of the Yurok people)

White Mountain Apache Tribe
P. O. BOX 708
WHITERIVER, ARIZONA 85941

March 25, 1971

Senator Barry Goldwater
United States Senate
Washington, D. C. 20510

Dear Senator Goldwater:

We, the White Mountain Apache Tribe, strongly oppose Senate Bill S-659 pending in the 92nd Congress listed as an Amendment by Senator Kennedy. We have repeatedly opposed such actions on both State and Federal levels because of our concern for adequate and thorough education of our Indian children.

Our prime concern is the loss of local school control and our own local Indian participation in education problems. This is a very serious concern of ours because over the past ten years we have been able to generate a cooperative atmosphere with the Bureau of Indian Affairs education functions.

We would strongly suggest before any further consideration on this Amendment, that thorough and comprehensive hearings be held that involve the Bureau of Indian Affairs and the individual Indian from the Washington, D.C. level to the hogan. We would like to see in these hearings, a true expression of the local Indians reaction to this type of back door termination and the serious attempt to gain National control of our local functions.

We have repeatedly wondered why this type of legislation can be continually introduced to gain additional funding to establish new programs, and yet we are unable to receive adequate funding through the current statues and funding procedures. Why not re-evaluate the intent of this Bill for both funding and management and establish with the Bureau of Indian Affairs a comparable program of funding.

Since we are discussing funding, we would appreciate having added to the Bureau of Indian Affairs budget, the proposed $2,000,000 of overhead outlined in this Bill for the prime reason of gaining National control.

It is the strong feeling of the White Mountain Apache Tribe that education is a local program. The White Mountain Apaches also feel that the more home rule, the better education our children will receive, as each locality is a different educational situation.

We, the White Mountain Apache Tribe, ask your support in defeating this Senate Bill S.659 and request that you assist us in all other ways to maintain our local control, so that we feel we are exercising our goals of self-determination.

Yours very truly,

WHITE MOUNTAIN APACHE TRIBE

Washington,D.C. 20510

Dear Mr. Kennedy:

On behalf of our people I would like to express our sincere appreciation for your amendment NO:6, inregards to Indian education.

Such concern about your fellow Americans relates that with the vast intellectual, scientific, and technical ability of the American people their are no problems, We can not solve through reasoning and understanding if we care to do so.

Offering such a amendment is a very thoughtful and gracious thing to do.

Sincerely,
Michael R. Rogers

Senator Edward Kennedy
U.S. Senate
Washington, D.C. 20202

March 31, 1971

Dear Senator Kennedy:

You are to be commended for your Education bill in behalf of the Indian youth of our nation.

I am especially interested in the portion of the bill dealing with the education of urban Indian youth. This is badly needed for them.

I have been involved in our community trying to improve the education for the Indian community. Our Indian population is about 1,000 and estimated Indian student population of about 300. Granted, our population is not as large as other urban areas, but our needs are as acute and critical. Many times the smaller population areas get overlooked in preference to larger urban Indian areas.

When it comes to programs and funds, who will serve our needs?

We will be very glad to come and testify at any hearings concerning urban Indian education.

Sincerely,

Ruth Myers

Senator Edward Kennedy
United States Senate
Washington, D.C.

Dear Senator Kennedy:

Just returned from an organizational meeting of the American Indian Medical Association.

While there spoke at length with John C. Rainer, Taos Indian who was a former classmate of mine, and with A.C. Atencio, Ph.D. who is Spanish-American and Assistant Dean of Student Affairs at the University of New Mexico.

Both were concerned with two phases of minority education. One of course is funding, especially at the graduate school level.

The other phase is that of adequate preparation of the 'country' student for college and professional school work.

Not only the minority student, but the student of any color who attends small high schools throughout the country. These young men are expected to participate in the whole gamut of sports throughout the whole school year and still polish their academic abilities enough to compete with the more sophisticated students in the universities.

Again may I urge you to consider preparatory schools for these young people. Schools which could fill in the gaps of incomplete preparation, methods of study, free of extracurricular activities and economic worries, free of politics, race problems, drugs and alcohol.

Such schools would assure a greater academic accomplishment by all races.

Thanking you for your attention,

Thomas S. Whitecloud

The Honorable Edward M. Kennedy
Senator, Subcommittee Chairman
Subcommittee on Indian Education
Committee on Labor and Public Welfare
United States Senate
Washington, D. C. 20510

Dear Senator Kennedy:

Myself and a colleague at Northern Arizona University in Flagstaff, Arizona, have been doing research on the problems of Navajo employment. Our major focus is on the problems the Navajos are having as they move from the reservation to the urban setting. Our study attempts to analyze some of the relationships that are important to economic success among the Navajo as well as some of the cultural and value attitudes which are expressed by the more mobile Navajo. We are attempting to try to develop insights that can be used to establish programs that will lead to a more satisfactory employment of the Navajo. This project is being funded by the Department of Labor through the Arizona State Employment Security Commission.

In carrying on our study, we need as much information as possible on all aspects of federal involvement with the Indian including Indian education. For this reason, it would be very helpful if we had a copy of the hearings which were generated by your subcommittee as well as a copy of the committee prints. Would it be possible for your office to supply me with a set of these publications?

I have read with a great deal of interest the amendment that you have submitted to the Higher Education Act of 1971. After having spent six years at Northern Arizona University teaching and developing friendships among the many public school teachers in this area, I feel this amendment is a large step in the right direction. Hopefully, our study will illustrate more successful ways of moving the Navajo into the economic mainstream in a manner which uses aspects of his culture rather than destroying it.

Thank you very much.

Sincerely,

Bernard E. Anderson
Associate Director

March 21, 1971
Salem, Va.

Senator Edward M. Kennedy
Washington, D. C.

Dear Senator Kennedy:

In the March 10, 1971 issue of The Cherokee One Feather, a newspaper owned by the Cherokee Indian Reservation of North Carolina, I read where you had introduced an Indian Education Act thereby giving the Indian the authoritory of educating himself by having control of his education program. My hat is off to you, I congratulate you.

In my opinion all of the Indian programs should be taken out from under the control of the Bureau of Indian Affairs. I have also read that Commissioner Bruce of the B. I. A. has been conducting an investigation concerning the money that was allocated to the educational program of the Indians, it seems that a good amount of the money did not go to the educational program. Perhaps you should ask Commissioner Bruce for his findings in this matter.

I am non-indian, there is not a trace of indian blood in me, but I feel disgusted when I read where we, the American people will go all out to help people of other nations of the world and then under our noses we have people theat are in great need and then, it seemspurposely, neglect them.

Again may I say my congratulations to you for thinking of these needy people and good luck on this and other projects that you are sponsering.

Honorable Edward M. Kennedy
United States Senator
Senate Office Building
Washington, D. C. 20510

Dear Senator Kennedy:

I am acting in the capacity of the President of the Interim Policy Making Board for the Federal Boarding School at Stewart, Nevada.

The recent news release explaining the Indian Education Act which you are co-sponsoring with Senator Howard Cannon is indeed gratifying news. Such a revision for Indian education to Indian people has long been needed.

Your proposed legislation would give us the legality to function as a School Board similar to that in the Public School Districts in the State of Nevada. We offer our whole-hearted support in your commendable endeavor.

Very truly yours,

LeRoy Rupert, Chairman
Stewart Interim Policy Making Board

WESTERN UNION,
Minneapolis, Minn., April 28, 1971.

Hon. WALTER F. MONDALE,
Washington, D.C.

DEAR SENATOR MONDALE: Please consider our support for the Indian Education Act, amendment 6 to Senate bill 659 as offered by the Honorable Senators Williams and Kennedy. This legislation is a milestone of cognizance to the deplorable conditions in Indian education. It is also a tremendous step toward Indian self-determination so essential in providing innovative and community based efforts in culturally oriented programs. The considerations of all members of Congress is appealed to for the passage of this legislation.

SENATOR GEORGE R. CONZEMIUS,
Minnesota State Legislature,
Secretary Minnesota Indian Affairs Commission.

WESTERN UNION,
San Francisco, Calif., April 23, 1971.

Senator CLAIBORNE PELL,
U.S. Senate Committee on Indian Education,
Committee on Labor and Welfare, Washington, D.C:

I strongly recommend that a chance be given to Indians who are in positions of powerlessness to voice their opinions and needs regarding the educational process as it effects their lives and the lives of their children. If you are truly committed to native American self-determination and local control of education for Indians supply time and money to hear what grass-roots see as their problems too often the self-styled Indian leader who maneuvers to positions of power in Indian organizations has no conception of conditions on the local level. How long shall such individuals and experts from governmental organizations make decisions for the majority of American Indians. We need local Indian input.

BEA MEDICINE,
Department of Anthropology, San Francisco State College.

DHP:vl

April 22, 1971

Telegram to Senator Harrison A. Williams, Jr.
Chairman, Senate Labor and Public Welfare Committee
Room 4230 Senate Office Building
Washington, D. C.

I have just had the opportunity to read the Indian Education Bill, amendment 6 to Senate Bill 659, which Senators Edward Kennedy and Walter Mondale introduced on February 25. In my opinion this legislation to assist Indian children is extremely worthwhile. As a school system with six schools with heavy Indian enrollment, I feel the provisions in the bill to increase Indian parent involvement and in earmarking impacted aid for it under Public Law 874 are outstanding features. I am also extremely pleased with the grants for planning and operating programs to improve Indian education.

Duluth lead the nation in a community elected Indian education advisory committee to advise administrators and board in the planning of an educational program for Indian students. Although it has been in operation only a few months we have had pronounced improvement in attitudes of the professional staff toward their responsibility to Indian children. The contribution of the committee has been helpful both in specific suggestions and in raising profound theoretical questions. The legislation as proposed would, in my opinion, improve education for the Indian children in Duluth.

Donald H. Peckenpaugh
Superintendent

STATE OF MINNESOTA
DEPARTMENT OF EDUCATION
CENTENNIAL OFFICE BUILDING
ST. PAUL, MINN. 55101

April 26, 1971

Senator Walter F. Mondale
441 B
Old Senate Office Building
United States Senate
Washington, D.C. 20202

Dear Senator Mondale:

The Minnesota Department of Education embarked on an intensive effort to improve educational opportunities for Indian citizens during the later part of 1968. The State Board of Education adopted in June, 1969, a State Plan for Indian Education. This Family Plan includes pre-natal through higher education. Our department has been successful in receiving federal and state funds to carry out programs which have been identified by Indian citizens of Minnesota to meet their needs. Unfortunately, federal and state programs currently available do not provide sufficient funds for the total Family Plan to be carried out.

I want you to know that Indian education is very high on the priority list of this department and we have been encouraged by the excellent support of the Minnesota Indian Education Committee. This committee is the result of a law enacted by the 1969 state legislature which has also supported supplemental assistance to carry out our State Plan. The twenty-five members on the committee come from all parts of the State and they have become an influential voice in Indian education in Minnesota. This Department is very pleased with the assistance the committee has given to us during the last two years.

We are grateful for your efforts in the United States Senate relative to Indian education, and especially pleased to note that you and Senator Edward Kennedy have introduced the Indian Education Bill. The bill has far reaching implications for Indian citizens and state departments of education. Hopefully, the bill will not separate the efforts being made in respective states; rather, it should strengthen the cooperation of all groups interested and responsible for the education of Indian citizens.

As you know, the problems and issues confronting Indian education are not easily resolved. The magnitude and depth of the concerns require extensive and intensive attention by many institutions and people. We want to be part of such an effort and will assist in any way we can. We trust the bill will allow the State Department of Education to continue to serve Indian people in meaningful and dignified ways.

I believe we have developed a keen interest and commitment to improve educational conditions which will have a positive impact on Indian people. We look upon Senate Bill 659, amendment 6, as an opportunity to continue to work cooperatively with Indian communities and local school districts to serve Indian children. Please count on our support and feel free to call on us if this department can be of further assistance.

Sincerely,

Howard B. Casmey
Commissioner of Education

Re: Senate Bill 959
Indian Education Act

Dear Senator Kennedy:

We would like to see a change in the bill to have the National Board composed of Indians to be elected by Indians. In Section 584 the word community should be removed and add all colleges. A clause should be added to give top priority for funding to Indian controlled colleges or universities.

We favor the bill but feel the changes are important.

Sincerely,

Rosalind Marshall

Rosalind Marshall
Box 235

Senator EDWARD KENNEDY,
Washington, D.C.

DEAR SENATOR KENNEDY: I fully support the Kennedy Amendment 6 to S. 659 that you are sponsoring. However, I feel that the National Board of Indian Education should include Indian controlled universities.

Please give Indian controlled schools and universities top priority for funding. Thank you for your interest in the Indian people.

Sincerely,

MRS. ALBERT HAILSTONE,
Member of the Hoopa Tribe.

THE NAVAJO TRIBE

CHAIRMAN, Navajo Tribal Council

WILSON C. SKEET
VICE CHAIRMAN, Navajo Tribal Council

14 May 1971

Senator Edward M. Kennedy
Senate Office Building
Room 3214
Washington, D.C.

My dear Senator Kennedy:

The Navajo Tribal Education Committee met on May 13, 1971, for the purpose of considering the position to take on the proposed amendment number six to S-659, a Bill to amend the Higher Education Act of 1965 and the Vocational Education Act of 1963.

The Navajo Tribal Education Committee cannot support this amendment as written and proposed. The Committee further recommends against its passage. The reasons why the Committee takes this stand include the following:

1) Navajo Education has progressed to the extent where a workable relationship has been established between the Navajo Tribe and the Bureau of Indian Affairs which continues to improve.

2) The Committee felt there was a tendency in this Bill to lead towards termination of the trust relationship existing between the United States of America and the Indian tribes.

3) The Committee felt that transfer to a new agency would create confusion.

4) The Committee questioned the 15-member National Board proposed.

Sincerely yours,

John Cummings
Chairman, Navajo Tribal Education Committee

Concurrence:

Senator Edward M. Kennedy
Senate Office Building
Washington, D. C. 20510

Dear Senator Kennedy:

Your letter is very much appreciated. I believe you are right in your thought that my proposal for an educational center could be built into the National Board. It seems to me this can be done by renumbering subsection (4) of Section 563 to subsection (5) and inserting the following subsection (4) or one similar in content:

> (4) to establish and support an educational center for collecting and disseminating research findings and studies made by local educational agencies under grants pursuant to any section of this act, and any other studies or information relevant to American Indian education, for conducting research and studies in American Indian education, and for coordinating study and research proposals of educational agencies requesting grants under any section of this act. The National Board shall locate the center in Utah which is central to many Indian reservations, Indian population centers and Indian schools.

A National Board of Indian Education and a Bureau of Indian Education can go a long way toward bringing Indian education up to a respectable competency. I'm glad to see the kind of progress promised by your Indian Education Act. It is very much needed.

For a number of years I was employed by the BIA. I tried during some of those years to interest BIA education personnel in moving American Indian education forward. I wasn't too successful. In fact, it seemed to me that whenever I suggested improvements, such as my proposed center, I incurred the displeasure of some BIA top-level people who apparently wanted to maintain the status quo, and they kept this in their minds when they were considering promotions. So I know you are quite correct in your introductory statement that "the Bureau of Indian Affairs does not appear capable of self-renewal or internal reform."

Presently, I'm employed by the Internal Revenue Service at the Western Service Center in Ogden, Utah.

There is another item I think would be appropriate in your Indian Education Act. It is provision for preference to qualified Indian in initial appointments and promotions to teaching and administrative positions related to Indian education. For this I would suggest an additional section in the Act similar to the following:

AMENDMENT TO INDIAN REORGANIZATION ACT

Sec. 586. Section 12 of the Indian Reorganization Act of 1934 is amended to read as follows:

(a) The National Board is directed to establish standards of health, age, character, experience, knowledge and ability for Indians to be appointed and promoted, without regard to civil-service laws, to the various positions maintained for federally-operated schools and related educational programs or activities pursuant to any section of this act. Such qualified Indians shall have preference in appointments and promotions to vacancies in any such positions.

(b) For the purposes of this section, the term Indian shall mean any Indian of one-fourth or more degree Indian blood.

It seems to me that something should be done also to raise the standard of qualifications for non-Indians who are employed in Indian schools. For example, the great majority of teachers and administrators at Intermountain School have had virtually no experience on the Navajo Reservation or any other reservation. Their whole working life so far has been spent at Intermountain School. I've felt that no one should be advanced to an administrative position without a minimum of experience in some capacity on an Indian reservation and that a program ought to be developed whereby teachers would spend part of their summer months on an Indian reservation. This would assure that teachers and administrators had first-hand knowledge of the student's homes and conditions.

Furthermore, graduate degrees are not required for advancement to administrative and other top jobs in BIA Indian education. Some of the department and section heads at Intermountain School, for example, do not have graduate degrees.

Sincerely yours,

Curtis E. Jackson

Mr. Bill Demmert
Senator Kennedy's Staff

United States Senate
Washington, D. C. 20510

Dear Mr. Demmert:

We are very concerned about the Kennedy-Mondale Indian Education Bill. Our community is now trying to start its own high school with BIA money. We plan to run the school as an independent institution until a state public high school can be started on our reservation.

So far our proposals have been well received by the BIA and local groups. Our Arapahoe Tribal Council has unanimously endorsed our project and over 800 people on the reservation, a record, have signed petitions in favor of what we are doing. The BIA has given us a planning commitment of $25,000.00 and we expect to sign a contract for operation of our school for next year.

But, even if we get the BIA contract, it will not provide enough money to open a school large enough to enroll all of our children. This troubles us greatly because right now so many of them drop out of school (50%) and very few get into colleges. There are cases of mistreatment in the local public high schools off the reservation where about half of the children go. The rest are in far away BIA boarding schools or mission schools.

We are convinced that we will have good education for high school children from the reservation only when we control a high school right here. That is why we do not think the present form of the bill would benefit us very much. From reviewing its sections, we see that our independent school would not get very much, if anything, even if the bill passes. We would like to see the bill changed to provide operating and constructing monies for us in our present circumstances. Although we think we will be able to have a school here next year, it won't be big enough to hold all of our children unless Congress provides the money. We also need new facilities, since the ones we plan to use next year will be makeshift.

We know how interested Senator Kennedy and Senator Mondale are in better education for Indians. But that will only come about when Indian people control their own education, which is our goal here on the Wind River Reservation. Please change the bill to help us too.

Sincerely,

Allison Sage, Sr.

Senator Edward M. Kennedy
Senate Office Building
Washington, D.C.

Dear Senator Kennedy:

I have read with interest the proposals for changes in Indian education in America. I must admit that I am greatly impressed with the possibility of your bill becoming a reality.

I have felt that Indian education has not been given the proper attention for the past few years. I would like to do anything possible or feasible to help encourage the passage of your bill. If there are things I can do or any of our people can do, please feel free to call on us.

THE AMERICAN INDIAN is a loosely-organized group of Indians who are interested in helping our race by encouraging and promoting better educational opportunities. The reason for my interest in the educational aspect is that I am a Dean at Samford University in Birmingham, Alabama; therefore education is of direct interest to me.

I shall look forward to your assistance in this matter.

Sincerely,

H. L. Martin

EDWARD M. KENNEDY
UNINTED STATES SENATE
COMMITTEE ON
LABOR AND PUBLIC WELFARE
WASHINGTON, D.C. 20510

May 6,1971

Dear Mr. Kennedy:

I'm sorry for this late response inregard to your letter of March 5, 1971 but the delay was unavoidable. I'm all for some thing of this nature. A bill of this cailber should have been implemented long ago. We have reçently met with local school officaials in regards to the Jonhson- O'malley Bill. They wanted to know what we wanted in education for our children and we told them that we are trying to get a study center or community building here on the reservation. With Johnson - O'malley funds we could purchase necessary equipment and supplies to furnish a building of this type.
This is greatly needed here on the Tule River Indian Reservation. We could use a special grant to get us started on the right road. If there is any way you can help us in this matter please let us know. In regards to the National Board, I'm for it as long as they get into the remote reservations as well as the concentrated areas. But I feel this board has to be independent of the Bureau of Indian Affairs.
I hope this will help you in evaluating your proposal.
Hope to hear from you soon.

Sincerely Yours,
Alec Garfield

Duluth Minn 55812
9 May, 1971

The Honorable Edward M. Kennedy
Senate Office Building
Washington, D.C. 20510

Dear Senator Kennedy:

I appreciated your sending me a copy of Amendment 6 to S 659 and the analysis of it.

From my work with local Indian groups (I am a librarian at the Duluth library, which is located in our Indian (Cities area), I hear reports that the greatest need for urban Indians in education is access to Johnson-O'Malley funds and Title I funds for which Indians have to cut through far too much "white" tape.

My husband, an English professor at U. of M., Duluth, was asked by the local UMD Anishinabe (Chippewa Indian) Club to help set up requests for Indian Studies courses. Their request was for courses about Indian cultures, taught by Indians, or, if that is not possible, by persons who respect Indians and will go beyond textbooks to involve local Indian leaders in the presentation of these courses. They do not, and rightly, I believe, want "white expert" courses.

Divesting the BIA of its jurisdiction over Indian education seems a step in the right direction. I support you & commend you for your action.

Sincerely yours
(Mrs.) Mary J. Erwin

United States Senate
Committee on the Judiciary
Washington, D. C. 20510

Gentlemen;

In response to your request asking for our suggestions and comments on changes or amendments to Amendment #6-S. 659, the Indian Education Act, introduced by Senator Edward M. Kennedy on Febuary 25, 1971. We would like to suggest that it be ammended as follows:

A. To include all children in impacted, remote and destitute areas.

B. To include all areas qualifying in the provisions set forth under Title Three.

It is our opinion and I am sure the opinion of many not only in Alaska but in all other States that it is a good Bill, however it is to be sponsored with Federal funds which means every taxpayers money in the United States and therefore should not be limited to Indians and Natives in Indian Reservations and Native Villages but should instead include children of all races in all needy areas throughout the United States.

In Alaska as in many other States it is a problem which cannot be ignored. We are beginning to wonder about consideration for the other races, and this now includes the caucasians. Each year we see vast amounts of money appropriated for wars, foreign aid, welfare, Urban renewal in riot torn cities,financial aid to Indians etc. yet the white race and the working people who have made all this financial aid possible seem to be forgotten and their voices of protest dimmed by the constantly increasing cries for more aid.

Please do not make the mistake of interpeting this to mean we are not for all of it including the Education Act, we merely wish to stress that the Caucasians, Negroes and all other races should be included and benefit from these projects, after all that is what a Democratic America is all about. In Alaska we want our Natives to receive a fair land claims settlement, but we also want free medical treatment, housing, Education etc., for all of us after the settlement has been made, not just the Indian and Native, for we too have our underprivleged and needy as well as the Indian and Native.

Respectfully,
Bennie M. Barker

Dear Senator Kennedy:

I am responding to a letter concerning a study of Indian education in general chaired by you in the Subcommittee of the Congress. I was asked to read, react and respond with questions and suggestions to your final report "Indian Education: A National Tragedy — A National Challenge", along with the summarized outline of the Kennedy Bill. Could we not appropriate or earmark money for Indian education as other kinds of education that need special attention in America without the stigma of a brand name being attached? (I am a member of a group of 30,000 or more Lumbee Indians settled along the Lumber River in Robeson County, N. C. — the home of Pembroke State University, with a four-year liberal arts program.) I have strong convictions that "Indian Education" will be a "National Tragedy" as long as it is segregated as "Indian Education".

There is a psychological point of view of failure and dependence on governmental agencies to subsidize our Indian education which will remain as long as we are set apart from the mainstream not being encouraged to organize, control and to implement an educational program with a sense of belonging. Large sums of money will go a long way to provide equipment and many kinds of pilot programs but perhaps the real key to a successful program is a child having an opportunity to learn without being singled out as being black, white, yellow, red (or Indian) — just another good old American. I ask the question, what is Indian education?

In an Indian education seminar I attended last year at Huron College, Huron, South Dakota, to my amazement, it was pointed out so often that B. I. A. extended just enough coverage to keep Indian people in jeopardy of a good education in the mainstream of American culture. Could we not entertain the idea of helping all American children who are deprived the opportunity of succeeding in our school systems?

The population of Robeson County, N. C. is split about three ways equally — white, black and red (Indian). We Indians will be the last to admit that we need help over and above the other two races. There is a strong feeling that other Indians in America would have been in a much better position had they not accepted the free gifts of the government but worked in the American way of free enterprise.

I would like very much to be a witness on the Kennedy Bill if it can be arranged.

Sincerely yours,

Jason B. Lowry
Director of Admissions

April 16, 1971

Dear sir,

I shall begin by apologizing for my delayed answer to your letter of last month. When I Recieved your letter I was caught up in the last minute struggles of Final Examinations and was not able to take the time necessary to consider your bill in the manner which I felt it deservrd.

I have now considered the bill.

May I compliment you sir; it is a superb proposal. It appears to me to be the beginning of a future for my people. It is my own belief that a people cannot exist in the world of today and tomorrow without an education. With proper funding the bill, as you and the other distinquished Senators have presented it, should meet the present problems with first class recognition of needs and defficiencies within the present system. It should bring us the education that we need and have long requested to properly meet the future.

Thank you also sir for consulting us, the Indian people, on this matter. You well know, I'm sure the long history of "help" that we've been given through the many mismanaged programs over the years. We know the solutions far better than anyone on the outside looking in. And it is important to us to have this voice. Our people cannot rise to our full height without your help and yet you will not be able to find the solutions without our guide.

Thank you sir for realizing this.

The only recommendations that I will make are to emphasize the need for adequate funding; Indian controls and an important push for compitant teachers. If the teacher does not undersatnd the students he teaches he can never help them. If he feels they are inferior he will never teach them. Without proper funding the program might as well not be started at all. And history has shown that without Indian controls the money is sometimes not wisely spent.

Once again sir, I thank you.

May your mind be at peace and your path be an easy one; may the sun warm you and the wind be at your back.

Washte,

Lawrence Baca

RESPONSE TO AN AMENDMENT

TO THE HIGHER EDUCATION ACT OF

1971, S. 659

April 26, 1971

Prepared by

Virginia Brown
Small Tribes Organization
of Western Washington
333324 Pacific Hwy. South
Federal Way, Washington

(206) 838-0790

The Honorable Senator Kennedy has presented an amendment to the Indian Education Act, S. 659. One of the Senator's recommendations was to appoint a National Board of Indian Education, connected directly to the Office of Education. I agree that a National Board of Indian Education is a necessity, but I strongly disagree that they should be appointed by the President. If we are to receive full consideration and full decision making authority, we need to have the responsibility of appointing our own people. Why should we suggest names and let the President make our appointments? It is an accepted fact that when appointments are made by the President, they very often become strictly political appointments and not on the basis of performance or ability. Too many times, we have been given the advisory role only, with little control and responsibility in decisions affecting our lives. We need to be able to make our own decisions and appointments. Let us make our own mistakes, if need be; everyone else has had the opportunity of making them for us.

It should also be a stipulation that these appointments receive the endorsement and approval of responsible governing bodies. Many times, we have been represented by Indian groups who do not have the endorsement of the elected Tribal Councils. Our Tribal Councils are elected to represent our people and should have the opportunity to do so. Although it is implied, the Senator does not state that the Board would consist of Indians. It should be a definite requirement of all members of the Board. We have capable Indians who are willing to serve in this capacity. Are we again going to have non-Indians making our decisions.

One of the functions outlined for the National Board is to investigate and determine which boarding schools should be converted into therapeautic treatment centers. I endorse this idea fully. When you realize that out of 100 students we sent to the Chemawa Indian School from Western Washington since September of this school year, 49 of these have returned home as of March, you begin to wonder about the purpose and capabilities of this school. More importantly, what happens to these children? A point of interest to you might be that our students now have the choice of taking their General Equivalency Diploma test or completing their high school classes at Chemawa. This is currently taking place. One of the main problems with Bureau of Indian Affairs boarding schools, I feel, is their compliance with civil service requirements. I would suggest that all civil service requirements be abolished; possibly then they could obtain and retain good teachers who are able to relate well to our children. This would also offer more job opportunities to Indian people.

In Part A of Senator Kennedy's amendment, he proposed to allow substantial increases of money Public Law 874 and Title 1, ESEA. I commend the Senator for his action; he has taken a necessary step in Indian Education. Senator Kennedy has suggested that Indians whether they are non-reservation Indians or not, are all Indians and he recognizes the fact that all Indians need and require the same services. We, at STOWW, have some bands of Indians in our organization who are refused Bureau of Indian Affairs and Indian Health Service assistance. These bands are as much Indian as reservation tribes. Why must it take a court decision to decide if they

are fully Indian? They think Indian, feel Indian and are Indian now.

In this section, Senator Kennedy stresses the need for having these monies, received from Indian communities be designed for use for those Indian children. I agree completely with the Senator. For years now, the money received by local school districts for Indian children has been used in the general operating funds. Our children have been neglected too long. The Senator also stresses the need for the participation and involvement of Indian communities. I would go a step further and suggest that tribal councils, along with parents, must be involved in all programming. The State Department of Public Instruction in Washington State has denied participation of tribal councils on Johnson O'Malley Committees. This has caused much dissatisfaction and dissension within our Indian communities. Our tribal councils are the elected governing bodies of our people; they must be recognized as such. It seems to me, too, that Indians are given the advisory role again in this section. There is a stipulation for consultation with parents of Indian children, but where do we have the authority of making actual decisions?

Part B allows the Commissioner of Education to make grants to everyone but tribal councils. Or are tribal councils referred to as public and private education and research agencies, organizations, and institutions? The Senator is going to realize that Indians demand to be specifically named in subh bills. And if tribal councils are not eligible to receive these grants, why not? In this section, also, is a reference to participation by tribal communities and parents. It should definitely

include our tribal councils, and not in the advisory capactiy, but in a decision making role.

Part B also allows the Commissioner to make grants to institutions of higher education to prepare persons to serve Indian children in the educational system. Who determines if an applicant received this type of grant? It should be apparent to everyone by now that Indians should have some control over this matter. When is our local control going to take effect?

In Part C the same question arises again concerning the granting of funds, participation of tribal councils and decision making authority. We would wonder also if $5,000,000 is enough for adult education? Divided as this money eventually will be, it seems that it may not adequately meet our needs.

In Part E there is a provision for more support of community colleges with Indian students. If these colleges were to recruit and obtain Indian students, who would determine how the additional funding would be used? There should be a provision included for local control of this money, or we may have community colleges recruiting our Indian students for the sole purpose of getting additional funds. If these colleges are near Indian communities, I would think that the tribal council or governing body in that area would have a direct interest in the administration of those funds.

In conclusion, I would like to say that we sincerely appreciate Senator Kennedy's interest and involvement with Indian education. I feel that his great commitment and assistance will certainly be beneficial to our people. The Special Sub-Committee on Indian Education has developed a very thorough,

relevant package for Indians; however, before passage of this Amendment, the forementioned items need further clarification. Thank you, again, for the opportunity of presenting our concerns to your committee.

GREASEWOOD BOARDING SCHOOL,
Ganado, Ariz., May 31, 1971

Hon. SENATOR KENNEDY,
Senate Office Building,
Washington, D.C.

SENATOR KENNEDY: I should like to inform you that I have read and studied your proposed plan for Indian education and have found it very appealing. I am in total agreement that the Bureau of Indian Affairs is having their problems and something should be done about it immediately.

I am a Blackfeet Indian who has been in the field of education for twenty-eight years. Sixteen of these years have been spent in working directly with Indian children, parents, and guardians. I have completed my second year on the Navajo Indian Reservation. I can truthfully say that on this reservation is the best example of BIA mismanagement in the whole area of Indian education. Their entire system demands a thorough re-evaluation or it will retrogress in zero.

Because I have functioned well in all area of education—from teacher to superintendent—and because I possess a curious and analytical nature, I am well aware many weaknesses and problems in the Bureau of Indian Affairs Education Program; and honestly believe that I can offer constructive suggestions and recommendations to remedy these many weaknesses and problems.

Respectfully,

JAMES G. KIPP.

KENT COUNTY DEMOCRATIC COMMITTEE,
Grand Rapids, Mich.

Whereas, Indians have been deprived of fair opportunities for health, education, housing, and jobs throughout the history of this nation and,

Whereas, Indians continue to live in poverty, continue to be mistreated, continue to earn an average of $1,500 wage per year with an unemployment rate of nearly 40% and,

Whereas, a proper education for all Indians would be a big step to alleviate their problem and,

Whereas, the Kent County Democratic Committee has always been opposed to unjust oppression of any kind; Now, therefore be it

Resolved, That the Kent County Democratic Committee go on record in support of the 1971 Federal Indian Education Act co-sponsored by Senator Edward Kennedy and be it further

Resolved That this Committee go on record in support of Michigan Senate Bill No. 10 which will provide for tuition payments to eligible Indians of this state to secure vocational or eductional training beyond the secondary education level, and be it further resolved that copies of this Resolution be sent to Senator Edward Kennedy and the sponsors of Senate Bill No. 10 and to the news media.

THOMAS F. BLACKWELL,
Chairman, Kent County Democratic Committee.

SPOKANE TRIBE OF INDIANS,
Spokane Reservation, Wash., May 27, 1971.

SENATOR EDWARD M. KENNEDY,
Committee on the Judiciary,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: The Spokane Tribe has reviewed Amendment 6 to S. 659, the Indian Education Act.

While there are many items contained in this Act that are very beneficial we feel that the Bureau of Indian Affairs has long recognized the needs of the Indian people and through recent policy and organizational changes many of these problems and priorities are being met. One of the great problems is that there are no two Tribes that have identical situations and needs and these become even more widespread through the different geographical areas of our nation. Admittedly, it took the Bureau of Indian Affairs many years to recognize this and to realize that one set of regulations could not apply to all Tribes. We feel the

Bureau has made great progress in this area, especially since about 1955. Any new agency would be confronted with the same problems and we feel much time would be lost in learning the basic facts that the Bureau and Interior Department have already coped with and now fully understand. We also feel that placing Indian education under another bureaucracy would, as in most cases we have observed, create vast expenses with new offices, new management, new personnel, new regulations and new expenses, so that monies appropriated for "Indian Education" would be greatly decimated by the time they reached the reservations.

We feel the Bureau is already well organized, has knowledgeable personnel and is cooperating and working closely with our people. We might note here that our new Spokane Agency was created only last November; our Council was given full reign in the selection of personnel and we are highly pleased and satisfied with our choice of Bureau staff members and certainly so in the field of education. We are making good progress with the Bureau and don't feel we want to be interrupted.

We pointed out earlier that there are vast differences in Tribes. We cannot agree that there is an "Indian problem" in education as most "experts" maintain. Rather, there are numerous, countless problems that are all unique to specific reservations. We hear continually that Indian children are "different" than other children—that they must be taught "different." The degree of this again varies from reservation to reservation and the Spokane Tribe does not prescribe to this theory. eW feel that Indian children must have the same training and acquire the same qualifications as other people in order to cope with today's employment situations and changing times. We believe that in our area they do not need to be taught different than other children; if there are differences, such a theory only tends to emphasize the fact and feelings of distrust and resentment tend to rise. There are many qualified Indian leaders now who graduated from colleges of their choice without the benefit of today's "experts".

This does not mean to say that we do not promote and encourage Indian cultures and the preservation of arts, crafts, language and customs, but these should be at the option of the sudents and families involved. The opportunities are provided here by the Tribe for participation in programs to perpetuate tribal customs and heritage. Specific subjects are also taught in our local public schools on Indian history, culture and present day Tribal affairs through cooperation between local school personnel, the Tribe and the Bureau.

We fully realize that there are vast differences in opinions among the various Tribes regarding education programs. For example the problems cultures, needs, etc., required for the Navajo people are entirely different than those for the Spokanes—the same may be true for even our closer neighbors such as the Yakimas and Colvilles. Here much depends upon the progress, attitudes, environment, social and economic backgrounds along with a multitude of other local conditions that add to the complexity of the individual tribal problems. Some Tribes have participated or have been "involved" in public schools and education problems for many years. The Spokane Tribe has had members on the local public school board for at least 35 years and the board for the last several years has been made up entirely of Tribal members elected at regular public county elections.

How well any program functions depends upon the cooperation between the agency and people involved. We feel that the Bureau of Indian Affairs has made many recent adjustments and Indian Tribes are enjoying the best opportunities to advance and make their own decsions than at any time in history. We feel there is too great an overlap of responsibilities between the branch of education and other Bureau functions to have a separation. We know our local Bureau people and we receive full cooperation from our Portland Area Office and the Commissioner of Indian Affairs. We feel that changes to another department would create a long period of turmoil, misunderstandings and confusion that the Tribes and Bureau have already been through. The Spokane Tribe, therefore, desires to keep the education program with the Bureau of Indian Affairs and does not support the changes as introduced in Amendment 6 to S. 659, the Indian Education Act.

Sincerely yours,

ALEX SHERWOOD,
Chairman, Spokane Tribal Council.

CAMBRIDGE, MASS.,
May 1, 1971.

HON. EDWARD M. KENNEDY,
U.S. Senate.

DEAR MR. KENNEDY: Thank you for your considerate request for comment or suggestions on Amendment 6 to S 659. Although I cannot speak for any other Navajo or Indian person, I will gladly speak for myself in this matter.

I am a full blooded Navajo woman, currently a student at the Harvard Graduate School of Education, and will shortly receive a Masters Degree in Education for general purposes. I attended the public hearings on April 28 and 29 on this amendment, and gave careful attention to the testimony of the various witnesses and to the comments and questions both of yourself and of Senators Mondale and Pell. Let me first of all say that I appreciate the thoroughness with which you have attempted to frame legislation which will meet the real educational needs and problems of the Indian citizens of this country. You deserve a great deal of credit for your sincere and sustained effort to discover the wishes of Indian people for their schools and to find ways of implementing them. The amendment, as proposed, and the hearings as well, both demonstrate this.

However, my strongest recommendation, after hearing both the testimony of various Tribal and inter-Tribal-group representatives, and of many friends among those present, is that you need to give as much time and effort to the process of reviewing and digesting, and making specific input as regards alterations of the proposed legislation, as you gave to the process of drafting it. A White House Conference was suggested several times during the hearings. No clear reason was spelled out for why one is not planned. The idea seems quite wise.

The problem is not that there is that much wrong with the bill as it is now written (I will make specific suggestions as to areas I personally would change below). The problem is that it presents some really major changes in the institutional environment of Indian people, and we mistrust sweeping change. As you yourself put it, the "devil we know is not as frightening as the devil we don't know". Very many of the ideas presented in the bill are good ones, and will quite likely be received gladly by many people, if they have the time to approach them carefully and with deliberation. Some of them you may have to have the political courage to enact boldly on the strength of your own judgement as an elected legislator, and let the people discover their wisdom in practice.

My comments on specific parts of the bill follow:

SECTION A

I like the notion of separate specially funded programs for Indian children in Public schools. To safeguards, however, for ensuring that these funds are used to supplement rather than supplant regular program funds seem weak in two respects. Experience with similar weaknesses in Title I programs already would suggest that the reports required in section 305(a)(7) to the U.S. Commissioner of Education (whose office seems to lack capability for keeping up with such things) be also sent to the National Board of Indian Education, and that that Board be funded for sufficient staff to keep these reviewed, and to communicate with local advisory committees and with USOE on whether local programs are being administered fairly. Or else, the entire review and funding of these programs might be lodged with the NBIA, if you can get it away from USOE. (The attitude and testimony of the Commissioner was discouraging at this point, and strongly suggestive of "termination" tendencies in the thinking of USOE regarding Indian Education, reducing it to one more aspect of "Minority Problems".)

Secondly, the local committees (sec. 305 (b) (2) (B) (ii)) should be so set up in the legislation that school officials cannot in any way determine who serves on them. The way the bill is now worded, a given principal could appoint school employees (who happen to be parents) as parent members of the committee, and exert all kinds of undue pressure on them regarding approval of funding proposals, or criticisms of personnel or program.

SECTION B

I am delighted with the provisions for innovative program funding, and with the safeguards in 810 (f) (4), except that I believe that it would be the NBIA and not merely the Commissioner of Education who should be "satisfied" that Indian parents, teachers, etc. have been appropriately included in the planning and development of programs. The same comment holds for Sec. C on Adult Education innovative programs.

I would like also to see the words "English and/or Indian language" inserted after "basic" in section 314 (a) (2) (A) and other pertinent points, to allow for development of literacy programs in native tongues in those tribes in which written forms have been developed for their languages.

SECTION D

I should like to register my agreement with the testimony of the California Indian Legal Services representatives and others urging the inadvisability of automatically transferring existing BIA educational personnel and apparatus to the employment of the NBIA "en masse". Instead, some transfer period should be set, within which local boards must be set up by the present system, and assisted by the NBIA in establishing hiring criteria and procedures, after which local boards must be free to hire whomever they wish, with no obligation whatever to former BIA employees. I could not more strongly disagree, as an Indian with the testimony of the NEA representative, who urged that there was some blanket "job security" obligation to these people as a group. In my experience with Federal Indian School personnel, some of these people have been riding free at the expense of Indians long enough, and ought to be turned out to fend for themselves. Those who have been doing a good, or even a conscientious (if inadequate) job will have little to fear. They will be needed, and fairly treated.

THE NATIONAL BOARD OF INDIAN EDUCATION

You will already have gathered from the above that I am much in favor of the NBIA idea. I recognize the wisdom of the proposal by Mr. Platero (with, no doubt, considerable input from Navajo Tribal Education figures) that this Board be in an "advisory only" position with respect to local school Boards. This may not be possible to achieve in the first stages of development, however, so it should be provided in the legislation that the NBIA is to operate as an umbrella under which local boards can be organized and given specifically limited training, after which it is to serve as a funding and technical assistance source only, with no other authority over local Boards than the USOE has over other local School Boards. Other functions, such as the operation of centralized Educational Treatment Centers, could be carried out as special projects under NBIA by delegation of its authority to various Indian groups or organizations.

As far as location of the NBIA in the Federal structure is concerned, I could see it operating within the BIA only if it is given exclusive and independent charge of all educational operations and funds, and set free of Civil Service restrictions in both hiring and firing of employees, at least until it has had ample opportunity for housecleaning. At the same time, the character of the Commissioner's testimony regarding the currently "locked in" bureaucratic hierarchy procedures suggests the Board would inherit really massive problems in tackling the reform of such a structure. This the real wisdom of Mr. Platero's proposal that power be lodged not at the top, but at the local levels, with assistance from the top.

Should the NBIA be established with semi-legislative and policy making functions and centralized power, then I should like to see it completely separated from the BIA, and lodged under the Executive office. In no case would I like to see it placed under USOE, since I feel that this would likely result in the kind of fragmentation of Indian program and policy that the hearing produced ample evidence that Indian leaders fear.

I should like to see members of the NBIA both nominated and selected on a geographical region basis, with region size determined by equalizing the number of Indians residing in each region as nearly as possible, without dividing tribes or reservations up. Representatives should then represent all tribes and individual Indians within their region.

I do not know how much GS 18 rating personnel are paid, but I would like to see NBIA members paid sufficient salaries that it be understood that theirs is a

full time job involving sufficient responsibility that they hold no other job or major position. They should be given adequate funds for maintaining repeated contact with schools and parents throughout the region they represent.

Again, let me express my appreciation for your competent pursuit of Indian guidance in framing legislation affecting Indian people. And let me urge that you consider ways and means of extending the time in which your proposed legislation can be transmitted by word of mouth (past Indian Education, as you know, has not provided many of the people with a lot of skill in interpreting written laws, even though they are held in great respect their wisdom and understanding, once things are explained to them). This is a slow process, but it is the real key to the kind of Indian involvement you have espoused. Please give it time to happen. We deeply respect patience.

Most sincerely yours,

MARY HELEN TAPTTO.

MOUNT PLEASANT PUBLIC SCHOOLS,
Mt. Pleasant, Mich., May 3, 1971.

Senator EDWARD M. KENNEDY,
Chairman, Senate Subcommittee Administrative Practice and Procedure,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: I would encourage passage of Amendment 6–S.659 (Indian Education Act) during the present session of Congress.

The adults and children of our Indian Reservation would certainly benefit from this legislation.

Any information on the present consideration of this Amendment would be appreciated.

Respectfully,

CARLO BARBERI, *Ed.D, Superintendent.*

SUPERIOR, WISC.,
April 29, 9171.

SENATOR WALTER F. MONDALE,
Senate and Congressional Hearings,
Washington, D.C.

We wish to support the Indian Education Act now being heard before the Senate.

SUPERIOR AREA INDIAN DEVELOPMENT ASSOCIATION.

MINNEAPOLIS, MINN.,
April 28, 1971.

HON. WALTER F. MONDALE,
Washington, D.C.

DEAR SENATOR MONDALE: Please consider our support for the Indian Education Act, Amendment 6 to Senate bill 659 as offered by the Honorable Senators Williams and Kennedy. This legislation is a milestone of cognizance to the deplorable conditions in Indian education. It is also a tremendous step toward Indian self-determination so essential in providing innovative and community-based efforts in cultural oriented programs. The considerations of all members of Congress is appealed to for the passage of this legislation.

SENATOR GEORGE R. CONZEMIUS,
Minnesota State Legislature and
Secretary Minnesota Indian Affairs Commission.

SAN FRANCISCO, CALIF.,
April 23, 1971.

Senator CLAIBORNE PELL,
U.S. Senate Committee on Indian Education,
Committee on Labor and Welfare,
Washington, D.C.

I strongly recommend that a chance be given to Indians who are in positions of powerlessness to voice their opinions and needs regarding the educational process as it effects their lives and the lives of their children. If you are truly committed to native American self-determination and local control of education for

Indians, supply time and money to hear what grassroots see as their problems. Too often the self-styled Indian leader who maneuvers to positions of power in Indian organizations has no conception of conditions on the local level. How long shall such individuals and experts from governmental organizations make decisions for the majority of American Indians. We need local Indian input.

BEA MEDICINE DEPARTMENT OF ANTHROPOLOGY,
San Francisco State College.

FORT TOTTEN, N. DAK.,
May 3, 1971.

Special Education Subcommittee,
Washington, D.C.

The Devils Lake Sioux Tribe has gone on record opposing proposed bill S. 659 pertaining to education. Resolution to follow.

LOUIS GOODHOUSE, *Tribal Chairman.*

DULUTH PUBLIC SCHOOLS,
INDEPENDENT SCHOOL DISTRICT No. 709,
Duluth, Minn., April 23, 1971.

Hon. WALTER MONDALE,
U.S. Senate,
Senate Office Building, Washington, D.C.

DEAR SIR: I am enclosing a corrected copy of a telegram mailed to you on April 22, 1971 pertaining to the Indian Education Bill, amendment 6, Senate Bill 659.

Yours, truly,

DONALD H. PECKENPAUGH, *Superintendent.*

Telegram to Senator Harrison A. Williams, Jr.:

I have just had the opportunity to read the Indian Education Bill, amendment 6 to Senate Bill 659, which Senators Edward Kennedy and Walter Mondale introduced on February 25. In my opinion this legislation to assist Indian children is extremely worthwhile. As a school system with six schools with heavy Indian enrollment, I feel the provisions in the bill to increase Indian parent involvement and in earmarking impacted aid for it under Public Law 874 are outstanding features. I am also extremely pleased with the grants for planning and operating programs to improve Indian education.

Duluth lead the nation in a community elected Indian education advisory committee to advise administrators and board in the planning of an educational program for Indian students. Although it has been in operation only a few months we have had pronounced improvement in attitudes of the professional staff toward their responsibility to Indian children. The contribution of the committee has been helpful both in specific suggestions and in raising profound theoretical questions. The legislation as proposed would, in my opinion, improve education for the Indian children in Duluth.

DONALD H. PECKENPAUGH, *Superintendent.*

[Telegram]

PHILADELPHIA, MISS., *May 13, 1971.*

Senator TED KENNEDY,
U.S. Senate, Washington, D.C.
(Attention Mr. Tom Sussman)

Dear Senator KENNEDY: We urge Indian Tribe and Tribal School Boards should be eligible for all educational assistance programs in Kennedy Indian Education bill. National administration of Indian assistance should be responsibility of local Bureau of Indian Affairs Agency acting as administrator with Indian control exercised through local Tribal School Board. Letter will follow this telegram.

EMMITT HORK, *Chairman Tribal Council.*

STATE OF MINNESOTA,
DEPARTMENT OF EDUCATION,
St. Paul, Minn., April 26, 1971.

Senator WALTER F. MONDALE,
Old Senate Office Building,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONDALE: The Minnesota Department of Education embarked on an intensive effort to improve educational opportunities for Indian citizens during the later part of 1968. The State Board of Education adopted in June, 1969, a State Plan for Indian Education. This Family Plan includes pre-natal through higher education. Our department has been successful in receiving federal and state funds to carry out programs which have been identified by Indian citizens of Minnesota to meet their needs. Unfortunately, federal and state programs currently available do not provide sufficient funds for the total Family Plan to be carried out.

I want you to know that Indian education is very high on the priority list of this department and we have been encouraged by the excellent support of the Minnesota Indian Education Committee. This committee is the result of a law enacted by the 1969 state legislature which has also supported supplemental assistance to carry out our State Plan. The twenty-five members on the committee come from all parts of the State and they have become an influential voice in Indian education in Minnesota. This Department is very pleased with the assistance the committee has given to us during the last two years.

We are grateful for your efforts in the United States Senate relative to Indian education, and especially pleased to note that you and Senator Edward Kennedy have introduced the Indian Education Bill. The bill has far reaching implications for Indian citizens and state departments of education. Hopefully, the bill will not separate the efforts being made in respective states; rather, it should strengthen the cooperation of all groups interested and responsible for the education of Indian citizens.

As you know, the problems and issues confronting Indian education are not easily resolved. The magnitude and depth of the concerns require extensive and intensive attention by many institutions and people. We want to be part of such an effort and will assist in any way we can. We trust the bill will allow the State Department of Education to continue to serve Indian people in meaningful and dignified ways.

I believe we have developed a keen interest and commitment to improve educational conditions which will have a positive impact on Indian people. We look upon Senate Bill 659, amendment 6, as an opportunity to continue to work cooperatively with Indian communities and local school districts to serve Indian children. Please count on our support and feel free to call on us if this department can be of further assistance.

Sincerely,

HOWARD B. CASMEY, *Commissioner of Education.*

YAKIMA INDIAN NATION,

Amelia Sohappy, *Aide.*

State of Minnesota,
Bemidji, Minn., April 26, 1971.

Senator Edward M. Kennedy,
U.S. Senate,
Washington, D.C.

Dear Senator Kennedy: Thank you for the letter of April 19, 1971, and related information concerning the Amendment 6 to S. 659, of the Indian Education Act.

As I read and studied the Indian Education Act, I found the following questions coming to mind. I would greatly appreciate answers to and clarification of these particular points.

1. Definition of "Indian": Currently it is not specific enuogh. I believe a blood quantum should be indicated for the major portion of Indians that will be affected. I propose the one-fourth blood quantum be employed.

2. Provisions should be made and spelled out to aid and assist those Indians under one-fourth. Perhaps partial payment in school assistance costs; specifically for Indians in post-high school educational training programs. Colleges and vocational-technical schools.

3. "Direct funding" Provisions: Does the act provide for direct funding to such Indian agencies as e.g. the Minnesota Chippewa Tribe?

(a) Can a recognized tribe, band, reservation business committee, or Indian organization be a "Local Educational Agency"?

(b) Specifically, who or what can be a "Local Educational Agency"?

4. Does this bill for an act supplement and replace Johnson O'Malley funds currently administered by the Bureau of Indian Affairs?

5. The National Board of Indian Education: Will this be the number one office of Indian Education? Will the mere 15 member board, including staff, assume the entire duties of the B.I.A. regarding Indian Education?

6. Based on the 1969 Federal Government's allocation of 27.9 million for public schools with eligible Indian students—does the proposed 25 million actually mean less money for more Indians?

7. What about funds for building, remodeling, and additions? Title I mentions maintenance and construction, but how much, what portion of the budget? Improving school space, and facilities is extremely important in improving the quality of Indian education.

8. Special Program of Titles II and III are extremely important in improving the quality of Indian education. Indian people themselves know the specific needs of education for Indian studies. Allowing Indians to create and implement these innovative programs would improve greatly the quality of Indian education.

Also, in Part B of Amendment 6 of Special Programs is the section to provide grants to institutions of higher learning and other local agencies for preparing potential teachers, social workers, counselors of Indian students. This type of preparation in training institutions is essential to insure that these professional personnel are adequately sensitized to the basic cultures, traditions, and needs of the Indian people for whom they intend to work. The primary resources input to training institutions should rely heavily on Indian expertise (Indian community people, tribal officials, Indian educators).

9. Would you please define and specify Parent and Tribal "Participation" in Part B of proposal applications. This term is too vague and often invites a degree of tokenism for Indian participation. I would recommend that a specified percentage, number of Indians, or named tribal official be spelled out to sit in on the planning, developing, and evaluation of proposal applications.

10. In Part C of Amendment 6 of Adult Education, the need to further supplement and develop employment and educational opportunities are greatly desired.

The interacting fields of education and employment together create an opportunity for Indian Adults to gain valuable knowledge, skill, and insight of potential goals relating to these two important elements.

11. In Part D of Amendment 6, how does the National Board "establish" local school districts and school boards?

12. The extent to which the local tribal governments, committees, and agencies are delegated actual responsibility and authority to "control" Indian Programs is not quite clear to me. Will current public schools adhere to the National Board's regulations on funding requests and guidelines?

13. What will be the relationship of the National Board and the State Department of Education? Is it possible the State Departments will be by-passed on occasion of direct funding? Will the State Departments continue contract for grants with the National Board? What priority will State Departments have?

14. I question somewhat the "stability" of the National Board. How concrete will Indian education be as the position of President of the United States and as administration changes hands from time to time?

Basically, these are the questions that I find require clarification. I recognize that this bill for act must be an all-out effort by Native Americans, and congressmen of our government to insure that the Indian people of America may be able to benefit to the fullest potential from the intent as well as the fact of the bill.

I commend you, Senator Kennedy, for your sincere and honest effort that you have exhibited thus far regarding this Indian Education Act. Without your insight as co-sponsor of this bill, no one knows how long Indian education in America would continue to exist ineffective, inadequate and in some areas very detrimental to a very proud race. As for a general overview of the act, I see the major premise of the bill as a definite move towards meeting the needs of the Indian people in education. I reserve my right to endorse this bill until these and other points of interest have been clarified to my personal notifications. Thank you for your attention.

Respectively yours,

ROGER T. AITKEN,
Counselor, Indian Adult Basic Education.

[Telegram]

BROWNING, MONT., *May 3, 1971.*

Hon. EDWARD KENNEDY,
Senate Office Building,
Washington, D.C.:

Received your telegram dated April 30, regarding hearings of the Senate Education Committee scheduled May 6. Appreciate your notifying me of the hearings and the recommendations you feel that is necessary in regards to the hearing. But I am at this time demanding, as the president of the National Congress of American Indians, and president of the Affiliated Tribes of the Northwest, that there be more hearings held on this subject both in Washington and regional. This would give the Indian leaders ample time to be able to give a better response to the bills being submitted. At the present I am unable to take a position on behalf of the tribes that I represent until such time as they have had this opportunity.

EARL OLD PERSON,
Chairman, Blackfeet Tribal Business Council.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE REGIONAL OFFICE,
OFFICE OF EDUCATION,
San Francisco, Calif., April 27, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: This office appreciates the opportunity to express a viewpoint on amendment six to Senate Bill 659.

The relationship of the U.S. Commissioner of Education in HEW to the proposed National Indian Board of Education is unclear to me in regard to funding. If the U.S. Commissioner of Education is empowered to make grants as described

in parts A, B, and C, then it seems to me that the role of the National Board of Indian Education is little more than advisory except in instances where the Indian Education Board would assume control of Federal Indian Schools.

With the continuing exodus from the reservation to the urban areas, the National Board of Indian Education needs also to have control of programs that affect Native Americans in the public schools as well as in higher education. I don't see that kind of authority being established in the National Board of Indian Education until it is also responsible for distributing funds rather than having them obligated through the U.S. Commissioner of Education.

I am enclosing a resolution passed at the recent Region IX conference on Urban Indian Education. Also enclosed is a list of Indian persons who could be helpful in providing additional viewpoints.

Sincerely yours,

MRS. COLLEEN REIMER,
Education Program Specialist,
Equal Educational Opportunities.

An urban Indian Education Workshop under the auspices of the Regional Council was held March 18 and 19, 1971. One of the recommendations coming out of the meeting applies to the Jackson hearings on the Kennedy Bill (SB 659). The recommendation follows:

1. That this body support the concept of a national All-Indian Board of Education.
2. That the Indian Community have much more input into the selection of the "Board" than the Bill now allows. (Indians want the board members to be responsible to the Indian Communities.)
3. That the bill include a section on the drop-out problem.
4. That the bill include in it services to urban Indians.
5. That the Bureau of Indian Affairs change their Johnson O'Malley (JOM) policies to include all Indians or to conform to the intent of the Act.

THE UNIVERSITY OF NEW MEXICO SCHOOL OF LAW,
Albuquerque, N. Mex., April 28, 1971.

Hon. EDWARD M. KENNEDY,
Chairman, Senate Subcommittee on Indian Education,
Washington, D.C.

DEAR SENATOR KENNEDY: This will refer to your letter of March 10, 1971, relating to the amendment to pending education legislation that constitutes the Indian Education Act. I am happy to have the opportunity to comment on the proposed amendment.

I believe that the tribal leadership will be consistent in their position of opposing the removal of the Indian education program away from the Bureau of Indian Affairs. This has been their position in the Denver conference of November. 1966; the Kansas City Conference of March, 1967; the National Congress of American Indian convention of October, 1969; etc. It could be that the Senate Sub-Committee on Indian Education has been misled in this respect by lack of balance between witnesses before the committee who were elected representatives of Indian Tribes and represented large numbers of Indian people, with whose children the committee is concerned, and these witnesses who represented their own personal point of view, many of whom were not Indians. It is significant also that no hearings were held in Albuquerque, New Mexico where opposition by the tribal leadership to any removal of education from BIA was strongest. One of the underlying reasons for this tribal position is fear of termination by indirection where it has not been accomplished by direction.

Too often individuals have let their attitude about the BIA, justified or not, color their objective judgment on matters as significant as Indian education. Even the committee on the NAACP Legal Defense and Education Fund which wrote the report "An Even Chance" contained but one official tribal spokesman representative of Indian people.

I will confine my comments to these sections of the bill beginning with Section 561.

Section 561(a) should be amended by adding after the word "members" on lines 4 and 5 the following "who shall be enrolled Indians of ¼ degree or more Indian blood," and deleting from line 10 the words "and organizations."

The reason for these suggestions are that there are too many persons now surfacing as spokesmen for Indians, who are not representative of Indians and even some whose Indian blood is open to question. Further, the education program administered by the BIA is for reservation Indian children and, therefore, Indians recommended by Indian Tribes should make up and control the National Board of Indian Education.

Section 561 (b). Line 9 of this sub-section should be amended by inserting "three-year" after "consecutive." The sentence beginning on line 13 of this sub-section should be deleted in its entirety and the following substituted in lieu thereof. "The Board shall elect a Chairman and a Vice-Chairman at its organizational meeting and annually thereafter."

The suggestion for consecutive three-year terms is so that an excellent board member may succeed himself for two consecutive three-year terms if he originally had only served a part of a three-year term. It is believed essential to Indian control of education that the membership of the Board elect its own officers.

Section 562. Delete sub-section (2) and insert in lieu thereof new sub-section (3) as follows "Preference shall be given to enrolled Indians in appointments by the Board for employment and in their advancement."

I believe Indian preference of enrolled Indians must be established as the policy of Congress not only for initial appointment but also for promotions and career advancement. My reasons for recommending deletion of Section 2 is stated in my comments on Section 564.

Section 563(2). Delete line 3 of this subsection and insert in lieu thereof "with the consent of the majority of the residents of the proposed district." Sub-section (3) delete from line 4 of this sub-section the word "having" and insert in lieu thereof "and who shall have."

The local residents of any proposed Indian school district should have the final determination as to the establishment of local school districts. The board of any school district should have administrative control and direction of any Indian school within the district so organized.

Section 564(a) Amend this sub-section by inserting after "Board" in line 2 "policy control over," change the period at the end of this sub-section to a comma and add "except training programs as authorized by PL 959."

Sub-section (b) Amend this sub-section by deleting all of the language after "learning" beginning in line 6 and inserting in line thereof "shall be transferred to and vested in the National Board by the Secretary of the Interior no sooner than six months nor later than twelve months after receipt by him of a duly authenticated resolution adopted by the National Tribal Chairman's Association requesting such transfer. There is excepted from any transfer training programs as authorized by PL 959."

It is my earnest conviction that the National Board of Indian Education through policy control of the education of Indian children will be able to control and direct the education of Indian children without becoming involved in daily operations and the problems of logistics. These problems could enmesh the Board that it possibly could not function in the more important areas of policy and direction.

After a reasonable period of time, during which much needed experience would be gained by the Board, and the opportunity provided for the duly elected representatives of the Indian people, whose children are being educated in Federal Indian schools, to observe the Board in action, the representatives of the Tribes could request the transfer of all education functions to the Board. The Secretary of the Interior would be authorized to make such transfer upon presentation of an appropriate resolution from the National Tribal Chairmen's Association. This amendment would place the decision of such major importance with the Indian people and this is the essence of Indian control of education for Indian children from Indian communities.

Section 5(b) This sub-section is amended by adding thereto sub-section (4) as follows. "In the exercise of the function under sub-section (b) there shall be open consultation with secondary school students, parents of students, alumni and elected tribal leaders.

This amendment will assure that Indian people most concerned will have an opportunity to express their views and it is consistent with other requirements of this bill.

Section 565(a) In Line 17 after "nominees" insert "of enrolled Indians of ¼ degree Indian blood."

This admendment is consistent with my recommendation for Section 561(a).

Section 583. Strike out all of this section and substitute in lieu thereof, the following:

(*a*) The National Board is directed

(1) to conduct, in concert with the Indian Arts & Crafts Board, a detailed investigation of the programs and operations of the Institute of American Indian Arts at Santa Fe, New Mexico.

(2) to make recommendations for establishing an All-Indian Board of Regents for the Institute.

(3) to submit to the Congress on or before January 1, 1973, a report of its actitvities under this sub-section and its recommendations for the Institute.

(*b*) In the exercise of the functions under this section there shall be open consultation with secondary school students, parents of students, alumni and elected leaders."

The Institute of American Indian Arts should not be elevated to the level of a 4-year college by legislative fiat. The suggested amendment will provide the opportunity for expression by the Indian people most concerned and be consistent with the philosophy of the bill for increased Indian participation in decisions relating to education of Indian students.

Pre-school programs, especially kindergardens are in need of additional funding both for programs and facilities. I recommend the bill include an authorization to that effect.

Along with the need for school construction there needs to be an increased authorization for the construction of all-weather roads to serve both existing and future schools. When I retired from the BIA on May 31, 1969, the optimum funding of 50 million dollars per year would be required to meet long-range road construction needs by 1985 but the then rate of funding will not meet these needs until the year 2000. At the same time the 5-year need for education construction was 178 million dollars. It is obvious that the goals of the bill cannot be accomplished unless these situations are improved.

I am on record in pointing out to the Congress that while it will allocate 25 million dollars per year for Indian students to be trained as barbers, and mechanics, etc., and pay family living costs while undertaking such training, only slightly over 4 million dollars per year was allocated for Indian students to attend college, leaving no funds for family living expenses. These needs to be brought into balance and I recommend that vocational training funds and higher education funds be consolidated in one line item to provide more flexibility and also opportunity for Indian students to cross over from one program to another, when justified, without jeopardizing their opportunity for training.

I would recommend that the National Board of Indian Education be authorized to carry out the functions of the present BIA Higher Education program in accordance with regulations promulgated by the National Board, including but not limited to, contracts with Indian Tribes, many of whom already have scholarship programs.

I wish to express my appreciation for the opportunity to comment on the proposed bill. I hope that my comments will help in the development of an Indian Education Act which meets the needs of Indian children in a manner satisfactory to them, their parents and their elected leaders.

Sincerely yours,

ROBERT L. BENNETT, *Director.*

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
NATIONAL INSTITUTES OF HEALTH,
BUREAU OF HEALTH MANPOWER EDUCATION,
Bethesda, Md., April 28, 1971.

SENATOR EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: I am in receipt of your letter dated April 19, 1971, as well as the copies, brief analysis, and outline of suggestions relative to Amendment 6 to S.659, the American Indian Education Act.

I was told by Mr. Tom Sussman, of your office, that though you requested my comments and suggestions before April 28th, that a slight tardiness in this regard would not be critical. Travel status has kept me out of the office and I was unable to respond until now.

The promptness with which you responded to my request for copies of this Act was most stimulating. My wife and sons are likewise proud of the opportunity that you are personally providing me in being able to offer my comments.

Senator Kennedy, at this point in time, I happen to be the only full-blood Indian dentist (Pueblo tribe of New Mexico) in the Federal Government and as far as I know, perhaps the only one in the country. I have been a dentist for fifteen years and during all this time I have been subjected many times to the following question—why are there so few Indians in the Dental and Medical professions? Each time I am asked this question I must refer to the Educational system (or lack of it) provided for American Indians. My own situation in obtaining a dental degree is unique and therefore I cannot relate it to other Indians.

Recently, I have become a member of the newly formed National Indian Education Association. In addition I have attempted to spread the word across the country that my dental brothers, namely the dental school deans, have asked me to recruit qualified Indian boys or girls into the profession of Dentistry. To my dismay, such a boy or girl is unavailable, not because they are not, or could not be motivated, but because their educational background is deficient to qualify them to meet the present dental school entry requirements.

The provisions in your proposed Indian Education Act will assure that sad commentaries such as the above, will be alleviated. I therefore submit this letter as a statement of support to your proposal.

I have reviewed the Act thoroughly and as a dental administrator in the Federal Government devoted to the managing of grant monies to dental schools to better meet educational objectives, I feel comfortable with most parts of the Act. My only suggestions relate to Part D of the Act, and suggestion number three in the outline of suggestions.

Relative to Part D, the establishment of a National Board of Indian Education, I strongly feel that there should be an Indian member representing the health professions. With only four full-blood Indian Physicians, and one full-blood Indian Dentist, in an American Indian population approaching 800,000, I feel that this area of Indian representation is lacking.

Concerning suggestion number three in the outline of suggestions, I again feel that technical assistance, and provided for by the National Board should include physiicans, dentists and other health specialties.

May I take this opportunity to thank you Senator Kennedy, and the other co-sponsors of the Indian Education Act, for your efforts in wanting to better the plight of the American Indian in this regard.

My grandparents could neither read or write. My parents were unable to obtain a college education. I have hopes that my fellow Indian brothers and sisters across this country will fare better, educationally, than past generations were able to do.

Sincerely yours,

GEORGE BLUE SPRUCE, Jr., D.D.S., M.P.H.,
Chief, Auxiliary Utilization Section,
Education Development Branch,
Division of Dental Health.

BOSTON INDIAN COUNCIL,
Boston, Mass., April 26, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: Amendment No. 6 to S659, the Indian Education Act is certainly a vast step forward for those of us who reside along the Eastern Seaboard and who are members of non-BIA-affiliated tribes. For the first time we may be included in a national Indian program. Until now, we have found that while we suffer the same inequities as those Indians who come under the jurisdiction of the B.I.A., we are totally left out of solutions and remedies. The fact that as few as ten Indian children are needed within a school district, will make funding for Indians possible in those areas where the Indian population is not concentrated or considered substantial enough to qualify for funding under existing programs.

There are some suggestions, I would like to make at this point.

In places where "participation by tribal communities and parents" are specified, it might be wise to include inter-tribal or Native American communities. In urban areas, often there are many tribes represented and while there is usually one or several Indian organizations, there is rarely a tribal community as that is commonly understood.

In defining "Indian", here in Boston we ask that a person show proof of acceptance within an Indian community. He must be accepted as Indian by Indians either here or elsewhere, if he cannot document his ancestral birth claim or his enrollment in a tribe or band.

Under Section 314 relating to "Improvement of Education Opportunities for Adult American Indians," it would be beneficial in compiling national statistics if research into "illiteracy and lack of high school completion" were extended to state reservations, urban and rural Indian communities. It is important to be explicit in regard to state reservations, because when one is not, only federal reservations are considered.

The National Board of Indian Education, in our opinion, should be in the Executive Office of the President. In this manner, the Board will not become entrenched in the existing bureaucracy.

In selection of the Board, it is my sincere hope that someone from a non-BIA affiliated group from the Eastern Seaboard will be selected as a representative. To my knowledge, we are not included in any national boards or committees.

Under miscellaneous provisions, requirements for admissions, programs and accreditation should be waived for those institutions in or near all Indian communities, not just reservations.

I am in agreement with most of the suggestions for improving Amendment No. 6 already submitted except for the one which says, State Departments of Education should be by-passed for all distribution of funds allocated under this bill. Here again, Eastern Seaboard Indians often have no formal arrangements with the federal government. This is a decision that should be made by the tribes or organizations residing in a particular state.

In view of the fact that the National Board is given so much power, I disagree with the proposal requirement that the Office of Education and the Office of Economic Opportunity should secure the Board's approval on programs and disbursement of funds. This just might tend to be discriminatory against urban and smaller Indian groups who are not represented on the Board.

All in all, we support the amendment and hope that you will continue in your efforts to help Indian people realize true self-determination and control over our own lives.

Very truly yours,

RAYLEEN M. BAY, *Coordinator.*

DAVIS, CALIF., *April 20, 1971.*

HON. EDWARD KENNEDY,
Senate Subcommittee on Indian Education,
U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: I am very enthusiastic in support of your legislation relating to Indian education, except in regards to the section relating to higher education. Allow me to make the following points:

1. Your language excludes Indian-controlled universities, such as Deganawidah-Quetzalcoatl University.
2. Your language allows colleges controlled by non-Indians to secure funds which should go only to Indian-controlled schools.
3. Your language would allow colleges with Indian boards hand-picked by the bureau to obtain funds.

I am enclosing a resolution which contains language which could be incorporated in your bill.

Above all, no college or university should be able to secure special funds for Indian higher education unless its governing board is comprised of at least one-half Indians who have been democratically selected by Indian people or organizations.

Your cordially,

JACK D. FORBES, PH. D.

RESOLUTION ON AMERICAN INDIAN AND MEXICAN-AMERICAN HIGHER EDUCATION

Whereas, very few American Indian and Mexican-American students are presently attending colleges and universities; and

Whereas, American Indians and Mexican-Americans have the lowest average educational achievement of any groups in the United States; and

Whereas, the federal government is at present providing no direct and regular financial support for colleges or universities oriented towards, and directed by, American Indians and Mexican-Americans; and

Whereas, the Bureau of Indian Affairs college scholarship program provides only minimal financial support for Indian students; and

Whereas, the Bureau of Indian Affairs college scholarship program is administered bureaucratically, without an impartial review boards; and

Whereas, a group of American Indians and Mexican-Americans have established Deganawidah-Quetzalcoatl University at Davis, California; and

Whereas, the Navajo Tribe has established Navajo Community College at Many Farms on the Navajo Reservation; and

Whereas, other Indian and Mexican-American colleges are proposed;

Therefore, be it

Resolved, That:

1. the Office of the President of the United States, the General Services Administration, and the Department of Health, Education and Welfare do everything possible to expedite the transfer of the former Army Strategic Communications Facility, Davis, California, to the trustee of the Deganawidah-Quetzalcoatl University;

2. the Office of Economic Opportunity, Department of Health, Education and Welfare, Department of Labor, Interior Department, and other appropriate agencies forthwith bring to bear all available resources to expendite the development and funding of Deganawidah-Quetzalcoatl University, Navajo Community College, and other such colleges and universities which may be established by Indians and Mexican-Americans;

3. the Interior Department establish a National Native American Scholarship Board to develop policy and to establish review procedures for the Bureau of Indian Affairs' scholarship programs, said Board to be composed of one representative each selected by the governing boards of the National Indian Education Association, the National Congress of American Indians, the Navajo Community College, the Deganawidah-Quetzalcoatl University, the National Indian Research and Training Institute, the National Council on Indian Opportunity, and the California Indian Education Association, with ex-officio representatives (one each) from the U.S. Office of Education, the Office of Economic Opportunity, the Department of Labor and Bureau of Indian Affairs; and

4. that the U.S. Office of Education's budget be augumented to include an appropriation, equal initially to the annual federal appropriation for Howard University, to be utilized for American Indian and Mexican-American higher education and specifically for the support of colleges and universities whose legal governing boards are comprised of a majority of American Indians or Mexican-Americans and whose programs are designed to meet the unique needs of American Indian and Mexican-American communities.

[Telegrams]

MARSHALL, MINN., *April 27, 1971.*

HON. EDWARD M. KENNEDY,
Senate Committee on Labor and Public Welfare,
Washington, D.C.:

This is to express endorsement of amendment No. 6 of S. 659 and other recommendations of subcommittee. I strongly support the direction of the determination and the retention of Indian culture through the education progress. I also wish to convey appreciation of your extensive efforts in preparation of this legislation.

ROBIN RAE BOFFERDING,
League of Women Voters, Marshall, Minn.

DULUTH, MINN., *April 27, 1971.*

SENATOR EDWARD KENNEDY
Committee on Labor and Public Welfare,
Washington, D.C.

DEAR SENATOR KENNEDY: I am in full support of the Indian Education Amendment No. 6 to S. 659. I feel with input such as Mr. Will Antill, the bill fully states what is needed in Indian education in Minnesota.

Sincerely,

MRS. NORA HAKALA.

MINNEAPOLIS, MINN., *April 28, 1971.*

Hon. EDWARD KENNEDY,
Washington, D.C.

DEAR SENATOR KENNEDY: Please consider out support for the Indian Education Act Amendment 6 to Senate bill 659 as offered by the Honorable Senators Mondale and Kennedy. This legislation is a milestone of cognizance to the deplorable conditions in Indian education. It is also a tremendous step toward Indian self-determination so essential in providing innovative and community-based efforts in culturally oriented programs. The considerations of all members of Congress is appealed to for the passage of this legislation.

SENATOR GEORGE R. CONZEMIUS,
Minnesota State Legislature, and
Secretary Minnesota Indian Affairs Commission.

JACKSON COUNTY DEPARTMENT OF SOCIAL SERVICES,
Black River Falls, Wisc., April 26, 1971.

Senator EDWARD M. KENNEDY,
U.S. Senate,
Committee on Labor and Public Welfare,
Washington, D.C.

DEAR MR. KENNEDY:

We have read the proposed Amendment 6 to S.659, the Indian Education Act, and find it to be a most timely piece of legislation. Many of the suggestions for improvement also merit consideration.

The only major weakness that we have observed is that there appears to be no provision to insure recognition of the parent-student groups. We have worked on many education projects with our local school district and the State Department of Public Instruction, and we have always felt that community representatives were placed in a position of great disadvantage in these negotiations. The first problem arises when public institutions request some verification of the committee groups' credentials. If there could be some guidelines that would insure community recognition and participation, many obstacles would be removed, and the members of the community could have some statutory authority to give them strength.

The second area of difficulty arises when community groups attempt to fulfill their responsibilities in representing the community. They usually have no funds to cover their operating expenses. We would like to see some funding authorized to meet per diem expenses and provide money for office space and equipment.

We are members of the Great Lakes Intertribal Education Committee and also members of the local Winnebago Education Committee. Since the Great Lakes group has already requested permission to participate in the hearings, we feel that we can endorse the amendment with the understanding that more Indian input will be considered before the bill takes final form.

Very truly yours,

Richard Cooper, *Social Worker II.*
Calvin Whiteagle,
Chairman, Winnebago Indian Education Committee.

THE NAVAJO TRIBE,
WINDOW ROCK, NAVAJO NATION, ARIZ.,
April 27, 1971.

HON. EDWARD KENNEDY,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of April 19, 1971, concerning the Indian Education Act, Amendment No. 6 to S. 659.

I have reviewed the copies you sent to my office and find it quite favorable. Indian control of Indian Education is urgently needed and definitely should be made up of and staffed by Indians. I believe it is only through this reform in Indian Education that we can be able to really move forward.

Again, I want to thank you and your committee supporting this amendment. It is only through your effort and help that this reform in Indian Education is possible.

If I can be of further assistance, please do not hesitate to write.

Sincerely yours,

WALLACE HANLEY,
Assistant to the Chairman.

CALIFORNIA INDIAN EDUCATION ASSOCIATION, INC.,
REGION I (NORTH COAST),
Hoopa, Calif., April 25, 1971.

Senator EDWARD KENNEDY,
U.S. Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: This is in reference to Senate Bill 659, (Indian Education Act) which you authored. We are generally in favor of the bill, but would like to see certain changes which we feel are most important. We would like to have the National Indian Board composed entirely of Indian people, and also feel that these Board members should be elected by Indian people so that they would be responsible directly to the Indian people.

Further, under Section 584 of the Amendment to Title III of the Higher Education Act of 1965, we feel that the word "Community" should be removed so as to include all colleges, and a clause should be added to this section to give priority to those colleges which are controlled by Indian people. Included would be such colleges as Navajo Community College and Deganawidah-Quetzalcoatl University which should have top priority.

In closing, I would like to thank you, also, for your valuable help in making the Deganawidah-Quetzalcoatl University a reality for the Indian and Chicano people. It is a wonderful thing.

Sincerely,

VIVIEN HAILSTONE,
Chairman, Region I.

BUREAU OF INDIAN AFFAIRS,
Ganado, Ariz., April 27, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of 19 April 1971 requesting recommendations on Amendment 6 to S. 659, the Indian Education Act.

The parents of young Indian students want quality education. The Indian Education Act should not lower any standards; instead, it should keep abreast or better the standards of education as required by the states.

The fate of Indian Education should not be allowed to fall into the hands of Indian politicians. Many of the Tribal leaders are not professional educators. Educational professional people of Indian descent should have a major part in formulating educational policies. Indian Education must be free from petty politics.

Civil Service Regulation cannot totally be disregarded. Some minimum requirements are necessary, or else we lose sight of a goal towards quality education.

Some areas need improvement, e.g., qualification and certification of teachers and administrators, and student teacher ratio needs to be lowered.

If colleges and universities are forced to lower their standard for Indian admittance, it will provide Indians with sub-standard and inferior education.

Sincerely yours,

SAMUEL BILLISON, *Principal.*

NEW MEXICO STATE UNIVERSITY,
Las Cruces, N. Mex., April 25, 1971.

Mr. EDWARD M. KENNEDY,
Committee on Labor and Public Welfare,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: I am sending this letter on behalf of the United Native Americans Organization of New Mexico State University. This organization is the only chartered organization on this campus that is of Native American membership. I also send this letter as president of the organization.

We the Native American students at New Mexico State University are aware of the Kennedy-Mondale Indian Education Act. We as college students and future Indian educators verily believe that this Amendment should be passed, we therefore, fully support the Amendment.

We strongly believe that this Amendment will effect and affect our lives, especially since we are the future educators for our kids. We have come to a realization that the educational standards we now face is short of what we want. We feel that we can better the so-called educational standards as it now stands, thus in order for us to make that a reality passage of the above Amendment is imperative. It will surely open new doors in the area of Indian education.

We urge everyone concerned to fully support said Amendment; we certainly hope that eyes will be open and see the importance of the passage of the above Amendment.

We as students of New Mexico State University are also aware of certain other findings on Indian Education and we hope that these and other findings become a reality and not have them tucked away as have been the case in the past. We hope that this is not just another waste of the federal funds. We are getting tired of being studied and researched and yet have nothing done for us. We do not want our hopes to again be shot out the saddle. We need to run our own educational efforts.

Again, we, the Native American students at New Mexico State University fully support Amendment 6, S. 659, Indian Education Act and ask that its passage be allowed as soon as possible.

Respectifully submitted on behalf of all Native American students at New Mexico State University and on behalf of the United Native Americans Organization.

FRED JOHNSON, *President.*

THE COMMONWEALTH OF MASSACHUSETTS,
EXECUTIVE DEPARTMENT,
Boston, Mass., April 26, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: I note that the Senate is at this time discussing a bill designed to deal comprehensively with the problems and challenges of Indian education.

With many other loyal American citizens, I am gravely disturbed regarding the apparent past unconcern of our Government's responsibility towards the native American.

If we are to make meaningful inroad against the unfair patterns which have existed for so many years in our educational system, it is absolutely imperative that Amendment 6 to S. 659, the Indian Education Act be implemented.

I fully endorse and support such amendment.

GEORGE M. ALLEN,
Assistant to the Governor on Human Rights.

APRIL 26, 1971.

Senator EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: Having read the information sent me regarding Amendment 6 to S. 659, the Indian Education Act, I offer my endorsement of this proposed legislation.

I was particularily gratified to find supportive services playing a major role in future Indian education programs. As an advisor and professor at the University of South Dakota I am well aware of the social and psychological problems facing the American Indian at the elementary, secondary and college level.

One concern that I had was the possibility that Johnson-O'Malley funding might be returned to school boards serving the Indian population. In fact I am aware that some Tribal leaders are attempting to organize opposition to the amendments because of their fears concerning control of JOM funds.

Again I would like to state that I suppot Amendment 6, to S. 659.

Your concern for the American Indian is deeply appreciated and we hope for your continued support.

Sincerely yours,

JOHN E. MACKEY.

LANSING SCHOOL DISTRICT,
Lansing, Mich., April 27, 1971.

Sen. EDWARD M. KENNEDY,
Committee on Labor and Public Welfare,
Washington, D.C.

DEAR SENATOR KENNEDY: Thank you very much for your letter of April 21 requesting my comments and support on Amendment 6 to S. 659 of the Indian Education Act.

Currently I am teaching a course in American Indian History at Everett High School to 120 students. As far as can be determined, it is the only course of its kind in the State of Michigan at the high school level, and quite possibly the only course of this kind in the country. I opened up the topic of your amendment to these students for comments and suggestions.

Their first reaction was positive because it was designed to assist Indians, but an underlying question was bothering them. Is this amendment contrary to Civil Rights legislation because it proposes a type of segregated education? Also, why couldn't the present schools be adjusted with the funds?

I also contacted the top people of the various organizations with which I am affiliated, and asked for their support or suggestions on your legislation. In all cases they endorse the amendment in principle and urge passage of such. The specific people and organizations are:

Dwayne Wilson, Advisory Specailist, Equal Education Opportunity, Human Relations Task Force, Lansing School District.

John Winchester, Center for Urban Affairs, Michigan State University, Coordinator of American Indian Programs. John is also vice president of the National Indian Education Association, and is a commissioner on the Michigan Indian Affairs Commission.

George Bennett, President, Michigan Indian Benefit Association.

If there is any additional way I can be of assistance to you, please contact me.

Yours very truly,

JAMES W. FAULKNER,
Instructor, American Indian History.

CRESCENT CITY, CALIF.,
May 10, 1971.

DEAR SENATOR KENNEDY: I was very impressed with your amendment on the Indian Education Act. A 15 man National Board of Indian Education is the one we endorse over the Bureau of Indian Affairs, if you aren't creating another B.I.A. The guidelines should be strong.

Sincerely,

BARBARA ELLER,
Secretary Treasurer, Area I,
North Coast California Indian Education Association.

MINNEAPOLIS, MINN., *April 27, 1971.*

Hon. EDWARD M. KENNEDY,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: This letter is in reference to Amendment 6 to S. 659, the Indian Education Act. I support the bill in general, however, I do have some comments.

The bill is very comprehensive and it appears that it could provide solutions for many of the extensive needs in Indian Education. However, there appears to be a failure to adequately consider educational needs of the Indian student in public institutions of higher learning. Perhaps it is understood that this is included in the transfer of the Bureau of Indian Affairs programing, and could be dealt with administratively. Regardless, I feel that there is a definite need to consider programing for the Indian college student, much more extensively than is currently allowed.

One suggestion which I strongly support, as listed in your comprehensive analysis, was number two (2): "provisions should be made for an Indian Tribe or Community to qualify for the Office of Education funds in order to develop their own schools when the L.E.A. will not or cannot cooperate with parents of Indian children in that public school. Construction funds must be available under this option."

One point which seems to have created much discussion is that educational needs of all Indians, according to definition, could be dealt with. This provides for non-reservation Indian children, including terminated tribes, state reservation Indians and Urban Indians. I feel that this is a positive point. All Indians are entitled to these opportunities, regardless of their status.

In reference to the definition of an Indian, I would suggest that the end of the definition be changed from "or who is considered by the Secretary of Interior to be Indian" to "or who is considered by his Indian community to be Indian."

I feel that I can give support for Part B of the amendment as I interpret it, to date. This involves the Special Programs and Projects to improve the Educational opportunities of Indian Children. The text is quite comprehensive, especially with inclusion of eligibility of reservation Indians for programs administered by the Office of Education.

I believe it is a must to establish an all Indian National Board of Indian Education, located in the executive office of the President with full and direct authority in educational matters concerning Indian education. I question the advisory role of the Board in regard to O.E. funding and programing. I feel it is necessary for the Board to have a more concrete function and a clearly definite voice than an advisory role, as such, would furnish. The selection process for Board members seems adequate—I have some questions however, relating to this. If the process equates with the present process of selection of the Commissioner of the Bureau of Indian Affairs, I would suggest alternatives be considered.

I had many more comments and suggestions however I believe they are being considered and have been pointed out already. It would only be repetitious to expound further.

Thank you for any consideration given to this letter and also for your sincere concern and outstanding leadership in the initiation of this legislation!

Sincerely,

ELIZABETH A. WHITEMAN,
Crow, Montana.

STATE OF MINNESOTA,
DEPARTMENT OF EDUCATION,
Bemidji, Minn., April 27, 1971.

Hon. EDWARD M. KENNEDY
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: Your letter requesting my reactions to various sections of Amendment 6 to S.659, the Indian Education Act, was received over the weekend. I will endeavor to relate my immediate reactions to some of the proposed elements of this new legislation and hopefully, have it at your disposal for the scheduled hearings on April 28 and 29.

I feel it is a desirable move to transfer the responsibilities of administering the programs of Indian education, on the national level, to a National Board of Indian Education; and that such Board be located in the Executive Office of the President. I would agree, too, that there should be established a Bureau of Indian Education in the Office of Education to administer Title III (Public Law 874–81), Section 810 of Title VIII of E.S.E.A. of 1965, and Section 314 of Title III of E.S.E.A. Amendments of 1966. I have definite reservations, however, regarding other portions of this proposed legislation.

The provision to finance an independent Indian school, separated from the public school district, I believe to be of questionable merit in Minnesota. This might be applicable in a specific situation, but certainly should first require the concurrence of the State Department of Education. The problem of providing an adequate separate secondary school program would be difficult because of the small local Indian population. In Minnesota, this would normally mean secondary schools with one hundred or less Indian students enrolled. If only an elementary school were maintained for Indian students, the transition from elementary to secondary would perpetuate a period of extreme shock, and the resulting high level of student drop-out. Separate Indian schools would undoubtedly result in the loss of considerable state support for education, and would continue all the the evils of a segregated school system. I feel it would be better to improve Indian education in our public schools, where Indian students now attend, by upgrading the curriculum to provide an acceptable quality of Indian education for both the Indian and non-Indian students, and by a constant in-service program for teachers of Indian students.

The suggestion that the National Board should have the authority to establish accreditation requirements that State Departments of Education would have to accept would, I believe, result in a sub-standard level of education for Indian children, and would not prepare those who so chose to successfully participate in the academic disciplines of higher education.

I do not believe it would be advisable for federal funds related to education to go directly to Indian tribes, who would then contract with local school districts. This would tend to fragment a well-rounded school program, and create friction within a school district. It would be far better to require approval by a local representative Indian committee, elected by the Indian community, for any school program financed by federal funds in support of Indian education.

Substantial immediate financing for school construction from P.I. 815 funds is imperative. Inadequate building facilities is one of the major handicaps in developing a comprehensive education program to provide for the unique needs of Indian education.

Sincerely yours,

WALTER W. CHRISTOPHERSON,
Supervisor of Indian Education.

C.H.I.E.F. *April 27, 1971.*

Senator EDWARD M. KENNEDY,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: Your letter of April 21, enclosing a copy of Amendment 6 to S. 659, the Indian Education Act, only reached me yesterday. Quite obviously I am in no position to send you a comprehensive critique of the legislation which you have introduced; after all, many able men have been at work for two years or more to draft it, and I have had it in front of me for little more than twenty four hours. However I can address myself to the main thrust of it. I do approve of your creation of a brand new agency which will have authority and responsibility for Indian education. I also approve . . . . if I am reading the fine print correctly . . . . of the fact that the Federal Government now recognizes that the Indian communities themselves should architect their own educational programs. However I do see one danger. While the old B.I.A. boarding schools have much to be ashamed of, they have (in spite of themselves) fostered the growth of pan-Indianism, which I think has been the most significant development for good amongst the Indians in our time. There is a danger that local autonomy in the design of educational programs will result in the creation of a school system with too parochial an outlook.

Turning to the twelve suggestions for improving Amendment 6, I disapprove of suggestions 4, 8, 10 and 12. 8 and 10 smack of an illiberal spirit. 12 means that, inevitably, one Federal Educational Policy will be adopted, which warps the very essence of what you appear . . . to me . . . to be trying to do. I think that the young Indian should be offered a wide variety of educational options, and if HEW or OEO come up in the future with exciting new programs, they should have the right to try them out. As to 4, my objection goes deeper. In recent years a number of well-meaning school administrations have deliberately lowered their standards to "service" the black community. The results have been disastrous. Young blacks are graduated from college, only to find that they could not compete in the job market with young white graduates. They are quite entitled to feel that they have been the victims of an elaborate hoax. To lower standards for Indian educators is wrong. Recast the suggestion to read that educators will have three years in which to meet the necessary standard, and I might be willing to buy it.

Finally, I would like to add a suggestion. You have noted, in your remarks before the Senate on February 25th "that Indian students in Federal schools score more than 2 years below national norms on achievement tests." This leads me to point out that almost all the current achievement tests . . . SSAT and the like . . . are objective tests, designed with the child from a middle-class suburban environment in mind. The further you move from the world of Brookline, Scarsdale or Waukegan, the less well does the youngster test out. I know; I taught college in Montana for three years. The ranch bred kid from Fishtail or Lavina performed poorly, in relation to his native intelligence, on his college entrance boards. If he did poorly, you can imagine what happened to the Northern Cheyenne boy or girl from Ashland. I should like to see specific provision made to support the development of adequate non-objective testing devices which will more fairly measure the real intelligence of youngsters from the under-privileged minorities.

Sincerely Yours,

DR. NATHAN C. SHIVERICK.

BARRY COLLEGE SCHOOL OF SOCIAL WORK,
April 26, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

Re Amendment 6 to S. 659.

DEAR SENATOR KENNEDY: This is in reply to your letter of April 19, 1971 relative to the above legislation. Thank you for sending a copy of your amendment and asking my response.

After carefully reading the proposed amendment I unequivocally support its passage and implementation. As an American Indian teaching in a graduate school of social work, I have been particularly concerned for some time at the lack of Indian students entering my profession. A profession which ostensibly provides the essential tools needed by the Indian to attain self-sufficiency. I feel the Indian Education Act will provide the necessary educational structure (controlled by Indians) which will make Indian education palatable to the Indian. When the total demographic, socio-cultural and welfare picture of the American Indian is examined, it presents many graphic needs, but especially the need for educational services. In addition to many splendid innovations, I am especially impressed with the attention given to the modfication of boarding schools to treatment centers for emotionally disturbed Indian children. That one step, if properly implemented, will do much to eliminating the problems of school drop-outs, alcoholism, suicides, etc. I, also, very much like your broad definition of "Indian," that will include the urban Indian heretofore neglected. The Indian should be actively involved in resolving his own problems. This involvement will require highly skilled Indian leadership in many professional areas. This legislative package will provide the educational structure to develop that essential leadership.

Co-incidentally, I have currently been involved in developing an educational grant to work with the South Florida Seminoles. Many of the problems discussed in your proposed legislation are obvious as we examine the Seminole community.

I am writing my Florida Senators requesting they support this legislation. Any further assistance that I may be in this matter, please feel free to contact me.

Very truly yours,

CHARLES E. FARRIS, ACSW,
Assistant Professor.

COLLEGE OF ST. THOMAS,
St. Paul, Minn., April 26, 1971.

Senator EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for the information regarding Amendment 6 to S. 659, the Indian Education Act.

The College of St. Thomas is indeed concerned about the native American, and at the present time I am working on a program which will allow Indian students to attend St. Thomas without worry of academic failure or financial burden.

I have read the information you sent me, and I enthusiastically support your suggestions and Amendment 6.

I would appreciate any further information on the progress of this Amendment.

Sincerely yours,

FRANK J. CHIODI, Jr.,
Assistant Director of Counseling.

MOORE, OKLA., *April 27, 1971.*

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Committee on Labor and Public Welfare,
Washington, D.C.

DEAR SENATOR KENNEDY: In response to your letter to me of April 19, 1971, in which you enclosed copies of Amendment 6 to S. 659, the Indian Education Act, I am enclosing comments and suggestions for possible improvement and change.

I, as a member of the Cherokee Nation of Oklahoma, have enlisted the aid of other Indian input from Mrs. Betty Campbell, member of the Kiowa Tribe of Oklahoma and Mr. Joe Work, member of the Choctaw Nation of Oklahoma, who work with Indian youth and parents in the area of education.

I felt that input from more than one tribe from qualified people who now work with Indian children in different counties of the State of Oklahoma would be a definite benefit to your scheduled hearings of April 28 and 29.

Since this letter was not received by me until April 23, I am sending this Air Mail, Certified Mail, as I feel that this input should be a definite part of the scheduled hearing.

As an Indian of Oklahoma, who works with Indian youth and parents in the state, I have definite feelings about the educational opportunities of the Indian youth of Oklahoma as well as the rest of the United States. I am honored that my opinions were solicited.

Sincerely yours,

PATRICIA ANN DOWNING (FARRIS).

RE AMENDMENT NO. 6 TO S. 659

The following suggestions are in response to items as specified relating to Oklahoma as opposed to Reservation areas.

Item 2. "Provisions should be made for an Indian tribe or community to qualify for Office of Education funds in order to develop their own schools when a local educational agency will not or cannot cooperate with parents of Indian children in that public school. Construction funds must be available under this option."

Suggestion.—Indian children in Oklahoma as tribal members are scattered throughout the state, therefore, this amendment would only go to further alienate the children from the society in which they must live and compete. We in Oklahoma do not need to further add to a feeling of difference as American citizens.

Item 7. "The National Board should have the authority to establish accreditation requirements for federal schools that State Departments of Education will have to officially accept."

Suggestion.—We feel the accreditation of federal schools should be a function of the State Department of Education as the federal schools should have the same quality of education and requirements as the local public schools. Stated more specifically—those children who attend federal boarding schools and who then return to the local public schools for various reasons should be able to continue with their studies and be prepared to compete academically with their grade level and/or peer group. This would be deemed necessary for those who not only complete their education at the high school level, but those who must be prepared to complete in higher institutions of learning.

Item 8. "State Departments of Education should be by-passed for all distribution of funds allocated under this bill."

Suggestion.—For the State of Oklahoma it is definitely felt the allocation of funds, specifically the Johnson-O'Malley Act, should continue to be a function of the Oklahoma State Department of Education. Continuance of the current program at the state level would assure that all the children of our tribes in Oklahoma would be serviced; whereas should the funds be administered and controlled by specific tribes this would not be effective as tribal members are located throughout the state. To cite an example: "In the existing Coordinator Program should one tribe employ a worker or coordinator for that specific tribe and should he find in his school as many as 15 different tribes, this worker would be compelled to work with only those students of the tribe that employed him. What is to happen to the other 14 represented tribes within that school district? Should there be a coordinator/worker for the other 14 tribes there would exist an overload of workers in one school not to mention the broad area the worker would have to cover to reach his students and hopefully be effective. This one incident shows only the problem encountered through workers not to mention the loss of funds which would be required to administer such a diversified program.

NOTE.—We feel that the thinking of the majority of the Indians in Oklahoma are of the opinion that the Bureau of Indian Affairs in contracting with the State Department of Education has efficiently operated and carried out the functions of the Johnson-O'Malley program in the State of Oklahoma. Therefore, their authority should not be vested to the National Board of Indian Education.

[Telegrams]

MANKATO, MINN., *April 30, 1971.*

Senator EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

Urge you heed advice of Will Antell re amendment 6 to S. 659, Indian Education Act, if Indian education remains part of BIA.

Senator EDWARD M. KENNEDY,
Senate Office Building,
Washington, D.C.

We support Indian Education bill now in Senate hearings.

RAY MURDOCK,
Chairman, Indian Education Advisory Committee,
Duluth Public Schools, Duluth, Minn.

STATE OF NEW MEXICO,
DEPARTMENT OF EDUCATION,
Santa Fe, N. Mex., April 27, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: I received your letter and copies of Amendment 6 to S. 659, the Indian Education Act, this past Friday 23 April. Unfortunately, because of the scheduled hearings on 28 and 29 April, I am unable to present to you at this time only a few of my personal comments and sugegstions. In working for a better education for my people as Director of Indian Education, I believe that I can certainly support Amendment 6. I welcome efforts to bring to my people the type of education we desire our young people to have, rather than the type of an education which an educator without knowledge of our specific problems and needs would design for us, to fit into the mold of the "average Middle-class American family."

There must come a time when those of us in the field of education must look at and consider the needs of the students for whom we are responsible. We must meet these specific needs by becoming involved with the people whose children it is our responsibility to educate, and the parents, conversely, must be able to feel that they have the right, or more especially, the responsibility, to meet with the boards of education and the school districts to plan programs which will specifically meet the needs of their children over and above the standard curriculum.

It is my belief, also, that your Amendment would elminate any bias the present programs have which are discriminatory toward one group of Indians as against another. I have difficulty in reconciling myself to the fact that the Government has established certain guide lines which enable one group of Indians to be aided while excluding another.

The urban Indian, in my opinion, has actually been penalized for attempting to move off the reservation and becoming a member of the predominant society, yet those of my people who choose to remain on the reservation are also criticized. This appears to be another case of being damned if you do and damned if you don't. I can envision amendment 6 eliminating this fact, or at least establishing a program to help the urban Indian.

We have people who are attempting to aid the Indian, and perhaps in some way begin to bring Indian education to a meaningful level for my people, but then at the same time, we have to cope with groups still breaking treaties and/or pacts with the Indian. We discuss how we can bring higher education to more of my people and how we can aid Adult Indian Education, and while this is being done, the State of Colorado has decided to end its agreement with Indians to provide them an education at Ft. Lewis.

I commend your efforts to establish a National Board of Indian Education, a board whose members will be expert Indians and, at last, not Indian experts. Hopefully then, the last of the old line "Indian educators" will follow the way of the buffalo, and the remark made to me several years ago by a BIA educator can be forgotten. Not realizing that I am Indian, or probably not caring, she said to me, "I just love Indians. They are such delightful savages."

Thank you for asking for my comments on your Amendment, but most of all, thank you and the other members of Congress who have chosen to show my people that there are people in Washington who care.

If I can be of further assistance to you, this Division and I will be most ready to help in any manner possible.

Sincerely yours,

WILLARD A. SCOTT,
Director, Division of Indian Education.

CITY OF BOSTON,
MAYOR'S OFFICE OF HUMAN RIGHTS,
Boston, Mass, April 27, 1971.

Hon. EDWARD M. KENNEDY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: I am delighted to receive the opportunity to support such an excellent effort to improve the quality of life for such a significant minority as the American Indian. In Boston, the work of Education Director

Cecile Landrum in the Mayor's Office of Human Rights, with the Boston Indian Council has made us increasingly aware of the problems that the Eastern seaboard Indians confront in receiving federal funds for education. Thus, I feel that the sections of legislation which will enable the Eastern seaboard Indians, which are not affiliated with the Bureau of Indian Affairs, to receive federal funds will be of great assistance to the Indians who reside in cities like Boston.

At the same time, it would be unfortunate if at least partial control of these federal funds would not be exercised by a representative of the Eastern seaboard Indian tribes. Therefore, I would suggest that amendments be made which would pemit a representative of the non-Bureau of Indian Affairs affiliated tribes to sit on the national board.

Since many Indians in the eastern part of the United States do not reside on state reservations, it would seem that when studies are undertaken to determine illiteracy and high school dropout rates that it would be inappropriate to exclude the many Indians who do not reside on state reservations.

Finally, the section of the proposed legislation which would permit school systems which have ten or more children of Indian extraction in their system to receive federal education funds, seems to be excellent because of the great dispersion of American Indians in the eastern part of the United States.

In sum, I wholeheartedly support amendment 6 to S. 659, the Indian Education Act which you have introduced to the Special Sub-Committee on Indian Education.

Sincerely,

A. REGINALD EAVES, *Administrator.*

HAWTHORNE, CALIF.,
April 24, 1971.

DEAR SENATOR KENNEDY: I am so happy that you are sponsoring Amendment 6 to S. 659 (nIdian Education Act).

Shouldn't Indian controlled schools of higher education, including universities, be added? I am particularly concerned about funding for the Degananidah (Indian) University recently turned over to the Indian-Chican people at Davis, California.

Please let me know about this.

Yours sincerly,

GRACE THORPE.

TUFTS UNIVERSITY,
SCHOOL OF DENTAL MEDICINE,
Boston, Mass., April 26, 1971.

Hon. EDWARD M. KENNEDY,
U.S. SENATE,
Washington, D.C.

DEAR SIR: Thank you for sending me a copy of *Amendment 6 to S. 659* and the background information. I am in total agreement with the substance and intent of the amendment and *wish to be on record as supporting the amendment.*

Special programs and projects are critically needed to alleviate the educational plight of American Indian children. The problems of Indian students were dramatically revealed to us in the course of our recently completed OEO–AAMC sponsored project to develop a recruitment model for minority group students. American Indian students argued at some length that American Indian students have felt "left out" of special programs and that the dental profesion must demonstrate an organized effort to recruit and train Indian students.

To say that American Indians are under represented in this profession is a gross understatement; we were able in the course of our one-year project to identify only one American Indian dentist. I am including a copy of our final report for background information regarding our interest in developing viable programs that will increase the number of minority group dentists.

I am most hopeful that Amendment 6 to S. 659 will gain successful passage.

Sincerely yours,

JOSEPH L. HOZID, ED. D.,
Chairman, Committee on Equal Education Opportunities.

ORANGEVALE, CALIF., *April 23, 1971.*

DEAR SENATOR KENNEDY: Your amendment *6 to S. 659 (Indian education act)* should include wording which allows Indian controlled schools of higher education (universities) to be funded.

Please think about giving all Indian controlled schools a top priority position.

Sincerely,

SARAH H. HUTCHISON.

LAS CRUCES, N. MEX.
April 23, 1971.

Senator EDWARD KENNEDY,
Committee on Labor and Public Welfare,
U.S. Senate,

DEAR SENATOR: As a representative of the United Native Student Organization of New Mexico State University, I have read and discussed your letter and the Amendment 6 to S. 659, The Indian Education Act, and also known to us as the Kennedy-Mondale Indian Education Act. We are appreciative of your concern of our educational welfare and we fully support the said Amendment.

We the Native Americans seeking higher education despite the odds we face, have committed our efforts to better the educational standards and status in life in general for our people. Every effort on the part of the co-sponsors of he Amendment passage will mean a new era in Indian Education.

We are aware of the findings the Special Subcommittee on Indian Education released in 1969 and have hoped that those recommendations evolving from the study would soon become a reality.

We the United Native American Students, without question, fully support Amendment 6, S. 659, Indian Education Act and recommend its passage immediately.

Sincerely,

EUGENE LEITKA.

MINNEAPOLIS, MINN., *April 24, 1971.*

Senator EDWARD M. KENNEDY
Chairman of the Special Subcommittee on Indian Education,
Washington, D.C.

SIR: Received the copies of the Amendment 6 to S. 659, the Indian Education act. After reading it, I am more than interested in supporting it, for the now, and future Education of the American Indian, Reservation, Non*Reservation, Indian Children, including Adult, Terminated Tribes, State Reservation, and, Urban Indian.

I want to add, Important issue's such as this should be brought closer to the Indian People, Parents, Youths, communities, etc., I know right here in Minneapolis, Minn., we have a large count of American Indians from different Tribes, and, from different States, young and older, who do not take part or have knowledge of this issue and other interests, etc. It is that they do not care (?) which I do not believe. or, Lack of Communication, could be the Answer.

I am sure if some kind of effort was to be taken, there are Indians in this group who would take Interest, this has been on my mind for some time.

From Mrs. Rosemary (Cardinal) Hill, Chippewa of the Chippewa Tribe of the Keweenaw Bay Band at L'Anse and Baraga, Michigan.

Mrs. ROSEMARY HILL (CARDINAL),
Member of the N.I.E. Association,
Member of the N.C.I. Association.

DAVIS, CALIF., *April 25, 1971.*

Senator EDWARD M. KENNEDY,
Committee on Labor and Public Welfare,
U.S. Senate,

DEAR SENATOR KENNEDY: In response to your letter of April 19, 1971 regarding Amendment 6 to S. 659, the Indian Education Act, the Board of Trustees of Deganawidah-Quetzalcoatl University are very much in favor of this bill. However, they do have two major concerns about the amendment. The first one deals with section 584 of the Amendment to Title III of the higher education Act of 1965. By specifically listing "community colleges" and not just "colleges" it will

eliminate four-year colleges such as D-Q U. or the Institute of American Indian Arts, should it become a four-year institute. Therefore the word "community" should be deleted from sec.(a). Also, another line should be added to sec.(a), which would give top priority to colleges, (such as D-Q U. and Navajo Community College), controlled by Indian people. We feel this is of crucial importance to fledgling Indian colleges.

The second area of concern deals with the National Board of Education. We feel that it should be composed entirely of Indians who are elected in some way from the different areas of the U.S. so that they would be responsible directly to the Indian community and not principally to the federal agencies. The method for setting up procedures for the election of a Board by Indian people or Indian organizations and tribes can be one of the responsibilities of an interim board appointed by the President from nominees suggested by Indian tribes and organizations.

We are a little concerned about suggestion No. 12 from the "Suggestions for Improving Amendment #6—S. 659", as this could prevent some new or innovative program from being funded because the National Board of Indian Education may not know enough about it or because the Board members were not "in" on the idea from the beginning.

Lee Sclar, an attorney from California Indian Legal Services, who is in Washington right now, has been designated to speak in our behalf regarding this bill.

Thank you kindly for your interest and concern.

Sincerely,

DAVID RISLING, Jr.,
Chairman, Board of Trustees.

SAINT OLAF COLLEGE,
Northfield, Minn., April 27, 1971.

HON. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for the copy of Amendment 6 to S. 659, the Indian Education Act, and for the opportunity to offer comments and suggestions. Unfortunately, I received this material only this morning and since your letter indicates that a response would be most useful by April 28, I do not really have much time to rethink many of the elements of the legislation, nor to confer with a number of colleagues who are involved in Indian education in order to give you some kind of composite response. However, I have been familiar with your proposal before now and many of my thoughts on the subject have already been expressed through the officers of the National Association for Indian Education who have met with you personally and discussed this.

First off, let me simply add my voice in indicating a general approval of that thrust of this legislation that seeks to put Indian education into the hands of Native Americans themselves. There is no need to rehearse at length arguments for doing this. The long history of abuses in the name of education that Euro-American culture has thrust upon Indians speaks eloquently in favor of any program that would permit Indians to be responsible for directing their own programs—even at the cost of many mistakes. In the light of this overall attitude, let me comment briefly on some of the suggestions that have already been made to you for improving Amendment 6—S. 659. (These suggestions appear on the mimeographed sheet you sent, and I will use the numbers assigned to them there when referring to them below.)

(1) Location of National Board in the executive office of the President; the Board's fiscal autonomy; and is direct authority for Indian education.

(I fully support this and think it necessary even in the face of a movement towards simplifying government and subsuming many functions under omnibus agencies.)

(10) Board composed wholly of Native Americans.

(Notwithstanding the public-relations aspect of this and the actual fact that there are some non-Indians who have competencies that the Board might need, I do think that at the start we must insist on a Board made up of Native Americans.)

(8) I do not believe that State Departments of Education should be by-passed for all distribution of funds; however,

(2) I can only take this position if a specific alternative is available to the Indian community when local education agencies fail to cooperate or perform. Thus, there must be clear provisions for a tribe or community to receive funds directly to enable them to run the educational program necessary for them.

(4) The National Board needs to have the power to suspend Civil Service requirements during some kind of adjustment period.

(7) In addition, the Board should be able to establish accreditation requirements for Federal schools that State departments of education will have to officially accept.

(5) Along similar lines, local Federal schools should be able to suspend Civil Service requirements so as to develop their own tenure system.

(I know the kinds of vested interests that are confronted forcibly by items 4, 5, and 7 above, but these controls seem to provide safeguards against much of the program's thrust being offset under the guise of bureaucratic legalism.)

(9) The bill should by specific language guarantee a continuation of the Indian relationship with the Federal government in regard to educational funds.

(12) The bill should require that the Office of Education and Office of Economic Opportunity secure approval of the National Board on programs and disbursement of funds.

(This really seems essential to giving the Board the kind of control it needs. It would seem too that it might better account for the assignment of responsibility for the success as well as the failure of specific proposals and programs.)

These suggestions taken up are the ones (among those previously brought to your attention) that are of principal concern to me. Incorporated in some form into Amendment 6, they would create a document that I could support with great enthusiasm.

Good luck to you and your like-minded colleagues in the attempt to remedy the sad waste of human potential that U.S. Indian policies have made possible in the past.

Sincerely yours,

DUDLEY FLAMM.

JOHN SALMI.

[TELEGRAM]

EASTPORT, MAINE, *April 29, 1971.*

SENATOR EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

This will advise you that you have the full support of the passamaquoddy tribe on amendment 6 to S. 659.

EUGENE FRANCIS TRAVEL,
Governor, Passamaquoddy Tribe.

Response to an Amendment to the Higher Education Act of 1971, S. 659

PREPARED BY VIRGINIA BROWN, SMALL TRIBES ORGANIZATION OF WESTERN WASHINGTON, SOUTH FEDERAL WAY, WASH., APRIL 26, 1971

The Honorable Senator Kennedy has presented an amendment to the Indian Education Act, S. 659. One of the Senator's recommendations was to appoint a National Board of Indian Education, connected directly to the Office of Education. I agree that a National Board of Indian Education is a necessity, but I strongly disagree that they should be appointed by the President. If we are to receive full consideration and full decision making authority, we need to have the responsibility of appointing our own people. Why should we suggest names and let the President make our appointments? It is an accepted fact that when appointments are made by the President, they very often become strictly political appointments and not on the basis of performance or ability. Too many times, we have been given the advisory role only, with little control and responsibility in decisions affecting our lives. We need to be able to make our own decisions and appointments. Let us make our own mistakes, if need be; everyone else has had the opportunity of making them for us.

It should also be a stipulation that these appointments receive the endorsement and approval of responsible governing bodies. Many times, we have been represented by Indian groups who do not have the endorsement of the elected Tribal Councils. Our Tribal Councils are elected to represent our people and should have the opportunity to do so. Although it is implied, the Senator does not state that the Board would consist of Indians. It should be a definite requirement of all members of the Board. We have capable Indians who are willing to serve in this capacity. Are we again going to have non-Indians making our decisions.

One of the functions outlined for the National Board is to investigate and determine which boarding schools should be converted into therapeutic treatment centers. I endorse this idea fully. When you realize that out of 100 students we sent to the Chemawa Indian School from Western Washington since September of this school year, 49 of these have returned home as of March, you begin to wonder about the purpose and capabilities of this school. More importantly, what happens to these children? A point of interest to you might be that our students now have the choice of taking their General Equivalency Diploma test or completing their high school classes at Chemawa. This is currently taking place. One of the main problems with Bureau of Indian Affairs boarding schools, I feel, is their compliance with civil service requirements. I would suggest that all civil service requirements be abolished; possibly then they could obtain and retain good teachers who are able to relate well to our children. This would also offer more job opportunities to Indian people.

In Part A of Senator Kennedy's amendment, he proposed to allow substantial increases of money Public Law 874 and Title 1, ESEA. I commend the Senator for his action; he has taken a necessary step in Indian Education. Senator Kennedy has suggested that Indians whether they are non-reservation Indians or not, are all Indians and he recognizes the fact that all Indians need and require the same services. We, at STOWW, have some bands of Indians in our organization who are refused Bureau of Indian Affairs and Indian Health Service assistance. These bands are as much Indian as reservation tribes. Why must it take a cour decision to decide if they are fully Indian? They think Indian, feel Indian and are Indian now.

In this section, Senator Kennedy stresses the need for having these monies, received from Indian communities be designed for use for those Indian children. I agree completely with the Senator. For years now, the money received by local school districts for Indian children has been used in the general operating funds. Our children have been neglected too long. The Senator also stresses the need for the participation and involvement of Indian communities. I would go a step further and suggest that tribal councils, along with parents, must be involved in all programming. The State Department of Public Instruction in Washington State has denied participation of tribal councils on Johnson O'Malley Committees. This has caused much dissatisfaction and dissension within our Indian communities. Our tribal councils are the elected governing bodies of our people; they must be recognized as such. It seems to me, too, that Indians are given the advisory role again in this section. There is a stipulation for consultation with parents of Indian children, but where do we have the authority of making actual decisions?

Part B allows the Commissioner of Education to make grants to everyone but tribal councils. Or are tribal councils referred to as public and private education and research agencies, organizations, and institutions? The Senator is going to realize that Indians demand to be specifically named in such bills. And if tribal councils are not eligible to receive these grants, why not? In this section, also, is a reference to participation by tribal communities and parents. It should definitely include our tribal councils, and not in the advisory capacity, but in a decision making role.

Part B also allows the Commissioner to make grants to institutions of higher education to prepare persons to serve Indian children in the educational system. Who determines if an applicant received this type of grant? It should be apparent to everyone by now that Indians should have some control over this matter. When is our local control going to take effect?

In Part C the same question arises again concerning the granting of funds, participation of tribal councils and decision making authority. We would wonder also if $5,000,000 is enough for adult education? Divided as this money eventually will be, it seems that it may not adequately meet our needs.

In part E there is a provision for more support of community colleges with Indian students. If these colleges were to recruit and obtain Indian students, who would determine how the additional funding would be used? There should be a provision included for local control of this money, or we may have community colleges recruiting our Indian students for the sole purpose of getting additional funds. If these colleges are near Indian communities, I would think that the tribal council or governing body in that area would have a direct interest in the administration of those funds.

In conclusion, I would like to say that we sincerely appreciate Senator Kennedy's interest and involvement with Indian education. I feel that his great commitment and assistance will certainly be beneficial to our people. The Special Sub-Committee on Indian Education has developed a very thorough, relevant package for Indians; however, before passage of this Amendment, the forementioned items need further clarification. Thank you, again, for the opportunity of presenting our concerns to your committee.

ALL INDIAN PUEBLO COUNCIL, INC.
Albuquerque, N. Mex., May 25, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senate, Washington, D.C.

Dear SENATOR KENNEDY: The 19 Indian Pueblos of New Mexico are very concerned about the new Indian Education Bills introduced by you and Senator Henry M. Jackson. Because of this concern, we would appreciate it very much if you would consider the following request:

In view of the fact that there is another Indian Education Bill currently in the Interior Committee, for which hearings have not yet been scheduled, we feel that it is important for all tribes to be afforded the opportunity to review this Bill and compare the two. We are aware that hearings on your Bill have been closed and that the Bill has been referred to your Committee on Labor and Public Welfare. We are not sure what the present status of this Bill is within the Committee. Nevertheless, the 19 Pueblo Governors hereby request that you defer your Bill until we have had ample opportunity to thoroughly examine it in comparison with the other Bill.

We know that you meant well with the development of your new legislative measure concerning Indian education. We appreciate and value this very sincere concern. We are aware that this Bill resulted only after a great deal of research and consultation with Indian people was conducted. Through this, we feel, you provided the Indian people opportunities to express their educational needs. However, this was done before the legislation came into being. We feel that we need to examine the finished products and relate them to our expressed needs. We hope that you will honor our request and give us this chance to examine your Bill more thoroughly as well as Senator Jackson's Bill. We have requested that hearings for Senator Jackson's Bill be held in the Albuquerque area so that our people can fully participate in reviewing these Bills. If this can be arranged, we would like to have you or your representative come and provide us with some answers to questions we might have regarding your Bill. We feel this hearing is very necessary in order for us to truly have a basis for consider-

ing the two Bills. We might add that it appears there may be a third Bill concerning Indian education. This, according to the enclosed copy of a news article, will be coming out of Senator Montoya's office. We hope that they can have someone available also for this hearing.

May we state again that we sincerely appreciate your efforts and those of your colleagues to assist Indian people in their quest for better opportunities for a better life.

May we hear from you soon regarding our requests?

Sincerely,

BENNY ATENCIO, *Chairman, AIPC.*

FLANDREAU SANTEE SIOUX TRIBE,
Flandreau, S. Dak., March 31, 1971.

Hon. EDWARD M. KENNEDY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

HON. EDWARD M. KENNEDY, This is in response to a bill S. 659 introduced by yourself which calls for a comprehensive Education Act to meet the special educational needs of Indians in both federal and public schools. I, having had twenty (20) years in the federal government, part of this time in the educational area, now presently serving as Chairman of the Flandreau Santee Sioux Tribe and Chairman of the Flandreau School Board, recently established for the involvement of the Flandreau Indian School, a federally operated school, have the following questions concerning this bill.

1. Will it adequately meet the educational needs of Indian people?
2. Does it really turn control of Indian education over to Indians?
3. What kind of Indian involvement or what organization was contacted in implementing this bill?
4. What assurance do we have the programs will continue for Indians after five (5) years?
5. What are your objectives in solving Indian School problems at the end of this period?
6. Does the bill provide provisions for direct funding to tribal organizations?
7. Are there definite stipulations that the National Board of Indian Education be made up of Indians?
8. How will this bill or policy affect federally operated boarding schools?
9. Is this new bill or structure really going to meet the needs of our Indian children?

In my present positions, it appear school structures are going to have to come from the youth or students and also that many little needs must be met so that our Indian Youth will gain status in attitude, character and feel like a true human being instead of a statistic or number.

I have two (2) delegates from the reservation that would be very interested to testify as a witness regarding Indian education problems.

Sincerely yours,

GORDON J. JONES,
Chairman, Flandreau Santee Sioux Tribe.

EDUCATION AMENDMENTS OF 1971

TUESDAY, MAY 25, 1971

U. S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to the call of the Chair, at 9:35 a.m., in room 4232, New Senate Office Building, Senator Pell presiding.

Present: Senators Pell, Randolph, Prouty, Dominick, and Schweiker.

Committee staff members present: Stephen J. Wexler, subcommittee counsel; Richard D. Smith, associate counsel; and Roy H. Millanson, minority professional staff member.

Senator PELL. The Subcommittee on Education will come to order.

The witnesses today are the Honorable Elliot Richardson and the Honorable Sidney Marland.

STATEMENT OF HON. ELLIOT L. RICHARDSON, THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE, AND HON. SIDNEY P. MARLAND, JR., U.S. COMMISSIONER OF EDUCATION; ACCOMPANIED BY DR. HARRY F. SILBERMAN, ASSOCIATE COMMISSIONER FOR EDUCATIONAL RESEARCH AND DEVELOPMENT, STEPHEN KURZMAN, ASSISTANT SECRETARY FOR LEGISLATION, AND CHISTOPHER T. CROSS, ACTING DEPUTY ASSISTANT SECRETARY FOR LEGISLATION

Secretary RICHARDSON. Thank you very much, Mr. Chairman.

Mr. Chairman, members of the subcommittee: My colleagues and I are very pleased to have the opportunity to appear before you today to testify on title III of S. 659 and related bills to create a National Institute of Education and a National Foundation for Higher Education. We also have some comments on sections 151 and 152 of the bill, which deal with the Education Professions Development Act.

The need for new approaches to the problems of education is clear. For the schools that have served so well for so long have now come into days of serious difficulties—difficulties we have not yet found tools to resolve.

We have poured billions of Federal dollars into education, only to find that the situation seems more critical than before.

Each year a heartbreaking number of disadvantaged young people leave school without the basic skills needed to fill any but the most

menial jobs. There is no assurance that their younger brothers and sisters will do better.

Older people with years of productive labor find themselves in a market which no longer needs their skills and with no adequate system for reeducation and renewal.

Too often, creativity and curiosity are stifled, persistence and motivation lost because we do not know how to build a learning environment which prepares young people to deal with the effects of modern society.

Too often the schools become a symbol of repression rather than honored as places which serve the student's hopes. Violence against teachers and against other students reveals an emotional wilderness in the minds of some of our young people. Incidents of violence initiate escalating security measures which turn the school from a community center into a daytime prison.

Even the best of schools do not prepare our children to deal constructively with an ever-changing world. We have not yet found ways to teach coping with change. Or humanity. Or ingenuity.

Obviously, change in the character of our schools and of our entire educational system cannot come solely from the Federal level. The brunt of the burden of change must be borne by State and local educational officials. But the Federal Government can provide the leadership for change and can make available the necessary financial assistance to educational institutions of all kinds and levels that will enable them to afford such change.

To do this, we need more flexible and responsive institutional arrangements at the Federal level. We need institutions which can provide the range of interrelated services we have found so critical to effectiveness. We need flexible institutions capable of combining energy and expertise in new ways to seek fresh approaches to education's problems. For this reason, the administration has proposed a series of major changes in the Federal structure as it relates to education:

The creation of a Department of Human Resources;

The creation of two new educational institutions devoted to change, the National Institute of Education and the National Foundation for Higher Education; and

The elevation of the Commissioner of Education to a level IV, making him the equivalent of an Assistant Secretary of HEW.

S. 659 in part shares this new vision. It does authorize the establishment of a National Institute of Education and a National Foundation for Education. However, I have serious reservations about the provisions of title III in S. 659, particularly insofar as they specify the internal organization of the Department. We urge the enactment of administration bills S. 1062 and S. 434 instead.

First, I feel it is unwise policy in general to detail internal organization by legislation. Such legal specificity creates too many roadblocks to change. One of the primary needs of any organization is the need for flexibility, the ability to maintain viability by responding quickly to changing conditions. One would hardly expect the Congress to legislate the organization of an infantry division. Its proper role is one of setting the goals and providing the resources.

It is up to the administrator, whether a military man or educator, to organize the resources and be responsible for carrying out the mission. Commissioner Marland is only the most recent example of a leader reshaping an organization to meet its mission as he sees it. The legislation before this committee would prohibit such adjustments.

Furthermore, the arrangements set forth in the bill are superfluous, since I have already made it clear that I intend to ask the Directors of the National Institute of Education and the National Foundation for Higher Education to report to me through the Commissioner of Education. To make this delegation a statutory requirement deprives the Secretary of a significant element of his authority. And one cannot fairly be held accountable for performance unless one has the authority required to perform.

I oppose the language of title III of S. 659 for other reasons as well. As created by the legislation, the Education Division of HEW would be composed of the Office of Education, the Institute, and the Foundation, all headed by the Commissioner of Education.

The Commissioner would be compensated at a level III of the executive schedule. This would give him a rank equivalent to the Under Secretary of Health, Education, and Welfare and would seriously skew the internal organization of the Department by elevating the Commissioner to a higher level than his counterparts in the health and welfare areas.

The Office of Education would also include a Deputy Commissioner, compensated at level IV, and six Associate Commissioners, compensated at level V of the executive schedule. Again, these salary levels are significantly out of line with comparable positions in the Department. Furthermore, the requirement for Presidential appointment and Senate advice and consent to the top eight positions in the Office could add serious political implications to the filling of these positions.

In addition, the elevation of the Director of the Teacher Corps to grade 18 and the Deputy Director to grade 17 would give a present division director status that some Deputy Commissioners do not now have, and an independent status equal to none.

Finally, not only would a legislated organizational structure prevent flexible Offices of Education response to changing educational problems, but it would also require an immediate reorganization of the Office from its current pattern of an Executive Deputy Commissioner and five Deputy Commissioners.

Similarly, S. 659 vests grant and policymaking authority for the National Foundation in a 15-member Higher Education Board appointed by the President and authority for the National Institute in a similar 15-member National Council on Educational Research. As I said in earlier testimony before this subcommittee, I firmly believe that the Foundation board should have a strong voice in the establishment of policy for the Foundation, as the NIE Council should have a strong voice in the formulation of NIE policy. However, ultimate responsibility for both these agencies must rest with the Secretary of HEW, and again, authority must go with responsibility.

Finally, in reestablishing the Office of Education, S. 659 would severely limit its scope of authority. It is authorized to promote the

improvement of educational opportunities for our Nation's people only "in such manner as may be specifically authorized by law." It would also authorize carrying out such other responsibilities "as may be specified by law" or as specified by the President "in accordance with law."

S. 659 goes on to specify that:

> Nothing in this section, or any other provision of law, shall be construed to grant the Office of Education any authority which is not expressly provided for by statute or implied therein.

These provisions are totally objectionable. Any executive agency, in order to function effectively, must have broad authority as part of its functional area. No leadership role can be totally dependent upon specific statutory authorization. The enabling legislation for the Office of Education which S. 659 would repeal does not contain any such limitation of its role in American education. Neither should any legislation reported by this committee.

In concept, I feel that the proposed Education Division is too narrow. The President has submitted a set of bills—S. 1430, S. 1431, S. 1432, and S. 1433—which reflect his comprehensive proposals for executive reorganization. S. 1432, the Department of Human Resources bill, would place not only the Office of Education, the National Institute of Education, and the National Foundation for Higher Education within the education agency, it would also transfer into the new Department the college housing program from the Department of Housing and Urban Development and the school lunch program from the Department of Agriculture.

The President's proposal would permit the centralization of authority in the Secretary, to be delegated as he decided. It would also consolidate other currently fragmented human resources programs and promote the better coordination of all Federal efforts dealing with the problems of people.

Education, I submit, is a crucial tool in the solution of these problems. However, the results will be far more effective and lasting when educational programs are coordinated with other social programs and not considered and treated separately. The President's proposal would foster such an integrated and flexible organizational approach, while S. 659 has provisions which would not.

On March 4, I had the opportunity to present my views on the Foundation before the subcommittee. Today, I reiterate my strong support for the Foundation and my belief that it can have a significant impact on the future of higher education. Since we did not have a chance to discuss S. 659 as it deals with the Foundation, I would like to add some specific comments on the Foundation authority as contained in S. 659.

SIMILARITY OF ADMINISTRATION PROPOSAL

In many respects, the provisions of S. 659 relating to the Foundation are similar to those contained in the administration's bill of last year. Since S. 659 was introduced in February, however, we have submitted a revised version of the original Foundation proposal, reflecting a year-long evolution in our conception of its role.

This is in part a result of conversations with members of the higher education community. This new version is contained in S. 1062, introduced by Senator Javits and six cosponsors. I would strongly commend the provisions of this bill to the subcommittee.

The National Foundation of Higher Education was proposed last year as an independent agency with a 15-member governing board. It was to be modeled after the National Science Foundation. In reconsidering last year's legislative proposals, we concluded that in the interests of coordination among education programs, the Foundation would better be placed within the Department of Health, Education, and Welfare. This year's proposal, then, gives to the Secretary authority for the Foundation and makes the board an advisory rather than a governing body.

These changes are a logical consequence of placing the Foundation within the Department of Health, Education, and Welfare. I recommend that since S. 659 places the Foundation in the Department, it also correspondingly alter the structure and governance function of the board.

The Foundation incorporated in S. 1062 contains a much clearer indication of the Foundation's mission to encourage innovation and reform in post-secondary education. The initial Foundation proposal also gave the Foundation more general grant-making authority. The lists of purposes and functions in S. 649's Foundation provisions do not reflect the new innovation thrust of S. 1062. I urge the subcommittee to adopt the provisions of S. 1062.

S. 659's version of the Foundation might be improved, we believe, through the inclusion of authority to transfer funds to or from the Foundation, authority to permit the Foundation to fund projects jointly with another agency and authority to make fellowship awards. In addition, S. 659 does not permit the hiring of technical and professional staff without regard to various civil service provisions. Addition of that authority would in our view give the Director special flexibility in hiring outstanding personnel.

In conjunction with my earlier statements, Mr. Chairman, about permitting the Secretary normal authority over internal Department matters, I recommend deletion of several provisions as unnecessarily restrictive with respect to the Department's operations. In particular, the requirements that the Foundation's report be submitted as part of the Commissioner's annual report and that the Commissioner promulgate management regulations for the Foundation—a responsibility normally vested in the Secretary—are inconsistent with the Department's responsibility for its internal affairs.

AUTHORIZATION

Finally, I should note that the authorization provided for in S. 659 is low, a comment I am not usually in a position to make. It would provide $200 million over 4 fiscal years, beginning in fiscal year 1973. S. 1062, on the other hand authorizes the appropriation of such sums as might be necessary. I recommend that this pattern be followed. We have requested an initial year appropriation of $100 million for fiscal year 1972. Two hundred million dollars would not appear to be sufficient over a 4-year period.

NATIONAL INSTITUTE OF EDUCATION

I move now to the second new institution proposed by the President, which both S. 659 and S. 434 would establish. I strongly recommend passage of S. 434, the National Institute of Education Act introduced by Senator Prouty and seven cosponsors. Since I have not previously had the opportunity to testify before this subcommittee about the need for a National Institute of Education, I would like to take a few minutes to talk about that need. Commissioner Marland will then discuss the National Institute of Education.

I cannot overemphasize the significance of legislation to shape new institutional leadership in educational research and development, through a National Institute of Education. Where once we put faith in the power of a new school building, an extra teacher, a new textbook, we know now that such "improvements" just do not make as much difference as we had once ascribed to them.

Research into the ways that people learn and live, and the painstaking development of effective and useful educational approaches, then, is key to progress in American education. Despite this, the Nation has not supported the major research and development effort needed to tackle our most stubborn and complex educational problems.

In contrast to research and development in other areas of national importance, educational research and development has remained a "poor cousin" in size, in resources, in scope, in organization.

In 1968, the man-years devoted to research, development, and innovation in education totaled just 5,836; in health, 58,570, 10 times as much.

Only about 10,000 researchers work on education, while the number of researchers working on health is three to five times that figure.

Since 1950, the Nation has invested less than $1 billion in educational research and development; in that time, $7 billion has been devoted to agriculture research and $14 billion to health research. Private industry's research and development investments have been even higher—the electrical equipment industry, for example, spends $4.2 billion a year on research and development; the aircraft industry spends $5.6 billion.

Research and development receives only 0.3 percent of educational expenditures and 4.6 percent of health expenditures.

I mention research in health, agriculture, and industry, not because their tasks are identical to those of education research—they are not—nor because resources in these areas are sufficient to their needs: certainly, there is always a need for more progress in these other areas of knowledge. Of course, research in these fields has had the advantage of a strong base in the hard sciences and more easily observable results than educational research. But the mission of educational research and development is certainly as challenging and complex as that of research in health, in agriculture, or industry. And education research and development clearly lags several orders of magnitude behind.

The growth of a vigorous research and development system in education has been hampered by other problems. The field has never attracted enough top researchers from a breadth of disciplines to give it firm grounding. Its institutional base has remained narrow, restricted mainly to university campuses—the expertise of business, governmental, and other institutions has scarcely been tapped.

Finally, educational research and development management at the Federal level has been kept to a relatively low profile. While research and development in other areas of natural importance has achieved high level, separate institutional status, the unit chiefly responsible for managing educational research and development, the National Center for Educational Research and Development (NCERD), has been unable to achieve sufficient visibility within the Office of Education. While the top management position ranks at a level IV in health research and a level V in agricultural research, the Center's placement within the Office of Education has meant that its head could be no higher than GS–17.

Through creation of a National Institute of Education, each of the obstacles to a vigorous research and development system can be tackled head on.

The new agency can substantially affect the size, scope, and vitality of the educational research community. An Institute will spark public and academic interest in educational research. Since education research has traditionally lacked prestige in the academic community, it has been unable to draw many of the top scholars. As the new agency boosts the competence and prestige of educational research and development, outstanding scholars from a wide range of disciplines will become interested in the field.

The NIE, separate from the Office of Education, would acquire national visibility in its own right. Its director, whom we propose to place at executive level V, would be a high level appointee, confirmed by the Senate. This ranking is a necessity if we are to recruit a director with extensive experience and the highest national stature, and to compensate him appropriately. The Institute and its director must command enough respect to draw the very best academicians, educational practitioners, public administrators and scientists to work in NIE.

In addition, exemption from certain civil service requirements would give the agency freedom to bring in outstanding scholars for varying periods of time and at salaray levels commensurate with their abilities. Their presence will build an institutional reputation and a high degree of confidence. All these qualities will help to maintain the Institute's prominence and therefore its ability to attract outstanding men and women.

Beyond strengthening educational research and development itself, the new Institute would organize people, energies and resources more effectively to conceive fresh approaches to education. A "critical mass" of expertise from a variety of fields would be marshalled. The National Institute of Education's personnel system will allow special flexibility to gather the best minds and put them to work together. And as a new agency, the National Institute of Education can develop operational patterns best suited to a research and development agency.

Finally, the NIE could stimulate the increase in funds for research that we have not yet been able to achieve. Perhaps because of its immaturity as a field, educational research has not received the public support necessary to secure substantial increased resources. If the agency does indeed succeed in boosting public interest in educational research and development, a willingness to increase public investment will surely follow.

I would like to emphasize the President's commitment to a sound and systematic growth of Federal expenditure for educational research and development under the NIE. We would expect NIE's first-year operational budget to fall within a range of $150 to $200 million. A substantial portion of this represents support levels of programs to be shifted from the Office of Education. After the first year, we would expect to see NIE's budget rising steadily to a level of $310 to $420 million in fiscal year 1977.

In summary, let me again emphasize that renewing education's promise requires new tools and techniques developed by a vigorous research and development system. The system of educational research and development itself needs strengthening if it is to match that challenge. Prominent researchers from many disciplines must be drawn to the task, funds must be marshalled to devise imaginative and radically new approaches.

As the next step toward these ends, we must mold a new agency capable of providing energetic national leadership—a National Institute of Education.

In conclusion, Mr. Chairman, I would like to emphasize perhaps more than my prepared statement does the fact that we appreciate very much the fact that S. 659, as you have introduced it, does include provision for both the Foundation and the Institute. And I would not like the testimony I have given which is critical in one respect or another of various of the administrative arrangements incorporated in your version of the Foundation legislation, for example, or title III, to obscure our appreciation of the fact that you have proposed legislation consonant with the basic concept underlying both of these important new components of the Federal role in education.

May I now ask permission, Mr. Chairman, to insert in the record at the close of my statement, first a table of differences between S. 1062 and S. 659 and, secondly a table showing comparisons between S. 434 and S. 659.

Senator PELL. Thank you very much, Mr. Secretary.

Before moving on to the Commissioner's testimony, I would say we are very honored to have both the ranking majority and minority member of the subcommittee here. They have statements they would like to make as they have to move on to other meetings.

Senator Prouty.

SUPPORT FOR INSTITUTE AND FUNDATION

Senator PROUTY. Thank you, Mr. Chairman, I regret very much it is necessary for me to leave.

I have another committee meeting at which I must be present as I shall be the only Republican member there.

I am tremendously interested in the National Institute of Education and the National Foundation for Higher Education. I am pleased that there is agreement in the subcommittee on the need to establish the Institute and Foundation. I am confident that in our deliberations, we shall insure both are structured in ways to insure they meet the obvious and compelling need for innovation and experiment in eduction.

I have had the opportunity to review in advance the testimony of enthusiasm for the Institute and Foundation and their observations on the legislation needed to see that both function as we agree they should.

I will follow this very closely, I assure you, Mr. Secretary and Mr. Commissioner, and I am very sorry it is necessary, for me to leave at this time.

Thank you, Mr. Chairman.

Senator PELL. Senator Randolph.

Senator RANDOLPH. Mr. Chairman, I, too, must join Senator Prouty, not at the same committee meeting, but another committee meeting, but the reasons are the same for our departure.

I think it is very important, Mr. Chairman, to realize that when a Senator cosponsors legislation that very often he says to the principal sponsor of that measure that he is joining because of the broad purpose sought to be achieved by the legislation which has been introduced rather than to attach himself to a finalization of language at the time of the introduction of the measure.

And so it was in that frame of thinking, Mr. Chairman, that I joined you as a cosponsor in the introduction of Senate 659. I feel that there are points of general agreement as we approach our overall responsibility, and I shall not this morning attempt, Mr. Chairman, because of the time element and the desire of the Secretary to move to the testimony of the Commissioner, to enter into colloquy or to make further comment. But I shall have certain questions that I will ask that these questions be presented either to Secretary Richardson or Commissioner Marland or one or more of their associates to bring out thoughts that I have had in connection with the material which is presented from the administration viewpoint.

I want to underscore my very genuine feeling that these differences sometimes are, in essence, our strengths because to have legislation presented either on the Hill or downtown and expect to have that legislation go to the Senate and pass as it was written and introduced would be a straight-jacketing of the legislative process. And the administration does not desire that, neither does the chairman of this Subcommittee on Education or Senator Prouty, the ranking member of the subcommittee on the minority.

I realize this is rather generalized, what I am saying, but I say it because I feel that there is a mutuality of awareness of the problem in one title or in four titles. And so we begin to think together and to work together and to not cross swords, but to exchange perhaps with vigor at times viewpoints in the hope that we can bring from this committee, Mr. Chairman, under your able leadership that type of legislation which will benefit the educational program of the United States.

Thank you.

Senator PELL. I thank you very much, Senator Randolph, I hope that out of the various theses and antitheses we get a fine synthesis.

Dr. Marland.

Secretary RICHARDSON. May I interrupt, Mr. Chairman?

Speaking for the executive branch, we share Senator Randolph's hope and we certainly expect to work with the committee in this spirit. We do not consider that legislation that we submit has been engraved in letters of of gold or brass.

Senator PELL. And one further small comment. My own view of it is an analogy from the private corporate field, Congress is really the board of directors, setting policies. While the executive council execute that policy.

Secretary RICHARDSON. All I would like to say, Mr. Chairman, is, I wish I had authority in relation to the Congress that most corporate executives have in relation to their boards of directors.

Senator PELL. Commissioner Marland, please.

NATIONAL INSTITUTE OF EDUCATION

Dr. MARLAND. Thank you, Mr. Chairman.

Mr. Chairman, I appreciate the opportunity to discuss with you the National Institute of Education. One cannot overstate the importance of an agency whose sole purpose is to lead in building tools for the resolution of education's difficulties and the fulfillment of its promises. I would commend to your attention S. 434, which contains the administration's proposal for creation of the NIE, and urge its enactment.

Several facets of the new agency, as the Secretary has noted briefly, are absolutely essential to its success, to its superiority over our present arrangements for managing research and development in the Office of Education. A number depend on legislative provisions not contained in S. 659. Let me deal with each of the essential qualities in turn, commenting as I go on specific provisions in S. 434 and S. 659 which affect them.

First, the National Institute of Education needs it own institutional identity, distinct from the Office of Education. Research and development management has been constrained in several respects by its placement within OE. Left in OE, it must conform to administrative patterns which evolved in response to the needs of operating programs. Its placement within OE restricts both the rank and number of its leadership. Then, too, establishing its own institutional identity on a level with the Office of Education will assure the NIE a visibility not now afforded research and development management in education.

Both S. 434 and S. 659 would establish the Institute as a unit separate from the Office of Education. We share with S. 659 the concept of three educational agencies overseen by a Commission of Education, although, as Secretary Richardson has stressed, we recommend strongly both against locking in this arrangement legislatively and against establishing a Division of Education.

The National Institute of Education, while requiring its own separate identity, will also need fruitful ties to other agencies supporting education or related activities. The most important of these, of course, is the Office of Education. One way to provide coordination is to make a single official responsible for both agencies.

Secretary Richardson would delegate to the Commissioner responsibility for overseeing the Office of Education, NIE, and the National Foundation for Higher Education. S. 659 would also make all three agencies responsible to the Commissioner, but the governing structure it provides for both NIE and the Foundation would seriously undermine the Commissioner's ability to coordinate the agencies.

As the Secretary has already warned, if these agencies are given board governance, it will be extremely difficult to insure linkages between them and the Office of Education and other appropriate agencies. I would therefore repeat the urging that these boards be made advisory.

I would reiterate the Secretary's concern that considerable and substantial responsibility for policy development should be afforded the advisory board of NIE. But ultimately governing authority must rest in the Office of the Secretary.

Another means of promoting coordination and cooperation between NIE and other agencies is to encourage them to undertake projects jointly. Section (7)d of the administration's bill provides a joint funding authority; S. 659 does not. In addition to permitting joint projects, the authority would allow other agencies to transfer funds to NIE and vice versa. This would allow, for instance, NIE to encourage OE to undertake a special dissemination project it felt important, for example, by offering to provide the funds. In this way, agencies can be encouraged to share their expertise and human resources for the advancement of educational research and development.

Of all the special qualities NIE must possess, perhaps the most crucial will be the agency's ability to attract outstanding scholars, educators, and the like. If the agency cannot marshal a staff of unusual breadth, competence, and stature, its other advantages will be severely handicapped.

The key to drawing that staff is authority permitting the Secretary to hire and compensate professional and technical staff without regard to certain civil service requirements. Other respected Federal research and development institutions such as NIH and NSF have authority to "except" staff from these civil service requirements. The NIE provision is modeled after the particular one NSF has used with successs for many years.

As these agencies have found, special flexibility in hiring and compensation is needed to draw and make use of top research and development talent. For instance, the university-centered career patterns of academia make it difficult to draw scholars away from tenured positions, except on a nonpermanent basis. Under the exemption authority, such people could come to NIE on a noncareer basis for 6 months, a year, 2 years, et cetera.

In addition, NIE will make use of flexible organizational arrangements such as short-term task forces organized to work on a particular problem and then disband. Exemption from the civil service provisions will permit the Director to hire top-level talent on a short-term basis to work in these groups without going through the normal lengthy civil service hiring procedures. Most of the staff, I should add, would be regular civil service employees. Excemption authority would be used only when a special advantage is to be gained.

As presented in S. 434, then, the porvision will allow the Director to—

> Bring people with special expertise to work on a short-term basis without waiting for lengthy civil service processing.
>
> Adjust qualification standards to the particular needs of a research and development agency.
>
> Offer salaries at a GS equivalent without having to offer the lowest step in the grade to prospective employees.
>
> Permit more high-level personnel than would be possible under restrictive civil service ceilings.

S. 659 would limit this provision to temporary employees. We strongly urge the committee not to restrict this authority. It is absolutely critical to NIE's capacity to draw emient scholars and educators to NIE.

The NIE's effectiveness will also depend upon its capacity to evolve and sustain flexible organizational patterns specially suited to its prob-

60-433 O—71—pt. 5——2

lem-solving research and development focus. Dr. Roger Levien has proposed a general organizational structure, and we are now working with this proposal and alternative ideas to design a detailed organization plan that promises to serve NIE's mission most effectively. That is a complex and challenging job, one that depends in part on decisions about other aspects of the new agency—its program, for example.

Because of this and because organization plans must be open to time testing and alteration, NIE's organizational structure must not be defined legislatively. Section 404(d) of S. 659 attempts such a definition based on Dr. Levien's current work.

I urge the committee to avoid this specificity as unnecessary and potentially harmful. A legislated organization structure would be a serious problem for any organization, but for a new agency, it could be disastrous. The best laid plans for a new agency may contain flaws in practice. Then, too, organization structure may need to be altered to adjust to changing priorities and circumstances. In either case, NIE's Director must be free to make adjustments in the organizational structure.

I should comment on the structure described in S. 659. As you know, Dr. Levien has supplied us with a recommended organizational model, composed of three main units.

One, a directorate of programs, would manage research and development programs aimed at solving major national educational problems. A directorate of research and development would oversee programs to strengthen the scientific base of education and educational practice generally. The third unit, a center for educational studies, would evaluate the state of education and of public education policies broadly.

The divisions as defined in S. 659 correspond generally to this scheme, although this description of functions is not entirely clear.

At this stage of our thinking, we are leaning to a somewhat different organization of functions for the NIE. A research and development division, for instance, might be responsible for supporting the development of significant and vastly different educational alternatives. A division of educational studies would be broader than the Center provided for in S. 659. It would be responsible for disciplined, problem focused research and analysis of the educational experience. This would include basic research in the learning process and evaluations of major reforms and developments.

I do not mean here to offer a definitive organizational scheme. I do want to demonstrate that we are currently thinking along slightly different lines than the outline suggested by Dr. Levien or that specified in S. 659. Again, we urgently recommend that no internal organizational structure be specified by law.

NIE FUNDING

Finally, NIE will need sufficient funding to sustain the momentum of progress. S. 659 would authorize $500 million over a period of 4 years. The administration's proposal authorizes the appropriation of such sums as may be necessary. We recommend that that pattern be adopted.

We expect a vigorously growing NIE to require higher funding levels over a period of years than S. 659 permits, as Secretary Richardson has estimated. We expect that the new agency would grow from a first-year budget ranging from a $150 to $200 million the first year to some $310 to $420 million at the end of the first 5 years.

We cannot provide definitive budget estimates for NIE. These must ultimately reflect decisions about program areas to be covered and more detailed cost assessments than are now available. The funding increase rate we suggest is based on a 20 percent annual growth rate, which the experience of other research and development agencies tells us is the maximum growth possible in such an agency. Again, we recommend that such sums as may be necessary be authorized and that the authorization be an open-ended one.

Before closing my testimony, I would like to make two points relating more to the office of Education than to the NIE. First, S. 659 would repeal the substance of the Cooperative Research Act, which has provided general research and demonstration authority for the Office of Education since 1954. Although many of the functions authorized by the Cooperative Research Act would be assumed by the National Institute of Education, it is extremely important that the Cooperative Research Act be retained.

The Office of Education must continue to carry out a number of activities authorized and funded under the Cooperative Research Act: demonstrations, dissemination, surveys, research designed to provide policy guidance, and the like. If the Cooperative Research Act is repealed, the agency would have no authority to conduct some of these crucial activities. Others, it could only do in severely restricted fashion under salaries and expenses budget. Any operating agency must have the freedom to carry out these research related activities.

After NIE is created, the Office of Education would continue to carry on functions under the Cooperative Research Act for which we have requested $33.6 million in fiscal year 1972. The Cooperative Research Act must be left on the books to provide funding authority for these important functions.

EDUCATION PROFESSIONS DEVELOPMENT ACT

Second, I am most disturbed about the changes S. 659 would make in the Education Professions Development Act. These would restrict the powers of the Commissioner to determine internal organization of the Office of Education and gravely reduce present capacities to allocate EPD resources to meet changing educational needs.

First, S. 659 assigns the Teacher Corps virtual independence as a separate office under the Commissioner with the director designated as GS-18. The Teacher Corps is working well as a division in the Bureau of Educational Personnel Development. To remove it to a separate office would create an imbalance in the Office of Education's organizational structure and impair efforts to coordinate it with other EPD programs.

We expect to submit legislation authorizing transfer of this program to the new action agency. Meanwhile, we are doing our best to build a vigorous Teacher Corps wherever its location. S. 659's provision will not, I believe, aid that effort.

In addition to the Teacher Corps provisions, S. 659 would drastically reduce our flexibility in administering other education professions development programs. It earmarks almost 75 percent of EPD funds among the different parts of the act. This would require a major alteration of the present programs.

For example, part D, under which most of the priority EPD programs are funded, would have to be cut back substantially. This would restrict the Commissioner's abilities to concentrate funds on important national priorities such as early childhood education and career education.

At the same time, the earmarking would require us to devote scarce resources to areas of extremely low priority. For instance, it requires that 15 percent of the funds be spent on the part C general fellowship program at a time when there is an oversupply of teachers generally. Other parts of the EPDA provide for training and retraining teachers in shortage areas. Funding part C will not help meet these shortages.

S. 659 would require us to spend 2 percent of the funds on part B(2) programs without adding the administration amendment which would permit these funds to be used for retraining as well as training of new teachers.

Finally, S. 659 fails to include another important administration amendment, the amendment to part D which would allow the development of new teacher education programs at the undergraduate level in coordination with schools of education and other faculties. This amendment would provide us with an opportunity to bring the liberal arts and other disciplines together with educational programs in the preparation of teachers.

This amendment is widely supported by the National Advisory Council on Education Professions Development, major educational associations, and numerous colleges and universities. I would like permission to insert for the record copies of their letters of approval.

And I would add again, in drawing upon the wisdom of the Educational National Advisory Council on the Educational Professions Development Act, this council has very strongly urged the retention of the administration position on the subject of EPDA legislation, particularly urging the continued support of this program in the way in which it is now fashioned without the restraints implicit in 659.

Senator PELL. Without objection, those letters of support will be inserted in the record. And the committee notes with delight the use that you have made of an advisory council. We hope all the advisory councils would be made equally useful.

Dr. MARLAND. Thank you, Mr. Chairman.

(The information subsequently supplied follows:)

ICE OF THE PRESIDENT

March 2, 1970

Memorandum to Dr. James E. Allen, Jr.
Assistant Secretary of Education
Department of Health, Education, and Welfare

B.E.P.D.

Gentlemen:

The District of Columbia Teachers College vigorously supports consideration of technical amendments of the Education Professions Development Act, Title V HEA, that assists undergraduate teacher preparation.

As a Teachers College in an urban location, indeed a college itself in a low income area, this institution produces more teachers for the Nation'a Capital than any other single institution but watches the large grant money go for assistance to graduate education.

This College has this year about the same number of student teachers in the District public schools as did all the other institutions combined but watches the large money go to the universities.

This College developed an undergraduate Teacher Corps Proposal but again observed the grant go to the master's degree program.

When we graduate 200 teachers in June, we can expect 76.6% (on the basis of the last six years) to go into the District schools and teach -- unless some have completed their work early and already started teaching.

The Federal government must assist the undergraduate programs; they are producing the teachers. MAT and Teacher Corps are all right but they don't produce the bulk of the teachers.

Yours truly,

Paul Cooke
President

Dr. Curtis E. Nash
Central Michigan University
Mount Pleasant, Michigan 48858

Dear Dr. Nash:

Thank you very much for your comments about the proposed technical amendment for the Education Professions Development Act.

Language that would permit major development and reform efforts in the undergraduate training of educational personnel has been submitted to the Congress by the Department of Health, Education and Welfare. It is currently incorporated as Section 510 of the Higher Education Act (H.R. 16621). This provision is currently being considered in the Committee headed by Congresswoman Green and will be considered soon by the Committee headed by Senator Pell.

Thank you again for your letter.

Sincerely,

Don Davies
Associate Commissioner

Dr. Don Davies
Associate Commissioner
Bureau of Educational Personnel Development
U. S. Office of Education
7th and D Street, S.W.
Washington, D.C. 20036

Dear Don:

Not just because I am a member of the Executive Committee of AST but also because I definitely believe that we need to put some more money into undergraduate teacher education I write in support of your proposed amendment to the Education Professions Development Act, Title V, HEA. I do not have adequate statistics on the percentage of teachers in our schools who received initial teaching license at the undergraduate level but my guess is that it is substantial. It seems to me that the efforts to provide traineeships for undergraduates in Special Education has been most effective and the same kind of efforts should be devoted to general teacher education at the undergraduate level.

If such an amendment is apssed and proposals are requested, I will be among the first to submit one. I hope very much that your office will introduce this and let me know when so we can try and influence our congressman.

I enjoyed your Florence Stratemeyer lecture at Chicago recently and hope to see you sometime when you are in Washington.

Sincerely yours,

Curt

Washington, D.C. 20202

Dear Dr. Davies:

This is to recommend an amendment to the Education Professions DEVELOPMENT Act TITLE V HEA along the lines of the draft which you prepared for discussion with the AACTE and others concerned, which would specifically provide for under graduate teacher education programs.

I am particularly interested in provisions for encouraging colleges and universities to develop extended practicum experience for prospective teachers.

Our college has moved in this direction by providing observation and participation for juniors in Elementary Education in the local public schools and has under written the program to the extent of several thousand dollars for co-ordination and teacher stipends. We have given much thought to means of improving this program and extending it to students in Secondary Education, but have been frustrated by lack of staff time and funds to fully implement such a program.

I am convinced that if we could over come these initial hurdles through assistance by the EPDA, the college would be able to assume all of the continuing support necessary.

Dear :

Thank you very much for your comments about the proposed technical amendment for the Education Professions Development Act.

It appears now reasonably certain, although not definite, that Part G will be contained in a package of such amendments to the Congress during March or April for consideration in the modification of the EPDA. They will then be considered by the committees headed by Congresswoman Green and Senator Pell.

Dr. Don Davies
Associate Commissioner of Education
Bureau of Educational Personnel Development
U.S. Office of Education
3100 ROB III
7th and D Streets, S.W.
Washington, D. C. 20202

Dear Dr. Davies:

I am pleased with the invitation extended by you through AACTE to respond to the proposed amendment to EPDA regarding improvement of undergraduate programs for the education of elementary and secondary school teachers.

The USOE draft of the possible technical amendment to EPDA is deserving of support. The effect of undergraduate program development can and may be to replace, to some extent, insufficient "corrective or repair" attempts with sufficient "preventive" efforts. There is no assurance of this, of course. Insignificant, poorly conceived and unproductive EPDA grants may prevail in undergraduate training as well as in graduate training, but this risk must be taken.

Winthrop has received some support for development of new approaches to undergraduate training of prospective elementary school teachers through a Small Research Grant from the Atlanta Regional Office of USOE. We are encouraged by our program, based on some notions taken from several of the ten sets of specifications developed under the Model Elementary Teacher Education Project. Such "seed" money for undergraduate program development has enabled us to place a larger share of our limited resources into undergraduate efforts. Previous funding for graduate work has imposed the threat, if not the reality, of reducing our undergraduate resources in order to take advantage of funds available for graduate program expansion. Graduate program improvement must

not be accomplished at the expense of the undergraduate program. A more certain future lies in improved programs for recruiting and preparing prospective teachers who can become impact teachers or change agents at the outset of their full-time careers before they learn not to "rock the boat." The proposed amendment, in providing for undergraduate training more resources, better designed programs to meet the challenges facing beginning teachers in the 70's, extended practicum experiences, and closer cooperation among colleges and schools, should have an additional impact that has not developed under EPDA in the past.

Winthrop would welcome the opportunity to develop EPDA proposals for improvement of undergraduate teacher education. I hope the proposed amendment can be incorporated into the Act.

May I add that I am not convinced that past and present EPDA projects have had little impact. Some projects are, of course, inconsequential. The fault lies, I believe, not with the present structure of EPDA, but with the poor quality of the proposals. There is no inherent reason why local educational agencies cannot become more involved in planning, no reason why short-term experiences cannot be reinforced "back home," no reason why research cannot be generated and disseminated, no reason why sound formative and summative program evaluation procedures cannot be built-in to present programs. The major responsibility for the design and execution of impact-producing projects rests with the institutions themselves. You at the U.S. Office can only fund the "best," and if the "best" are not very good, you are stuck with them.

Again, thanks for the opportunity to comment.

Sincerely,

Jack H. Boger

Dr. Don Davies
Associate Commissioner of Education
Bureau of Educational Personnel Development
U.S. Office of Education
3100 Rob III
7th and D Streets, S.W.
Washington, D. C. 20202

Dear Dr. Davies:

I read with great interest the initial description of the Education Professions Development Act and the proposed 1970 technical amendment to it. I remember attending a Chicago meeting several years ago on this particular act. For that reason I want to commend the intent of the amendment to include undergraduate education, since this was woefully lacking in the original Education Professions Development Act of 1967.

I am heartily in favor of including undergraduate programs for developing educational personnel in the colleges because I represent a four-year college. I see the recommended change as an aid to assisting Negro colleges and other teacher-training institutions which provide programs for the disadvantaged of many origins.

The recommendation that grants support to joint efforts is very desirable. In theory many educators recommend this type of cooperation. There are many more who need to work through the difficulties of such programs. If help is given to joint efforts, this may be an indirect way of encouraging more joint efforts.

I will try to join one of the committee groups on government regulations on February 26 or 27, 1970, during the AACTE convention.

Best wishes to you on your efforts on this and other activities in encouraging better teacher education programs.

Sincerely,

Sister J. Dolores Brunner

Dear Don:

I received, through AACTE, a copy of the draft of the USOE Paper on a possible 1970 Amendment to EPDA.

I was quite heartened by some of the proposed provisions in the draft that would tend to move EPDA support one step closer to the development of needed change, innovation and expansion of programs in teacher education. I would suggest, however, that consideration be given to the concept of assistance to potentially good ongoing programs which need supplemental funds to achieve their aims. For years we have been working with some potentially good programs that deteriorate into ineffective traditional models because of lack of supplemental funds beyond which most colleges and universities give because of traditional concerns of staff, student resources, and budget ratios. I am sure you are well aware of these problems. In fact, EPDA support might well encourage expansion of beginning programs. It could sponsor developing programs on campus and in the community in teacher education which would require at least 50 percent of the financial effort to come from the institution or consortium of higher education, junior colleges and public schools. Again, we all have been involved in programs that would have made considerable change in teacher education, but became more traditional by the year because of the additional support needed to make them good.

Good luck on your planning for EPDA next year. I am counting on you to help develop the leadership and give this Office of Education program the kind of direction it needs.

Sincerely,

E. J. Cain
Dean, College of Education

Washington, D. C. 20202

Dear Mr. Poppendieck:

My attention has been called to the proposed amendment to the Education Professions Development Act which would provide support for undergraduate education of prospective teachers. I have read it carefully and write to indicate my warm support for it. Federal encouragement of programs that would provide more realistic and effective cooperation in the preparation of teachers between the institutions that provide the formal preparation and the schools would do much to bring about more effective and realistic teacher education.

Sincerely yours,

William H. Cartwright

Dear Don:

I am reacting to a proposal sent to me by Walter J. Mars, AACTE Associate Secretary, regarding a possible technical amendment to the Education Professions Development Act. I agree completely with the position stated by Jerry that our desperate need in teacher education is not at the graduate level, but rather at the undergraduate level. I would support very strongly the enlargement of EPDA funds for undergraduate teacher education, rather than being restricted solely to graduate education. If there is anything that I could do to help facilitate this possibility, please don't hesitate to let me know.

Sincerely yours,

James M. Cooper

7th and D Streets, S.W.
Washington, D. C. 20202

Dear Dr. Davies:

Newark State College supports the position taken by the United States Office of Education in its draft paper on proposed amendments to the Education Professions Development Act of 1967. We do so, however, with certain reservations.

Newark State College finds nothing objectionable in the proposed changes to the legislation. We believe they are feasible and needed. Our fear is that the legislation, if passed, might open up the EPDA coffers to additional programs with no increase in funds. We believe that the present funding of EPDA programs is less than desirable; dividing existing funds even further would perhaps serve to cripple operating projects.

For some time we have thought of an undergraduate program in conjunction with our present Project NOW program (NOW is a masters in student personnel program specializing in guidance). NOW's directors have thought about a combined undergraduate, graduate curriculum that would speed the process of educating sorely needed guidance personnel for inner-city schools. If the proposed legislation is passed we would pursue this idea with the thought of submitting a proposal that would seek funds for pilot implementation of this concept.

Please note that we greatly favor programs which provide extended practicum experience for prospective teachers, as is done in our Project NOW program.

Newark S e, which is represented in the New Jersey Education Consortium In also emphatically supports the consortium approach to today's educational problems. We therefore heartily support the references made to this activity in the position paper, feeling that a collaborative effort offers the participant much greater and better subject matter and field based experiences.

In our opinion the complexity and intensity of education problems today mandates, for the sake of economy and efficiency, the pooling of institutional resources.

Sincerely,

Foster F. Diebold
Director of College Development

Washington, D. C. 20202

Dear Dr. Davies:

In accordance with material furnished to me recently through the Government Relations Committee of the American Association of Colleges for Teacher Education, I should like to note our concurrence and strong support of the statement which has been developed by the Office of Education concerning the strengthening of programs for the education of teachers and related education personnel.

The draft copy of a proposed amendment to the Education Professions Development Act of 1967, which would make possible specific support for improving undergraduate teacher education programs is, in my opinion, entirely appropriate. Despite the importance of graduate level professional preparation in teacher education, the realism of our circumstances forces us to conclude that undergraduate programs involving initial certification for teaching are crucial. Both in terms of program changes and in the number of persons served, the opportunity for cooperative ventures which require additional funding is evident. All agencies need the supportive assistance that the E.P.D.A. provisions have thus far ignored.

I trust that it will be possible to obtain the necessary legislative support for the change in this important Act.

Cordially yours,

John P. Daughtrey
Director, Teacher Education Programs

DEPARTMENT OF SOCIOLOGY
AND ANTHROPOLOGY

FEB 19 1970

February 16, 1970

Mr. Don Davies, Associate Commissioner
Bureau of Educational Personnel Development
Office of Education, HEW
Washington, D. C. 20202

Dear Mr. Davies:

Your proposed amendment to the Education Professions Development Act (EPDA) was forwarded by the Executive Officer of the American Sociological Association to me in my capacity as Chairman of the Undergraduate Committee on Teaching and Curriculum.

I am in full agreement with your objective of bringing together the academic disciplines and those responsible for professional education as a means of improving the education of elementary and secondary school teachers. As you well know, it makes little difference how well trained such a teacher is in the aspects of professional education unless he or she is equally well trained in the content area or areas in which teaching is anticipated.

I was particularly pleased to see proposed section 563.(a) and (b). Regarding item (3) under section 563.(a) I should like to suggest that your office in reviewing grant proposals give priority to those proposals that indicate a clear sharing of responsibility by the academic discipline concerned and the teacher training department for the practice teaching or internship experience of prospective teachers. I would suggest that the academic discipline be responsible for content development and evaluation of the prospective teacher in this regard. The department or school of education would be responsible for evaluating the student on matters pertaining to teaching methods, techniques, philosophies, and other aspects of professional education. Such a joint endeavor in the practicum area would go a long way toward developing the needed cooperative and joint ventures between the discipline and the professional educators. In my opinion, the principal responsibility for improving teacher training rests with the disciplines though I am fully aware of their past lack of action in this realm.

The ASA Committee on Undergraduate Teaching is currently drafting a proposal concerned with content improvement, development of training materials, and new training experiences. I hope that your agency under Sec. 563.(b)(5) will be able to receive such a proposal.

Best wishes to you in your endeavor, I am,

Sincerely,

John T. Doby
Professor

Bureau of Educational Personnel Development
U. S. Office of Education
3100 ROB III
7th and D Streets, S. W.
Washington, D. C. 20202

Dear Dr. Davies:

Ball State University is in accord with the AACTE position on the Education Professions Development Act. Continued emphasis upon graduate programs oriented to bringing liberal arts graduates into teaching and on improving content competency of experienced teachers will not affect the quality of people being prepared to enter the profession. As the disparity between supply and demand in the teaching profession narrows, it is less necessary to attract into teaching people who have completed baccalaureate programs with other emphases. Improvement in the nature and quality of the area or areas of specialization at the baccalaureate level should result in less need for support programs to bolster this component at the graduate level. Since it is the professional education component in the program for teacher preparation which distinguishes beginning teachers from other educated persons with baccalaureate degrees, emphasis on materials and techniques of instruction should prove constructive. Programs for educating teachers should not evade or be apologetic about stressing pedagogy, since it is the distinguishing essence of the profession.

It is our conviction that reputable institutions for preparing teachers have many unrealized and unfulfilled dreams about improvement of their own programs. Many factors at the local level, which need not be elaborated here, mitigate against aspirations to "be as good as we know how to be" in teacher education. A program of federal support which motivates and assists institutions to improve themselves--to initiate a series of changes which are aimed at improving the quality and capabilities of graduates from curricula in teacher education--appears to hold great potential for good. Teachers will undoubtedly continue to be prepared in a wide variety of institutions and on differing programs. It seems that it would be highly desirable to encourage many of these institutions to upgrade their programs, rather than to concentrate on a more limited number of situations. Demonstration programs or centers are necessary, but what they are demonstrating must be incorporated at the grass roots level if a real impact on teacher education is to result.

Page
Februa. 70

The reco ations of the AACTE Committee on Government Relations relative to the E on Professions Development Act are supported enthusiastically by Ball St niversity.

The proposed dment to the EPDA advanced by the USOE also merits the support of th institution. Its emphases upon encouraging development of practical cooperative baccalaureate level programs for teacher preparation appear constructive and reflective of current needs. Its inclusion of support for preparation of personnel to serve in positions below that of teacher is particularly pertinent. Two suggestions are offered for consideration: (1) that more obvious support be given to stressing the professional component in the program of teacher preparation, to balance what seems to have been an earlier tendency to downgrade this aspect in favor of stress on the academic teaching specialty, and (2) increased recognition of the sociological orientation needed by teachers in today's society.

Ball State University regards viewpoints expressed in positions taken by the AACTE and the USOE in regard to the Education Professions Development Act as wise, desirable, and deserving of support.

Sincerely,

John Dunworth

Dear Dr. Davies: VIA AIRMAIL

In reviewing the draft for possible amendments to the EPDA Title V Programs, we have found a number of points with which we are in strong agreement. The areas which deal with joint efforts of institutions of higher education and local school agencies in the development of programs which articulate theory and application are particularly appropriate.

It is our impression that the direction being taken in the revision of EPDA Programs in teacher education is highly desirable. We are particularly pleased in observing the broad base of expertise which is being used in this endeavor.

Dear Dr. Davies:

Re: Education Professions Development Act

The letter dated February 4, 1970, from the office of Walter J. Mars, AACTE Associate Secretary, is before me. This relates to the EPDA. The importance of this act and the good it has done is inmeasurable. It is a most effective instrument. May I just show by two cases what it has meant.

Case No. 1 - Mr. Jerry Lawson

Mr. Jerry Lawson is approximately 33 years of age. He is now a college graduate. His major interest is in the field of Art, and in this area he has a splendid amount of talent. Mr. Lawson recently became interested in young people. However, because of family responsibilities it was utterly impossible for him to return to college and qualify himself for the field of teaching. Through the EPDA and the limited amount of compensation it provides, he has been able to make his way and will conclude his program of teacher education in the summer of 1970. He will thereby be available for teaching and will be an excellent teacher.

Case No. 2 - Mr. William LaBahn

Mr. LaBahn is a man of approximately 24 years of age. He has family responsibilities. His employability status has not been too compensating, nevertheless he is bright, energetic, industrious, very responsible, and dedicated. Through EPDA the possibility of his becoming a teacher has been made available. He has been carried through all the steps required for

certification--is now teaching on a temporary certificate in one of our Sioux City junior high schools and will complete the balance of his program qualifying him for certification by the end of the summer of 1970.

The Federal government through this act is providing an avenue of training for individuals who would otherwise be unable to make the grade because of limited finances. Likewise, it is providing to the schools of America highly-qualified teachers who would never be available without this opportunity.

We recommend this program wholeheartedly.

Sincerely yours,

Russell M. Eidsmoe

Washington, D. C. 20202

Dear Dr. Poppendick:

Thank you for the invitation to attend the meeting in Chicago on last Thursday to discuss the amendment to the Education Professions Development Act, Title V, HEA.

I was glad to hear the overview of the programs presently funded under the Education Professions Development Act. I am even more interested in the amendment since it aims to get at the teaching problem at one of its most critical points, namely, pre-service education. I see a great need for strengthening undergraduate programs so that we can better prepare teachers for the very critical and significant role they are going to be called upon to face in the next decade. This need is crucial when it comes to the preparation of teachers for culturally different children. In this area we would like to give prospective teachers many more life experiences which may demand more time spent in college and which in turn means more money. However, most of our students are presently hard pressed to meet the tuition for a regular program. Hopefully, with an amendment such as you presented to us last Thursday, something might be planned to supplement an on-going teacher-preparation program which would be impossible without such assistance.

I strongly urge you to place this amendment before those bodies which must approve of it, and I commend you for your efforts in improving teacher education throughout the country.

I am most interested in being kept informed of the progress of this amendment.

Sincerely,

Sister Bernadette

Washington, D. C. 20202

Dear Dr. Davies:

I have a memorandum from the American Association of Colleges for Teacher Education relating to Government Relations.

A reply was requested late February but the letter did not reach my desk until it was too late to meet that dead line. I am very sorry about this but I thought I would add my support in a more direct way.

I am quite aware that there is a limit to what the government can do but there is a need to be met in the field of education. I see no way that private funds and student tuition will be adequate to meet these needs. My personal feeling is that we must upgrade, considerably, the programs for teacher education.

Here at Olivet the Education Department wants to do some research in methods but the problem of funding beyond the present budget seems impossible. The same is true in some other areas.

Therefore, in the light of what I have said, I support the proposal of the AACTE.

With kind personal regards,

Linford Marquart formerly at National College Evanston.

Dear Dr. Davies:

A recent notice sent out by the Government Relations Committee of the American Association of Colleges for Teacher Education indicates that a constructive response has already been made to its October position paper by the Bureau of Educational Personnel Development. Since you have expressed a real interest in seeking reaction to the possible amendment to EDPA, I should like to go on record as strongly supporting the proposal to further the aims of the Education Professions Development Act of 1967 by:

1. Providing resources for the improvement of undergraduate programs for preparing educational personnel through the development of high-quality subject matter content and more effective training materials;

2. Providing resources for the design of undergraduate programs for preparing educational personnel to meet the current needs of the nation's elementary and secondary schools;

3. Encouraging colleges to develop and to provide extended practicum experience for prospective teachers.

In the light of the teacher education programs currently offered by our College, and in view of our plans for the expansion of these services, we are particularly interested in grants to support:

Dr. Do...
Page 2

1. Joint efforts by four-year higher education institutions and junior or community colleges to develop high-quality programs for preparing educational personnel who may choose to serve in positions below the teacher or equivalent level;

2. Joint efforts by such institutions to develop programs leading to the teaching level in which responsibility is shared between junior or community colleges and four-year institutions;

3. Joint efforts by the academic and teacher education departments of a college to develop new or improved programs of study for persons planning to pursue careers in elementary and secondary education;

4. Joint efforts within consortia in establishing programs of study that draw on the resources of all participating institutions;

5. Joint efforts by institutions of higher education, professional associations, and/or private agencies to develop new programs of study, new training materials, and additional training experiences for prospective teachers;

6. Joint efforts between institutions of higher education and local education agencies to develop training experience in local schools as a part of new or strengthened teacher training programs.

Thank you for the interest you have shown in developing and improving programs for the education of American teachers.

Bureau of Educational Personnel Development
Washington, D. C. 20202

Dear Mr. Davies:

Thank you very much for your letter of February 9 and the enclosed preliminary Discussion Draft of the Amendment to the Education Professions Development Act. All I can say is that I sincerely hope that this amendment will be adopted. I consider ~~it~~ especially the clause referring to "joint effort by the academic and teacher education department" to be of prime importance.

I think that the trend of separating teacher training from academic training and reserving the former to fifth year graduate program has had rather unfortunate results--especially in some of our top insitutions of higher learning. There seems to be a very large potential pool of highly intelligent young undergraduates feverishly looking for relevance within their undergraduate studies -- a relevance which the academic departments functioning by themselves are often unable to provide. Post B.A. training in Schools of Education and/or Peace Corps involvement does not seem to be the answer -- perhaps because many young people are affected by the disappointment and dropout syndrome before they ever reach the post-graduate stage. At any rate, I do think that very much could be gained by an early involvement of undergraduates with the clearly defined practical problems and realities of Education. I do hope that the proposed amendment will pass and that it can be used to serve this purpose.

Sincerely yours,

Dear Dr. Davies:

Many small teacher education colleges in the urban areas of our country have responded to the changing community in so far as they have been able but the response involves programs in school-community-college interrelation which require greater resources in personnel and time than local college budgets based largely on tuition can support. Hence, the position paper (draft) of the United States Office of Education "A Possible 1970 Technical Amendment to the Education Professions Development Act, Title V HEA" merits consideration and support. We who work in small colleges are less likely than larger institutions of higher education to receive the consideration of the representatives and congressmen. Therefore, the EPDA will continue to exclude our needs unless action is taken to help us.

Upsala College and the Board of Education of the city of East Orange have already undertaken steps in the redesign of teacher education. The two agencies have already established a working committee toward this end. It is the goal of the committee to develop a relevant teacher education program along lines of a medical internship which will become virtually self-supporting. There is need for seed money to support initial efforts to the point where both agencies can assume their financial responsibilities based on demonstrated performance.

Your support of this proposal will help us if action is forthcoming through suitable amendment to the Education Professions Development Act, Title V HEA.

Yours sincerely,

K. Rystrom

Washington, D.C. 20202

Dear Dr. Davies:

I have just finished reading the draft of the possible 1970 Technical Amendments to the Education Professions Development Act, Title V, that were circulated by the AACTE staff.

I firmly believe that the proposed amendments would serve, in a most substantial way, to prompt the improvement of undergraduate Teacher Education Programs. It has been my feeling that the program as it exists tends to "hit around" the real problem of Teacher Education and does not come to grips with directly improving the quality of undergraduate programs. I believe the technical amendment, as described in the draft, would go a long way to a solution to this concern.

We are certainly hopeful that such an amendment can be passed and stand ready to do anything that we can to assist in that endeavor.

Sincerely,

Leonard C. Skov
Dean

Dear Sir:

There is, without a doubt, a need for improvement in undergraduate teacher education. We concur with the point of view expressed in the letter from the AACTE Committee on Government Relations to the AACTE Executive Committee dated 20 October 1969 and further support the principles and content set forth in the USEO discussion paper pertaining to this matter.

In the section dealing with the allocation of grants, however, it is felt that some guidelines for ensuring the inclusion of some small institutions, and some predominately black institutions should be incorporated into any final document.

Very truly yours,

W. P. Smith, Chairman
Division of Teacher Education
and Psychology

U. S. Office of Education
Washington, D.C. 20202

Dear Don:

I was very glad that you invited me to attend the meeting to discuss the proposed amendment to the Education Professions Development Act, TITLE V, and I am now happy to respond to your request that participants write you their suggestions.

I feel strongly, as many participants in the meeting did, that Section 562 should be revised so that grants and contracts can be awarded to professional scholarly organizations. It will be extremely cumbersome for learned societies to be sub-contractors to individual universities or consortia of universities. The natural administrative channel for a national effort should be from the national organization to appropriate institutions of higher education rather than the reverse.

If, as I gather, the problem is to avoid giving greater influence and power to lobbying organizations, the words "tax exempt" should precede the term "professional educational associations," thus eliminating from the list of possible grantees and contractors professional lobbies. If the associations which represent the scholarly disciplines are to play the major role we all agree they should, they must be placed on a par with institutions of higher education and state and local educational agencies in the administration of programs.

With warm regards,

Cordially yours,

Gordon B. Turner

Dear Senator Pell:

The National Commission on Teacher Education and Professional Standards supports the proposed amendments to the Education Professions Development Act in the Administration's Amendments to the Higher Education Act, H.R. 11621 and S. 3636.

The Commission has considered the proposed legislation and urges that the proposed amendments be legislated promptly so that authority to improve undergraduate programs can be established. The Commission supports the Resolution of the National Advisory Council on Education Professions Development as expressed June 12, 1970 and forwarded to you July 7, 1970 by the Council Chairman, Mary W. Ricke.

We urge speedy action even if it becomes necessary to treat the Education Professions Development Act amendments apart from the rest of the Higher Education Act proposals.

We also express our support of the Senate Amendment (S. 3707) proposed by Senator Javits to make funds under the state grant portion of the Education Professions Development Act (Title V-B2) available to retrain present teachers to meet critical shortages.

We appreciate your interests in education and your part in many recent positive developments. We hope that our position adds support for your action on these proposals.

Sincerely,

(Mrs.) Lois Williams
Chairman
National Commission on Teacher Education
and Professional Standards

Dear Senator Pell:

The American Personnel and Guidance Association and its 30,000 national members applaud the recent endorsement by the National Advisory Council on Education Professions Development of the Administration Amendments to the Higher Education Act as found in H.R. 16621 and S. 3636.

Our Association is particularly pleased with that amendment to Part D, Sections 531 (b) and (c) which authorizes grants to develop, expand, and improve undergraduate and other programs for training educational personnel. This amendment seems to open up avenues which will give full meaning to a concept of differentiated staffing in education and thus make the education "career ladder" a reality. We in the guidance, counseling, and testing fields enthusiastically support this amendment.

May I also add that Senator Jacob Javits' recent bill, S. 3707 which provides opportunities for professionals in one area of educational expertise, which may have surplus numbers of personnel, to be re-trained for another area of educational expertise experiencing personnel shortages, seems to hold great promise for quality education across the education profession. This bill can be quite helpful in meeting all personnel requirements.

If our Association can be of any assistance in your efforts please do not hesitate to call upon us.

Sincerely,

Willis E. Dugan

Washington, D.C. 20510

Dear Senator Yarborough:

The Executive Committee of The Association of Teacher Educators, at its meeting in Oregon in August, reviewed the proposed amendments to the Education Professions Development Act as contained in the Administration's Amendments to the Higher Education Act introduced in the House (as HR.16621) and Senate (as S.3636). The Executive Committee endorsed strongly these amendments.

The Association of Teacher Educators is concerned particularly that funds be available for the direct reform of regular undergraduate educational personnel development programs. Having appropriately prepared people initially determines the advancement that might be made later by school personnel at the graduate level. The Executive Committee of The Association of Teacher Educators supports the resolutions of the National Advisory Council on Education Professions Development as expressed on June 12, 1970, and forwarded to you on July 7, 1970, by the Council Chairman, Mary W. Rieke.

It is urgent that the amendments referred to be considered now. The Association of Teacher Educators represents a membership of more than 5,000 members, representing almost all of the major institutions engaged in teacher preparation as well as the public schools working cooperatively with these institutions. We feel the urgency of aid to affect the development of programs at the undergraduate level. We feel that you would want to know our position on the proposed amendments. We hope that our position is in agreement with your study of the needs of education.

We do express appreciation for your interest in education and your part in many recent positive developments in education in the nation.

Sincerely,

Mary Ellen Perkins

July 23, 1970

The Honorable Edith Green, Chairman
Special Subcommittee on Education
U. S. House of Representatives
2451 Rayburn House Office Building
Washington, D. C. 20515

Dear Mrs. Green:

One of the strong interests of National PTA is the strengthening of teacher education, as I am sure is well known to you. The Education Professions Development Act has been the means of several very promising programs, and we have been very happy with this legislation.

We are concerned with the possibility that the present session might come to an end without the extension of this legislation or the enactment of the proposed amendments. The proposals to extend EPDA authority to improving undergraduate programs, where most teachers are prepared, also to authorize larger local and state roles, and to include Indian schools, seem to us to offer significant improvement.

Since questions in respect to other parts of the Higher Education Amendments may not be resolved in the near future, we would ask whether your committee might be willing to report these amendments for enactment separately. We should greatly appreciate your consideration of this action, and would be pleased to be advised of any help we might give.

Sincerely yours,

CR

Mrs. Edward F. Ryan
NCPT Chairman for Legislation

2252

August 31, 1970

The Honorable Carl D. Perkins, M.C.
2252 Rayburn House
Office Building
Washington, D. C. 20515

Dear Representative Perkins:

Although the attention of many of us has been diverted in recent weeks to other education legislation such as the FY 1971 USOE appropriations measure, we would like to point out that the proposed amendments to the Education Professions Development Act as contained in the administration amendment to the Higher Education Act (H.R. 16621 and S. 3636) are important steps in attempting to improve the quality of teaching.

If the Office of Education is to be able to incorporate these changes into its budget for FY 1972, it is urgent that the appropriate legislative action be taken in the current session either within or outside the present Higher Education Amendments proposal.

Sincerely,

Forrest E. Conner
Executive Secretary
AASA

Dr. Robert Poppendieck
Director, Field Services
Office of Education
Washington, D.C. 20202

Dear Dr. Poppendieck:

It has been a pleasure for me to look over the Resolution of the National Advisory Council on Education Professions Development, with respect to Administration Amendments to the Higher Education Act (H.R. 16621 and S. 3636), and I should like to express my personal endorsement.

The matter has not been taken up by the Commission on Science Education as a formal matter, since the Commission will not meet again until October. I can react personally, however, partly out of our experience during the past two years in the development of guidelines for the training of elementary school teachers and high school science teachers, and partly out of the long experience of the AAAS Education staff in other matters relating to elementary and secondary school education.

I believe firmly in the general principle that the Congress should provide general authority and funds for the development of national programs for the improvement and advancement of education, on the basis of its awareness of the need for changes, but that congressional restrictions and limitations should be held to a minimum. The most effective work can be done if administering agencies and the educational community, in general, can have the maximum amount of freedom in the encouragement of innovations and in adapting quickly to the rapidly changing needs in education.

I should be very happy to have my reaction to the Resolution given to the appropriate members of the Senate and House of Representatives Education Committees.

Sincerely yours,

John R. Mayor

Enclosure

308 Vanguard Building / 1111 - 20th Street, N.W. / Washington, D.C. 20036 / (202) 382-8

July 7, 1970

Honorable Claiborne Pell
Chairman, Subcommittee on Education
U. S. Senate
4230 New Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

The National Advisory Council on Education Professions Development has considered the proposed amendments to the Education Professions Development Act as contained in the Administration Amendments to the Higher Education Act of 1965.

After a careful review, the Council voted to endorse these amendments. On behalf of the Council I am transmitting to you a copy of the resolution which endorses these amendments and comments on their importance.

The Council's resolution notes the need for action on the amendments to Title V of the Higher Education Act during this session of the Congress to enable the Office of Education to incorporate these changes in its plans and budget for Fiscal Year 1972. Accordingly, it is our hope that, should it appear unlikely that the Higher Education Amendments be voted on in toto this year, an appropriate course of action will be taken to ensure that amendments relating to the Education Professions Development Act are passed this session.

Sincerely,

Mary W. Rieke, Chairman

60-433 O - 71 - pt. 5 - 5

NATIONAL A[illegible] COUNCIL ON EDUCATION PROFESSIONS DEVELOPMENT

RESOLUTION

The Council, at its June 12, 1970 meeting, unanimously passed the following resolution endorsing the amendments to the Education Professions Development Act as contained in the Administration Amendments to the Higher Education Act introduced in the House (as H.R. 16621) and Senate (as S. 3636).

The National Advisory Council on Education Professions Development strongly endorses and urges early enactment of the Administration Amendments to the Education Professions Development Act (Title V, HEA of 1965).

Although the six amendments are of a technical nature, the Council would like to emphasize the significance of two of the amendments:

I. An amendment to Part D, Sections 531 (b) and (c) authorizes grants to develop, expand, and improve undergraduate and other programs for training education personnel. At present, grants for the direct reform of regular undergraduate educational personnel development programs are not allowed. Since 90 percent of all teachers and other personnel are prepared

in re[illegible] undergraduate programs, the Council believes that the direction of resources to the development of strong programs for training undergraduates will better enable the Bureau of Educational Personnel Development to "improve the quality of teaching," one of the two primary purposes of the Education Professions Development Act.

II. The Council notes with approval that the proposed amendments to EPDA extend the authority of Part D, but allow the language of Part C to lapse. The restrictive language in Part C does not allow the funding of local school districts, give a role to States, provide a direction of resources to the need of increasing the educational achievement of the disadvantaged children, or allow the payment of actual training costs. The removal of these restrictions and utilization of the broader language in Part D will allow the Bureau to more efficiently allocate its resources to meet national priorities.

The Council urges prompt action to extend and increase the authorization for Part D. At anticipated 1971 funding levels, the Bureau is utilizing virtually all of the $90 million authorization for Part D. In order to allow for increased expenditures in FY 1972, it is imperative that action be taken this year to extend the Act and to provide a substantial increase in the authorization level of Part D.

The Council strongly supports four additional perfecting amendments to Title V.

- Amendment to Part B.2 to increase the amount of State grant funds alloted for administrative costs, from three percent to five percent or $20,000 whichever is higher.
- Amendment to Part B.2 to eliminate the ceiling (one-third of total) on amounts expended by the States for the attraction and training of teacher aides.
- Amendment to Part D, Section 531(a) to make Indian schools eligible recipients of EPDA funds.

- dments to Parts B.2 and D to allow the payment of aries to student tutors participating in youth tutoring youth programs.

The Council would like to draw attention to the importance of these amendments and to the necessity for securing action on them this year. Only in the case of prompt action will there be adequate time for the development of effective programs and for planning and budgeting efforts in advance of Fiscal Year 1972.

Dr. MARLAND. It was my pleasure to meet with this advisory council this past week. And it is an extremely impressive body of citizens.

Let me finish, Mr. Chairman, by returning to the national institute of education, again emphasizing that the basic characteristics of the proposed national institute—its distinct identity, its stature, its flexibility—create the potential for bold national leadership toward superior educational research and development. We are shaking off the customs of traditional Government agencies as we construct this new instrument for the improvement of learning.

Great care is needed if we are to create a new agency that can begin to fulfill its potential for leadership and excellence. For this reason, we have proposed that the NIE begin operation in fiscal year 1973. The coming fiscal year should be devoted to thorough planning.

We join with the sponsors of S. 434 and S. 659 in looking to the day when a new national agency provides a focus in educational research efforts and urge early enactment of S. 434 as legislation which promises to establish a vigorous and flexible national institute of education.

Senator PELL. Thank you very much, Mr. Secretary and Mr. Commissioner. And I would like to thank you particularly for such detailed, specific testimony. Many of your points are very well taken, will be helpful to us in executive session, and I would think could be included in the final synthesis legislation which we trust will emerge from this subcommittee.

Others of your thoughts relate to the traditional institutional differences between the executive and legislative branches of Government; for instance, your suggestion that such amounts may be authorized as are necessary goes against the grain of this committee and most committees of the Congress. We like to be a little more specific as to the amounts authorized. However this is perfectly natural from your viewpoint since you wish maximum discretion in doing what we both seek to achieve as a goal.

One point, however, I would like to touch on here is that you appear to want the equivalent of what we are proposing in the form of an education division of HEW. However, you really want to do it administratively, and we want to set it up by law.

From past experience, this committee tends to believe that in order to insure the carrying out of its wishes it is a good precaution to put a legislative framework around our ideas. I am directing counsel to prepare a memorandum for the record which will analyze the differences on the testimony, and can assure you that each point will be substantially considered by the subcommittee in its executive sessions into which we hope to go early next month.

I would also hope that the administration would submit any additional materials backing up the position.

In your behalf, I wrote Senator McGee who is chairman of the Committee on Post Office and Civil Service and asked him the position of his committee on blanket exemptions of agencies from civil service laws as you propose. Mr. McGee indicated his opposition to the exemptions you asked for. Therefore, at this time, we cannot accept your proposal as is.

I would without objection put Senator McGee's letter in the record.

(The letter of Senator McGee follows.)

UNITED STATES SENATE,
COMMITTEE ON POST OFFICE AND CIVIL SERVICE,
Washington, D.C., May 6, 1971.

Hon. CLAIBORNE PELL,
U.S. Senate, Washington, D.C.

DEAR CLAI: Thank you for your letter of April 30 concerning S. 434 and S. 1062.

Legislation to exempt permanent agencies in the Executive Branch is generally not favored by the Committee on Post Office and Civil Service. Although we recognize that civil service laws, rules and regulations, practices and procedures present a complication in administration, experience has shown that the advantages of the civil service system outweigh the disadvantages. Intelligence and security agencies are exempted from these laws for obvious reasons, but agencies which employ a considerable number of people on a permanent basis to carry out administrative and ministerial functions of the government are not.

Kind regards.

Sincerely,

GALE MCGEE, *Chairman.*

Senator PELL. I would advise you to work with staff on some modified language that would meet both the objections and objectives.

Finally, before getting into any specific questions, I hope you understand the reason for our proposal. I look forward to the day when we will have a separate Cabinet-level Department of Education. I realize this runs completely counter to the administration's proposals to merge all the executive departments into four massive departments. If the administration's reorganization plans prevail, obviously this idea of a separate Department of Education will flounder.

I would think that within a very few months, we would be able to determine whether the proposed organization is going to prevail or not and then adjust our legislation. If it takes too long, maybe we can just leave it as it is presently in 659, and it would be spun off if the opportunity ever arose in the future.

Before getting to any specific questions, I would like to defer to my colleague Senator Dominick who is here for whatever questions he has.

AUTHORIZATIONS

Senator DOMINICK. I thank the chairman and I have listened with great interest to the testimony by the Secretary and by the Commissioner of Education, Commissioner Marland. And I have got to say to begin with that ever since I have been in Congress, I have been sharply opposed to open ended authorization and even though I have been a cosponsor of the NIE and the Foundation bills, to the extent that they are open ended, I think we are making a great mistake. It is part of the backdoor spending that we have had problems with for years.

And without having any legislative determination of what is needed, it is very difficult for the Appropriation Committee to take this on the fact. What they are doing, then, is acting both as an appropriation committee and a legislative committee. And I think it never reveals to the public what we are in fact thinking in terms of spending.

So there has been kind of a rule as I think the chairman will agree every time this has come up, I have opposed it. And up to date, we have been successful in getting some kind of overall limita-

tion put on. I do not really think this would be a problem, Mr. Secretary, really.

I think just for the way you said here on the growth of the NIE, you could put in overall limitations which would be sufficient so that you could justify your budget request before the appropriation within that limitation if we have a 2 or 3 year bill.

Secretary RICHARDSON. I was going to say I am sure we could work out an appropriate ceiling, but I was going to comment on the rather ironical circumstance that in the interval between my previous service in HEW and the present, the BOB/OMB and congressional positions have completely reversed themselves. When I was in HEW before, we were always proposing appropriation ceilings as we regarded them at the time in order that the Congress would not be in a position to appropriate more money than we contemplated as desirable for the legislation. And usually at the direction of BOB, we fought against open-ended authorizations of such sums as may be necessary.

And the Congress in that period tended to argue that we could not see clearly enough ahead what might be needed and why tie it down. This was a restrictive approach to the dynamic process, et cetera. And now OMB likes the such sums language, which in effect gives the Congress a blank check. However, I am sure we can work with the committee in determining an appropriate projected level.

STRUCTURES AND FUNCTIONS

Senator DOMINICK. Giving Congress a blank check, if I may say so, can be rather an extraordinary measure to put it bluntly. Particularly with the mood of the Congresses that I have seen in the last 11 years. And you get totally outside any reasonable authorization as far as I can see.

And furthermore, the American public never knows how much is being authorized for specific programs. And that is the real problem as I see it.

A few other questions if I may. How do you see the difference in the functions and structure of NIE from the Foundation?

Secretary RICHARDSON. This is an important question to try to respond to as clearly as possible. And I appreciate your raising it, Senator Dominick.

The basic distinction between the two, the most fundamental way of putting it, is that the National Institute of Education would be devoted toward the development of new knowledge relevant to education as a whole. It would be in the truest sense an agency directed toward research.

The Foundation, whose role would be limited to higher education, would be an instrument for innovation and reform, but it would not be confined to or would not emphasize new knowledge. It is designed to enable an institution that seeks the opportunity to develop a new type of program, responding to what it believed to be a need within its own area, to carry this program out.

It might be a program in the field, for example, of cooperative education which has been tested and shown to be effective where it has been used, but which we believe is an approach to higher education that needs to be applied on a wider scale. And we visualize the

Foundation as being in a position to assist an institution that wanted to do this to take that kind of a step.

There is, we think, from the point of view of the colleges and universities, moreover, some advantage in having an institution they can go to that is focused in its responsibility on higher education.

Senator DOMINICK. Well, NIE then would embark on research not only in connection with the educational quality of higher education, but also of the elementary and secondary, is that correct?

Secretary RICHARDSON. Yes.

STUDY OF FINANCING OF ELEMENTARY AND SECONDARY EDUCATION

Senator DOMINICK. We have had, and correct me if I am wrong, but it is my recollection that Senator Mondale and I for one of the few times we have joined together in a bill put together a provision in one of them in which we were going to have research on financing of elementary and secondary education. That bill, as I remember, went into law. What has been done on it if anything and what would happen to it under this approach?

Secretary RICHARDSON. Well, there is a commission on the financing of elementary and secondary schools.

That commission has been established and has been working under the chairmanship of Mr. Neal McElroy. Concurrently, the President had proposed a White House Commission or an executive branch commission on school finance. And the resolution of that was with the addition of a couple of members, the two bodies were made into one single entity which will report on the statutory due date to the Congress.

I believe that is March of next year, is that right?

Dr. MARLAND. The President's Commission is to report in March of 1972. The mandate of the Council is April of 1972, within 30 days of each other.

Secretary RICHARDSON. This body is now and has been hard at work, but their role as we conceive it and understand it does not embrace research in methods of education or the cognitive process or reading or things of that nature. It is studying only the financial problems of support of elementary and secondary education.

Senator DOMINICK. Would these functions be transferred, then, to NIE as you see them?

Secretary RICHARDSON. The Commission would go out of business, I understand, when it finished its present work and submits its report next year.

Senator DOMINICK. Yes, but the point I am making is that, let us assume that we get a report from them upon which some new ideas will come forth, and we wanted to continue this. As you and I know, everybody here in this room knows, one of the problems that we have in the educational field at the moment is funding, not only of public schools, but of private schools. And what can we do about it?

Assuming that they take up, as I understand, the private schools, one-tenth of the total load of the education of the people in the country, it would seem to me to be fairly important that we build into any consideration that we have of financing what we are going

to do about this particular problem. And would that be envisaged as part of the role of NIE?

Secretary RICHARDSON. Yes, it certainly would be within the scope of its authority. And I am sure that it would be one of the areas of very high priority that the advisory board and the director would want to pick up. And insofar as the financing commission points to areas in which new knowledge or experimentation seems needed, I am sure that the NIE would want to pursue those opportunities.

EXCESS PAPERWORK

Senator DOMINICK. Mr. Secretary, at a briefing which I received, there was a report made that in the Office of Education alone, there were some 10,000 applications for grants for one type of program or another and that a great many very skilled technicians are simply shuffling through papers down there to determine whether these grants meet congressional requirements and the regulations that have been established.

What effect would the adoption of the administration proposals have on that backlog of paper shuffling?

Secretary RICHARDSON. I think the main thing that it would do, and I would like to ask the Commissioner and Dr. Silberman if they would want to supplement my answer, is that it would, by increasing the prestige of educational research, also help to establish more widely accepted standards of quality in educational research. This might in itself shake out some of these applications.

Beyond that, though, the NIE as a more highly visible and prestigious entity responsible for educational research would also be in a position to adapt to education research the procedures that have been successfully applied in medical research, drawing on the community of scholars qualified to comment on and appraise applications for research in a particular area, use such individuals for review on an advisory basis.

This is the system that the National Institutes of Health have had to use. Of course, they get thousands of applications per year for research in cancer and heart disease and so on. And the system they use of peer review of these applications has been the only way in which, one, a larger part of the burden of review has been shifted from Federal employees, and, two, Federal employees have been able to avoid the position of unilateral responsibility of assessing the quality of an application in a technical and scientific area.

EFFECT OF SPECIAL REVENUE SHARING

Senator DOMINICK. In fact, would it not be true that if we got the special educational revenue sharing through, a great portion of this load would be eliminated from OE and would go back into the State agencies?

Secretary RICHARDSON. The special revenue sharing in education would eliminate a large volume of work in going through the paper generated by over 30 separate formula grant programs that would be folded into the special revenue-sharing program.

And, of course, that would in turn free people in the Office of Education so as to enable them to provide assistance to State and local people in taking advantage of educational research and development. Office of Education people could become disseminators, cross-pollinators, in effect, bringing to one school system information about the successful experimentation carried out by another.

I assume the 10,000 figure included all granted applications and that the special revenue-sharing program would reduce a lot of these. It would still leave in the NIE the responsibility for reviewing applications for research funds. And my first answer was directed to that process.

Would you like to comment further?

Dr. MARLAND. I would like to make a brief comment, Mr. Secretary.

Returning for a moment if I may to the question Senator Dominick asked on the Commission on Finance, I think the record should show that the Commission prescribed by Congress did require that two additional individuals be appointed to the original commission created by the President's direction. Those two individuals have now been established and have accepted appointment to the Joint Commission, the first being the Deputy Commissioner of Education for School Systems, and the second being the Director of the U.S. Mint, in compliance with the terms of that law.

As for the processing of papers and the adequacy of resources to do that well, I do, indeed, see NIE still having a very substantial task to perform in the review of proposals. However, I think that the very fact that NIE will be targeting research activities toward areas of very high priority to a greater degree than the present program may decrease the proportion of nonsolicited proposals that do now come to us for research support.

Second, I would endorse the Secretary's comment that the increased quality, increased prestige, of this agency will give us an opportunity in general to screen out what may be viewed as either irrelevant or low-quality proposals without engaging the extended labor that we now feel obliged to afford them.

Senator DOMINICK. Mr. Chairman, I do not want to take too long, but I have just a couple of other questions which I feel may be helpful.

Do you anticipate that a substantial portion or even a major portion of the present researchers in OE would be transferred into NIE?

Dr. MARLAND. I lost the first part of that, Senator.

Senator DOMINICK. Do you anticipate that a substantial portion or even a major portion of the researchers who are now operating under OE would be transferred into NIE, talking in terms of personnel?

Dr. MARLAND. The short answer to that question is that no, we do not see substantial numbers of researchers transferred to NIE from OE.

I think that the directors should be substantially free to gather his own staff. There would clearly be a nucleus of competent people from the Office of Education available to him, but I think that the discretion in that regard should reside in the new director, realizing that very likely there will be important people in OE whom he would wish to have.

OVERLAP OF FUNCTIONS

Senator DOMINICK. As a supporter of NIE and a cosponsor of the bil, what is then going to be the overlap of functions between the researchers in OE and the researchers in NIE?

Dr. MARLAND. It should be pointed out, Senator Dominick, that at this time virtually all of the research being conducted by the Office of Education is done by contract where the researchers as such are external to the Office of Education. And therefore, there will not be individuals in OE in any significant number viewed as researchers to be moved to NIE.

I would add that the ability of NIE to recruit such people does look promising, but they would not be recruited from the Office of Education. As for duplicating effort, the kind of activities in OE which we plead be sustained through the continuation of the Cooperative Research Act are not research activities as such in terms of the scope implied for NIE. They would be internal evaluation activities, policy-making surveys, activities of that kind which do legitimately fall under the Cooperative Research Act. I expect that some of the staff now working on strictly research management would turn to work in some of these other areas.

DISSEMINATION

Senator DOMINICK. Now, you have a proposal as I understand it that the dissemination of information will remain within OE and not be put into NIE. What is the reasoning behind that?

Dr. MARLAND. We see the NIE as having many markets for its dissemination, but we see the Office of Education as being one of its principal markets, if you will, or resources for dissemination.

Our logic in that, Senator Dominick, resides in the fact that the Office of Education is at the center of a vast network of governmental, political, and administrative structures which open through the entire nation down to and including classrooms. We feel this agency, the Office of Education, should have a lively, mutually supportive two-way flow with NIE, first of all, to put before NIE and its board and its director the great needs as we see them, not to prescribe or dictate to them but to say, "Here are some of the great problems we face, please view them affirmatively." When they have acted upon such a need and have discovered promising solutions, back into our network these solutions should flow.

And, indeed, much that the Secretary has implied in referring to the technical capacities of the Office of Education to go out and oversee the delivery and the installation of new practices would in my judgment be the emerging new role where the Office of Education does begin to exercise true leadership in the delivery system out of NIE.

We do not see NIE as having the lines of communication as complex and large as they are for delivering their product. And we do not want to burden a research and development agency with the great cost of implimentation. There would certainly be other agencies besides OE, however, that would share in the delivery of this product.

Secretary RICHARDSON. May I just add one word to this, Mr. Chairman and Senator Dominick?

I might say, first of all, that what the commissioner has said is fully consistent with my own view. And what I am saying is only in supplementation of it on one small point.

We both assume that scholars working within NIE or carrying out research supported by NIE would publish the results in professional journals and disseminate these results in that sense to other scholars and interested people. The role that the Commissioner was referring to that belongs, we think, in the Office of Eductaion attaches to the results of research that point to a new way of doing things that is well enough demonstrated and potentially effective enough so that it ought to be made known to the heads of all State departments of education and all school superintendents in the school systems of the Nation.

And that role of trying to assure that the opportunity to adopt this new method or approach is available to school administrators is one that we see the Office of Education as increasingly performing to the extent that the personnel of the Office of Eductaion have their time and energies free from the sheer tending of paper.

Senator DOMINICK. If, as and when, then, the NIE goes into effect, I would presume that contracts for research which are presently being conducted under OE would be reevaluated by NIE to see which ones would be continued and which ones would not. Is this correct?

Dr. MARLAND. This is correct, Senator Dominick. And I would even take a step further and say that in this very year, at this time, under the leadership of Dr. Harry Silberman who is with me this morning, we are already initiating a stern scrutiny of present commitments so that perhaps a good bit of such action will have been accomplished before the creation of NIE.

Nonetheless, NIE would be in a position, then, to scrutinize further any present research commitments to insure that they are, indeed, suitable to NIE's goals and purposes.

EFFECT OF SPECIAL REVENUE SHARING

Senator DOMINICK. Can I then look at the broad picture as far as I can see at the moment? What you are saying is that if you can get the special educational revenue sharing program through that you will release the expertise of a number of people in OE from shuffling papers so that they can be of actual assistance in program techniques and evaluation in the field and at the same time NIE would continue the research on innovative ideas either by evaluation of contracts that are now there or by initiating new ones and by cross-fertilization, if you want to put it that way, as we do in the health field, of getting in new ideas from the field for evaluation so that the three things would be working together, OE in trying to get the techniques and programs out, revenue sharing to let the States do a lot more of the specific needs for their area, and NIE in the research area?

Dr. MARLAND. This is true.

Senator DOMINICK. Is that a broad picture?

Dr. MARLAND. This is a very precise description, Senator Dominick, of what we would hope the new leadership role of the Office of Education will become, both with the advantages of special revenue sharing and the freedom implicit in the NIE role.

RELATIONSHIP OF REGIONAL LABORATORIES

Senator DOMINICK. Just a couple more. What would be the relationship of NIE to the regional labs and the R. & D. centers, the Foundation for Higher Education, NSF, and NIH, and the other research groups?

Dr. MARLAND. Senator Dominick, I would like to introduce Dr. Harry Silberman, presently the Associate Commissioner for Research and Development in the Office of Education who is taking an active leadership role in planning NIE, and have him comment on these issues as they are now emerging, still realizing that planning has only begun.

Dr. SILBERMAN. Senator Dominick, we are planning to transfer the regional laboratories to NIE. In preparation for that transfer, we are attempting to develop an institutional support policy that would enable the NIE to actually pursue programs which have fixed terminal dates and are capable of being carefully monitored by the NIE management.

In connection with the latter part of your question, we expect to have interchanges of personnel and resources between the NIE and other agencies such as the NSF, OEO, and so on.

VOCATIONAL RESEARCH

Senator DOMINICK. There have been proposals, talking now about the higher education function, that courses be set up in the secondary education level designed to show the importance of job orientation, if you want to put it that way, either in the public or private sector, but largely in the private sector, and at least strongly urging if doing no more than that, that people take 2 years off from high school before they decide whether or not they want to go into higher education.

Obviously, this not only envisages, but urges, a concentration of effort in the vocational educational field. What research and support would be received on this type of program out of NIE, that has not been put into effect through OE at the persent time.

Commissioner MARLAND. Mr. Chairman, Senator Dominick, the suggestion as I hear you is a reformed model for higher education broadly described. This could provide a typical example of the way NIE and the Foundation for Higher Education would relate to each other. It would be a very suitable topic for NIE to take on as, first, a research theme to discover new ways to make career education, to make higher education, responsive to the needs of this country.

And it would then be very suitable for the Foundation to pick up this theme, gather the products of research as emanating from NIE and set about funding of promising programs throughout the country within the scope of the Foundation's authority to install improvements and encourage institutions to modify themselves.

Senator DOMINICK. Do you anticipate, then, that you would have more support for the vocational effort we have been trying to put forth under NIE than you would have under the present setup?

Dr. MARLAND. I do, indeed. In fact, the initiative of the current

Commissioner of Education is giving maximum attention to the subject of career education. We are now engaged in the development of three new experimental models for installing carreer education in the elementary and secondary and community college spectrum throughout the country. These three models—one an in-school model, one an industry-related model, and one a home-based model for those individuals who may for a variety of reasons have left conventional institutions of learning—will be developed throughout this coming year; hopefully some parts of them will be in a position for testing and demonstration in the field within a year.

I feel that this is one of the highest and most crucial priorities of the Office of Education: to make our secondary schools, particularly at this time in history, meaningful to the young people who are there. For fully half of their graduates are, indeed, not finding rewards at the end of those 12 years of schooling that have significance for their lives.

One of the ways to turn this about is to make career education important, desirable, meaningful, attractive, and of high prestige in our society and to make sure that all elegance does not reside in the bachelor's degree with a liberal arts curriculum.

Senator DOMINICK. Would we need more legislation in order to accomplish those goals in the event that your programs that you have just outlined should seem more fruitful for the educational process than what we now have?

Dr. MARLAND. At this time, Senator, I feel we have ample legislation, both in the NIE and in the cooperative research authority now administered in the Office of Education. We have pooled our research funds in vocational and technical education under the total thrust of OE research, bringing together staff from the vocational education and from research arm of OE, to work together on the Office of Education's major new thrust in research and development this year: The career education models.

I do think the authority is there, sir. However, it would be my hope to return to Congress after a time and with the support of the administration to seek new funds to implement this program nationally.

Senator DOMINICK. Thank you, Mr. Chairman.

Senator PELL. Thank you.

Returning for a moment to the organizational structure, my long-term objective, as you know, is that the Commissioner of Education would eventually be in a position where he would be reporting directly to the President as the Secretary of Education. I do not see this happening in the next short period of time. So that would mean he would be promoted from being two away as he is now to being one away.

The long-term project of the administration or short-term project is this reorganization which does exactly the opposite. And when you look at the table of organization which I ask unanimous consent be inserted in the record at this point, one sees that the chairman of education reports to the Administrator for Human Development who in turn reports to the Secretary of HEW who in turn reports to the President.

(The table of organization follows:)

PROPOSED

DEPARTMENT OF HUMAN RESOURCES

Senator PELL. So maybe the synthesis here will be that nothing happens and he stays in his present position. I would hope that he would move up however.

The basic difference between the two approaches, except for that and funding requirements, are all questions, it would seem to me, of detailed administration. As you try to cut through brambles and underbrush here, what else do you see as the fundamental differences between the subcommittee's bill and your approach?

Secretary RICHARDSON. Mr. Chairman——

Senator PELL. Of a fundamental nature.

Secretary RICHARDSON (continuing). I think you have accurately stated the situation. There really is involved a sort of built-in institutional bias in all the comments that we have made. And it is sort of like the issue we were discussing earlier. It involves appropriations levels, for instance, as such sums may be necessary.

The executive branch is once again, as we constantly do in testifying on various bills before various committees, taking the position that we object to having too detailed provisions in legislation governing the entire structure of any proposed new governmental entity. This is a position that we take year in and year out because of the experience within the executive branch which shows that statutory blueprints for internal organization can be hard to live with; that we are continually accountable to the Congress anyway, both the authorizing committees and the appropriation committees, for what we do within these structures. The Congress has the opportunity to intervene, and it is undesirable, therefore, on balance, for legislation to be so detailed that we feel straitjacketed by it or have to come back and continually seek to get adjustments in it.

And much of what we have said here today really is a reflection in one way or another of this basic attitude on the part of the executive branch.

Senator PELL. Mr. Secretary, either you or Commissioner Marland—I forget which—pointed out the necessity of finding men of stature to head the Institute and the Foundation. And this is a very real need.

I know in a somewhat similar organization, the Endowment for the Humanities, the administration has searched for a year for a man of very real stature, and it is hard to find men outside of Government who will come in.

With regard to the Teacher Corps, I understand that you prefer now that it go to this new sort of voluntary, whatever it is called, agency and leave the Office of Education. Is that correct?

Dr. MARLAND. Yes, I support that position, sir.

Senator PELL. Thank you.

Secretary RICHARDSON. I think it should be stated that this was a matter in which the point of view of the Commissioner was weighted in and processed within the administration. And I think he certainly supports that because it is the administration position.

I think on the other hand, in fairness to his own point of view, that looking at it from the perspective of the Office of Education, as distinguished from the perspective that has been reflected in the proposal to create a new volunteer agency, the conclusion might be different.

Senator PELL. Thank you.

Now, with regard to research, when private industry performs research for the Government which has paid for that research, as I understand it, the use of that research belongs to the Government. Would this be the case with research performed for the National Institute of Education?

Secretary RICHARDSON. Yes. I am not expert on the patent provisions and so on, but generally speaking, the conclusion you state is right.

Dr. MARLAND. I would like to amplify that if I may, Mr. Chairman and Mr. Secretary.

We have in my judgment over the past year developed some innovations in the area of copyrights. So much research is performed under public banner and, therefore, available to the entire marketplace. Particularly for publications, books, materials, instructional devices and so on, if these are cast upon the public domain without any constraints, responsible producers, publishers, manufacturers, and others tend to be discouraged from engaging themselves deeply in the marketing and production of those devices.

Therefore, we have developed a system whereby the Government is protected and yet a given compentent producer can acquire rights to our research and development materials for periods of time sufficient to protect himself. The royalties therefrom deriving are shared by the developer and the Federal Government, giving some degree of exclusivity to encouraging the entrepreneur. So, indeed, we can get the materials marketed and delivered rather than having them sit on the research shelves with very high promise, but no distribution.

This system is now beginning to work. We have a good number of different contracts surrounding such materials that have come out of our labs and centers. And we see this as a good solution protecting the Government and furthering private enterprise in the distribution of good materials.

Senator PELL. Would these royalties go into the general treasury or into a trust fund?

Dr. MARLAND. I will have to get help on that one.

Senator PELL. It may be submitted for the record.

Commissioner MARLAND. We will submit it for the record, sir.

(The information subsequently supplied follows:)

WHERE ROYALTIES GO

Royalties returning to the Federal government go into the general fund of the Treasury.

Senator PELL. Now, another question is in regard to the protections you have built into the Institute, the Foundation, to keep politics out of the decisions. As you know, we have sought hard in the legislation which established the Endowment for the Humanities and the Arts to insulate it from the ebb and flow of politics.

One of the ideas of having a strong board is to have an insulation between administrations, be it Democratic or Republican, and the actions of the Institute and Foundation, which I thought was your view when we started out on this legislation. But now I see a weakening of the role of the board.

Am I correct in that?

Dr. MARLAND. No, sir; not from my viewpoint. And my testimony should show and I hope it does show emphatically that the roles of both of those advisory boards will be tremendously important. I think we are dealing here with the question of structure of management.

Is it feasible, for example, for an instrument of Government, tax supported, and closely related to other agencies, to be free standing in Government affairs without the responsibility ultimately to report to a cabinet member; namely, the Secretary? We feel that the Secretary should encourage, the Commissioner should encourage, the utmost in the way of freedom and autonomy within those boards to guide the policies, unincumbered by political arrangements, to tell us where this Nation should be going both in its higher education revolution and in its elementary and secondary reform.

Now, given that, however, we feel that if, indeed, the Secretary of HEW is to be held accountable—and he must be in my judgment—and if the Commissioner is delegated this task, he also must be held accountable—that there cannot be absolute autonomy in these instruments of Government. Although under S. 659 the agencies would still report to the Commissioner, it would be very difficult for him to be held accountable for the actions of a governing board.

I would hold that the Secretary and the Commissioner would depart from the recommendations of the boards for policies and procedures at their peril. Both the Secretary and I have reiterated the importance of appointing individuals of the higher prominence and integrity, untouched by political shifts, to develop these policies and procedures.

Having worked with such instruments in the past at a lower level of government, I feel very confident that the ultimate conditions of responsibility can be invested in established government and still maintain the virtual freedom of these advisory bodies to perform high service.

Senator PELL. To cut through those words, as I understand it, you would rather that the Board was more advisory than operating; is that correct?

Secretary RICHARDSON. May I add a word, Mr. Chairman?

You recall that when the legislation was originally proposed the National Foundation would have been a separate agency entirely outside of the Department of HEW. The National Institute of Education, on the other hand, has always been conceived as a part of HEW with an advisory rather than governing board. And my view was, and I think the Commissioner's, in our first discussions when he was shortly to come on board in HEW, was the same, that if we were proposing to establish major responsibility for innovative program support in postsecondary education in a separate agency, that agency should have close ties with the Office of Education. In the same way, we felt from the outset that there should be assured some direct interrelationship so that the areas of research identified by Office of Education people in their work with States and local communities could have a high claim on the priorities of the NIE and conversely so that the results of research sponsored by the NIE could be fed into the processes by which the Office of Education would disseminate results to State and local school systems.

So the question then was how do you accomplish this and with what kind of interrelationship. And the conclusion was, in effect, that the head of the NIE, Director of the NIE, should be independent of the Office in the sense that the Director would not be taking orders from the Commissioner day to day, but still related to him as the Foundation would be. In effect, the Commissioner would be the senior among a group of three people, the heads of the Foundation and the Institute and himself, all within HEW.

And given that structure, we thought that the Foundation board should have a somewhat different role than it would have as the governing body for an institution not having this relationship to the Commissioner and the Foundation.

Senator PELL. I think I follow, but my understanding was that the Institute and the Foundation would be established so that in the event of a secretary or commissioner without great imagination or an innovative approach, the new agencies would be able to support innovation.

And while I have great respect for you and Dr. Marland the time might come when there might be in those jobs men for whom one does not have such respect. And I personally believe that the agencies should be a spot more independent than I detect in the present table of organization.

I know I thought enough of your original proposal to put it in our legislation. We proposed to bring them all in to one department, admittedly a different approach from yours. But having brought them in, we then proceeded to give them as much independence as we could, very like the National Science Foundation. I think the more advisory you make the boards, the lower the caliber of men you are going to be able to find will accepted appointment.

I would hope that as we work together working up this legislation, you might go a little bit back toward your original direction and split

the difference somewhere between where you were a year ago and where you are today, which is about where my own thinking would be.

Secretary RICHARDSON. We would be glad to work with you on this, Mr. Chairman.

Senator PELL. Thank you.

A couple of very little specific points. In your testimony, Mr. Secretary, you objected to the fact that we make it a statutory responsibility that the Directors of the National Institute of Education-National Foundation for Higher Education report to you through the Commissioner, yet this is in a sense just what you are advocating now; is it not?

Secretary RICHARDSON. No, I would not object to their reporting to me through the Commissioner. The only problem is not their relationship to me, it is to assure both on the one hand their genuine independence in the sense of the integrity of their role on the one side and yet a sufficient relationship to the Commissioner so that what they do in the areas of their emphasis and so on would properly factor in the areas of priority and emphasis which the Commissioner as chief education officer of the United States believes to be important.

For my part, I would expect to have my primary contact with the heads of these institutions through the Commissioner, although there would undoubtedly be situations where we would meet together or where they might want to simply talk to me about what they were doing and what they hoped to accomplish.

Dr. MARLAND. I would find that perfectly compatible with the Commissioner role, Mr. Chairman.

Senator PELL. Thank you.

I was delighted to note that the Secretary thought the authorization in S. 659 was low. And I am sure that we can compromise our differences there very easily.

Secretary RICHARDSON. I am sure.

Senator PELL. In connection with title III of ESEA, the demonstration projects, some of them have been terribly successful, how do we get these demonstration projects going under the Institute?

Secretary RICHARDSON. The Office of Education would continue to administer title III as a demonstration program. I think we could expect to see the NIE producing valid study program models of which title III could support the demonstration. NIE should look closely at what has been developed under title III, to see what might be built on it through research and development. The gradation between research, experimentation, demonstration, is obviously a continuum.

Let me ask Commissioner Marland to supplement this.

Dr. MARLAND. I think there is a further factor in this which the committee should hear, Mr. Chairman. That is that the present intent of the administration is to move the substantial part of title III that part administered by the States, into special revenue sharing, giving the States and local districts what they already have in the way of authority over those funds, but increasing the efficiency and freedom in getting that money and authority to them.

However, the very kind of thing which I think you are implying as to the demonstrations, the breakthroughs, that follow research, which can be supported under title III, should continue to rest in the Office of Education, under the authority of the Cooperative Research Act. And we can use the title III mode as a national instrument for advancing demonstrations.

Senator PELL. Thank you.

Thank you very much.

REORGANIZATION AND GENERAL REVENUE SHARING

Senator DOMINICK. I have just one more question. It is a tough question. Maybe I ought to address it to Commissioner Marland instead of the Secretary.

If by any happenstance—and I hope this does not happen—the educational special revenue sharing does not pass and we are left with the present is not the proposed reorganization we have got here going to be very sharply handicapped?

Dr. MARLAND. The reorganization dealing with National Institute for Education?

Senator DOMINICK. I am talking about NIE, the Foundation, the whole reorganization of education within HEW.

Dr. MARLAND. If indeed that misadventure does fall upon us and we we do not find special revenue sharing passing this year, we would still be able to manage. Indeed, the Secretary noted earlier and as Senator Dominick noted earlier, there is a vast and steadily increasing morass of paper work to be handled. We would simply have to continue to handle it, Senator Dominick.

If NIE should pass, there would be, as noted earlier, a removal of those functions having to do with research and development program grant management from the Office of Education focused more sharply within NIE. But there would still be, failing the passage of special revenue sharing, a continuing very large paper managing responsibility in the Office.

We could manage, however, if we have to. We would hope that in time, if it should not pass this year, special revenue sharing or something like it will pass.

Senator PELL. Thank you very much, indeed, gentlemen, for being with us.

Secretary RICHARDSON. Thank you very much, Mr. Chairman.

2277

Differences Between S. 1062 & S. 659

	S. 1062 (Javits)	S. 659 (Pell)
1) Location of the Foundation	Sec. 2 "There is established in the Department of Health, Education, & Welfare a National Foundation for Higher Education."	Sec. 401: "There will be, within the Department of Health, Education & Welfare, an Education Division which shall be composed of the Office of Education, the National Foundation for Higher Education, and the National Institute for Education and shall be headed by the Commissioner of Education."
2) Authority to set policy	In Mr. Javits' Bill, the Board is given the authority to advise the Secretary and the Director with regard to general policy. (Sec. 4(a)(1))	Sec. 403(a)(1) "The Foundation...shall be subject to the general regulations of the Commissioner promulgated for its management." Sec. 403(b)(3) "Subject to such general regulations of the Commissioner promulgated for the management of the Foundation the Board shall (A) establish policies for the Foundation..."
3) Authority to Award Grants	Sec. 5(a) "The Secretary is authorized to make grants or contracts with ..."	Sec. 403(b)(3): "The Board shall have the primary responsibility for the powers, duties and authorities vested in the Foundation under this section and is authorized to delegate any of such powers, duties and authorities as it may deem appropriate to the Director, or other officers, or permanent employees of the Foundation. Sec. 403(d): "The Foundation is authorized to make grants to ..."

	S. 1062 (Javits)	S. 659 (Pell)
4) Purpose of the Act	Sec. 3. The purposes of the Foundation are-- (1) to encourage excellence, innovation, and reform in postsecondary education; (2) to provide assistance for the design and establishment of innovative structures for providing postsecondary education and innovative modes of teaching and learning therein; (3) to expand the ways and patterns of acquiring postsecondary education and to open opportunities for such education to individuals of all ages and circumstances; (4) to strengthen the autonomy, individuality, and sense of mission of postsecondary educational institutions, and to support programs which are distinctive or of special value to American society; and (5) to encourage postsecondary educational institutions to develop policies, programs, and practices responsive to social needs, and to provide an organization concerned with the rationalization of public policies toward postsecondary education.	Sec. 403(a)(2): "It shall be the purpose of the Foundation-- (1) to provide a source of funds to encourage excellence, innovation, and reform in higher education; (2) to strengthen postsecondary educational institutions or courses of instruction that play a uniquely valuable role in American higher education or that are faced with special difficulties; and (3) to provide an organization concerned with the development of national policy in higher education.
5) Contents and Submission of the Annual Report	Sec. 4.(a)(2): prepare an annual report to the Secretary on the current status and needs of postsecondary education in the United States, which the Secretary shall transmit to the President with such recommendations as he may make.	Sec. 403.(b)(3)(C): "submit an annual report to the President on the activities of the Foundation and the status of higher education in the United States, which (i) shall include such recommendations and comments as the Board may deem appropriate, and (ii) shall be submitted to the Congress as a part of the Commissioner's annual

Differences Cont'd

	S. 1062 (Javits)	S. 659 (Pell)
6) Appropriation for the Foundation	Mr. Javits Bill does not specify an appropriation level.	Sec. 403.(e): "There is authorized to be appropriated, without fiscal year limitations, $200,000,000, in the aggregate for the period beginning July 1, 1972, and ending June 30, 1976, to carry out the functions of the Foundation. Sums so appropriated shall, notwithstanding any other provision of law, unless enacted in express limitation of this subsection, remain available for the purposes of this section until expended.
7) Number of Board Members	Sec. 4(b): "The Board shall consist of the Director, ex officio, and eighteen members..."	Sec. 403(b)(1): "The Board shall consist of fifteen members appointed by the President, by and with the consent of the Senate, the Director and such other ex officio members who are officers of the United States as the President may designate."
8) Term of office for Board members	Sec. 4.(b) "The members of the Board shall be appointed for terms of three years; except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and (2) the terms of office of the members first taking office shall begin upon enactment of this Act, and shall expire as designated at the time of appointment, six at the end of three years, six at the end of two years, and six at the end of the first year.	Sec. 403.(b)(2): "The term of office of members of the Board (other than ex officio members) shall be six years, except that (A) any member appointed to fill a vacancy shall serve only such portion of a term as shall not have been expired at the time of such appointment, and (B) in the case of initial members, five shall serve for terms of four years and five for terms of two years. Any person, whose term of office is subject to this paragraph, who has been a member of the Board for six consecutive years shall thereafter be ineligible for appointment to the Board during the two-year period following the expiration of such sixth year.

Areas Included in S. 659 That Are Not In S. 1062

	S. 1062	S. 659
1) Deputy Director		Sec. 403(c)(2):"There shall be a Deputy Director of the Foundation (referred to in this section as the 'Deputy Director') who shall be appointed by the President, by and with the advice and consent of the Senate, and shall serve at the pleasure of the President. The Deputy Director shall be compensated at the rate provided for level V of the Executive Schedule under section 5316 of title 5, United States Code, and shall exercise such powers as the Director may prescribe. The Deputy Director shall serve as Director during the absence or disability of the Director or in the event of a vacancy in the Office of Director.
2) Quorum for Board Meetings		Sec. 403(b)(1): "Eight members (excluding ex officio members) shall constitute a quorum.
3) Specification of Board Sessions		Sec. 403(b)(3)(B): "meet at the call of the Chairman of the Board, except that it shall meet (i) at least one time during each fiscal year, or (ii) whenever one-third of the members request a meeting in writing, in which event one-third of the members (excluding ex officio members) shall constitute a quorum;"

2260

Areas Included in S.1062 That Are Not Included In S.659

	S. 1062	S. 659
1) Qualification of Board Members	Sec. 4(b):"members who shall be broadly representative of the general public as well as the education community."	
2) Fellowships	Sec 6: The Secretary is authorized, where appropriate and necessary to carry out the purposes of this Act, to award fellowships and to pay to fellowship holders stipends (including allowances for subsistence and other expenses for themselves and their dependents) for stated periods of time.	
3) General Authority	Sec. 7: In carrying out this Act the Secretary shall have the authority-- (1) to enter into contracts without performance or other bonds, and without regard to section 3709 of the Revised Statutes (41 U.S.C. 5); (2) to make advance, progress, and other payments without regard to the provisions of section 3648 of the Revised Statutes (31 U.S.C. 529); (3) to receive money and other property donated, bequeathed, or devised to the Foundation with or without a condition or restriction, including a condition that the Foundation use other funds for the purposes of the gift; and to use, sell, or otherwise dispose of such property for the purposes of this Act; (4) to publish or arrange for the publication of information without regard to the provisions of section 501 of title 44, United States Code; (5) to accept and utilize the services of voluntary and uncompensated personnel, notwithstanding the provisions of section	

	S. 1062	S. 659
	3679(b) of the Revised Statutes (31 U.S.C. 665(b)), and to provide transportation and subsistence as authorized by section 5703 of title 5, United States Code, for persons serving without compensation; and (6) to arrange with and reimburse the heads of other Federal agencies for the performance of any activity which the Foundation is authorized to conduct.	
4) Miscellaneous Provisions	Sec. 8(a): The Secretary may appoint and compensate without regard to the provisions of title 5, United States Code, governing appointments in the competitive service and chapter 51 and subchapter III of chapter 53 of such title, relating to classification and general schedule rates, such technical and professional personnel as he deems necessary to accomplish the functions of the Foundation. (b) Funds available under this Act shall be available for transfer to any other Federal department or agency (including constituent agencies of the Department of Health, Education, and Welfare) for use (in accordance with an interagency agreement) by such agency (alone or in combination with funds of that agency) for purposes for which such transferred funds could be otherwise expended by the Secretary under this Act, and the Secretary is likewise authorized to accept and expend funds of any other Federal agency for use under this Act. (c) All laborers and mechanics employed by contractors or subcontractors on all construction projects assisted under this Act shall be paid wages at rates not less than	

2263

2263

	S. 1062	S. 659
	those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a--276a--5). The Secretary of Labor shall have with respect to the labor standards specified in this section the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 50 U.S.C. 133z-15) and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. 276(c)).	
5) Joint Funding	Sec. 9: "Pursuant to regulations prescribed by the President, where funds are advanced by the Foundation and one or more other Federal agencies (including any other part of the Department of Health, Education, and Welfare) for any activity assisted under this Act, any one Federal agency may be designated to act for all in administering the funds advanced. In such cases, any such agency may waive any technical grant or contract requirement (as defined by such regulations) which is inconsistent with the similar requirements of the administering agency or which the administering agency does not impose.	
6) Specification of Instits. Eligible for Grants	Sec. 5.(a): "The Secretary is authorized to make grants to or contracts with any public or private agency, organization, or institution, any combination thereof, or any individual, in order to achieve the purposes of the Foundation, except that no grant may be made to a private agency, organization, or institution other than a nonprofit one.	

	S. 1062	S. 659
7) Specification of Rates of Reimbursement of Board	Sec. 4(b)(2) "Members of the Board who are not regular full-time employees of the United States shall, while serving on the business of the Board, be entitled to receive compensation at rates to be determined by the Secretary, but not exceeding the per diem equivalent for GS-18 for each day so engaged, including travel-time, and, while so serving away from their homes or regular places of business, may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code for persons in the Government service employed intermittently."	

22834

Areas of Agreement Between S. 1062 and S. 659

	S. 1062	S. 659
Appointment of the Director	Sec. 2: "The President shall appoint, with the advice and consent of the Senate, a Director of the Foundation."	Sec. 403(c)(1): "The Director of the Foundation...shall be appointed by the President, by and with the advice of the Senate, and shall serve at the pleasure of the President."
Appointment of the Chairman of the Board	Sec. 4(b)(2): "One of the members shall be designated by the President as Chairman."	Sec. 403(b)(1): "The Chairman of the Board shall be designated by the President from among its members."
Availability of Appropriations	Sec. 11: "Funds appropriated to carry out this Act shall remain available until expended."	Sec. 403(e): "Sums so appropriated shall, notwithstanding any other provision of law, unless enacted in express limitation of this subsection, remain available for the purposes of this section until expended.

Differences Between S. 434 and S. 659

	S. 434 (Prouty)	S. 659 (Pell)
(1) Location of the NIE	Sec. 3(a) - Establishes NIE in DHEW.	Sec. 401*- Establishes NIE in a Division of Education in DHEW.
(2) Authority to set policy	Sec. 3,4,5 and 7 - Authorizes Secretary to carry out NIE's functions.	Sec. 404(b)(3) - Gives the National Council on Educational Research the primary responsibility for powers of the Institute. Permits the Council to delegate these to the Director or other permanent employees of the Institute.
(3) Scope of Authority	No provision - inherent powers of the Executive Branch are protected.	Sec. 404(a)(1) - Gives the Institute only such authority as Sec. 404 specifies, subject to management regulations promulgated by the Commissioner.
(4) Rank of Top Officials	Sec. 3(b) - Ranks the Director at a level V.	Sec. (c)(1) - Ranks the Director at a level IV. Sec. (c)(2) - Provides for a level IV Deputy Director, presidentially appointed with Senate advice and consent. Sec. 404(d) - Provides for three GS-18 Assistant Directors.

* Section numbers of this bill refer to sections of the General Education Provisions Act, which Title III amends.

2267

2267

	S. 434 (Prouty)	S. 659 (Pe)
(5) Employment Authority	Sec. 5 - Permits the appointment and compensation of professional and technical personnel without regard to competitive, eligibility, and pay rate requirements of the civil service laws.	Sec. 404(E)(2) - Permits such appointment and compensation only with regard to temporary technical and professional personnel.
(6) Council Membership	Sec. 6(b) - Authorizes the appointment of 15 members without regard to the civil service laws.	Sec. 404(b)(1) - Authorizes the appointment (with the advice and consent of the Senate) of 15 members plus such ex officio members who are U.S. officials as the President wishes.
(7) Council Functions	Sec. 6(a) - Authorizes the Council to advise on the status of educational research and present recommendations for strengthening it and improving dissemination methods, advise on NIE programs and policy, conduct studies, and prepare an annual report to the Secretary and President.	Sec. 404(b)(3) - Vests in the Council primary responsibility for the powers, duties and authorities of the Institute.
(8) Council Terms	Sec. 6(b) - Provides for three year terms for Council members.	Sec. 404(b)(2) - Provides for three year terms but makes a person ineligible for 2 years after having served for 6 consecutive years.
(9) Time of Appropriations Authorized	Sec. 8 - Authorizes appropriations for NIE from FY 1973 onward, without limitation.	Sec. 404(e) - Authorizes appropriations for NIE from FY 1973 through FY 1976.
(10) Amount of Appropriations Authorized	Sec. 8 - Authorizes the appropriation of such sums as may be necessary.	Sec. 404(e) - Authorizes the appropriation of $200,000,000 in the aggregate for FY 1972-76.

2287

2268

Provisions Contained in S. 659 and not in S. 434

	S. 659 (Pell)
(1) Internal Organization	Sec. 404(d)(1) specifies the following divisions within the Institute: (A) a Division of Institute programs to identify educational problems and opportunities and manage comprehensive R&D programs directed toward them. (B) a Division of Education Studies to conduct studies on the state of education in the U.S., evaluate education policies, and assist in planning and evaluating educational R&D programs. (C) a Division of Research and Development to manage programs designed to improve education policies and techniques and strengthen the scientific and technological foundations of education, and to carry out programs to improve educational R&D systems.
(2) Repealer of the Cooperative Research Act	Sec. 404(b)(3) repeals sections 2 and 3 of the Cooperative Research Act, effective FY 73, leaving only research facilities construction authority.

60-433 O - 71 -pt. 5 - 7

2269

Provisions Contained in S. 434 and not in S. 659

	S. 434 (Prouty)
(1) Joint Funding and Fund Transfer Authority	Sec. 7(d) provides that funds available under the Act may be available for transfer to another Federal agency for the purposes of NIE, and that the Secretary may accept funds of another Federal agency for use under the Act.
(2) Gift Accepting Authority	Sec. 7(c) permits the Secretary to accept gifts and voluntary services on behalf of NIE.
(3) Provision for Council Staff	Sec. 6(d) authorizes the Council to hire and compensate staff without regard to certain civil service authorities. It also authorizes the Council to enter into contracts. Sec. 6(c) directs the Secretary to provide the Council such professional, clerical, and other assistance as necessary to carry out its functions.
(4) Payments	Sec. 7(b) provides that payments under the Act may be made in installments, in advance, by reimbursement, with necessary adjustments.
(5) Use of other Federal Agencies	Sec. 7(a) authorizes the Secretary to utilize the services and facilities of any Federal, public, or private nonprofit agency, in accordance with agreement.
(6) Davis-Bacon Act	Sec. 7(e) requires payment of laborers and mechanics employed on construction projects assisted under the Act in accordance with the Davis-Bacon Act.

2289

THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE
WASHINGTON, D. C. 20201

MAY 21 1971

Honorable Claiborne Pell
United States Senate
Washington, D.C. 20510

Dear Senator Pell:

On March 4 I appeared before the Subcommittee on Education to testify on behalf of the National Foundation for Higher Education Act of 1971. I would like to take this opportunity to reaffirm my personal interest in this proposal.

The mission of the National Foundation will be to stimulate new directions in post-secondary education. The term "post-secondary" education is especially important, for it indicates that the Foundation will be concerned with the entire range of programs and institutions which provide education beyond high school.

I have been asked why I believe the Foundation will succeed in this mission. There are four principal answers.

First, the time is right. After several decades of rapid growth and several years of conflict and turmoil, post-secondary education is alive with ferment and new ideas. Reports from a number of educational groups such as the Carnegie Commission, the Assembly on University Goals and Governance, the Scranton Commission, and the Newman Task Force have outlined possibilities for creative changes which were not even being discussed five years ago. In my visits to different campuses over the past year, I have been deeply impressed with the interest expressed to me by students and educational officials in experimenting with new approaches to learning, and new types of institutions and programs. Administrators wish to focus the missions of their institutions, introduce new cost-saving methods, enter consortia arrangements, and provide new programs to new clienteles such as older women, workingmen, and minority students. Faculties wish to rearrange departmental structures and experiment with internships, cooperative study arrangements, and other new educational formats. Students wish to meet degree requirements outside traditional institutional settings. Boards of trustees

wish to introduce experiments in televised and computer-assisted instruction. The National Foundation can make the difference, in many of these cases, as to whether these new ideas are nurtured and encouraged into being, or whether they will die for lack of interest and support.

Second, the approach is right. We have proposed a foundation form of organization because it is perfectly suited to accomplish the goal of encouraging innovations in post-secondary education without dictating the nature of these innovations. (The National Science Foundation and the National Foundation on the Arts and the Humanities have already demonstrated the success of the foundation concept.) We know that this can be done, for the new Foundation will have the flexibility and the prestige to attract an outstanding Board and a high-caliber staff capable of selecting for support those ideas which are in the best interests of the Nation.

Third, the design is right. The Foundation will have a strong Board to establish policies and programs for the Foundation which are in the best interests of the Nation and the community of post-secondary institutions. It will be established within the Department of Health, Education, and Welfare in order to insure that its programs are carefully coordinated with other educational programs in the Department.

Fourth, the Foundation has the support of the educational community. On March 31, the Subcommittee on Education heard testimony in favor of the Foundation from representatives of the American Association of Junior Colleges, the American Association of State Colleges and Universities, the American Council on Education, the Association of American Universities, the National Association of State Universities and Land Grant Colleges, and the National Council of Independent Colleges and Universities. Dr. Clark Kerr, Chairman of the Carnegie Commission on Higher Education, has also written the President of his support. Copies of the testimony from the Associations, the letter from Dr. Kerr, and my own testimony before your Subcommittee are enclosed for your information.

I would ask, therefore, that you give serious consideration to this Bill along with our other proposals for higher education. I will be glad to provide whatever assistance you need.

With kindest regards,

Sincerely,

Elliot L. Richardson
Secretary

Enclosures

STATEMENT BY HON. ELLIOT L. RICHARDSON, SECRETARY OF HEALTH, EDUCATION, AND WELFARE, BEFORE THE SUBCOMMITTEE ON EDUCATION, COMMITTEE ON LABOR AND PUBLIC WELFARE, UNITED STATES SENATE, THURSDAY, MARCH 4, 1971

Mr. Chairman and Members of the Committee, I am pleased to be here today to testify on the President's proposal to establish a National Foundation for Higher Education. This proposal has been introduced as S. 1062 by Senator Javits, ranking minority member of the Labor and Public Welfare Committee, and co-sponsored by Senators Prouty, Beall, Dominick, Griffin, Schweiker, and Scott.

Our student aid proposals which I testified on yesterday are directed at the highest Administration priority in higher education, the need to equalize opportunities for attending college. Our proposal for a National Foundation is directed at the second clear need—to assure that these opportunities will be meaningful ones. The mission of the Foundation is reform—and not just any reform, not just change for the sake of change, but new orientation, programs, and innovative structures which will substantially enhance the capacity of higher education to serve the needs of all our citizens.

While our proposal is based upon the legislation we submitted last year, it has been improved in major ways. Since last year, we have benefited from the thinking of leaders in higher education. The Commissioner of Education and I have consulted with the educational associations, and we have taken into account the views expressed last year and this by members of Congress and their staffs. The result is a proposal which many have helped design and for which I am personally responsible—and believe in.

We have not only listened, but we have tried to incorporate into our conception of the National Foundation those ideas which would advance the purposes I have stated. We have weighed and pondered the diagnoses of what is wrong with higher education which have been made by such groups as the Carnegie Commission, the Assembly on University Goals and Governance sponsored by the American Academy of Sciences, the Scranton Commission, and the Newman Task Force. As a result, I am confident that the proposal before you addresses itself to the right problems in higher education and deals with them in the right way.

These problems have many sources, yet surely a major one is the sheer and unparalleled growth of higher education in the last two decades. Twenty years ago less than a quarter of our young people went to college; today over half do. Twenty years ago most of our post-secondary institutions served a select and relatively homogeneous student population. Today they serve students from all kinds of economic and social backgrounds and a wide range of academic abilities and interests. Twenty years ago more institutions were relatively small, and the balance between public and private institutions was about even. Today, a quarter of our students attend institutions where enrollments are over 20,000, and large public multi-campus systems dominate the field.

This swift growth had to occur if we were to keep faith with the expanding demand for higher education. Yet this rapid growth left a number of problems in its wake which might have been avoided had there been a chance to proceed more cautiously, to experiment, to assess what worked and discard what did not. With some notable exceptions, higher education kept doing what it knew best, namely, what it had been doing all along. The structures and methods of years standing simply were extended and expanded to a larger universe. Now the problems created during these two decades are all around us.

Academic departments and disciplines designed for advanced training and research have been extended throughout undergraduate education. Modes of teaching suited for students who have been raised to enjoy and excell in academic pursuits have been extended to students from very different social backgrounds. Requirements and practices which were designed for the selective few persist—yet today, less than half of the students who enter college ever graduate.

The expansion of research and graduate education, too, was largely accomplished by extending traditional departments and disciplines into institutions where they had not previously existed. Departments were expanded to enroll more students, often without consideration as to whether a market existed for the skills the department provided. The congruence of lines of research with problems of society has been often a matter of luck rather than intention.

In the structure and administration of post-secondary institutions, the same phenomenon can be seen. Many have grown enormously, without adequate examination of their mission, how they were changing, and their competence

and resources for doing more and different things. Under pressure of financial need, institutions have taken on outside activities which are unrelated to their central purposes and which other agencies can better perform. Even the ordinary processes of administration have generally expanded along traditional lines. The lack of sophistication in planning, programming, costing, and operating even in some of our most prestigious universities is distressing.

In turn, these outmoded forms and practices have been reinforced by equally outmoded habits and practices outside the institutions. Going to college has become a now-or-never proposition immediately following high school rather than an experience to be undertaken when individiuals are eager and ready to acquire a higher education. Career ladders are so encumbered with requirements for certificates and credentials that doing time in school has become nearly the only avenue to advancement. Accrediting bodies have come to protect the professional views of guilds more aggressively than the changing needs and interests of consumers. And not the least of the problems is that we have continued to perpetuate modes of financing higher education without understanding their impact or experimenting with new financing methods. State and federal governments alike have been so concerned with finding revenues for an expanding system that questions about how to reward quality and performance, as well as provide financial stability, have been shunted aside.

Now this is a formidable list of problems, and I have no means exhausted them all. All of these are problems defined from a traditional conception of what higher education is all about. But patterns of work and leisure are changing so rapidly, the demand for advanced skills is rising so fast, surely higher education will be called upon in the coming decade to perform tasks never before even attempted. The worker, the housewife—individuals of all ages and circumstances—also represent "problems" for—and opportunities—to higher education.

I do not want to suggest that the National Foundation will solve or even address each and every one of these problems. Other programs of HEW and other agencies will make major contributions. But the National Foundation will be involved in a particular way. If we can agree upon the need for Federal leadership to facilitate basic reform in higher education, then I believe we can agree that the National Foundation is the right instrument for exerting this leadership.

We have adopted the Foundation form of organization and administration because it seems so perfectly adapted to the things we want to do—to innovate, to seed and stimulate, to sponsor and encourage. A foundation is not an institution which deals with all clients in an even-handed way, but an institution designed from the start to be selective, and given the flexibility to attract for varying periods of time the highest order of staff and counsel. The National Foundation will have this capability. It will not be an organization for operating programs or carrying on large and continuing financial transactions but a grant-making organization. It will be free of responsibility for operating any existing programs now conducted by H.E.W.

The Foundation will be located within the Department of Health, Education, and Welfare in the same way as other agencies of the Department such as the Office of Education. This is a major change from last year's proposal which established the Foundation as an independent agency in the Executive Branch reporting directly to the President. It is a location which we believe will retain the advantages of independent action and add to these the benefits of full-coordination with other major educational programs.

The Director of the Foundation will have close working relationships with the Commissioner of Education and the Director of the proposed National Institute on Education. Since this Administration has made it clear that the Commissioner of Education is the chief education officer, I intend to ask the Director of the Foundation to report to me through him.

I also intend to seek maximum coordination between the Foundation and other agencies outside H.E.W. which transact considerable business with post-secondary institutions. The Foundation will have my backing to share information and stimulate jointly-supported projects with other agencies. And we intend to establish, within the Executive Branch as a whole, a mechanism through which the Director of the Foundation can routinely do business with the leaders of other agencies.

Communication with the world outside the Federal government will be fostered by an advisory board of public members representing both the educa-

tional community and the general public. We want a strong board. Hence we have provided for its appointment by the President as a way of recruiting top people from education and other walks of life. In addition, the Board's advice will reach to all important matters of policy and all important projects and programs. There is enough experience in higher education to be sure that a strong board can serve important purposes; rightly operated it will strengthen the hand of its executive officer, and that is what we intend.

Among all the key elements of the Foundation, the Director is the most important. We want someone who is dynamic, one who has fresh and progressive views about higher education. To recruit such a person, the bill provides a number of incentives. He is to be a Presidential appointee, confirmed by the Senate. He will have an exciting program to develop and administer, and a strong Board to help him formulate policies and programs.

These are powerful incentives, but he needs others. Thus the bill includes a very important provision to give him the tools he needs and to enable the Foundation to carry out its mission. The bill exempts the professional and technical staff from the requirements of civil service laws and regulations regarding appointments, tenure, and classification of personnel. This is not an exemption for the sake of exemption. Rather, it recognizes the unique characteristics and mission of the Foundation, a recognition which Congress has previously accorded to other governmental foundations. Existing civil service rules, designed for the settled operations of diverse governmental operating activities, would severely constrain the Foundation from pulling together—often quickly and for varying lengths of time—teams of skilled and experienced people. The image of freshness and new starts that the exemption would convey to the individuals we want to attract should also not be underrated. The exemption could make the crucial margin of difference between assembling a staff of the first or the second order.

I am confident that with these key features I have mentioned the Foundation can be the vehicle for bringing a bold new emphasis to Federal higher education policy. The President's budget requests $100 million for the first year of operation of the Foundation. This is a substantial sum. But we are dealing with a large and very important system, and are seeking much more than piecemeal reforms here and there in existing institutions.

The Foundation will bring substantial new elements of diversity to higher education by supporting exemplary programs in a wide range of areas. Excellence and innovation in higher education has for too long been associated with one activity—academic research. Those institutions which are excellent in this activity should continue to be so, and other institutions should be encouraged to join them. But we also need institutions which are excellent in training individuals for particular careers and professions, excellent in providing motivation as well as knowledge, excellent in educating particular groups, excellent in equipping people with the attitudes and skills required to serve others.

Excellence in all these areas will entail not just strengthening of existing programs but the development of new ones based on new sequences and modes of education. The high school graduate today who wants to enter a profession such as the law, must undertake three or four years of general education followed by three years of formal training, and may never see the inside of a law office during this whole period. Women have no institutions seriously devoted to experimenting with sequences and courses of study related to their special needs and capabilities. Minorities other than Blacks have no programs to speak of which are devoted to the study and enrichment of their particular cultures. We need institutions and programs devoted to all these needs—and others. We need wholly unstructured educational programs for those who use freedom well and can learn by experience, and highly structured, disciplined programs for others. We need colleges with broad-based programs and colleges with narrow missions, colleges of three years and five years as well as four years and two years. Nothing short of such diversity will meet the range of contemporary needs. The Foundation can encourage this diversity.

We believe, too, that the Foundation should seek to make higher education more responsive to public needs.

One such need is the efficient use of public resources, and the Foundation can do much in this area. It can support evaluations and transitions to new kinds of administrative structures and procedures, new uses of faculties and facilities, and experimental modes of financing higher education. But it can go beyond this as well, and direct attention to the more general problem of accountability. It can support evaluations of what kind of educational programs are needed by our

fast-moving society, where the distortions and imbalances are, and can encourage new programs in needed areas.

The Foundation should, thirdly, encourage new ways of going to college. The Carnegie Commission recently issued a report entitled "Less Time, More Options" which suggested the kinds of things which could be done to break the lockstep pattern and rigid sequences of college education. The Foundation can support these steps. And it can also establish programs and institutions which can provide higher education within the home, the neighborhood center, and the work place. As the President said in his message on higher education, Great Britain and Japan have already made impressive strides in developing open universities based on televised courses and innovative tutorial and examining arrangements. Our citizens are no less deserving.

Mr. Chairman, I thank you for allowing me the time to elaborate on the reasons why we feel the Foundation is so necessary. I urge the speedy enactment of the President's proposal.

THE NATIONAL INSTITUTE OF EDUCATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, WASHINGTON, D.C.

In March 1970, the President called for the creation of a National Institute of Education as a "focus for educational research and experimentation in the United States." Pointing to the pressing need for reform and revitalization in American education, the President declared, "As a first step toward reform, we need a coherent approach to research and experimentation. Local schools need an objective national body to evaluate new departures in teachings that are being conducted here and abroad and a means of disseminating information about projects that show promise."

Our system of educational research and development has produced a number of important breakthroughs effecting the state of education. And yet research and development in education has never received enough attention to make it the full partner for progress our schools need so poignantly. In comparison to health research for example, it has commanded meager resources and recruited but a small community of researchers.

—Since 1959, the Nation has spent less than $1 billion on educational research—and $14 billion on health research.

—Today research and development receives barely three percent of the education dollar—and 4.6 percent of the health dollar.

—In 1968, the number of manyears devoted to research and development came to 5,390 in education—and 59,500 in health.

—The number of researchers working on education is only four or five thousand—and 30,000 receive support from the National Institutes of Health.

Insufficient resources and personnel have not been the only hindrances to a vigorous educational research and development effort. Education researchers have traditionally been associated with psychology, sociology, and the like—few have been drawn from a range of other disciplines now understood to have particular relevance to education—physiology, chemistry, computer sciences, statistics, etc. Education research has been concentrated too heavily on a few university campuses—most of it has been conducted in some 200 such institutions. Very little has emerged from other kinds of institutions.

Finally, education research has lacked the leadership of its own national agency with high visibility and favored institutional status. The creation of a National Institute of Education would place leadership in just that kind of agency.

The Institute would have power to carry on a broad range of research and development activities, including most of those now carried out in the Office of Education's National Center for Educational Research and Development. The new agency would be placed within the Department of HEW as an entity separate from the Office of Education. Although responsibility for it would be delegated to the Commissioner of Education for coordination purposes, the Institute's distinct organizational identity would permit it special visibility and flexibility.

The Institute would be led by an Executive level V director, to be appointed by the President and confirmed by the Senate. A National Advisory Council on Educational Research and Development, also Presidentially appointed, would bring together prominent representatives of education, research, science, business, and the public to advise the Director on Institute policy.

The Director would have special authority to hire and compensate staff exempt from civil service regulations. This would permit the Institute to evolve the kind of special staffing patterns other outstanding research and development agencies such as National Science Foundation and the National Institutes of Health have found so successful in attracting top researchers. For example, this civil service exemption will allow distinguished scholars and educators whose permanent career commitments are to universities or school systems to serve at the Institute on a short-term basis.

Most of the activities now vested in National Center for Educational Research and Development would be the complete responsibility of the Institute. The NIE would take responsibility for basic research and development, research and development centers and regional education laboratories, researcher training, and experimental schools. In addition to these activities, the NIE would conduct a small amount of in-house research. And the new agency would devote more resources to exploring radically new approaches to education's critical problems. The Office of Education would probably retain responsibility for education policy research relating to OE programs, statistical gathering, some demonstration projects, and a share of dissemination activities serving both agencies.

An increase in funds for educational research and development would accompany establishment of the NIE. $90 million is now spent under the Cooperative Research Act. In FY 1973, the first year of the Institute's full operation, the agency's budget is expected to begin at $150 million rising to about $250 million in five years.

In conclusion, the NIE will have special qualities enabling it to exert leadership for a more vigorous and effective educational research and development system. Its high level directorship will allow it particularly distinguished leadership. Its personnel authority and separation from the Office of Education will allow the Institute flexibility in evolving patterns of staffing and operation suited to a successful research and development agency. And its visibility as a new and distinct agency will help it to draw national attention to itself and, in the process, to progress in educational research.

Undoubtedly the present organization of research is capable of gradual, quite progress. But creation of a National Institute of Education will result in a giant step forward, and a major impetus for far-reaching improvements in the capacity of research and development to find better methods to educate Americans.

CARNEGIE COMMISSION ON HIGHER EDUCATION,
Berkeley, Calif., April 5, 1971.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I wish to indicate my strong support for your proposal for a National Foundation for Higher Education. As you know, the Carnegie Commission proposed a similar Foundation in its first report, *Quality and Equality*, and suggested further tasks for that Foundation in the revision of *Quality and Equality* and also in its recent report, *From Isolation to Mainstream*. The Foundation can have significant influence in encouraging the type of reform so greatly needed in higher education. The growing interest in developing more effective options at the postsecondary education level make this a particularly opportune time for the establishment of this type of Foundation.

The Administration's new proposal for a National Foundation avoids the major cause of concern over last year's proposal—the mixing of responsibility for continuing programs with responsibility for innovative and experimental programs. The only existing HEW administered program that would seem to fit appropriately within the general mission of the National Foundation is the Developing Institutions Program.

In reviewing the bill to establish the National Foundation (S. 1062), I noted the emphasis on creating new institutions. It is possible that new types of institutions will be needed to achieve some of the necessary reforms. Although it is by no means the only reason for doing so, this emphasis on new institutions makes it particularly desirable to build into the Foundation a continuing mechanism for working with state planning agencies. Even the most nationally oriented institutions have some impact on the educational resources of the state in which they are located. And, since the Foundation provides experimental

funds only, the state may eventually be called upon to provide some of the funding for the new institution.

It is partly because of this that we recommend in our revised recommendations to *Quality and Equality* that there be a division within the Foundation which would make grants to states and regions to plan for the effective growth of the broad range of postsecondary education.

We also recommended in our report, *From Isolation to Mainstream*, issued in February 1971, that a special subdivision be created in the National Foundation for the development of black colleges and universities to give particular attention to their problems in this period of transition.

Some further thoughts on the general role and possible functions of the National Foundation are included in the attached note which I prepared for a forthcoming issue of *Change* magazine.

It is hoped that the National Foundation for Higher Education will soon become a reality.

Best wishes,

CLARK KERR.

William S. Hayes, President, Alice Lloyd College, Pippa Passes, Kentucky

THE HIGHER EDUCATION FOUNDATION

We support the Administration's proposal to establish a National Foundation for Higher Education because we believe that innovation and experimentation in higher education are urgently needed, and because we are convinced that only support by the Federal government will make possible the range of innovation that we consider desirable.

In our judgment the five purposes of the Foundation as stated in Section 3 of H.R. 5192 are clear, important and attainable. The kinds of activities which the Foundation is authorized to support by Section 5(a) of the bill are practical and of high priority in adjusting higher education to new needs and opportunities. The authority in Section 5(b) to make studies in the field of post-secondary education, including studies related to post-secondary education finance, organization and management, are in our judgment an integral part of the activities of the Foundation, particularly because it must be able to assess critically the innovative efforts which it funds. Any bill which would state the purposes and activities in the general terms stated in H.R. 5192 would in our opinion be satisfactory.

We see no conflict or overlapping between the proposed Foundation and the proposed Institute for Education. The Institute will concentrate on research relating to education, concentrating but not confined to the pre-school, elementary and secondary levels. The Foundation will concentrate on innovation and implementation at the post-secondary level. The Institute will be heavily engaged in research on such matters as the learning process, motivation, family and cultural influences upon learning, curricula and so forth. The Institute would not be heavily engaged in supporting or evaluating innovative efforts in higher education, as would the Foundation. Since both organizations are related to education, there will be a border area where the legitimate interests of the two organizations should and will converge. Reasonable administrative judgment on the

part of the Directors of the two organizations, together with use of authority to transfer funds, would resolve any problems that may arise.

We wish to commend the Secretary for modifying his proposal for the Foundation so that operating functions are removed from the Foundation. We advocated this removal, and now find the statement of objectives and the activities entirely acceptable.

Since the Foundation is a new concept, it is our earnest hope that the proposal will be discussed intensively with a view to arriving at a proposal which will become law.

As contrasted with the statement of purposes and activities, we see a need for further discussion and modification of the portions of the bill which spell out the relative authority and responsibility of the Secretary, the Director of the Foundation and the Board of the Foundaiton. Two separable but related problems are involved here—the degree of independence which the Foundation should have, and how the independence of institutions of higher education is to be preserved when the Federal government can to some degree decide the direction and nature of change in higher education.

We consider it to be of the utmost importance that the Foundation be able to act with a high degree of independence. By this we do not mean that the Foundation should be another branch of government. It should be broadly responsive to the policies of the President. However, it should not be the machinery for administering to higher education prescriptions decided upon by government. The Department of Health, Education and Welfare and other agencies of the Federal government should be a source of ideas for the Foundation to consider, but it should not have executive authority to tell the Foundation which kinds of innovation should or should not be tried. In this connection, we were pleased to note that in his testimony before this Committee on March 18, Secretary Richardson was sensitive to this problem. He said:

"I think it important to emphasize that we visualize the Foundation as operating under a strong higher-education Foundation board and a strong director. . . . it is not, I can confidently say, a relationship under which we would expect the Commissioner to tell the Director what to do but rather a relationship designed . . . to try to make sure that the pieces fit together in a complementary way." Moreover, the Commissioner of Education expressed these views in testimony before this Committee on March 18: "The Director of the Foundation would not be a handmaiden, if you will, of a Commissioner; he would not be a person subordinate to the Commissioner in the sense of taking direction. I would see the roles as very compatible, collegial and mutually supportive."

However, we have some reservations as to the adequacy with which these concepts are stated in the Administration's bill. For example, it states (Section 2) that the Director of the Foundation, "shall perform such duties in carrying out this Act as are prescribed by the Secretary of Health, Education and Welfare." This conveys a tone of subordination rather than independence.

Without suggesting that the Foundation for Higher Education be outside the Department of HEW, we see in the National Science Foundation some structural principles and some internal arrangements which deserve careful consideration. This consideration is indicated because the functions of the proposed National Foundation for Higher Education and the National Science Foundation are broadly analogous. Both would provide governmental funds to institutions—one for research and one for higher education. The innovative as contrasted with the research function of the Higher Education Foundation is stronger, but this is not a critical difference. Both would provide governmental funds to areas of activity that must be protected against the imposition of central authority. Yet both must have a set of broad purposes which will inevitably influence the actions of individuals and institutions.

One might say that science, as contrasted with higher education, is not beset by deep philosophical differences and involved in political decisions. However, science on the national scene is in fact as deeply involved as is higher education in fundamental and controversial questions relating to the purposes of the entire undertaking and the proper role of the Federal government. One need only reflect on the deep disagreements as to the responsibilities of the National Science Foundation for the solution of social problems to realize the close parallels between the way in which science and higher education become politically involved. Incidentally, it is worth noting that the National Science Foundation has retained the respect of all parties concerned, and that it has not been

politically dominated in a partisan sense, in large part because its structure and distribution of authority have been worked out with great care.

In the light of this background, let us look briefly at the structure and distribution of authority proposed in H.R. 5192. It is simple. The President appoints the Director, who performs duties prescribed by the Secretary of HEW. (Section 2). A Higher Education Foundation Board advises the Secretary and the Director on matters of general policy, and prepares an annual report to the Secretary. (Section 4). The President designates one of the members of the Board as chairman. (Section 4). The Secretary is empowered to make grants or contracts to carry out the puposes of the Act.

Proposals for modification

Recalling the dual objective of giving the Foundation an adequate degree of independence and of protecting the independence of institutions of higher education—objectives which we share with the Secretary—the bill as written does not in our judgment present an optimum solution.

1. *Authority of the Board.*—As a central means of assuring an adequate degree of independence, we suggest that the Foundation (as is true of the National Science Board) be given unambiguous authority to set the policies and priorities of the Foundation for Higher Education, after consultation with the Secretary. H.R. 5192 does not clearly state who sets the policies and priorities of the Foundation but this authority is not given to the board. In fact, the Board has only two functions, as stated in Section 4. It advises the Secretary and the Director with respect to matters of general policy, and it prepare an annual report to the Secretary.

We believe that an annual report should be prepared by the Board, but that it should be sent to the Secretary for transmission to the President, and for submission to the Congress. We also believe, as in the case under the National Science Foundation, that the act should specifically empower the Board to make in its annual report such recommendations as it deems timely and appropriate.

This degree of independence of the Foundation does not relieve the Office of Education of authority and responsibility for innovation. The activities of the Foundation would simply demonstrate for the Office of Education, as well as for others, which experiments and innovative modes of higher education are productive and ready for large-scale application.

It is important to recognize that not all innovations work, and that all experiments do not succeed. One of the values of a Foundation is that it, to a greater degree than a standard operating arm of government, is designed to take chances on untried ventures and to lose some bets without being accused of incompetence, poor judgment or wastefulness.

2. *Composition of the Board.*—In our judgment, the composition of the Board is an extremely important matter H.R. 5192, Section 4(b) requires only that the members be broadly representative of the general public as well as the education community. We believe that this is highly desirable, but that twenty years of experience with the National Science Foundation have demonstrated that additional factors are important. For one thing, the members should be eminent in the field of higher education and public affairs. We do not want this Board to be a haven for mediocrity. The members should be selected solely on the basis of established records of distinguished service as the National Science Foundation Act provides. Finally, they should be so selected as to reflect views of leaders in all areas of the Nation and all major elements of higher education. We stress the need for broad representation on the Board.

In the selection process we believe that the President should be requested—again following the lead of the National Science Foundation Act—to consider recommendations of the National Association of State Universities and Land-Grant Colleges, the Association of American Universities, the Association of American Colleges, the Association of State Colleges and Universities and other educational organizations.

3. *Chairman of the Board.*—To emphasize the independence of the Board, we believe that it should elect its own chairman, as is the case with the National Science Board, rather than to have the chairman appointed by the President.

4. *Director of the Foundation.*—While we agree that the President should appoint the Director of the Foundation as provided in Section 2 of H.R. 5192, we believe that this authority should be greater and more explicit than the bill provides. As in the case of the National Science Foundation, we believe that the

Director should exercise all of the authority granted to the Foundation (including authority delegated by the Board) and that all of his actions should be final and binding upon the Foundation. Under H.R. 5192 as written, the Secretary alone is authorized to make grants or contracts. While he would undoubtedly delegate this authority to the Director, the ultimate authority (including authority to set conditions under which the delegation would be withdrawn) would remain with the Secretary. We suggest that failure to lodge authority to make grants and contracts in the Director, together with the requirement that the Director carry out such duties as the Secretary prescribes, reduce the independence of the Foundation to such a low level that it will be difficult to attain the goals which we share with the Secretary.

Incidentally, we wish to point out that the National Science Foundation has devised a system for making grants and contracts which has the full confidence of the higher education community. It is based upon a concept often missing in governmental operations—wide and open participation and involvement by the groups concerned with decisions, and avoidance of predetermined answers. A National Foundation for Higher Education free to adopt the principles and procedures for contracts which have made the National Science Foundation such a conspicuous success would be welcomed by higher education.

Finally, the Director should be required in exercising his executive functions to consult with the Board to ensure that the programs which he formulates are in conformity with the policies set by the Board.

5. *Place of the Foundation in the Department.*—We do not have a precise formula for stating the place of the Foundation in the Department, and the relationships between the Foundation, the Secretary and the Commissioner. Some of the suggestions made above relate to this question, but they do not provide a complete answer.

We suggest that the Foundation be considered as an element of the Department with a collegial relationship with the Secretary, as the Secretary and the Commissioner have proposed. We also suggest that the Commissioner of Education be a non-voting member of the Board of the Foundation in order to ensure a close working relationship between the Department and the Foundation. (We suggest a non-voting status not to reduce the status of the Commissioner, but to retain his freedom of action in adopting or rejecting ideas put forward by the Board.) Finally, we suggest that the budget proposed for the Foundation be presented by the Secretary to the President in a single lump sum for contracts, plus another sum for administrative expenses. For reasons stated above, we believe that the Foundation should be empowered to make grants and contracts and to do so under terms and conditions set by the Foundation. Finally, we note that Presidential appointment of the Director and the Board are means of ensuring the proper degree of responsiveness to the general policies of the administration in power.

Consideration of suggestions of this sort should lead to a reasonable resolution of this thorny problem.

Conclusion

Our proposals are made with the intention of establishing the principles, structure and relationships which will attract the best people, enhance confidence in the independence of the Foundation, protect the independence of colleges and universities while encouraging them to be responsive to needs for change, lead to the formulation of superior programs, and enhance the quality of administration. We do not make these proposals dogmatically or with the feeling that we know the ultimate answer to all of the problems, but with concern that the existing proposal needs modification in the general direction which we suggest.

In conclusion, we wish to emphasize our belief that innovation and general institutional support are related. General support is needed if productive changes are to be widely adopted. Poverty can, and often does, inhibit change. On the other hand, specific funds for innovation and experimentation are necessary to show what will and will not work.

Introduction

Higher education has come to occupy an important place in American life. In terms of size alone it has grown from enrolling about 4 per cent of the 18-21 year old population in 1900 to about 15 per cent in 1940 and 38 per cent in 1960. (1) By 1969 there were nearly 8,000,000 students in over 2,500 institutions of higher education. (2)

The greatest growth not only in size but in diversity has occurred since the Second World War and especially in the early sixties. This has been true in the great expansion of graduate programs and academic research facilities and in the remarkable rate at which community colleges have been founded. Some of this growth has been stimulated and made possible by the federal government. For example, while the total income of all institutions of higher education in 1946-47 was one billion dollars, federal aid alone to higher education in 1972 is estimated at six billion dollars. (3) But on the whole it appears that the federal role, rather than being one of initiation, has been one of response--response to either a sense of national need or of local demand. This has been true with the G.I. Bill, the National Defense Education Act of 1958, and in the construction of educational facilities.

One concomitant of this growth by response, however, has been the lack of either long-range planning or of coordination among current activities at the federal level. This has been clear for some time. In 1947 the Office of Education was a fairly insignificant unit within the Federal Security Agency; its Higher Education Division had a permanent staff of twelve.

The $1.5 billion in veterans' higher education benefits were administered by the Veterans Administration. (4) Twenty-five years later, although it has been given responsibility for NDEA and other programs, the Office of Education still administers less than one-quarter of federal higher education funds; nearly half of all such funds are not administered by either it or its present parent Department of Health, Education, and Welfare. This can be seen in the following table.

FEDERAL OUTLAYS FOR HIGHER EDUCATION BY AGENCY AND PROGRAM
(in millions of dollars)

Agency and Program	1970 actual	1972 estimate
Defense:		
Academic research	219	209
Other	278	311
Subtotal, Department of Defense	497	520
Health, Education, and Welfare:		
Office of Education:		
Student assistance	610	800
Construction of facilities	437	201
Institutional and personnel development	220	308
Subtotal, Office of Education	1,267	1,309
Other Health, Education, and Welfare:		
Academic research-health services	586	677
Fellowships and traineeships-health professions	280	281
NIH facilities construction	139	147
Social and rehabilitation research and training	51	49
Social security (student benefits)	502	594
Other	152	268
Subtotal, other HEW	1,710	2,016
Housing and Urban Development:		
College housing	196	46
Other	1	10
Veterans Administration: Readjustment benefits	665	1,260
National Science Foundation	360	363
Other	447	449
Total, higher education	5,142	6,047

(Table I-10, Office of Management and Budget, Special Analyses, Budget of the United States, 1972, Special Analysis I, Federal Education Programs, January 1971, p. 126.)

Lack of planning and coordination have also characterized the great growth in higher education. Only recently has the higher education community begun to realize that it is just that: a system of national proportions whose components interact with each other in important ways. Graduate students from one state attend university in another and work in a third; admissions standards and fees at private institutions affect attendance at public ones; research facilities in one region affect the quality and opportunities of students and faculty in another.

The implications of these interactions were not of much concern as the system burgeoned seemingly without limitation or question. The combination of social unrest, political protest, and economic difficulties in the last half of the sixties, however, led to widespread questioning of purposes and practices. Financial constraints in particular, as they began to force choices to be made between different alternatives, have illuminated the range of problems, the subtlety of the mechanisms at work, and how much has been taken for granted.

This situation may by now have had the effect of "unfreezing" the system so that it is open to more carefully thought out change. Yet individuals, institutions, states do not have the ability by themselves to plan or coordinate these changes on a national basis. The National Foundation for Higher Education is intended to help redress the problems of unplanned growth in both federal higher education programs and in the postsecondary educational system at large.

The Carnegie Commission Proposal

Reacting to the rapidly changing conditions of higher education in the last half of the sixties, the Carnegie Foundation for the Advancement of Teaching in early 1967 created with a $5 million, five-year grant the Carnegie Commission on Higher Education. The 15-member Commission was to examine the relationship between higher education and American society, sponsoring detailed studies of various aspects of the relationship and issuing occasional special reports on urgent problems that required early action.

Under the chairmanship of Clark Kerr, the initial Commission members were:

RALPH M. BESSE
Chairman of the Board
The Cleveland Electric
Illuminating Company

JOSEPH P. COSAND
President, The Junior College
District of St. Louis

WILLIAM FRIDAY
President, U. of No. Carolina

DAVID D. HENRY
Pres., U. of Illinois

THEODORE M. HESBURGH, C.S.C.
Pres., U. of Notre Dame

CARL KAYSEN
Director, Institute for
Advanced Study at Princeton

James A. Perkins
Pres., Cornell University

KATHERINE E. McBRIDE
President
Bryn Mawr College

CLIFTON W. PHALEN
Chairman of the Exec. Com.
Marine Midland Banks

NATHAN M. PUSEY
President, Harvard U.

DAVID RIESMAN
Professor of Social Sciences
Harvard University

THE HONORABLE
WILLIAM W. SCRANTON

NORTON SIMON
Hunt Food and Industries, Inc.

ROY E. LARSON
Chairman of the Executive
Committee, Time, Inc.

Roy Larson resigned in mid-1968 and subsequently five other members were appointed:

ERIC ASHBY
The Master, Clare College
Cambridge, England

KENNETH KENNISTON
Professor of Psychology
School of Medecine, Yale U.

THE HONORABLE PATRICIA ROBERTS HARRIS
Partner, Strasser, Speigelberg, Fried, Frank, and Kampelman, Attorneys, Washington, D.C.

KENNETH TOLLETT
Dean of the Law School
Texas Southern University

STANLEY J. HEYWOOD
Pres., Eastern Montana College

In December 1968 the Commission issued its first report, "Quality and Equality: New Levels of Federal Responsibility for Higher Education." Examining the nation's needs for higher education, higher education's potential to meet those needs, the federal concern with higher education, possible forms of federal support, and various federal aid proposals, the final recommendation of the report was that there be created a National Foundation for the Development of Higher Education.

The rationale for this proposal was that

> Research and graduate instruction in the nation's universities have been greatly strengtheded over the past two decades, in large part because of substantial research support by the federal government. Parallel gains of this magnitude have not been made in other areas of higher education, such as undergraduate curriculum development, instructional techniques, utilization of resources, and new program areas.
>
> The Commission believes that the federal government can play an extremely valuable role in encouraging developmental programs in higher education by providing initial funds for such undertakings. The continuing rise in the costs of higher education makes it particularly important to develop existing facilities to their greatest potential and to try out new methods and techniques in order to improve operational efficiency and quality. But many institutions find that they do not have a margin of funds for such undertakings.

The Foundation, therefore, was

> ...to provide encouragement, advice, review, and financial support for institutional programs designed to provide new directions in curricula, strengthening of essential areas that have fallen behind or that have never been adequately developed because of inadequate funding, and development of programs to improve educational processes and techniques.

This Foundation would be organized along the lines of the National Science Foundation but would develop higher education programs that would in a relatively short period of time be turned over to other federal agencies, mainly the Office of Education, for their operation. The funding level of the Foundation would be $100 million in 1970-71 rising to $200 million in 1976-77. By the latter date, however, additional funding for the newly divested programs and for some that now exist--those providing aid to developing institutions, for library support, and for international studies--was estimated to be about $800 million annually.

In its June 1970 "Revised Recommendation," while deleting reference to the Foundation's developing operating programs, $600 million was the Commission's new estimated federal expenditure for special programs in 1976-77 (the figure was reduced due to a different treatment of inflationary components). In addition the job of helping states and regions plan for post-sedondary education was added to the Foundation's work. In February 1971 the Commission recommended in its report "From Isolation to Mainstream" that there be a division for black colleges and universities within the Foundation.

The Moynihan Proposal

The Carnegie Commission proposal was published just after the 1968 National elections. During 1969 and early 1970 the Nixon Administration, newly in office, was to develop its major policy stances and legislative proposals. Trying to apply general principles to policy-making and have programs follow therefrom, higher education policy was formulated in the same mold as the initiatives in revenue sharing and the negative income tax. In the latter an income stretegy was designed intended to limit the amount of direction coming out of Washington. Revenues would be provided to the people needing them and the determination of their uses would be left to the recipients.

This approach to higher education policy was expressed as early as March 22, 1969, when the President stated

> For there is a second issue, of far greater concern to me, and, as I believe, to the Congress, to the American people generally, and the faculties and students of American colleges and universities especially. That is the preservation of the integrity, the independence and the creativity of our institutions of higher learning.
>
> * * *
>
> The first thing to do at such moments is to reassert first principles. The federal government cannot, should not--must not--enforce such principles. That is fundamentally the task and the responsibility of the university community. But any may state what these principles are, for they are as widely understood as they are cherished.
>
> First, that universities and colleges are places of excellence in which men are judged by achievement and merit in defined areas. The independence and competence of the faculty, the commitment, and equally the competence of the student body, are matters not to be compromised.
>
> * * *
>
> Students today point to many wrongs which must be made right:
>
> **We have seen a depersonalization of the educational experience. Our institutions must reshape themselves lest this turns to total alienation.

**Student unrest does not exist in a vacuum but reflects a deep and growing social unrest affecting much of our world today. Self-righteous indignation by society will solve none of this. We must resolve the internal contradictions of our communities.

**There must be university reform including new experimentation with curricula such as ethnic studies, student involvement in the decision making process and a new emphasis in faculty teaching.

The specifics of policy and legislation were to be worked out over the following year by a "study group" on higher education in the Executive Branch. Under the chairmanship of Edward Morgan, Deputy Assistant to the President for Domestic Affairs, it included on and off about a dozen of the Administration's top domestic social policy and planning figures, including Cabinet members. The various outcomes resulted from a coalescence of divergent views and philosophies. In this fashion Daniel Patrick Moynihan, who as Counsellor to the President had responsibility for higher education policy and attended a number of the group's sessions, originated the idea of the Foundation and through spirited advocacy won acceptance of it.

Moynihan had known of the Carnegie Commission's proposal, but not of its details. His concept was based very much on the model of the National Science Foundation, as was the earlier proposal. The emphasis, however, was on quality being the paramount criterion for awarding grants. In this manner the most prestigious institutions, especially the private ones, would qualify for aid in amounts and forms which would not be available in any program of proportional distribution to all institutions or of a categorical nature. The need was seen as critical in that the whole academic system would suffer if its leading institutions ran into difficulty, as was being predicted.

At the same time, those institutions at the farthest end of the academic procession--principally the black colleges--would receive some support so that the bottom of the system would not fall out either. In addition the Foundation would become the mechanism by which federal relations with higher education could be more coherently designed.

These purposes were stated in the President's Message on Higher Education of March 19, 1970, which contained the Foundation proposal. Having been written under Moynihan's direction, the Message gave the principal purposes as being:

--To provide a source of funds for the support of excellence, new ideas and reform in higher education, which could be given out on the basis of the qulaity of the institutions and programs concerned.

--To strengthen colleges and universities or courses of instruction that play a uniquely valuable role in American higher education or that are faced with special difficulties.

--To provide an organization concerned, on the highest level, with the development of national policy in higher education.

The proposal had been introduced in the Message by explaining the premises upon which it rested in this way:

One of the unique achievements of American higher education in the past century has been the standard of excellence that its leading institutions have set. The most serious threat posed by the present fiscal plight of higher education is the possible loss of that excellence.

But the crisis in higher education at this time is more than simply one of finances. It has to do with the uses to which the resources of higher education are put, as well as to the amount of those resources, and it is past time the Federal Government acknowledged its own responsibility for bringing about, through the forms of support it has given and the conditions of that support, a serious distortion of the activities of our centers of academic excellence.

For three decades now the Federal Government has been hiring universities to do work it wanted done. In far the greatest

measure, this work has been in the national interest, and the Nation is in the debt of those universities that have so brilliantly performed. But the time has come for the Federal Government to help academic communities to pursue excellence and reform in fields of their own choosing as well, and by means of their own choice.

* * *

Outside of science, however, there is no substantial Federal source for assistance for an institution wishing to experiment or reform. There is a heightened need in American higher education for some source for such support.

To meet this need, I have proposed the creation by Congress of a National Foundation for Higher Education....

This first federal proposal for a National Foundation provided that:

The National Foundation for Higher Education would be organized with a semiautonomous Board and Director appointed by the President. It would make grants to individual institutions, to States and communities, and to public and private agencies. Its grants would emphasize innovative programs and would be limited to 5 years each.

A number of small, categorical programs presently located in the Department of Health, Education, and Welfare--would be transferred to the Foundation. In addition to the more than $50 million now being spent in those programs, $150 million would be requested for the Foundation in fiscal 1972. Beginning with this $200 million budget, this Foundation would have the capacity to make a major impact on American higher education.

The legislation embodying the proposal also provided that the Foundation's Director would be at Executive Level II, the rank of the Director of the National Science Foundation, which would be higher than the Executive Level V rank of the Commissioner of Education.

Moynihan expected the proposal to be greeted with enthusiasm by the leaders of the academic community as an obvious way to obtain the funds they kept saying they required. Instead there was little response. As he put it in an October 1970

speech at the Annual Meeting of the American Council on Education,

One would like to report that the response of higher education was positive with respect at least to this proposal, but I fear this was not the case either. Here and there approval was expressed. Here and there suspicion. But on balance there was no response. Quite serious efforts by the President, members of the Cabinet, and of the White House staff to explain the proposal and to elicit either support or some counter-proposal came to nothing. Time after time such discussion would begin on a fairly high--and appropriate--level of general principles and within moments degernerate into a competitive and barely dignified clamor over this little categorical program or that.

Had we thought categorical aid had distorted the relations of the higher education community to the Federal government before the program was announced, we were utterly convinced of the fact in the aftermath. Corrupted would not be too strong a term. No one seemed able to think of the whole subject. Few, even, seemed able to think of the interests of a single whole institution. A major Presidential initiative which, right or wrong, was at very least the product of some thought and some analysis was greeted by silence on the part of precisely those institutions that are presumably devoted to thought and analysis.

Congressional Reaction

Legislation was introduced in the Ninety-First Congress which included the Foundation proposal. S.3636 was sponsored by Senator Jacob K. Javits (R., N.Y.); H.R.16621 and later H.R.18849 were sponsored by Rep. Albert H. Quie (R., Minn.). In the Senate, however, no hearings were held; in the House, although hearings were held, no action was taken. Moynihan commented in his ACE speech that

> Had there existed a powerful "higher education lobby" which willy nilly would push through great increases in existing programs, the sequence of events might be more explicable. (It is worth noting that in the course of five years the elementary and secondary school interests have created such a lobby in Washington.) But there was no such lobby, and the result was predictable. Congress did nothing. The current newsletter of the American Council on Education reports that the chairman of the Subcommittee on Education had given up efforts to assemble a committee quorem to draft a comprehensive higher education bill. "She said," the report continues, "she saw no chance of passing a higher education bill at this time because of concern over campus unrest."

The hearings which were held in the House were before the Committee on Education and Labor's Special Subcommittee on Education, chaired by Representative Edith Green. (Cf., "Higher Education Amendments of 1969," Hearings, April-July 1970, pp. 1142 ff. The then Secretary of Health, Education, and Welfare, Robert H. Finch, made the presentation on the Foundation for the Administration stating that the bill

> proposes the creation of a broad structure which would have the authority to support almost any program of merit, rather than the kind of Federal assistance, usual in the past, which has tended to focus on such narrow areas as the building of libraries and science centers.

He added that

> Prior to the President's message of March 19, there has been little official acknowledgment of the major role which the Federal Government has played in maintaining the status quo. In the past, the Federal Government has taken the position that it knew what was best for the Nation's colleges and universities, and then has proceeded to create programs with stringent guidelines to administer the granting of whatever moneys were available.

A primary purpose of the Foundation is that it will be an gency with significant resources where colleges and universities ay go to find support for new and interesting ideas. We be- ieve this will have the effect of releasing institutional resources therwise needed to support those programs. In effect, this ction will assist institutions in meeting their budget obli- ations as most colleges and universities are currently unable o find funds to operate or establish innovative programs.

We anticipate that the Foundation will probably wish to ontinue funding certain established programs, including fellow- hips and aid to international education. In addition the oundation may also fund community service programs, cooperative rrangements between institutions, curriculum development plans, nd will particularly assist institutions engaged in the high ost efforts of serving the disadvantaged. Authority to fund rograms specifically authorized in the 1965 bill, but never unded, will be transferred to the Foundation.

It is planned that the Foundation will not fund programs or longer than 5 years. If, after that period, there remains mple justification for the continuance of a certain program r project, that specific item would be spun-off from the Foun- ation and, with congressional approval, be lodged in the ppropriate agency; in most cases the Office of Education. ere, again, the thrust is to keep the Foundation from being addled with continuing programs which will drain its resources nd prevent it from fulfilling its primary mission--the pursuit f excellence and innovation in higher education.

The reaction in the committee was mixed. Representative

dith Green (D., Ore.) responded by saying,

May I say first of all, that I do like some of the approaches sed in the administration's bill. I certainly like the start, t ending the fragmentation of education programs and if we can et the Foundation to move in that direction, I will be in favor f it.

Representative John Brademas (D., Ind.) commented, however, that

Finally, I am very concerned about the proposed foundation hat you suggest which would seem to me to put the Congress of he United States right out of business and just give all of the ower to the Secretary and the Commissioner of Education for ou to decide what you think is best for American higher educa- ion, and I must say that I don't think you have at all made our case for killing off a wide variety of programs that have on great support in the higher education community in the nited States.

Secretary Finch replied,

As I said, I think our precedent here is the National Science oundation. They come to Congress every year with their budget...

The HEW Proposal

Moynihan was to leave the White House in December 1970 to return to Harvard University. Before leaving, however, as an outgrowth of the ACE speech, he arranged a series of meetings between college and university presidents and the new Secretary of Health, Education, and Welfare, Elliot L. Richardson. Richardson, in turn, was reportedly surprised by what he considered the traditional attitudes of the educators. He was soon bolstered in this opinion by the submission of a draft of the "Report on Higher Education" (released in March 1971) of the Newman Task Force, which had been appointed by his predecessor Robert Finch. As he stated in his forward to the Report,

> Few people realize how welcome to a Secretary of the Department of Health, Education, and Welfare are fresh insights into problems and social trends affecting education. Without them no Secretary can adequately perform his role of public leadership nor make intelligent choices about priorities among programs within the Department. Yet unfortunately fresh ideas are all too difficult to come by.
>
> I am luckier than most Secretaries in this regard because my predecessor, Robert Finch, inspired an unusual amount of creative activity within and outside the Department. This report is one of his legacies.
>
> The report is an unusual document. It is provocative without being irresponsible; unconventional without making a fetish of being so; blunt and critical, yet clearly written by individuals who are higher education "insiders" deeply committed to their profession. If my own reading is a guide, it will offer many others insights which will become recognizable in terms of their own experience.

Becoming convinced in this manner that something should be done for and about higher education, Richardson took on the task of developing and promoting the Foundation proposal. Believing that the Newman Report and other recent publications (notably those of the Carnegie Commission on Higher Education

and the Assembly on University Goals and Governance of the American Academy of Arts and Sciences) gave sufficient background for planning purposes, the decision was made not to do the intensive preparation for the Foundation that had gone into the draft full-time, six-month study by Roger Levien of the RAND Corporation for the proposed National Institute of Education. The planning responsibility was therefore delegated on a part-time basis to one of Richardson's assistants, Russ Edgerton, who had been a member of the Newman Task Force. He in turn was largely assisted by Dr. Martin Kramer, from the office of the HEW Assistant Secretary for Planning and Evaluation. Kramer had also served in the Newman group.

At the same time, Sidney P. Marland, Jr., had been appointed Commissioner of Education. Even before confirmation of his appointment, he was brought into the Richardson discussions with the higher education representatives. Independently he took on as a part-time consultant to plan for the Foundation William B. Cannon, a vice president at the University of Chicago, without knowing that Cannon had also served on the Newman committee.

As a result of these interactions and appointments, the concept of the Foundation was fundamentally changed away from a means for supporting excellence and toward a mechanism for encouraging innovation and reform throughout the whole academic system. It would be a grant-making agency, operating no programs of its own, with initial "no-year" funding of $100 million. It would have a Presidentially-appointed Board and Director,

but they would report through the Commissioner of Education to the Secretary of Health, Education, and Welfare. Legislation was introduced into Congress to this effect (H.R.5192, S.1062).

Insofar as the HEW concept of the Foundation derives from the President's Message, the premises stated there apply to it as well. Secretary Richardson has re-stated them himself, however, in his March 1971 testimony before the Congressional education subcommittees. He said that

> These problems (in higher education) have many sources, yet surely a major one is the sheer and unparalleled growth of higher education in the last two decades. Twenty years ago less than a quarter of our young people went to college; today over half do....
>
> This swift growth had to occur if we were to keep faith with the expanding demand for higher education. Yet this rapid growth left a number of problems in its wake which might have been avoided had there been a chance to proceed more cautiously, to experiment, to assess what worked and discard what did not. With some notable exceptions, higher education kept doing what it knew best, namely, what it had been doing all along. The structures and methods of years standing simply were extended and expanded to a larger universe. Now the problems created during these two decades are all around us.
>
> * * *
>
> I do not want to suggest that the National Foundation will solve or even address each and every one of these problems. Other programs of HEW and other agencies will make major contributions. But the National Foundation will be involved in a particular way. If we can agree upon the need for Federal leadership to facilitate basic reform in higher education, then I believe we can agree that the National Foundation is the right instrument for exerting this leadership.

As presented in the 1971 legislation, the purposes of the Foundation proposed by HEW would be:

(1) To encourage excellence, innovation, and reform in postsecondary education;

(2) To provide assistance for the design and establishment of innovative structures for providing postsecondary education and innovative modes of teaching and learning therein;

(3) To expand the ways and patterns of acquiring post-secondary education and to open opportunities for such education to individuals of all ages and circumstances;

(4) To strengthen the autonomy, individuality, and sense of mission of postsecondary educational institutions, and to support programs which are distinctive or of special value to American society; and

(5) To encourage postsecondary educational institutions to develop policies, programs, and practices responsive to social needs, and to provide an organization concerned with the rationalization of public policies toward postsecondary education.

It should be noted that, while the higher education associations support the concept of a Foundation, they have been highly critical of the Newman Report which has so strongly infused the HEW proposal. The criticism was contained in the April 27, 1971, "A Critique of the Report on Higher Education" by the "Secretariat," which is comprised of the executive officers of 14 major higher education associations. Their major objection seems to be that the Newman Report was immoderate in its presentation. They said that

The document restates familiar criticisms. It is replete with internal contradictions, and ignores the existence of a vast number of recommendations that respond specifically and directly to the issues it raises, while merely alluding to a few recommendations in its footnotes and text.

* * *

It is really a "non-report"--too long and pejorative as a briefing memo, too short as a scholarly examination. To the informed reader it is provoking rather than provocative. To the uninformed it presents a distorted and misleading description of the problem and possibilities for solution.

* * *

Higher education has been assailed for a long time with general talk about the weaknesses that prevent it from doing a better job. What it requires is not more exposure of weaknesses, but more explication of specific programs based on a sound perception of needs and testing programs for cost-effectiveness.

Apparently the associations adhere to the premises upon which all of the proposals are based, but naturally enough would like the Foundation to be guided by the tone and temperament which characterize their own operations. Their major objection to the Moynihan proposal, insofar as any objections were raised, had been the inclusion of operating programs. There was in addition the generalized fear of federal control, which may have in part been assuaged merely by the process of being consulted more in formulating the HEW proposal. Their criticism of the Newman Report and of certain key elements of the HEW proposal while supporting the idea of a National Foundation in fact suggests that they prefer the Moynihan proposal. Indeed they stated in their testimony that "any bill which would state the purposes and activities in the general terms states in H.R.5192 (S.1062) would in our opinion be satisfactory."

Congressional Attitudes

The situation in Congress had changed from that of the preceeding year because in summer 1971 all existing higher education legislation would come up for renewal. On the Senate side the Foundation notion, considered non-controversial and perhaps a good idea, was included in the major Democratic higher education package (S.659) submitted by Senator Claiborne Pell (D., R.I.), chairman of the Subcommittee on Education of the Senate Committee on Labor and Public Welfare. The bill provides, however, that the Foundation be part of an Education Division within the Department of Health, Education, and Welfare. The Division would also include the proposed National Institute of Education and the Office of Education. The Commissioner of Education would be moved up to Executive Level III, while the Directors of the Institute and the Foundation would be at Executive Level IV.

In this bill the Foundation Board would have the authority to establish policies for the Foundation and would submit an annual report to the President on Foundation activities and on the status of higher education in the United States. The Foundation would also have authority to make grants to institutions of higher education (including combinations of such institutions). Its purposes would be those of the Moynihan proposal, while its activities would encompass all three proposals.

In the House no mention was made of Foundation in the omnibus Democratice higher education bill (H.R.7248) submitted by Rep. Edith Green (D., Ore.), chairman of the Special Subcommittee on Education of the House Committee on Education and Labor. In late March 1971 Mrs. Green told the Administration that she was opposed to the Foundation. Her change in attitude from the previous

year stems apparently from two causes. First, having sponsored a year-long study of Office of Education grant-making procedures, she was appalled at what had been found. She was therefore opposed to proliferating the bureaucracy, especially as with the National Institute of Education and perhaps with the Foundation if it would remove the "brains from the body." Second, believing that any qualified student should be able to obtain postsecondary education and that any job can be worth of dignity (so that there might even be a "philosopher-plumber"), she was concerned that the Foundation would concentrate too much power in too few hands, which could stifle diversity of educational opportunity.

Mrs. Green's solution to these problems is to provide massive direct federal aid to higher education institutions on a formula basis, and to authorize the Comptroller General to "review, audit and evaluate Federal education programs." Title VIII of her "Higher Education Act of 1971" states that "the Congress hereby finds and declares that an emergency condition has arisen which threatens the continued ability of many institutions of higher education to provide the education necessary to enable our citizens to make their full contribution to the Nation's economic and cultural development. It is therefore the purpose of this title to meet this critical need through general assistance from the Federal Government...."

Basically each higher education institution would be eligible to receive $100 for each lower division student, $150 for each upper division student, and $200 per graduate student. The amount actually appropriated would be distributed proportionately. Mrs. Green has, however, also given some thought to the idea of establishing a National Advisory Council on Higher Education.

Representative John Brademas (D., Ind.) remains critical of the Foundation, but for somewhat different reasons. After hearing the Richardson testimony, he said,

A third principal weakness, as I see it, of your proposal is with respect to the Foundation for Higher Education. Now as you know, in another subcommittee we are considering President Nixon's proposed National Institute for Education, which I regard as a splendid initiative on the part of the President and I commend him warmly for it. It seems to me to hold out great promise of reform and change for good in American education at every level. But I think that your Foundation has been put together so sloppily that it is intellectually very difficult to defend.

A year ago your predecessor, in this room, described the Foundation as a general purpose program and wanted to use it as an effort to kill off so-called categorical grants programs. Today it has a different shape and size and description, although I confess having heard you today I am still not clear on exactly what it is you are trying to do with it. But if you are trying to use it as an instrument for innovation and experimentation in higher education, then it is not clear its association with the dimensions of the National Institute of Education as outlined by your own counsel.

What you are doing is moving in precisely the opposite direction that the Nixon Administration has been moving in, namely, you are proliferating the Office of bureaucracy (sic) in the Office of Education. Because now you are going to have a higher education section of the Office of Education spending money, you are going to have a higher education division of the National Institute of Education engaged in research, and you are going to have a Foundation for Higher Education. You will have three animals.

If we are logical, we ought to have a Foundation for Child Development, a Foundation for Vocational Technical Education. I remember very well Mrs. Green's putting Clark Kerr a year ago the question--I believe I am correct--If you had a dollar to spend on higher education or a dollar to spend on child development? (sic) Mr. Kerr, who was concerned with higher education, saying he would put it in child development. Yet you single out higher education as uniquely suited to a Foundation.

I should have thought vocational technical education might have an equally pressing demand. So, in all three respects, Mr. Secretary, I greet your proposals with minimum high regard.

The Secretary later responded to a similar question:

...We believe we are at a period in the history of higher education in which there is particular need to encourage reform and in which the only effective means of doing this which is available to the Federal Government is to provide funds to institutions, new or old, that are willing to undertake them and come forward with significant individual proposals that could serve as examples to other institutions.
(Source: uncorrected transcript of Hearings, March 18, 1971)

Role in Government

The design of the Foundation requires a careful balancing of purposes and interests. The importance of this is evidenced by the change of location in Government between the Moynihan and HEW proposals. In the former version the Foundation was to be an independent agency like the National Science Foundation, but which would also have taken over some existing Office of Education operating programs. In the HEW version the Foundation is located within HEW and will not operate any programs of its own. The Carnegie Commission proposal relies on the NSF model, but in a recent unpublished paper representing the views of the Commission though not endorsed by it, Clark Kerr suggests that the Foundation might be located in HEW.

As Secretary Richardson described the changes in his statements to the House and Senate education subcommittees in March 1971,

> The Foundation will be located within the Department of Health, Education, and Welfare in the same way as other agencies of the Department such as the Office of Education. This is a major change from last year's proposal which established the Foundation as an independent agency in the Executive Branch reporting directly to the President. It is a location which we believe will retain the advantages of independent action and add to these the benefits of full-coordination with other major educational programs.

He went on to explain that

> The Director of the Foundation will have close working relationships with the Commissioner of Education and the Director of the proposed National Institute of Education. Since this Administration has made it clear that the Commissioner of Education is the chief education officer, I intend to ask the Director of the Foundation to report to me through him.

I also intend to seek maximum coordination between the Foundation and other agencies outside H.E.W. which transact considerable business with post-secondary institutions. The Foundation will have my backing to share information and stimulate jointly-supported projects with other agencies. And we intend to establish, within the Executive Branch as a whole, a mechanism through which the Director of the Foundation can routinely do business with the leaders of other agencies.

Commissioner Marland stated in his testimony that

> In addition, the Foundation hopefully would work towards the development of a national policy for higher education, including an examination of the federal government's impact on policy formulation and institutional behavior.

The changes that went into the HEW proposal appear to be in accordance with current Administration priorities and practices. The change to the HEW location, for example, was based in part on the need to conform with the principles of the proposed Executive Reorganization. As stated in "The Case for Executive Reorganization," these principles are that

> I. Whenever possible, the executive branch should be organized around major purposes of Government--both at the inter- and intra-departmental levels. This will allow for clearer lines of authority and responsibility....
>
> II. Each department's mission should be defined broadly enough to allow the department to set policy and resolve conflicts concerning a wide range of issues. This will minimize the need for inter-agency coordination and reduce the number of issues which surface at the Presidential level for resolution.
>
> III. Similar and interdependent programs should be brought together whenever possible so that there is a single organizational location for a given social or economic objective. Officials who are addressing common problems should work together in a single chain of command. This will bring together in one place the relevant information, resources, and authority needed to set intelligent priorities in a given area.

IV. The number of agency heads directly accountable to the President should be reduced in order to increase meaningful contact between the President and the major line officials of his administration.

A complication which may arise, however, is that of planning the location of the Foundation in accordance with the principles of the Reorganization if the Reorganization Plan is not passed. While the principles may in principle be sound ones, rejection of Reorganization can be seen at least partially as a rejection of the principles upon which it is based. More generally it would mean that other considerations were given more weight. Such a determination would undermine this rationale for locating the Foundation within HEW.

Another reason for the proposed HEW location is to strengthen the position of the Commissioner of Education. Without emphasizing any sense of pessimism, however, the Office of Education has been subjected to repeated overhauls in the past several years and has proved nearly unmanageable. To provide it with the leadership desired by the present Administration must be considered a worthy goal. Yet the future of the Foundation in its proposed HEW location is tied heavily not only to this perhaps unattainable goal but to its having been set by a specific Administration as well. Any change in Administration could not help but lead to a sense of uncertainty within the Foundation about its future import. This is the sort of uncertainty that causes undesired turnover in personnel. An independent agency clearly would be freer from these effects.

Finally it may be argued that the HEW location can protect the Foundation from political pressures because they would be warded off by the Commissioner and the Secretary. The counter-argument, which has been made by the higher education associations and will be dealt with more in relation to the National Foundation Board and Director, is that independence from political pressure is best achieved through legislative provision for that independence.

In terms of the potential efficacy in policy-making by different mechanisms, the Foundation in either location is likely to have more effect than an Advisory Council or Commission, mainly because it will have funds of its own by which it can create programs that represent its policy preferences. While the National Science Foundation has never greatly affected Government-wide policy-making, it was created to do so but did not by choice of its first director.

Located within a department--either HEW or a Department of Education, the Foundation is likely to have less effect on policy than if there were a Presidential advisor with staff on the model of the Science to the President and the Office of Science and Technology in the Executive Office of the President, both augmented by the Federal Council on Science and Technology and the President's Sciency Advisory Committee. Although the advisor's influence will vary with the President's confidence and interest, there at least exists a direct line to the Chief Executive.

The Director of the Foundation in the HEW proposal, however, would report through at least one intervening layer in a

Department of Education and two layers in HEW, while the appointment of an Assistant Secretary for Education would either add another layer or serve to confuse the relationships. No matter the interest and determination of the Secretary or Commissioner this structure implies a process of selection from among Foundation proposals and recommendations.

It may be argued that the advantage of the HEW location for policy-making is that it provides for a Cabinet-level spokesman for the Foundation's concerns. This, however, is a very uncertain advantage. Policy generally is not made by the Cabinet itself. So the question then becomes one of the relative advantages of the Secretary versus those of the Director of an independent agency. The weight on the side of the Secretary is that he presumably can take more initiative and call upon more support from his broader constituencies for any measure which he considers to be of major consequence. This must be balanced, on the other hand, by the fact that the Secretary's political position, which gives him his broader constituencies, may also require trading off the effort needed for support of a higher education measure for that of a measure in another area. The Director of an independent agency, while probably not having the capability of taking major policy initiatives, is not only able but expected to be continually attentive to the concerns of his agency at the intermediate and lower policy levels. He would moreover be in a position to take initiatives at any level when it is politically or otherwise not possible for the Secretary to do so, while a Foundation reporting to the Secretary would be more constrained from taking such actions.

The Foundation may have some impact on coordination among federal higher education programs, if only because this has not taken place in the higher education sphere before. If a Coordinating Council were formed, as the Secretary suggested, it might include representatives from the Foundation, the Office of Education, the proposed National Institute of Education, the National Institutes of Health, the Department of Commerce, and others. The Foundation would, however, be only one voice among many--and the Director at Executive V might even be a junior one, so that its capabilities in this domain are likely to rest precipitously much on the personal stature and skill of the Director.

The Coordinating Council must also to some extent come into conflict with the Federal Council on Science and Technology. This means that both within the Coordinating Council (from at least NSF and NIH) and between Coordinating Council and FCST there will have to be accomodations made with the scientific research establishment, the disproportionate growth and influence of which was an important impetus for the creation of the Foundation.

In addition the Federal Interagency Committee on Education is widely accepted as having had little or no impact on program coordination even under an Assistant Secretary for Education. As a model for a Coordinating Council, it offers little reason to expect much efficacy; as an existing entity, it is one more potentially competing or at least conflicting body. Reliance on the Commissioner of Education to mediate such conflicts, when his role has traditionally been most closely linked to

primary and secondary education, cannot be looked upon with much confidence by the higher education community.

It appears, therefore, that some but not a great deal of headway can be predicted in federal higher education policy-making and program coordination due to the existence of a National Foundation, but with more to be expected from an independent agency than from one located in HEW. This outcome in part reflects what is understood to be the fear of the higher education community of too much federal control. But just as the disparate interests of that community have acted against the formation of coherent federal policy in the past, there is little reason to fear too much federal control in the future.

This sense of achieving only as much reform as is politically possible will most likely also infuse what is presumably the major function of the Foundation--program origination. If, for example, one criterion of the Foundation's success is how widely accepted are its reforms, then the programs it proposes to fund will have to be very close to those that are already being considered or are near to being considered for adoption. If this were the main criterion, then it would be expected that the Foundation would be dominated by the higher education associations which have traditionally attempted to reach a consensus among their members before advocating or supporting any policy or program. It is just this sort of consensus and even-handedness, however, that all the proposals for the Foundation are meant to avoid.

This means both that different criteria of success must be considered and that the Foundation cannot simply be reactive to proposals from the field. The Foundation must make choices, which is in fact program origination, and it must plan its programs in light of its criteria for success. Lack of appreciation for this paradox has led Kerr, for example, in a recent paper to state that "the Foundation should respond rather than initiate; facilitate others to act rather than act itself; and encourage and influence reform and experimentation rather than direct such activities." In order not to cut off a large source of its support and credibility in the higher education community, the Foundation may have to provide for a sizeable portion of its funds to go for these "popular" activities.

In the context of this acceptance, two other criteria and types of programs seem reasonable. One is the difficult but challenging area of planning and beginning programs that are intended to have widespread effect only in 1985, 1990 or 2000. The other is the perhabs equally challenging area of planning and completely funding programs intended to have large-scale impact quite soon. Among these might be off-campus operations such as a national university without walls. This type of program could have much popular support so that it and the first type might together in a sense underwrite the second as an activity for the Foundation and as a basis for judging its effectiveness.

Observing that the Foundation must be political in this sense of supporting those programs which are currently valued

by the higher education community is not, however, meant to downgrade the importance of this responsiveness in that relationship. The Foundation would rather be intended to bring the level of response down to a more selective attitude, targeted toward various types of individuals, institutions, or programs.

The Moynihan proposal in good measure embodies this approach as a program of nearly purely institutional support. The institutions receiving funds would set their own priorities as to how the funds would be spent. Or to put it another way the Foundation would accept the priorities recommended by the recipients. The Carnegie Commission proposal is somewhat more restricted in this respect because it suggests more antecedent choices on the part of the Foundation as to what types of programs to fund. The HEW model, while suggesting a wider range of potential recipients than the others, is more open to the effects of the paradox noted above that to have any program coherence at all will require making even more choices.

Whether the Foundation should be a testing ground for the development of new higher education programs which would be turned over to the Office of Education for operation on a large scale remains an open question. It is explicitly included in the Carnegie Commission proposal; it is accepted by the higher education associations as a feature of the HEW concept (they stated in their Congressional testimony that "the activities of the Foundation would simply demonstrate for the Office of Education, as well as for others, which experiments and innovative modes of higher education are productive

and ready for large-scale application"); and was included by Secretary Finch in his testimony as an intended feature of the Moynihan proposal.

Transfer to and operation of large-scale programs by the Office of Education may lead to new orthodoxies and rigidities. It may result in blunting of the aims of the programs by administrative inefficiencies. But it is also a logical way to develop new higher education programs and provides the type of planning and testing that have been absent until now. In this regard there need be no conflict with the proposed National Institute of Education. Any research which the NIE may do in postsecondary areas can be highly useful in contributing to informed choices among program alternatives within the Foundation. This would be especially reasonable if the NIE grows to its projected tenth-year billion dollar level and the Foundation maintains a fairly stable and much lower level of funding. A close working relationship between NIE and National Foundation staff in this respect makes sense without suggesting any unnecessary overlap of functions.

This relationship could occur with presumably equal facility whether the two agencies were co-equal under the Commissioner of Education or the Foundation were an independent agency. However, the two agencies are not in fact co-equal because of the Foundation's policy and coordination functions, so that the parallelism implied by having them both report to the Commissioner does not really hold.

Program

While the National Foundation may contribute to policy-making and program coordination and serve as a capstone for higher education generally, its reason for being is primarily expressed in its program activities. Nevertheless, in planning for the Foundation there has been a lack of desire for going very far in the direction of specifying which programs should be funded and at what level. One reason given for this in relation to the HEW proposal has been that intensive efforts have already gone into the work of the Carnegie Commission on Higher Education, the Assembly on University Goals and Governance of the American Academy of Arts and Sciences, and the Newman Task Force. There has also been a desire not to tie the hands of the National Foundation Board and Director before they are appointed.

Yet there has been some pulling together of various possible program activities. The HEW proposal, as embodied in the 1971 bill, empowers the Foundation to assist, among others, the following activities:

1. The creation of institutions and programs involving new paths to career and professional training, and new combinations of academic and experiential learning.

2. The establishment of institutions and programs based on the technology of communications.

3. The carrying out in postsecondary educational institutions of changes in internal structure and operations designed to clarify institutional priorities and purposes.

4. The design and introduction of cost-effective methods of instruction and operation.

5. The introduction of institutional reforms designed to expand individual opportunities for entering and reentering institutions and pursuing programs of study tailored to individual needs.

6. The introduction of reforms in graduate education, in the structure of academic professions, and in the recruitment and retention of faculties.

7. The creation of new institutions and programs for examining and awarding credentials to individuals, and the introduction of reforms in current institutional practices related thereto.

8. The development or revitalization of educational training programs of national importance.

This may be as good a general list as can be developed without going into detail. It was specifically endorsed by the higher education associations, which stated that "the kinds of activities which the Foundation is authorized to support by...the bill are practical and of high priority in adjusting higher education to new needs and opportunities." Kerr, in kind, in his paper "Federal Policy for Academic Reform" suggests that the following sorts of activities might be funded initially:

--Plans by groups of colleges to develop regional liberal arts centers for the purpose of increasing quality, scope, and diversity of undergraduate education, of stimulating more economical and effective use of administrative and teaching personnel, and of sharing library and computer facilities.

--Application by cities or school districts for the purpose of improving counseling for postsecondary education.

--Development of programs designed to reduce the length of time required to secure Bachelor of Arts degrees, including experimentation with three-year curricula for the B.A. degree, credit by examination, and credit for various types of service activities.

--Experiments with "open universities" along the lines of the Open University in England.

--Experimentation with the possibility of accrediting high schools to provide certain lower division college work.

--Developing programs which effectively combine work experience with college education.

--Extension of programs permitting simultaneous enrollment of students in clusters of institutions permitting each institution to specialize but providing a wide range of options for the individual.

--Experimenting with programs designed to develop a closer partnership between industry and education for the supply of certain occupational education.

Thus there are clearly many program opportunities amenable to funding but the extent of further planning required for the Foundation and by the potential recipients is not clear. The British Open University, for example, was a decade in the planning. Nevertheless there has been a considerable amount of self-study in American higher education recently and a fairly rapid gearing up by the Foundation and by academia does not seem an unrealizeable notion.

Structure

It is suggested here that the internal organization of the Foundation might be as depicted in the accompanying diagram. This structure is designed to contain as little hierarchy as possible in order to maximize the responsiveness of the staff to their constituencies. It is, however, extended horizontally to give it a substance which augments and sustains its program activities. Yet with six divisions, each under an Assistant Director of the Foundation, it is within the normal "span of control" of the Director. A strong Planning and Evaluation Section under a single Deputy Director is suggested. The various components of the Foundation will be described in succeeding sections.

National Foundation Board

The 1971 legislation authorizes an 18-man, Presidentially-appointed Board with staggered three-year terms. The members would be "broadly representative of the general public as well as the education community." The role of this Board was described by Secretary Richardson in the following way.

> Communication with the world outside the Federal government will be fostered by an advisory board of public members representing both educational community and the general public. We want a strong board. Hence we have provided for its appointment by the President as a way of recruiting top people from education and other walks of life. In addition, the Board's advice will reach to all important programs. There is enough experience in higher education to be sure that a strong board can serve important purposes; rightly operated it will strengthen the hand of its executive officer, and that is what we intend.

The Director of the Foundation would also be a member ex officio of the Board.

A NATIONAL FOUNDATION FOR HIGHER EDUCATION

2320
2339

The HEW concept of the Board, however, is one of the aspects of the Foundation which the higher education associations now criticize most. With regard to the Board's authority the associations (including the American Association of Junior Colleges, the American Association of State Colleges and Universities, the American Council on Education, the Association of American Universities, the National Association of State Universities and Land Grant Colleges, and the National Council of Independent Colleges and Universities) testified that

> As a central means of assuring an adequate degree of independence, we suggest that the Foundation (as is true of the National Science Board) be given unambiguous authority to set the policies and priorities of the Foundation for Higher Education, after consultation with the Secretary. S.1062 does not clearly state who sets the policies and priorities of the Foundation but this authority is not given to the Board. In fact, the Board has only two functions, as stated in Section 4. It advises the Secretary and the Director with respect to matters of general policy, and it prepares an annual report to the Secretary.

In relation to the composition of the Board they added that

> In our judgment, the composition of the Board is an extremely important matter. S.1062, Section 4(b) requires only that the members be broadly representative of the general public as well as the education community. We believe that this is highly desirable, but that twenty years of experience with the National Science Foundation have demonstrated that additional factors are important. For one thing, the members should be eminent in the field of higher education and public affairs. We do not want this Board to be a haven for mediocrity....

In addition "to emphasize the independence of the Board" it should elect its own chairman.

The National Science Foundation model which the associations use was the one used by Moynihan and by the Carnegie Commission. Since the Moynihan concept is aimed at general

institutional aid, it would be logical that there would be considerable representation of the Board of college and university presidents. On the part of the Carnegie Commission their own membership might represent the ideal.

As an active body, an 18-member Board may prove to be too large--fifteen is a more workable number as found in organization studies, but the Board may decide to break down into panels or task forces to concentrate on various aspects of policy or of the Foundation's activities. It is expected that the Board would draw on the work of the Planning and Evaluation Section suggested here. If the Board does break down into panels, it might meet only quarterly. If it operates as a whole, it might meet bi-monthly or more frequently.

Director

The Director will be the pivotal person in the Foundation in shaping its spirit and activities. The 1971 bill merely states that he shall be appointed by the President and "shall perform such duties in carrying out this Act as are prescribed by the Secretary of Health, Education, and Welfare." The Director is also likely to have duties incumbent upon him merely because he and the Foundation exist. He becomes a spokesman for higher education to the Government and to the public; he in turn will represent Government interest in higher education to the higher education community and to the general public; and in part he will represent the public interest in higher education to the Government. Mastering this interplay without appearing completely ineffectual to all concerned will

require a person of firm conviction in the purposes of the Foundation.

The Director will of course administer the Foundation. As an agency devoted to change, the Foundation will require a Director who can create an organizational climate of personal responsibility and creative joint action. As a demonstration agency, the Foundation will require a Director who can attract talented staff capable of taking new ideas and the results of research and bringing them to fruition with a sense of responsibility for their actions and responsiveness to the clients they are serving. To the extent that such individuals may tend to question authority and administrative detail, the Director should be able to live with and utilize such attitudes. Since he will also be called upon to interact with other parts of the federal Government, it might be helpful if he already had some familiarity with how it works.

To maintain the confidence of his constituencies, to effectively interact with other parts of Government, and to be able to deal with questioning of authority by his staff, however, the Director must be given some authority to begin with. As the higher education associations succinctly put it, "We believe that this authority should be greater and more explicit than the bill provides. As in the case of the National Science Foundation, we believe that the Director should exercise all of the authority granted to the Foundation (including authority delegated by the Board) and that all of his actions should be final and binding upon the Foundation....We suggest that failure to lodge authority to make grants and contracts in the Director,

together with the requirement that the Director carry out such duties as the Secretary prescribes, reduce the independence of the Foundation to such a low level that it will be difficult to attain the goals which we share with the Secretary." The language which they suggest had in fact been that of the 1970 Administration bill embodying the Moynihan proposal. That bill also placed the Director at level II of the Executive Schedule, the level of the Director of the National Science Foundation.

Deputy Director for Planning and Evaluation

One of the key elements of the success of the National Foundation is likely to be its ability to plan and evaluate its activities. The importance of these functions is emphasized by suggesting that a Deputy Director with a separate staff of trained professionals have primary responsibility in this area. In most agencies the Deputy Director's main job is to act in the absence of the Director. Here it is suggested instead that the Deputy Director take on this specific function and thereby free the Director so that he may interact more freely with the Foundation's constituencies, the other agencies and parts of Government, and the public.

This emphasis on intra-agency planning and evaluation is not meant to exclude or discourage evaluation of its activities by other groups--including the National Foundation Board and any panels it may create, the Congress and its investigatory organs, and the Office of Management and Budget. It may on the contrary prove to generate great interest in having outsiders evaluate its programs. Probably nothing in fact could encourage more an attempt to achieve the most efficient use of funds, the most imaginative programs, and the most effective projects--and the desire to have everyone know it--than a built-in, self-conscious, and well-trained planning and evaluation unit.

A professional staff of this kind would be in an excellent position to act as the link between the National Institute of Education and the Foundation's program staff.

Program Areas

While a number of program activities were noted earlier for possible funding by the Foundation, that still leaves the important question for planning purposes of how these activities should be administered. It is suggested here that there simply be three program divisions:

1. the Community College Division
2. the College and University Affairs Division
3. the Off-Campus Operations Division.

Although no grouping of program activities can be completely mutually exclusive, this grouping seems to represent the major areas into which the activities fall. It has the advantage of making clear just what the Foundation is doing.

This arrangement may also prove to be a simple means for expressing and evaluating the Foundation's priorities. For example, rather than simply dividing all program funds equally among the three divisions, for which there could be good justification, the Board and Director might decide to allocate fifty per cent of all program funds to the Off-Campus Operations Division for the first five years or to make some other distribution.

The fear has been expressed that the Foundation may fall prey to political pressures, particularly from the various interest groups and associations in higher education. This could be a reason for creating program divisions along some sort of "activities" lines simply to reduce the targets for political pressure. This argument, however, obscures the point made earlier that the Foundation itself cannot serve its purposes

if it does not have the confidence of the higher education community. One element expressed in all the recent recommendations for higher education reform is that the community colleges must be made to be considered a legitimate and full-fledged component of higher education. This belief can be given substance by institutionalizing a place for community colleges in the Foundation. Furthermore, it is taken for granted that additional sets of priorities will also be asserted within the various program and non-program divisions.

By way of example of what organization around activities might look like, Kerr has suggested one such breakdown. There would be six divisions:

1. Planning division (assigned responsibility for reviewing applications for planning grants for post-secondary education and working with states and other appropriate agencies for the purpose of creating more effective postsecondary educational planning)

2. Black Colleges division (assigned responsibility for reviewing applications from black colleges and working with them toward development and implementation of their transition and expansion proposals)

3. Off-campus education (assigned responsibility for reviewing applications for grants in the area of development of external degree programs, credit by examination, the use of video-cassettes for instruction centers away from the campus, and better articulation with educational programs in industry and military.

4. Institutional and inter-institutional structure (assigned responsibility for reviewing applications and working with programs for the establishment of new institutions, development of open universities, regional liberal arts centers, mergers of small institutions, inter-institutional contracting arrangements, and multiple enrollment by students)

5. Educational processes (assigned responsibility for reviewing applications for compensatory educational programs, use of technology at the higher education levels, experiments in class size)

6. Curricular reform (assigned responsibility for reviewing applications and working with institutions developing programs of three-year curricula for the B.A. degree, developing Master of Philosophy programs and Doctor of Arts programs, experimenting with a shift in emphasis in lower division, developing new approaches to vocational education)

Administratively, the Foundation is designed to try to avoid building up too large a bureaucracy in handling its programs. On the other hand the kind of effective program operation and review procedures which are called for require adequate staffing. To provide for this, each program division would be headed by an Assistant Director of the Foundation. He would have an Advisory Committee composed of individuals experienced in the areas of the division's programs and perhaps leavened with others with more diverse interests. The Advisory Committee would help develop priorities and guidelines for the programs in the division, provide oversight of the programs, and generally contribute a wider perspective for the administration of the division.

Under the Assistant Director would be a single layer of Program Managers. In a division there might be three or four programs, some of which would have multiple activities. Each program or activity would have its own review panel of appropriately knowledgeable people to make grant decisions. Program managers would be assisted by enough other staff to be able to monitor their grantees. They could also call upon the staff of the Technical Assistance Division for consultation and to render aid to the clients if so desired.

Non-Program Areas

Every effort should be made to extend the impact of the Foundation's programs and purposes as widely and as efficiently as possible. To this end three non-program divisions are suggested. These are: the Small Grants Division, the Technical Assistance Division, and the Publications and Professional activities Division. Each of these divisions not only has merit in its own right, but is intended to complement the others and the Foundation as a whole. Suggested funding for each of these three divisions is five per cent of the total Foundation authorization.

Small Grants Division

The Small Grants Division could be an exciting part of the Foundation. It would take a shotgun approach to reform, but with careful aim in certain directions. There would be a $25,000 maximum for any grant made through this division. This should be enough to fund, for example, one professional plus some support staff for one year. Grant decisions would be made rapidly--perhaps even within a couple weeks. In this manner any number of projects could become more than just a thought for students, faculty, administrators, or others. A grant could pay for an Ombudsman; it could support the initial year of an urban relations office or of a minority recruitment office on campus; it could make possible the planning of a store-front learning center in the community.

Such a grant might also pay for computer time to try a new accounting system or for the equipment to set up a technology-based educational program. Clearly guidelines would have to be developed, but they might be

(a) need--in terms of amount of change required or desired (both rather subjective measures) or in terms of resources; these grants might at least in part be directed toward the "developing institutions."

(b) innovativeness--this could also in part be a simple testing-ground for some of the programs that the Foundation might fund on a larger scale in the future.

(c) opportunity for experimentation--a few grants for the same purpose to different institutions can be followed in their outcomes. While this is getting over into the area of the proposed National Institute of Education, it seems justified if done on a small scale for specific program development purposes.

With the proposed funding level for the Foundation at $100 million, 5% or $5 million might be allocated for small grants. With a maximum of $25,000 per grant, then, if all the funds were expended, there would be a minimum of 200 such awards in any one year, though a single grant might be expended over more than a year's time. The services of the Technical Assistance staff might also be made available to the grantees. They could be called upon also to advise on the feasibility of particular proposals.

Administration of the Division would rest with an Assistant Director for Small Grants under whom there would be a

small staff. Guidelines and award decisions would be contributed to and made by a Review Panel as in the program divisions.

Technical Assistance Division

One service which the Foundation can provide not only to its own projects but to higher education in general is that of technical assistance. At almost every stage of the adoption of change at a particular institution, in the diffusion of change among institutions, and in off-campus operations, information of a technical nature plays an important role.

To provide for the breadth and depth of knowledge required, the Foundation will be obliged to retain a considerable staff of professionals experienced in higher education. These might include communications and educational technologists, organizational design personnel, financial and other management experts, legal counsel, individuals experienced in relations with federal and state governments, urban affairs specialists, and so on.

If involvement of the Technical Assistance staff is likely to be heavy, a nominal fee might be charged to represent commitment on the client's part. While this might be considered a service of the Foundation on behalf of higher education in general, the Foundation might want to concentrate its technical assistance efforts on the "developing institutions," community colleges, and others which are less likely to have specialists in related areas on campus or to have uncommitted funds which could be used to purchase such expertise.

With Foundation funding at the proposed $100 million level, 5% or $5 million might support a staff of 100 full-time pro-

fessional staff with extensive back-up assistance and considerable allowance for travel. In line with the model of the county agricultural agent the Foundation might establish regional offices so that the experts can become more familiar with area problems, distances travelled can be reduced, and potential clients can more conveniently come in to discuss their problems.

While the Technical Assistance staff can also provide an added check on the quality of performance under grants of the program divisions and the Small Grants Division, they would primarily be intended there and in general as non-threatening agents of change.

Publications and Professional Activities Division

The Publications and Professional Activities Division can be one of the most important parts of the Foundation. Publications in this case is meant to include the whole range of communications, information transfer, and dissemination activities. It is intended to greatly amplify the impact of the Foundation. There are many ways by which this may be done. For example,

(1) On the model of the Carnegie Commission the Foundation could support a standard line of high quality higher education books--including sponsored and reprinted works. It should be clear here that the joining of the publications program with other professional activities is intended to help inspire the type of output that can come from, for example, a first-rate university press. With careful development having such books on a person's bookshelf may come to symbolize a commitment to

excellence and change in higher education. If the Foundation retains a dedication to openness to new ideas, then this should also help to belay the rise of any new orthodoxies in higher education.

(2) To represent its purposes and commitment the Foundation might support a new journal, which could be called Innovation and Reform. If it came out as a monthly, this would permit featured articles, reports of program evaluations, discussion of policy, reports on symposia, and the like. It might even include debates on current "hot" topics. This, then, would be of the nature of a professional journal, but without the reporting of specific research results.

(3) The Foundation could publish a bulletin. It might be of the quality of The Chronicle of Higher Education but with a different format and a different focus. It would concentrate more on activities of the Foundation itself--projects being supported, new ideas that have come in, more reports of evaluations, changes in policy. To facilitate two-way communication it could be a forum for lively exchanges of correspondence. It might also have a Question and Answer section; to the extent that the questions are technically oriented, and this might be encouraged, the experts in the Technical Assistance Division could be called upon to provide the answers.

(4) Relying again on the Technical Assistance Division, a series of "how to" pamphlets might be put out on different innovations and reforms. Should someone want to find out the elements of installing a management information system in a

college, this can tell how to begin. If a community wants to think about able television for a local educational project, they can be sent the appropriate booklet.

(5) In connection with the Professional Activities there could also be published the proceedings of seminars, conferences, and symposia which are sponsored by the Foundation.

There are any number of professional activities which might be sponsored to help the Foundation itself to be as lively, attractive, creative, and informed an institution as it can be. Among these could be the following.

(1) A Center for Advanced Study in Higher Education. This component could have the option of taking on different activities, formats, or purposes, which supplement those of existing regional laboratories and research centers in higher education. It could develop curricula for the departments of higher education being created on many campuses. It could be a small group of senior academic fellows who try to develop theories of higher education; perhaps joined by some junior fellows. It might bring Foundation and/or non-Foundation technical experts together with administrators, legislators, and others to work intensively on solving specific problems. It could be the group that most seriously tries to take the results of research in higher education and apply them to the programs of the Foundation. It might be the really "far-out" group that tries to imagine the innovations required twenty or thirty years hence. It could be a group that studies public policy toward higher education. Any of these activities could provide an exciting stimulus to the rest of the Foundation.

(2) Conferences, seminars, and symposia could be sponsored at the Foundation and around the country on topics related to areas of interest to the Foundation or to the higher education community. This could be one format by which the Director and the Board could have contact with and obtain information from many sources. As noted above, the proceedings of some of these sessions might be published by the Foundation.

(3) The Foundation might consider supporting training programs similar to those run by the American Council on Education and others for college and university presidents, deans, and other administrators. Opinion is mixed as to the value of these programs, but they could be a legitimate professional concern of the Foundation.

(4) College students and others could be taken on for varying periods of time as interns in the various parts of the Foundation.

(5) In conjunction with the Publications programs and other Foundation activities there could be professional staff who visit around the country to keep informed of what people in higher education are thinking and doing, and to inform them of the Foundation's activities.

Staffing

Professional staff for the Foundation would be exempt from Civil Service requirements. As an agency with new purposes, it appear logical that a minimum of personnel would be taken on from existing governmental agencies.

Funding

The currently proposed initial funding level of the Foundation is $100 million. On this basis the following general distribution of funds is suggested:

For all administration and staff other than the staff of the Technical Assistance Division	5%
For the Community College, College and University Affairs, and Off-Campus Operations Divisions	80
For the Small Grants Division	5
For the Technical Assistance Division	5
For the Publications and Professional Activities Division	5
Total	100%

Funds appropriated for the Foundation would remain available until expended.

It is difficult to say what the funding level of the Foundation should be, though the $100 million to $200 million/year level seems about right in order to have some impact on the higher education system, to give the Foundation some standing within Government, and yet to escape the more intense political pressures which might be generated by the availability of considerably larger sums of money. Perhaps the appropriate funding level can only be determined once the Foundation is created and applications are received and programs planned in detail. Consultation throughout the academic community before then, however, could be used to arrive at both a total amount and the distribution of funds among Foundation program areas.

Conclusion

All three proposals for a National Foundation derive from almost precisely the same premises, namely,

--that higher education is now in a period of difficulty and need for change;

--that just as the Federal Government has supported higher education in the past it should do so in the future, though in different ways; and

--that the current Federal structure does not include the appropriate mechanism for providing the type of support now required.

The purposes of the three proposals, however, are quite different in emphasis. The Carnegie Commission proposal concentrates on developing programs and institutions that apply for and are adjudged to need strengthening. The Moynihan proposal principally aims at giving institutional aid to the prestigious private colleges and universities, though some aid would go to black colleges and others, and at creating a policy center in Government for higher education. The HEW proposal would support efforts at innovation and reform throughout postsecondary education.

A simple structure is suggested here which could embody the substance of any of the Foundation proposals. It includes three program divisions (the Community College Division, the College and University Affairs Division, and the Off-Campus Operations Division), three non-program divisions (the Small Grants Division, the Technical Assistance Division, and the

Publications and Professional Activities Division), and a single Deputy Director for Planning and Evaluation with staff.

The Foundation's program origination and program development functions suggest a natural working relationship with the proposed National Institute of Education, without any unnecessary overlap of activities. The Foundation's policy-making and program coordination functions, however, set it apart from the NIE in its role in Government. It is concluded that the Foundation would be better able to fulfill these latter functions if it were an independent agency similar to the National Science Foundation rather than a subordinate part of the Department of Health, Education, and Welfare.

APR 29 '71

April 27, 1971

Senator Robert O. Packwood
United States Senate
Washington, D.C. 20510

Dear Senator Packwood:

I am sorry to have delayed answering your letter of March 29 which arrived just as I had returned from an educational tour in eastern Europe. As I am sure you would recognize, my desk has been more than full since my return.

I greatly appreciate your co-sponsoring the legislation which would establish a National Institute of Education. I am in agreement on practically all phases of the bill, and if there is any way that my committee on National Policy for Teacher Education of the National Association of Schools and Colleges of Education in Land Grant Colleges and State Universities can be of assistance to you in the passage of the measure, you may be sure of our cooperation. We have a small budget which permits our assembling the committee in Washington on matters of important legislation.

I would hope that the bill might be amended so that the President does not appoint the director of the Institute. One reason for the difficulties within the United States Office of Education has been the political vulnerability of the Commissioner of Education. I think it is entirely reasonable and desirable for the President to appoint the National Advisory Council on Educational Research and Development. That Council could provide the political buffer between the National Institute of Education and the federal executive. I think it might strengthen the Council to have the Secretary of H.E.W. or an Under-Secretary of his designation serve on the Council. Boards or councils of this nature can operate most effectively in pursuing desirable professional policy if they have the right to appoint the director as their executive officer, establish his compensation, and hold him accountable for the performance of his office in accordance with the policies established.

In the long run, the Commissioner of Education will remain as a political appointee to carry our federal policy in the operating and funding programs of the Federal Government. The removal of the Institute director from political appointment would not impair the appropriate development of federal educational policies.

I sincerely hope that I may have an opportunity to discuss this with you sometime when I am in Washington or when you are in Oregon.

Very cordially yours,

Keith Goldhammer

Keith Goldhammer
Dean

NATIONAL EDUCATION ASSOCIATION
REACTION TO PROPOSAL TO ESTABLISH A NATIONAL INSTITUTE OF EDUCATION:
PRELIMINARY PLAN FOR PROPOSED INSTITUTE - RAND CORPORATION

After careful consideration of the Rand proposal for establishment of a National Institute of Education and other plans to reorganize the executive branch of government, particularly HEW, we are more than ever convinced that elevation of education to Cabinet status headed by a Secretary is imperative. With minor reworking of extant proposals, the OE and NIE could be integrated into such a department and work effectively as parallel operating arms.

* * *

The Rand proposal

In general terms, the Rand proposal for a National Institute of Education is a good, logical construct for approaching the totality of educational research and development. This document outlines a program for creation, development, and implementation of a National Institute of Education as proposed by President Nixon in March 1970.

It is perhaps appropriate to caution that this Presidential proposal might be a diversion from the real needs of education, such as massive federal support for the operating expenses of the nation's public school system, and as such should rank very low on the scale of national--and educational--priorities. Furthermore, because this proposal is concerned with overall organizational structure of NIE, it may seem premature to raise questions about proposed specific activities and programs such as who is going to research what and how. But inasmuch as the program of NIE will determine its structure, attention should be called to aspects of its program.

* * *

Structure

The whole NIE concept is incorporated into the federal government at too low a level and is in danger of getting lost in the HEW bureaucracy. The establishment of NIE would vastly increase federal responsibilities in education and makes the creation of a separate Cabinet-level post for Secretary of Education more than ever necessary. One arrangement might be for the Director of NIE to have a position equal to that of the Commissioner and to report directly to the Secretary of Education, while the Commissioner of Education (with whatever change of title might be necessary) would retain authority over OE and would also report to the Secretary. There would thus be under the Secretary two executives of equal status, one responsible for federal R&D activities in education and the other responsible for operational federal programs in education.

However, if the Rand proposal were implemented as written, with its provision for several super grade top level personnel positions, the NIE would totally overshadow OE. There is no suggestion in the report that OE be equally upgraded. Under the proposal, NIE will clearly have the leadership role, with OE being merely a disburser of funds under formula grants and a gatherer of statistics.

There is a good case made in the Rand proposal for a single institute charged with the major R&D role in education at the federal level, with maximum emphasis on development and implementation of education R&D projects by institutions of higher education, state departments, local education agencies, and other nonprofit agencies with funding from the NIE.

Another major fault in the proposal is that the plan of organization calls for altogether too many advisory groups. While a National Advisory Council is clearly necessary and desirable, the attachment of a subsidiary advisory group to virtually every major unit within NIE adds up to an excessive number of persons

serving in an advisory capacity. This would inevitably result in some overlapping, with the same persons serving on more than one advisory group. It would also be very costly, and the meeting expenses of bringing these advisory groups together would consume a considerable part of NIE's rather slender resources. Some other alternatives for obtaining input should be explored so as to reduce the total number of advisory groups.

With regard to membership on the National Advisory Council:

a. Some members of the Council should be designated specifically as representatives of professional organizations. A Council member who serves as the representative of a group occupies a different position from one appointed as an individual. Such representation would provide an important avenue of communication between NIE and the education community. This should be specified in the section on Council membership.

b. Federal officials representing other agencies should not be members of the Council, as recommended under the section on membership. Such officials have primary responsibility to their own agencies, and their concerns might interfere with developing the NIE program in the best interests of education R&D. The sole criterion for the selection of Council members should be suitable knowledge and expertise in education, either in regard to what to research or how to research it.

Additionally, there would seem to be major problems of finance with an NIE. A considerable disparity exists between what NIE might do under the proposed program and organization and what it is likely to be able to do with the available resources. In light of the proposed budget and timetable, all the elaborate description of program and activities in the other chapters is somewhat misleading. For the first year, at any rate, there would probably be little if any new program.

The plan proposes transfer, by FY 1973, of the present R&D functions of OE to the NIE, with accompanying budget transfer of $130 million and a request for an additional $25 million for a total $155 million for FY 1973 for NIE. Most of the $130 million coming from OE is already committed, leaving only the $25 million additional for developing the whole NIE administration and staff and initiating its program. By 1982, according to the plan, NIE's budget would be $1.13 billion, rising sharply after FY 1977 which calls for $380 million. Again, this might be a device to hold down expenditures for education at this time--with rosey promises for the future, under some other President.

Another budgetary question is raised by the transfer of the present OE R&D Centers and Regional Educational Laboratories to NIE: What is to happen to the budgets of these institutions when they are transferred to NIE management? Are they to be continued at present strength? If so, continuing to maintain the present educational research establishment will absorb a sizable portion of NIE's resources for several years, further inhibiting the development of new programs. All in all, it seems that if NIE is to become anything like the institution described in the proposal, more funds would have to be devoted to it at the outset than are presently being considered.

* * *

Rationale, activities, programs

A major problem in considering the goals and functions of NIE is the fundamental difference between educational research and the agricultural and medical research models on which the proposed NIE is based. In medicine or agriculture, general agreement exists about the purposes and applications of research, and results, when obtained, are usually decisive. In education, purposes are controversial and results are rarely dramatic. Medicine and

agriculture are examples of applied science in which most of the research is based on laboratory and clinical studies. It would be misleading to suggest that a National Institute of Education could be set up on the same basis as the National Institute of Health and achieve the same kind of dramatic results.

It is appropriate to mention here the distinction between "basic" research and "action" research. The largest part of educational research at present is of the "action" type and must therefore take place in the classroom. The proposed NIE, if it is established, should take as its province "basic" research--experimental studies of the essentials of teaching and learning. It should do concentrated research in new areas, not simply regroup and restudy old subjects of research. This emphasis is not obvious in the Rand proposal.

Another need which is overlooked in the Rand report is dissemination to bridge the gap between research findings and implementation. A systematic means of transmitting whatever data may be found should be incorporated into the proposal as an integral function of NIE's program.

Another problem in connection with these broad topics is the relationship between research and action programs in the same area and the practical question of the relationship of NIE projects with existing OE programs. A number of the research projects suggested overlap, and potentially conflict, with OE programs already in existence. For example, NIE's proposed task force on education of the disadvantaged overlaps with OE's Title I program in the same area; the demonstration projects mentioned at various points throughout the proposal would overlap with OE's Title III demonstration projects. This means that two federal agencies would be working with state and local agencies on the same problem, and a great deal of confusion and duplication of effort could result unless NIE and OE each had clearly defined, separate spheres of action. It is not evident from the proposal how these problems would be resolved, and it would help to have at least

some guidelines indicating the appropriate boundary between NIE and OE activities.

Furthermore, the areas of investigation described in connection with improving the educational system are rather far removed from research design in the usual sense of the term. They are more in the nature of demonstration projects that could involve major problems in financing. It seems doubtful whether the NIE budget would be able to undertake work of this type.

Several consequences follow from this fundamental difference which have implications for the proposal. One is the need to reduce the problems of education to be researched to terms in which they are researchable and to distinguish R&D activities from action programs and demonstration projects. Many of the areas of NIE activity outlined in the proposal are so broad that they overlap both types of program, and the research concept and the demonstration concept are mingled together throughout the report. Such broad topics are quite reasonable as areas of education within which research might be conducted, but they are too broad to serve as a satisfactory definition of research fields, and they extend beyond the limits of what is manageable research activity.

In principle, the use of task forces to deal with specific, major educational problems is a good organizational approach that avoids the pitfalls of institutionalization. However, the examples of problems selected are not researchable in the form in which they are presented here. Improving the education of the disadvantaged, and improving the quality of education, are too broad to serve as effective targets for research, and the activities suggested in connection with these goals go beyond research to include a variety of action programs and other operations, as well as public values and policy. There needs to be some narrowing down if the projected NIE activities are to represent a practicable research program.

Another consequence is the need for input into the educational research process to be oriented to the practioner and user. The proposal, on the contrary, is oriented chiefly toward the producers and the research institutions, colleges

60-433 O - 71 - pt. 5 - 12

and universities, as the primary source of input. Very little is said about the role of teachers and administrators, school districts, and teacher organizations, in determining what is to be researched. Although the proposal does stress the importance of relationships with the educational system, the role assigned to practicing educators is largely a passive one as disseminators and appliers of research findings. For input, the proposal puts greatest reliance on the professional researchers. In light of the present state of educational research, this is unrealistic and unlikely to produce constructive results. The experimental researchers are too isolated from the practical realities of the classroom to be effective as the major source of input.

* * *

Role and involvement of the education profession

The role of the organized teaching profession as a transmission belt for linking R&D with practice should be mentioned. Practicing educators and the organized teaching profession have an important part to play in deciding the directions which educational research should take, and the proposal needs to delineate this part more clearly. Professional meetings of teachers and professional journals should be included among the means of transmitting R&D, and professional organizations, such as NEA and its state and local affiliates, could play an important part in the whole area of NIE activity devoted to strengthening linkages between R&D and practice.

Finally, the proposal's discussion of teacher training needs to focus on more than just pre-service teacher education. In-service training and the whole concept of professional development should be included, as well as the role of the organized profession in this area. This entire area might come under the direction of a "Center for Professional Development," instead of the proposed "Center for Teacher Education".

January 16, 1971

Senator PELL. Our next witness will be Dr. Roger Levien of the Rand Corp.

Dr. Levien, Senator Dominick would be kind enough to preside here, and I will go over your testimony.

(Senator Dominick assumed the Chair.)

Senator DOMINICK (presiding pro tempore). Dr. Levien, if you just go ahead, it would be fine.

STATEMENT OF ROGER LEVIEN, DIRECTOR, NATIONAL INSTITUTE OF EDUCATION PLANNING STUDY, THE RAND CORP., WASHINGTON, D.C.

Dr. LEVIEN. Thank you.

Mr. Chairman, my name is Roger Levien. I am director of the National Institute of Education Planning Study conducted by the Rand Corp. under the sponsorship of the Office of Education. The views and conclusions I will express are mine and those of my study group and should not be interpreted as representing the official opinion or policy of Rand or the Department of Health, Education, and Welfare.

With your permission, I would like to submit my statement for the record and spend a few minutes summarizing what I have to say.

Senator DOMINICK. Your whole statement will be put into the record at this point, and you go ahead and highlight the points you want to.

Dr. LEVIEN. I am grateful for the opportunity to testify before this distinguished subcommittee on a matter of such potentially great importance for American education as creation of a National Institute of Education. The preliminary planning study which I led began last April at the request of the then Commissioner and Assistant Secretary of Education, James Allen.

My testimony today will draw upon the preliminary plan that resulted from that request. But I want to emphasize that this plan should be understood to be but the second stage—after the President's message and the accompanying legislation—in what I hope will be the continuing evolution of the Institute.

These hearings, and those currently underway in the House, might be considered to be the third stage. The work of the Commissioner's NIE planning unit will be the next stage, and if the Institute is authorized, there should be additional stages of modification and adaptation as long as the Institute retains the capacity to renew itself as circumstances change. I hope that this preliminary plan, therefore, will be a useful contribution to the deliberation of this subcommittee, but that it will be seen as describing just one picture of what the NIE can become.

The charter given to the planning study was to "put flesh on the bones of the idea" expressed in the President's message on education reform and the accompanying NIE bill. Specifically, the goal was to determine the design for a national institute to support and manage educational R. & D. that would have five important characteristics:

1. Be responsive to the need for solid knowledge on which to base educational decisions and to alleviate major educational problems.

2. Attract first-class educational and R. & D. personnel from a wide range of backgrounds.

3. Bring new disciplines, interdisciplinary teams, and new approaches to the quest for knowledge and technique to serve education.

4. Retain the capacity for self-renewal as educational problems and approaches change.

5. Improve the linkage between educational R. & D. and the educational community so as to assure that R. & D. products reach practice and practical problems receive R. & D. attention.

Underlying these goals was the conviction that the Nation does not yet have in the service of education the kind of viable and effective R. & D. system that has so successfully served agriculture, industry, or health care during the past half century; and the realization that the initiative to create it must come from the Federal Government, which supplies almost 90 percent of the funds to the existing system.

The planning study began by identifying the questions that needed to be addressed in order to gain a clearer understanding of the Institute. These fell into five categories:

1. What should the principal objectives of the NIE be?

2. What program activities should the NIE undertake? How should the choice of program activities be made?

3. What should the internal structure and management procedures of the Institute be?

How should the NIE relate to other Federal, State, local, and private agencies?

5. What early activities will give the NIE the best chance of success?

We used a number of sources to try to answer these questions. First, and most important, we engaged in wide consultation with individuals in education and research. We held many individual discussions, arranged meetings with groups, and sent a preliminary draft out to more than 450 people, about 150 of whom replied with letters which were used in revision of the draft. So I hope it is fair to say the final version of the preliminary plan distills and conveys the suggestions of a very wide sample of the education and R. & D. communities; although, of course, the responsibility for the selection and representation is mine and my study committee.

We also looked at the experience of comparable Federal research organizations, such as NIH and NSF, and reviewed carefully the literature of science policy, educational R. & D. and the management of R. & D.

Our preliminary plan provides answers derived from these sources for each of the five categories of questions.

I know the Department of Health, Education, and Welfare has made available to the subcommittee copies of our study. I will, therefore, in this testimony attempt only to summarize those aspects of the plan that seem most germane to these hearings. I would be happy to discuss other aspects in response to your questions.

Now, I would like to depart from my prepared testimony to discuss 5 questions that I do not really cover very thoroughly in that testimony: five questions, though, that I believe underlie the issues that many people have come to feel are most important with regard to the National Institute of Education.

These questions are: first, why do we need educational R. & D.? Is not our educational system serving us well enough as it is?

Second, what should an educational R. & D. system be doing? What would be its products?

Third, why is it not doing it now?

Fourth, what needs to be done to make it perform?

And fifth, what would be the result of that activity?

Rather than go into detail about each of these questions, I will try to summarize our answers to them. And should the committee wish to discuss any one of them in further detail, I will be happy to do so.

First, why educational R. & D.? Well, I think it is clear to everyone, and most specially to this subcommittee, that despite a record of magnificent success, especially with regard to access to education, education is not doing the job that it should; that education faces severe problems.

Just to illustrate: we see that children who come into the educational system carrying the burden of social and economic disadvantage find educational disadvantage adding to their burden rather than alleviating it. Even those who enter the educational system from backgrounds of comfort and care too often find school a joyless and inadequate place.

As Senator Dominick has indicated, there are severe financial crises at all levels of education—elementary, secondary, and higher—yet the existing resources available to the schools through tax revenues frequently are not used effectively. Many have come to feel that we are not getting our money's worth from the educational system.

We find in many schools a disruption of learning through violence, and at the same time irreconcilable demands for changes in the governance of those school systems. We have new clientele, such as those who wish strong and effective career education, demanding service from the system, while many of our most powerful nonschool sources, such as television, libraries, clubs, and work experience, are wasted in trivial and ineffective education.

So there is no shortage of problems in the educational system. And to alleviate those problems, we need not more random and uncoordinated experimentation from which we very rarely learn or accumulate knowledge, but rather more disciplined and interrelated investigations that add to our knowledge and our capacity to improve education. Increased knowledge and capacity for improvement is what we have come to expect from a truly adequate research and development system.

An educational R. & D. system should enable us, first of all, to gain better knowledge about learning; to understand, for example, the wide variety of individual learning strategies, so we can teach children more effectively according to their individual capabilities.

We need to understand the biochemistry of memory, so perhaps we will learn how to improve the capacity of those who are handicapped in one way or another to gain from our educational system.

There can be breakthroughs, I believe, within the next few decades in our understanding of the process of language acquisition, and certainly there are major gaps in our knowledge of the stages by which intellectual and affective development occur in children.

So an educational R. & D. system should be adding to our understanding of these and similar phenomena that underlie the way we perform education.

Second, we can expect and we should demand improved curricula. At each level of school from kindergarten or preschool through graduate education, we need curricula that reflect the needs of the students in our changing society, not only for the knowledge that is, but for the techniques for gaining the knowledge that will be. We need to understand and convey to this new generation the way societies function, their economics, and their legal structure, so that when they reach the age of joining society fully as citizens, they will be able to participate effectively and adequately.

We need new and revised forms of schooling that better meet the needs of some children for extended school days, that extend more responsibility to students and teachers for making the basic educational decisions, or that employ technology to the fullest extent that it can be employed in the teaching process.

We need improved management techniques so that the people who have the responsibility for making decisions in education can make them on the basis of a systematic analysis of alternatives and with better information on which to base them.

We need better evaluation of the policy alternatives that face us in government. For example, how to provide suitable financial support for our higher educational system; which form of student aid or which form of institutional aid will most effectively serve the needs of our society, our higher education system and our citizens.

What about disorder in the schools? To what extent does it really exist? And what are its causes? And how might we go about alleviating them?

And in support of all of these changes, we need new means of selecting and preparing teachers, who are the true means, the basic means, for bringing about reform and improvement in education.

And finally, we need not just these separate and individual activities, but we need a truly coordinated attack on the major problems that our education system faces. We have to ask ourselves how can we improve the education in the ghettos or in the barrios or on the reservations, not just by single palliatives, but by a concerted effort to understand the needs, to develop alternative curriculums, to design new forms of schooling, to apply technology, and to train teachers, all in a consistent and coherent way so that the combination will truly lead to improvement and reform in the way education is conducted.

So those are the kinds of contributions we should be expecting from an educational R. & D. system. To a large measure, we are not receiving them.

That is not to say that the existing system has not had major successes. I think there are some dramatic examples. Sesame Street is frequently mentioned. And research and development did play a large role in its success. Many of the science curriculum developments, such as PSSC physics and some technology developments, such as the Plato project, which is a computer-assisted instruction project at the University of Illinois, are improving the standard of what people learn as compared to what we knew 50 years ago or even 30 years ago and are all the results of our investment, small though it has been, in educational R. & D. thus far.

The Commissioner and the Secretary made the case that our educational R. & D. system has been too small. After decades of indifference, there has been a decade of forced growth in that system that started in the early sixties. Educational R. & D. is still, nevertheless, very small in size compared with the investments in the generation of new knowledge and technique in health or agriculture or industry.

Certainly, there are other weaknesses in educational R. & D. It does not have the solidity of scientific base that R. & D. for industry, agriculture, and health does. There is not the strong demand for and acceptance of innovation by its prospective users in the school system. We cannot measure and display improvement so effectively as we can in the industry, agriculture, and health.

Nevertheless, I think the cost and scale of really successful R. & D. in other national enterprises of no greater complexity or challenge than education R. & D. demonstrates very clearly that we are not yet putting enough into our educational R. & D. system.

The other deficiencies also mentioned by the Secretary and the Commissioner include the fact that educational R. & D.'s reputation has been low, tragically low. I think if we consider the importance of educational R. & D. to our education system and how challenging such a topic and pursuit should be to scientists and educators and developers we see how unfortunate and inappropriate that low reputation has been. In addition, educational R. & D.'s base of knowledge has been narrow. It has been based primarily in psychology. And the focus has been diffuse. We have had primarily small projects asking small questions with small effect.

And the linkage to practice, which I think is the major problem we will face in the educational R. & D. system in the years to come, has been weak in both directions.

Finally, we have to add that the support from the Federal side has been unstable. There have been changing priorities. The Federal Government has been a fickle taskmaster, changing its priority from the disadvantaged one year to early childhood, to reading, to vocational education, and so on.

So all of these things have contributed to the failure thus far of eductional R. & D. to contribute as effectively as it must to the improvement and reform of American education.

What needs to be done to overcome these deficiencies? Certainly, a great many things. Greater support is the principal one. Higher status must be achieved; higher quality personnel in a wide range of disciplines have to be attracted to work in critically sized activities, addressing major issues. We need closer linkage with the education system and stable support and leadership.

That last point is important because almost 90 percent of the support for educational R. & D. comes from the Federal Government. How much Federal money is spent, how well, where and for what, strongly affects the direction and quality of educational R. & D. Thus, I think many people came to the conclusion at the same time that the key to improving our educational R. & D. system is the strengthening of Federal support and leadership. To do that, two things are needed—wise management and sufficient funds.

But as a practical matter, neither wise managers nor such resources can be attracted and applied to the best effect in the absence of proper institutional arrangements. And that is what gave rise to the notion

of an NIE, raised in stature to that comparable to the National Science Foundation or the NIH, with an active and broadly representative advisory council to help develop policies, with its own internal R. & D. activity to illuminate the major issues facing American education and identify promising directions for R. & D. effort, and with a flexible personnel system like that of NSF and NIH, and with the authority to carry over funds from one year to the next so it can support stable multiyear programs of R. & D.

None of those characteristics characterizes the existing institution, the National Center for Educational R. & D. So the argument has been made that the way to proceed is to replace or supplant it with the National Institute of Education.

Now, what would such an organization be like? As I have said already, this is still a set of decisions that is evolving. But in the course of our study, we found a number of points on which there was fair agreement. And I would like to convey them to you today.

First, there was the basic question of intent. Was this NIE to be an organization to conduct basic research, to emphasize development, to be an experimentation and evaluation mechanism, or to play a large role in implementation? Was it to focus principally on elementary or secondary education or on higher education or on education occurring outside of the schools? Was it mainly to be concerned with equality of educational opportunity or with the quality of education itself or with the effective use of resources?

We found that there was broad agreement that the National Institute of Education must have as its primary objective the improvement and reform of education through R. & D., and that its scope must include education at all levels both within and outside of schools for all ages, before the traditional school age during, and after.

And it must engage in all kinds of R. & D., from basic research on the most fundamental aspect of the way we learn, through the development of new educational processes, to the implementation, at least to the point of demonstrations, of these new processes.

And when it seeks improvement and reform, it must be concerned not only with equality of educational opportunity, but also, with the quality of education provided to everyone and with the effectiveness with which we use the resources available to the school system.

Now, in completing my statement, I would just like to say a few words about the next level of detail beyond that broad primary objective. How does one achieve it? Again, in the course of our discussions, we encountered a variety of points of view. When talking with school people, it was generally felt that the NIE ought to concentrate its resources on the urgent pathologies of our time, on the disdvantaged or on quality of education or on financial problem.

When we talked to those with specific interests in teachers' education or educational technology, for example, their advice was to concentrate on improving practice by those means, to strengthen educational technology or improve teacher education.

When we talked with the social and behavioral scientists, they told us that the state of basic knowledge in education stands now about where the basic state of knowledge in health stood in the 1600's. So if we want to make any progress, it must be by building the scientific foundations of education.

And certainly when we came to those who had some responsibility for the R. & D. community, deans and directors of laboratories, their counsel was to build the institutions, provide the people, and allow them to do the job.

Now rather than asserting that none of these counsels were correct, I would rather say that each of them had a portion of the truth and that what the NIE must aim to do is balance these four themes in its program.

It must help to solve or alleviate problems and achieve the objectives of education. I think a major part of the NIE's resources—up to perhaps 50 percent—should be devoted to comprehensive, nationally organized and managed programs addressing these priority concerns and comprising research, development, experimentation, evaluation and implementation efforts. So half the resources should go to priority concerns.

But those priority concerns depend for their resolution on the state of our knowledge of the basic practices of education; on how well we can train teachers on how well we can instruct, on how well we can administer and manage.

The advancement in those areas must occur through a cumulative, continuing program. The NIE, it seems to me, should devote at least a quarter of its resources to continuing efforts to advance the practice of education—such things as evaluation, teacher education, instruction and educational management. Our ability to improve practice depends in turn on our basic knowledge of education, our understanding of those fundamental phenomena that I discussed earlier.

Again, this understanding can be advanced only by investing in a portfolio of stable and long-term programs intended to strengthen our understanding of those phenomena. We should be trying to find out how the individual performs as a learner, how group processes effect learning, how society needs and uses and should support education, and how technology and media might be used in instruction.

(Senator Pell resumed the chair.)

Each of these topics should be the subject of a long-term, stably-supported program of basic and fundamental research.

Finally, as the Secretary indicated earlier, the R. & D. community is underdeveloped with regard to the size of its personnel pool and with regard to the variety and number of its settings for research. Currently, it has fewer than 10,000 individuals, mainly working and individuals and mainly situated in the universities.

There are few cases where a critical mass, where mixed teams of disciplines, where developmental focus, or where a close association with schools occurs. And if we are to be effective in conducting R. & D., we must pay attention to the development of that R. &. D. community that will be its performers.

So I would expect that some percentage perhaps, 10 or 15 percent, of the NIE's budget would go into the catalytic supports of the development of personnel, institutions, and pathways and linkages to practice.

Finally, I think one of the major features and one of the important distinctions of the NIE from the existing system will be its intramural program. This, I hope, will be an opportunity and a place to encourage a wide-ranging review of the state of education and educational

R. & D., a place where we can bring together a wide range of individuals concerned in a variety of ways with education. They might be from universities, they might be from R. & D. labs, they might be from schools of education, from the school systems themselves; and they might come to spend 6 months or 2 years at the NIE to work on small task forces formed to illuminate the nature of our educational problems, to analyze and evaluate educational policies, or to assist in the design of R. & D. programs.

This, then, is a rough and quick overview of what an NIE might be like and how it might perform and bring about the change in educational R. & D. that we desire. But, as I said, the NIE I have discussed today is only an example of what the NIE might become. Its eventual structure will be the result of these congressional deliberations and the actions of the Commissioner, the Director, his taff, and the advisory councils.

In the course of that evolution, is seems to me that there are three conditions that must be satisfied if the NIE is to be an effective force for the improvement and reform of American education.

The first is adequate financial support. An appropraite first goal might be the investment of about 1 percent of total expenditures on education for educational R. & D. This might be achieved in about a decade, at which time it would mean an investment of somewhat over $1 billion each year in acquiring knowledge and techniques to improve and reform education

Thus, the target would be something like tenfold growth for the OE contribution in 10 years.

The second is a self-renewal capacity. Most particularly, I mean that the NIE should retain the capacity to revise and redefine its internal structure in response to external changes or to the lessons of experience. And in order to retain a high level of competence in the important areas of educational R. & D., the NIE should arrange to have a continuing flux of staff.

Perhaps one-half of its staff should be drawn from external R. & D. and educational agencies for less than career terms of service; individuals from universities, school districts, R. & D. labs and centers should be encouraged to spend several months to several years at the NIE.

The authority to restructure itself and to assure a high degree of staff flux are essential if the NIE is to have a reasonable capacity for continuing self-renewal.

The third precondition for success of the NIE is that it achieve effective links with the operating agencies of education. This must be done at the Federal level with the OE and the proposed National Foundation for Higher Education, at the State level, and at the local level, as well as with the many private institutions of higher and other education. Here, the need for initiative and creativity on the part of NIE is very high. For no single action can achieve this linkage. Its strengthening must be a goal of most of the NIE's activities.

I have attempted here to provide in summary the findings of our preliminary planning study for the NIE. I hope that these results of analysis will prove useful to the subcommittee during its consideration of this major social initiative—the National Institute of Education.

Thank you.

Senator DOMINICK. Mr. Chairman, just to bring you up to date, we put Mr. Levien's full statement in the record, and he has been highlighting it and doing it very ably, if I may say so.

Senator PELL. Thank you very much.

Senator DOMINICK. Do you want to go ahead and ask questions first?

Senator PELL. No, please proceed.

FLEXIBILITY OF NIE ORGANIZATION

Senator DOMINICK. I have just a couple of questions, Dr. Levien, and they are of interest to me. You have emphasized over and over again the need for flexibility in the NIE. It would appear to me despite what you say in your specifics on page 11 as to the internal structure of NIE that if we put that in by legislation that we have in effect limited that flexibility.

Dr. LEVIEN. Yes, indeed. As I have been at some pain to say, what we presented here was one picture of what the NIE could become. In the course of doing this study, a number of other possibilities were addressed and for the moment set aside.

There is in the full study itself a discussion of those alternatives, but I might point, for example, that there is nothing in the structure I have suggested which corresponds to the common division of education roughly into elementary, secondary, higher, and so on.

Senator DOMINICK. The point I am making is under S. 659 we have through legislation put into operation the specifics that you refer to on page 11. I do not see how by doing this by legislation which could only be changed by legislation that we are insuring the flexibility you would want.

Dr. LEVIEN. No; I agree with you on that. I was simply going to give an example of another structure which might prove to be useful later on that we put aside at the moment, but would want to be able to adopt if experience showed it to be more useful than the one we have suggested.

Senator DOMINICK. Now, let me ask you a very difficult question. Maybe it will liven up the hearing a little bit.

Many witnesses here and before Senator Mondale's Select Committee on Equal Education Opportunity on which I serve have challenged what education is and done it rather effectively. In the process of your study, have you come down to any definition of what you mean by education?

Dr. LEVIEN. Well, the direct answer to that is "No," we have not tried to define education except to try not to exclude from education things which frequently are excluded. That is, frequently, we assume that education is what goes on in schools. We have made it explicit several times in the study, and I hope several times in the testimony this morning, that education is a function of far more institutions in our society than the schools themselves; that all the processes by which we equip individuals with the knowledge and techniques and skills through which they can interact with their surroundings are education, and that all of those things are the proper domain of the NIE.

Senator DOMINICK. So that in NIE, then, the research program should not only encompass the rather more formalized system of education which we have been experiencing for many years, but also

should tackle many of the problems of the home and environment and cultural background and things of that kind.

Dr. LEVIEN. Media, what we learn through television, what we learn through the Scouts, what we learn through jobs we acquire, yes, all of those influences on education should be within the proper scope and domain of the NIE.

RELATIONSHIP BETWEEN NIE AND FOUNDATION

Senator DOMINICK. In your preliminary proposal, at least insofar as your paper here and your testimony is concerned, you have not mentioned the Foundation concept that the administration put in. How do you conceive of its relationship with NIE? Do you think it is duplicative or do you think it is repetitious, or do you think it is important to have this Foundation?

Dr. LEVIEN. I do not think it is duplicative or repetitious. It seems to me that the NIE has a proper role in R. & D. and that this R. & D. would include activities in higher education. So I would anticipate the National Institute of Education, for example, funding, just for a specific case, a program for using the computer in instruction in higher education.

And it might carry this activity up through the point where the concept had been demonstrated to be valid, where it was shown to be effective in many institutions—say two or three. At that point, there would be many institutions around the country which might want to implement it.

I would not like to see the NIE then undertake the funding of the introduction into practice of that innovation. I would like, and I think it is a proper role, for the National Foundation to take on that job because I see this as a natural division between the NIE and National Foundation—the NIE developing innovation and the Foundation facilitating its introduction into practice.

Senator DOMINICK. I would agree with you that this can be separate, and it can be very useful this way. I would also agree with you that electronic data or computers or whatever you may have may have some usefulness in education. Practically every young person that I have spoken to who has either dropped out or is thinking of dropping out of either secondary education or higher education do so because they say they do not like the teachers. And to the extent that they use advanced technology in machines as opposed to personal relationship, they dislike it even more. And they seem to be more likely to drop out.

Did you find any input of that kind of reaction from the people who answered your preliminary proposals?

Dr. LEVIEN. Well, I can answer that on two bases both on the discussion we had in the course of developing this plan and on a prior study which I carried out for the Carnegie Commission on Higher Education that was directed to the question of what is the future of instructional uses of the computer in higher education.

And on the basis of that study, I would say that where the computer is used effectively and intelligently that precisely the opposite phenomenon occurs; that students find an opportunity to learn at their own pace with a patient and rewarding tutor, but also that the faculty finds an opportunity to relieve themselves of the burdensome tasks of teach-

ing—the rote learning, rote teaching, the correcting of papers and so on—and frees their time for the kind of association with students that both of them enjoy the most.

I do not think the computer in itself is a tool for dehumanizing or depersonalizing education. It can be a tool for freeing that relationship between the teacher and student of many of the depersonalizing aspects. And I think it offers a great potential in the future for effective use in higher education.

ELECTRONIC INSTRUCTION

Senator DOMINICK. Well, I hope you are right. But in our hearings before the Subcommittee on Health which were held all over the country, we heard consistent and constant complaints that you cannot get a doctor to come to your home in a personal relationship.

And the doctors very properly say they can handle far more patients with far more ailments if they will come down to either a clinic or their own office.

So technically speaking and from an efficiency basis, I am sure the doctors are right. From a human patient point of view, what they want is someone who is there to give them what is generally called TLC for a while even if they do not get any aspirin out of it.

And this is what I am concerned with on overmechanizing education and where do you see this computerization and electronic data used? In the sciences largely or in administrative functions or what?

Dr. LEVIEN. So far as instruction goes, the major part of the current use—in fact, it is over 90 percent—is in sciences.

But I want to make clear what I am talking about when I say use of the computer. I am not talking about a situation in which the computer replaces the teacher. I am talking about a situation in which the computer becomes a tool of teaching and tool of learning for a specific aspect; for example, to simulate a phenomenon in a chemistry or physics class which could not be provided to the student in any other way.

USE OF TV IN INSTRUCTION

Senator DOMINICK. I could well understand that, but in the process of talking about computers, people also talk about teaching by television, which is bad enough without having put it in the educational field, it would seem to me, as far as the dehumanizing of education is concerned.

I wonder if you have got any reaction to that one.

Dr. LEVIEN. My view on television cannot be based on the same kinds of experience I have had with the computer. I think it is more the other way around. There are people who are not receiving education now who do not have access to it.

For example, those such as my wife who have gone through a liberal arts education, raised children, would now like to go back into some career, but do not have the opportunity to get away from home. If we provide via television some of the educational experiences they cannot get on a formal campus situation, I think that would be a great advance in our educational system.

And I think there are other opportunities for using television to supplant the kind of personal instruction that would be the most desirable where it cannot always be achieved.

Senator DOMINICK. With all due respect, I think maybe your wife, with the experience she has already had and the education she has already derived might be better off without going through any more television educational programs to get a certificate or something.

Dr. LEVIEN. Well, yes. In the case of teaching, however, since she does not have a certificate, she does have to undergo certain kinds of training.

Senator DOMINICK. That is the problem. I understand it.

Thank you, Mr. Chairman.

Senator PELL, Senator Dominick, I just received the unpleasant news that we have a vote in 8 minutes. I do not know whether to recess or continue. Were you planning to come back?

Senator DOMINICK. I frankly cannot. We have a 1 o'clock vote, as you know.

Senator PELL. We will roll along, and I will recess and run over and vote and come back. We will wait for the call.

Dr. Levien, there is only one question I have, and that is which do you think is more effective from the viewpoint of the governance of NIE: Should the governing body be an advisory one or an operating one?

Dr. LEVIEN. On the basis of personal opinion, I would say I would rather see the governing body be an advisory one with a strong advisory role.

Senator PELL. Thank you very much. I look forward to reading your statement in full and understand the great debt we all owe to you in the input that has been made, really, out of your very intelligent head into the legislation, that is in front of us. Thank you.

(The prepared statement of Dr. Levien follows:)

Testimony
before
Senate Subcommittee on Education
Claiborne Pell, Chairman

NATIONAL INSTITUTE OF EDUCATION: PRELIMINARY PLAN

Roger E. Levien, Director
National Institute of Education Planning Study
The Rand Corporation
Washington, D.C.

May 18, 1971

Mr. Chairman and Members of the Subcommittee:

My name is Roger Levien. I am Director of the National Institute of Education Planning Study conducted by The Rand Corporation under the sponsorship of the Office of Education. The views and conclusions I will express are mine and those of my study group and should not be interpreted as representing the official opinion or policy of Rand or of the Department of Health, Education and Welfare.

I am grateful for the opportunity to testify before this distinguished subcommittee on a matter of such potentially great importance for American education as creation of a National Institute of Education. The preliminary planning study, which I led, began last April at the request of the then Commissioner and Assistant Secretary of Education James Allen. My testimony today will draw upon the preliminary plan that resulted from that request. But I want to emphasize that this plan should be understood to be but the second stage (after the President's Message and the accompanying legislation) in the continuing evolution of the Institute. These hearings, and those currently underway in the House, might be considered to be the third stage. The work of the Commissioner's NIE Planning Unit will be the next stage, and if the Institute is authorized, there should be additional stages of modification and adaptation as long as the Institute retains the capacity to renew itself as circumstances change. I hope that this preliminary plan, therefore, will be a useful contribution to the deliberations of this subcommittee, but that it will be seen as describing just one picture of what the NIE can become.

The charter given to the planning study was to "put flesh on the bones of the idea" expressed in the President's Message on Education Reform and the

accompanying NIE bill. Specifically, the goal was to determine the design for a national institute to support and manage educational R&D that would:

(1) Be responsive to the need for solid knowledge on which to base educational decisions and to alleviate major educational problems.

(2) Attract first-class educational and R&D personnel from a wide range of backgrounds.

(3) Bring new disciplines, interdisciplinary teams, and new approaches to the quest for knowledge and technique to serve education.

(4) Retain the capacity for self-renewal as educational problems and approaches change.

(5) Improve the linkage between educational R&D and the educational community so as to assure that R&D products reach practice and practical problems receive R&D attention.

Underlying these goals was the conviction that the Nation does not yet have in the service of education the kind of viable and effective R&D system that has so successfully served agriculture, industry, or health care during the past half century; and the realization that the initiative to create it must come from the Federal government, which supplies almost 90% of the funds to the existing system.

The planning study began by identifying the questions that needed to be addressed in order to gain a clearer understanding of the Institute. These fell into five categories:

(1) What should the principal objectives of the NIE be?

(2) What program activities should the NIE undertake? How should the choice of program activities be made?

(3) What should the internal structure and management procedures of the Institute be?

(4) How should the NIE relate to other Federal, state, local, and private agencies?

(5) What early activities will give the NIE the best chance of success?

Several sources were employed to help answer these questions. The first, and most important, was wide consultation with individuals in education and research. During the initial stages this took the form of individual and group discussions with over two hundred persons. Last fall an advance draft of the preliminary plan was made available to more than 450 persons in education and R&D for comment. Over 150 written replies were received and were used to guide the revision of the draft. As a result, I think it is fair to say that the final version of the preliminary plan distills and conveys the suggestions of a very wide sample of the education and R&D communities, although of course the responsibility for selection and representation is mine.

The second source of information was examination of comparable research organizations, such as NIH and NSF, for lessons from their experience that might be applied in planning for NIE. And the third source was the extensive literature concerned with educational R&D, science policy, the management of R&D enterprises, and Federal science administration.

The preliminary plan provides answers derived from these sources for each of the five categories of question.

PLANNING STUDY - FINDINGS

The Department of Health, Education and Welfare has made available to the Subcommittee copies of the final report of the planning study, *National*

Institute of Education: Preliminary Plan for the Proposed Institute. I will, therefore, in this testimony attempt only to summarize those aspects of the plan that seem to be most germane to these hearings. I would be happy to discuss other aspects in response to your questions.

I would like to begin with a few conclusions concerning the current state of educational R&D, discuss their implications for the NIE, and then describe one picture of how the NIE might function.

Current State of Educational R&D

Financial Support for Educational R&D is Small. Although research on education began in the 1890's, it was not until the mid-1950's that significant national investment became available, and only after 1963 that the OE-provided funds passed the $10 million mark. Even now educational R&D receives only slightly over $200 million each year, which is tiny compared to the size of the educational enterprise: $70 billion yearly contribution to GNP, 3 million personnel, 60 million students. *R&D investment is about 0.3 percent of total educational expenditures.*

As the previous witnesses have testified, this is a *trivial investment* in developing the knowledge for innovation and reform, especially when compared to the investment in such activities made by other national enterprises. Health invests about $2.5 billion in R&D each year; 4.6 percent of total health care expenditures and 12 times as much as education invests. Agriculture invests about 1 percent of agriculture's contribution to GNP in R&D; about $1 billion for new knowledge and practices and 5 times as much as education invests. Moreover, if education were ranked among the major industries according to R&D expenditures it would stand in thirteenth place -- just below the stone, clay and glass products industry, and far below the $5.6 billion aircraft industry

R&D program, or the $4.2 billion program of the electrical equipment industry.

Of course, the comparison with health, agriculture, and industry is not sufficient to demonstrate the need for more funds for educational R&D. Educational R&D is not as fortunate as those areas in the *solidity* of its scientific base, the *demand* for and acceptance of innovation by its clientele, or the *ability to measure* and display improvement. Nevertheless, these comparisons are useful because they show the cost and scale of reasonably successful R&D systems in other major enterprises of *no greater complexity or challenge* than education. Since 1950 over $14 billion have been invested in health R&D by the Federal government alone, over $7 billion have been invested in agricultural R&D, but less than $1 billion have been invested in educational R&D. Thus, the present inability of the educational R&D system to satisfy the needs of education for knowledge to guide improvement and reform is understandable: *it is too small.*

Educational R&D Suffers Other Deficiencies. Educational R&D's smallness has been exacerbated by other deficiencies.

- The *reputation* of educational R&D has been relatively low: it has not occupied the rank in the hierarchy of scientific activities that its importance and challenge warrant; nor has it attracted as many people of high competence as it needs.
- The *scientific base* has been narrow: psychology has provided most of the basic concepts and techniques.
- Its focus has been *diffuse:* most of its efforts have been dissipated in small projects asking small questions with small effect.
- The *linkage* between educational R&D and the classroom has been weak: not enough output has found its way into practice; nor have enough classroom problems been solved through R&D.

- Finally, the *support* for educational R&D has been unstable: rapid changes in staff and priorities in Federal agencies have caused frequent fluctuations of emphasis.

So if it is to serve American education effectively, the educational R&D system must be strengthened. It needs greater support, higher stature, more high quality personnel from a wide range of disciplines, effort channeled into critically-sized activities addressing issues of high scientific or practical consequence, closer linkage with the educational system, and the stable support and leadership essential to the development and maintenance of multi-year programs addressing major questions.

Implications for the NIE

The action to overcome these difficulties cannot be taken by the educational R&D community alone. As noted earlier, almost 90 percent of educational R&D funds are provided by the Federal government. How much Federal money is spent, how well, where, and for what, strongly affects the direction and quality of educational R&D. Thus, strengthening educational R&D must begin with the strengthening of Federal support and leadership.

Two things are essential: wise management and sufficient funds. But, as a practical matter, neither wise managers nor sufficient resources can be attracted and employed to best effect in the absence of the proper institutional framework. Thus, the characteristics of the principal Federal agency supporting educational R&D are of central importance.

After considering the need, and reviewing the diagnosis of the problems, the conviction developed that to strengthen educational R&D would require the support and leadership of a Federal agency with the following characteristics.

(1) *Stature within the government comparable to that of such R&D agencies as the National Institutes of Health, National Science Foundation, and National Bureau of Standards.* Such a position seems essential if the agency is to achieve leadership among the several Federal agencies that support educational R&D and if it is to have a strong voice in support of educational R&D within the Executive Branch and before Congress. (This heightened administrative position and visibility would also be expected to have the effect of raising the stature of educational R&D among the public, educators, and the R&D community.)

(2) *Active advisory councils, broadly representative of the education and R&D communities and the public, to help the agency develop its policies and programs.* These councils would be expected to help to assure that the Federal government's support of educational R&D activities reflects the needs and has the support of the educational community. They would also advise on the choice of areas of program focus and help maintain stable support for multi-year programs.

(3) *An internal R&D activity concerned with illuminating the major issues facing American education and identifying promising directions for educational R&D.* The deliberations of this internal group would help the agency to define appropriate areas in which to focus resources. The group would also be expected to establish the climate of intellectual challenge and concern for education that would help to draw first-class staff to the agency.

(4) *A flexible personnel system, modeled on those in other Federal R&D agencies, such as NSF and NIH.* The personnel system should enable the NIE to hire competent staff from many disciplines and

backgrounds in competition with universities, industry, and other R&D agencies and to provide 6-month to 2-year positions--as Fellows--to those who plan to spend most of their careers in other organizations.

(5) *Authority to carry over unexpended funds from one year to the next.* The funding authority would permit it to provide stable funding for multi-year R&D programs.

The principal Federal agency for Federal support and leadership in educational R&D--NCERD--as currently constituted, has none of these five characteristics. Thus, many have concluded that the best way to strengthen Federal support and leadership for educational R&D is to supplant NCERD with an agency having these characteristics--the proposed National Institute of Education.

How Might the NIE Function?

Now, having reviewed the current state of educational R&D and the implications for the National Institute of Education, I would like to present one picture of what the NIE might become if it is authorized by the Congress. I will phrase my description of the NIE in more definite terms than the current stage in development of the NIE may warrant, since obviously what the NIE will become will be determined by Congress, deliberations within the Administration, and the advice and decisions of the NIE's staff, advisory groups, and clientele. I would hope too that the NIE Director and Council will retain considerable flexibility to shape and reshape the Institute according to the situations they face. With that understanding, let me summarize how such an NIE might function. As appropriate, I will also note how the picture of the NIE presented in the Preliminary Plan differs from that appearing in the bills now before this Subcommittee.

General Features. The *primary objective* of the NIE would be: *To improve and reform education through research and development.* Improvement and reform of three specific kinds would be sought: increased equality of educational opportunity, higher quality of education, and more effective use of educational resources. Education in *all settings,* both within schools and outside of them, and of *all Americans,* before, during, and after the traditional school ages, would be within the NIE's scope of interest. And *all kinds of R&D activity,* from basic research to large field tests and demonstrations, would be in its repertoire. This statement is important to make because, for several reasons, the exact scope of the NIE has been unclear to many. One source of confusion has been the fact that the President proposed the NIE in a message that was principally concerned with elementary and secondary education. Another source has been his subsequent proposal for a National Foundation for Higher Education in the higher education message. As a consequence, some people have formed the impression that the NIE is limited to a concern for elementary and secondary education. But education has too often been torn by arbitrary divisions into levels or subjects or formats; if the NIE is to bring to education "a coherent approach" and "a serious, systematic search for new knowledge," it should not be unnecessarily hampered by conventional distinctions and artificial barriers. The NIE should be able to relate children's learning at home, in the streets, and from the TV screen to their learning in schools. It should be free to seek the consistent application of new knowledge to the learning process in all educational settings. And since a problem seeming to reside in one part of the educational system (say, elementary education) may be discovered upon study really to reside elsewhere (say, in teacher education), the NIE should have a broad enough charter to permit the thread of an educational problem to be followed across the educational fabric.

With respect to its *organization*, the NIE described in the Preliminary Plan would be:

- o A *separate agency* within HEW,
- o *Parallel* to the OE,
- o *Reporting to the Secretary of HEW* through the Commissioner of Education,
- o Led by a *Director* at Executive Level V, appointed by the President with the advice and consent of the Senate.

Its administration would be provided by

- o The *National Advisory Council on Educational Research and Development*, which would advise on the development of programs and the establishment of general policy, and
- o The *Director*, who would be responsible for continuous administration of the Institute's policies and programs.

These provisions are close to those in S. 434. They differ from those in S. 659 in three respects:

(1) In S. 659, the Director is at Executive Level IV.

(2) In S. 659, the Director reports to the Commissioner and to the Institute Council, rather than to the Secretary of HEW, and the Institute is part of an Education Division of HEW headed by the Commissioner.

(3) In S. 659, the Council has responsibility for establishing the policies for and directing the conduct of the Institute, rather than advising on those matters.

Specific Features. To attain its primary objective of improving education, the NIE would undertake efforts directed toward four specific *supporting objectives:*

I. *To help solve or alleviate the problems and achieve the objectives of American education.*

II. *To advance the practice of education as an art, science, and profession.*

III. *To strengthen the scientific and technological foundations on which education rests.*

IV. *To build a vigorous and effective educational research and development system.*

The design of the research program would follow from these objectives. Associated with each supporting objective would be a major *program area* of the Institute:

Program Area I: Solution of Major Educational Problems

Program Area II: Advancing Educational Practice

Program Area III: Strengthening Education's Foundations

Program Area IV: Strengthening the Research and Development System.

These program areas would be divided, in turn, into several *program elements.*

The *internal structure* of the Institute would correspond to the structure of its programs. It would comprise

- A *Directorate of Programs,* headed by an Assistant Director for Programs, responsible for development and management of comprehensive national programs that address major educational problems (Program Area I),
- A *Directorate of Research and Development,* headed by an Assistant Director for Research and Development, responsible for development and support of coherent, cumulative efforts to strengthen educational practice,

the foundations of education, and the educational R&D system (Program Areas II, III, IV),

- A *Center for Educational Studies*, headed by an Assistant Director for Studies, responsible for conduct of a program of studies of the state of education, analyses of educational problems, and design and evaluation of R&D programs (Intramural Studies).

These provisions with regard to objectives and to internal structure go beyond the degree of specificity in S. 434. They are very close, except for wording changes, to the provisions of S. 659.

Functions. The NIE's functioning (as envisioned in the Preliminary Plan) may be described in terms of its four major program areas and its intramural program.

Program Area I: Alleviating Major Educational Problems.

The first priority of the NIE would be to organize, support, and carry out *comprehensive national programs* (combining research, development, experimentation, evaluation, and implementation activities) attacking major educational problems. It would devote a major portion of its resources--on the order of 50 percent--to this program area.

Illumination of the nature of education's crucial problems would be a major function of the NIE; the intramural R&D activity would play a central role in this process. However, that illumination has not yet been performed, so an adequate definition of problems warranting national R&D efforts does not exist. Thus, the following exemplars of problems to be addressed must be viewed as preliminary and tentative:

- The poor education received by the disadvantaged,
- The inadequate quality of the education received even by those from more comfortable backgrounds, and
- The need to use education's limited resources more effectively.

Certainly, these problems would have to be narrowed and sharpened before comprehensive R&D programs addressing them could be developed.

To help solve these major educational problems the NIE would want to do two things: first, bring to bear in a coordinated way all that is already known or developed that might help in resolving the problem; and second, focus careful effort on learning and developing what is needed to provide better solutions.

Central management of each program element would be provided by an NIE *program task force*, led by a *program manager* and advised by an *advisory panel* of educators, R&D personnel, and laymen. The staff of the task force would comprise not only permanent problem-oriented R&D management personnel, but also personnel seconded from those parts of the NIE concerned with support of work on educational practice and foundations. They would bring to the problem task forces an awareness of the state of the art in their areas of concern, and would take back to those areas an enhanced appreciation of the needs of the educational system.

Program Area II: Advancing Educational Practice.

The NIE would commit a significant portion of its resources — up to 25 percent — to *continuing, cumulative programs* intended to advance the practice of education in its artistic, scientific, and professional aspects. These programs would attempt to do those things that offer the best hope of moving the state of the art forward. The activities would be carried out

in many settings, would be less tightly linked together than the components of a problem-focused program element, and would provide both near- and farther-term returns.

This area would be concerned with the instructional process (content and methods), the educational system (forms of education and their administration), educational assessment, and the education of educational personnel.

Management would reside in a *Division of Educational Practice* within the Directorate of R&D. Because of the continuing nature of these concerns, each one could be the responsibility of a separate *National Center*, led by a *Center Director*, and advised by a *Center Advisory Group* drawn from those distinguished educators and scholars with a direct interest and competence in the Center's area of concern.

The staff could comprise both permanent members and a number of educators or scholars serving temporary tours. To facilitate the exchange of information between problem-oriented and practice-oriented R&D, Center staff members would serve — part-time — on problem task forces.

Program Area III: Strengthening Education's Foundations.

The NIE would invest a stable proportion of its resources — say 10 to 15 percent — in a *portfolio of programs* intended to strengthen educational foundations in the sciences and technologies.

Educational practice and the solution of educational problems are rooted in an understanding of the *individual* as a learner, *group processes* and how they affect learning, *society* and its relation to learning, and the *technology and media* useful in instruction. These would be the central concerns of this area.

Management responsibility would reside in a *Division of Educational*

Foundations within the Directorate of R&D. Each subject of concern would be associated with a *Program of Studies*, headed by a *Program Director*, and relying heavily on *Review Panels* drawn from the scientific community for assistance in program development.

Staff would be both permanent and short-term. Many of them would serve part-time on problem-oriented task forces.

Program Area IV: Strengthening the R&D System.

The NIE would devote a portion of its resources — say 10 to 15 percent — directly to the development of the R&D performer community through fellowships, institutional grants, and similar mechanisms.

Among the constituents to which it might want to devote attention are R&D manpower, R&D institutions, the linkages between R&D and practice, and information transfer within the R&D system.

Management responsibility for this area would reside in a *Division of R&D Resources* within the Directorate of R&D. Each constitutent would be the responsibility of a *Program*, headed by a *Program Director*. The program professional staff would comprise permanent members primarily. Care must be taken to coordinate these programs with those of other parts of the NIE so that manpower and institutional programs respond to actual needs.

Intramural Program—Center for Education Studies.

The NIE would devote a small portion of its resources — say 5 percent — to an intramural R&D program that would undertake careful study of educational problems, practices, and R&D. The intramural program would bring together permanent staff and a large number of 6-month to 2-year visitors from the education and R&D communities and others with a deep interest in education.

Manag_ment would be provided by a *Center for Education Studies*. The internal organization of the Center would not be so formal as that of the Directorates. The basic unit of activity would be the *project*, each led by a *project leader* and varying in intensity from one man part-time to a dozen or more men full-time. An *Education Studies Board* would advise on the selection of visiting staff and on the program of studies.

Short-term staff would be drawn from other Directorates of the NIE, other Federal agencies, Fellows--both junior and senior--who come full-time for a fixed period, and Associate Fellows--both junior and senior--who are associated with the Center part-time for a fixed period.

Major themes of work at the Center would include illumination of major educational problems, evaluation of educational evaluations, examination of educational goals, evaluation of educational policies, and review of the state of educational R&D.

CONCLUSIONS

The design of institutions is an art, not a science. This is especially true for R&D institutions. The art is an important one, however, for an institution's structure can facilitate creativity or impose docility; it can encourage continuous self-renewal or induce unresponsive rigidity; it can make communication and coordination easy or introduce unnecessary barriers. Program may be primary, but organization is what determines how well the program will be carried out.

The NIE I have discussed today is only an example of what the NIE might become. Its eventual structure will be the result of these Congressional deliberations and the actions of the Commissioner, the Director, his staff, and the advisory councils. In the course of that evolution, it seems to me that there are three conditions that must be satisfied if the NIE is to be an

effective force for the improvement and reform of American education. They are:

Adequate Financial Support

The OE portion of total Federal support for educational R&D is currently slightly over $100 million. An appropriate first goal for an adequately-sized educational R&D system would be the investment of about 1% of total expenditures on education in educational R&D. This might be achieved in about a decade, at which time it would mean an investment of somewhat over $1 billion each year in acquiring the knowledge and technique to improve and reform education. Thus, the target would be *ten-fold growth in ten years.*

The growth rate in the early years would have to be small as managerial and program competence were developed. But then as large-scale developmental, experimental, and problem-solving programs came into being, the need for support would grow more rapidly. The NIE could spend, by these principles, up to about $150, $175, $225, and $300 million in its first four years, respectively. In this case, the total NIE expenditures for FY 73 through FY 76 would be $850 million, still less than a third of health R&D expenditures each year.

Clearly, these are only potential expenditures. Detailed program and budget development cannot be carried out until the NIE comes into being, acquires a staff and advisory councils, and establishes its priorities. Then, of course, each year's requests would have to be submitted to and approved by Congress. But educational R&D needs to grow; the job to be done cannot be accomplished on a continuation of existing budget levels of $100-125 million a year through the educational arm of HEW. The NIE authorization should, it seems to me, provide the *opportunity* for such growth to occur, subject to the validity of each year's appropriation requests.

Self-Renewal Capacity

We are still at an early stage in the development of our understanding of educational R&D, its proper support and management, and its linkage with practice. We can expect that as the NIE builds a vigorous and effective educational R&D system, the rate of change of understanding will be rapid. This will impose severe requirements for flexibility and adaptability on the NIE and on its staff.

As priorities are established, programs develop, and linkage with the educational community is strengthened, new organizational arrangements may have to be made. For example, the internal structure in the Preliminary Plan purposely excludes sub-structures concerned with levels of education, such as primary, secondary, higher, and so on. However, experience may demonstrate that such sub-structures are necessary. *The NIE should retain the capacity to revise and redefine its internal structure in response to external changes or to the lessons of experience.*

Effective leadership and support of R&D demands talents comparable to those needed to carry out R&D itself. These talents must be continually renewed if the NIE is not to lose its capacity for leadership. As new areas of knowledge develop and new techniques become important, the skill mix needed for effective management changes. As knowledge advances, the need for individuals with fresh competence grows. And as the conditions of educational practice change, there is a concomitant need for individuals familiar with those new conditions. *In order to retain a high level of competence in the important areas of education and R&D the NIE should arrange to have a continual flux of staff. Perhaps one half of its staff should be drawn from external R&D and educational agencies for less-than-career terms of service. Individuals from universities, school districts, R&D labs and centers should be encouraged to*

spend several months to several years at the NIE.

The authority to restructure itself and to assure a high degree of staff flux are essential if the NIE is to have a reasonable capacity for continuing self-renewal.

Linkage to the Education System

The third precondition for success of the NIE is that it achieve effective links with the operating agencies of education. This must be done at the Federal level (with the OE and the proposed National Foundation for Higher Education), at the state level, and at the local level, as well as with the many private institutions of higher and other education. Here the need for initiative and creativity on the part of NIE is very high. For no single action can achieve this linkage; its strengthening must be a goal of most of the NIE's activities. Moreover, the linkage must clearly be understood to be a two-way one. Only when that linkage is strong will educational R&D achieve the results that we should demand of it, and receive the support that it must require from us.

I have attempted here to provide, in summary, the findings of our preliminary planning study for the NIE. I hope that these results of analysis will prove useful to the subcommittee during its consideration of this major social initiative--the National Institute of Education.

Senator PELL. Our next witness is Mr. Arthur Lee, president of the American Vocational Education Research Association of Phoenix, Ariz.

STATEMENT OF ARTHUR M. LEE, PRESIDENT, AMERICAN VOCATIONAL EDUCATIONAL RESEARCH ASSOCIATION, PHOENIX, ARIZ.

Mr. LEE. Mr. Chairman and members of the committee, I appreciate very much this opportunity to testify in behalf of several provisions in S. 659 and other legislation affecting education and educational research. My remarks are contained in a prepared statement which I would like to have included in the record.

Senator PELL. This will be inserted in full in the record.

Mr. LEE. Thank you, Mr. Chairman. I will try to summarize what I have said in my statement briefly.

Senator PELL. Maybe even focus on the particular changes you would like to see in the legislation in your summary.

Mr. LEE. I would be very glad to.

I would like to say first of all that the American Vocational Education Research Association, of which I am president, is a small but perhaps significant organization. We are in constant contact with the teachers, the administrators, the students and parents, and the concerned citizens in every State who make up the educational system.

While we are primarily concerned with research and with the vocational education, many of us come from other disciplines and have considerable experience in teaching and administration as well as research.

First, I want to say that we strongly support the National Institute for Education proposal, the National Foundation for Higher Education proposal and also, although the Occupational Education Act proposed by Senator Javits and others.

But, Mr. Chairman, many of my colleagues and I have experienced such concern over the neglect of career education as compared with strictly academic education in the administration of Federal programs, that we are particularly interested in the Occupational Education Act which I mentioned a moment ago. I hope it will be made a part of S. 659 or reported out as a separate bill by this committee.

In my statement, I refer to a pattern of neglect in this area of career education which I do not feel is intentional, but which is greatly in need of correction. The Occupational Education Act will help accomplish that purpose.

I do feel, however, and this is also in my statement, that Congress should bring the administration of educational programs and manpower training programs together under a single agency. They are not two separate functions in practice, and much of the difficulty in their coordination at the Federal level stems directly from the fact that their administration is divided between two departments.

The concern I have expressed about a pattern of neglect in career education has its parallel in educational research. It is this concern which leads me to make my first suggestion for what I think might strengthen and improve the legislation you are considering. I refer to the National Institute for Education.

Ordinarily, it should not be necessary to spell out in an act of Congress that educational research means research in career as well as academic education, but under the circumstances which continue to prevail, I believe it is necessary. Therefore, I am suggesting that at specific points throughout the NIE bill, the words "career and academic" be inserted before "education" or "educational."

In my statement, I refer to this——

Senator PELL. I assure you that suggestion will be considered seriously.

Mr. LEE. I refer to this as an amendment to S. 659, but in your consideration of this legislation, my suggestion applies equally to the administration bill, S. 434.

My second suggestion which also deals with the National Institute for Education is much more substantive. It is a suggestion which I hope will be studied carefully and given very serious consideration because it attempts to solve what I feel is a major problem in educational research and in the NIE bill in its present form—and this is true of both S. 659 and S. 434.

The problem to which I am referring now is that educational research has a very weak and largely unorganized diffusion system. My suggestion is that a diffusion and liaison system linking the National Institute with every local school district in the country be written into the bill.

Borrowing from the experience of the agricultural experiment stations and county agents in agricultural research and the U.S. Office of Education's experience with research coordinating units in vocational research, I am suggesting that educational research coordinating units be established in all universities having educational research and training programs.

In addition to my own observations and reasoning on this point, I am including portions of a study by Dr. Gordon Swanson at the University of Minnesota in which he makes an assessment of the vocational research coordinating units. Some of his conclusions, I think, are quite important.

The research coordinating units were created at about the same time as the national R. & D. centers and regional laboratories in the mid-sixties. And Dr. Swanson points out that they were created out of a recognition that "education had a low capacity for generating new knowledge——

Senator PELL. Forgive me. How much longer would you be going? That was the bell for the rollcall vote.

Mr. LEE. I am practically finished. I just wanted to bring Dr. Swanson's article to your attention because he is a recognized authority in educational research. And he had realized when he made this assessment of the vocational research coordinating units that the function here was to provide a strengthening of the diffusion in liaison that is so necessary and so lacking in educational research.

Senator PELL. I would like to assure you, too, I understand Senator Schweiker will be introducing an amendment along the lines you are talking about with regard to career education, which I would think might well be favorably considered by the committee.

Mr. LEE. Thank you Mr. Chairman.

There were only 2 other recommendations that I had to make in my statement. I will just call your attention to them.

One is to provide some research money for basic grants to the universities under the NIE bill for the support of local research, research overhead and research development.

The other recommendation that I had is in relation to the amendments to the Higher Education Act. Mr. Chairman, I have made a strong recommendation that the provisions for the work-study program and the cooperative education program under the Higher Education be strengthened.

Senator PELL. Thank you very much.

If you will forgive me, I will go over your testimony carefully. Each of the specific suggestions will be considered. Personally, I am very much in sympathy with you and believe that my own ideas about 14 and 16 years of education as a matter of right should also apply to career training as well and would like to go in that direction.

(The prepared statement of Mr. Lee follows:)

STATEMENT TO THE SENATE SUBCOMMITTEE ON EDUCATION

by

Dr. Arthur M. Lee
President, American Vocational Education Research Association
May 18, 1971

Mr. Chairman and Members of the Committee, I appreciate very much this opportunity to discuss with you the legislative proposals under consideration in S. 659. I am here as President of the American Vocational Education Research Association, and while my views are shared by many of my colleagues and associates they are essentially my own.

For the past six years I have been director of one of the forty-six State research coordinating units established in universities and State departments of vocational education to develop, coordinate, and disseminate vocational research. Many of us who are active in this field have academic backgrounds other than in vocational education. My own is history and government, and I have a number of years experience as head of a college department of social studies and also in government service at both the State and Federal levels. For more than thirty years I have been in close association with educators at every level in both public and private institutions, and at the same time with a great many business, civic and government leaders.

The organization I represent has a small but significantly located membership. It is made up of several hundred vocational education researchers, teachers, and administrators in universities and State agencies in each of the fifty States. We are the research section of the American Vocational Association, and most of us are also active in the American Educational Research Association and other

professional groups. We are in contact with the teachers, the administrators, the students and parents, and the concerned citizens in every community in the Nation who are working in the schools and offices and neighborhoods to provide the best education they can for large numbers of students today and larger numbers in the years ahead.

We are close to the processes of education and we see the problems and frustrations as well as the solid achievements in the different kinds of schools and communities and population groups which make up the American educational system. I believe we are as close to what I will call the "gut issues" of education today as anyone could be. We also work just as closely with the professional staff in State agencies and in the U.S. Office of Education as we do with the schools. The development of vocational research brings us into equally close association with business and industrial management and with labor groups. It is from this broad base of daily experience in the nuts and bolts and binder twine of American Education that I will attempt to discuss the legislation you are considering.

First, let me join with the many others who have appeared before this Committee in commending you for your leadership and support in developing national education policies suited to the needs of a changing world. The bills you now have under consideration contain several excellent proposals which will greatly strengthen our educational system. I refer particularly to the National Institute of Education, the National Foundation for Higher Education, some of the Amendments to the Higher Education Act, and the Occupational Education Act. Each of the national programs proposed in this legislation is needed and is capable of great impact on the nation's educational system.

But I would like to discuss these proposals in relation to the major concerns that many of my associates and I have about the practice of education today, and the research efforts being made to improve educational practice. In doing so I would

like to offer for your consideration a few suggestions which could be included in S. 659 if you agree they would help to achieve the goal of strengthening and improving our educational system.

Occupational Education Act

The first concern we have comes from a continuing neglect of career education as compared with academic education in the administration of Federal programs. This was the subject of testimony earlier in these hearings by the President of the American Vocational Association, C. Thomas Oliva, when he observed that only 69 employees out of a total of 341 in the U.S. Office of Education are allocated to the Division of Vocational and Technical Education and 30 of those are secretarial and clerical. The same pattern of neglect is evidenced, I think, in the annual budget requests for vocational education. They are so far below Congressional authorization that each year Congress finds it necessary to appropriate larger amounts than requested and even to instruct the Administration that these funds are to be used. This happens in other educational programs also, but except for impacted aid no where else in the annual educational budget is the neglect so evident to Congres and to educators.

One aspect of this neglect is particularly frustrating to the great number of educators and administrators who have responsibility for carrying out the Congressional mandate for change in the Vocational Education Amendments of 1968, and it is the one with which I am most familiar. I refer to the provision for research. It is simply not possible to bring about the sweeping changes in both vocational education and academic education called for in the 1968 legislation without a well coordinated system of programmatic research. This was included in the 1968 Amendments but for the past three years virtually no funds have been requested for this part of the program. Two years ago Congress appropriated $17 million for research

under the Vocational Education Act and the Administration refused to spend it. Last year Congress appropriated the funds as provided by law and specifically requested that they be used. In spite of that request in the Senate and Conference Committee Reports, none of the research funds were released until the year was nearly half gone and some of them are still not available.

No money at all was requested this year for fiscal 1972 under the research provision of the Vocational Education Act, and once again the Appropriations Committees of Congress are correcting the oversight. In the meantime the agency that has had the responsibility for administering the vocational research program for the past six years, the Division of Comprehensive and Vocational Research, has been abolished. It is true that the National Center for Educational Research and Development in which DCVR was located, is committing a much larger share of its developmental resources to career education than before. But development alone, without continuing research and without coordination and diffusion in the area it is to serve, is a dead end street.

I do not believe this neglect of a career emphasis in the Federal administration of educational programs is intentional; I believe it simply follows the traditional pattern of academic orientation inthe schools and by the general public that we have always had. But it does reflect a sluggishness in the Federal structure to adapt to changing times and changing needs. Most educators today are acutely aware that the great majority of students in grades 1-12 and beyond are receiving an education that is largely college oriented, while two-thirds to three-fourths of those students need employable skills they are not receiving for careers that do not require a college degree.

The change-over from a traditionally academic school system to one combining academic instruction with preparation for the world of work is one of the most

extensive upheavals taking place in education today. Congress has given strong leadership and increasing support to career education in the schools through the Vocational Education Act of 1963, the Vocational Amendments of 1968, and several other pieces of legislation. Now you have under consideration the Occupational Education Act introduced by Senator Javits and others in the Senate and Congressmen Quie, Pucinski and others in the House. It is a logical and much needed addition to the previous Acts, since it is aimed partly at correcting the imbalance between academic and career education in the Federal establishment and partly at strengthening coordination in the States between various agencies and institutions sharing the responsibility for career education.

Department of Education and Manpower Training

While I strongly support the Occupational Education Act, I think it is only one more step in the right direction and not the last step that should be taken even now. Preparation for the world of work is an educational responsibility that varies greatly among different population groups and under different circumstances. It includes regular classroom instruction, skill training, supervised work experience, and for a great many youth and adults remedial education and training for specific jobs under manpower programs. All of this is being done in the schools, and the nation's educational system is already far and away the major source of skilled manpower for business and industry. Yet the Federal government too often considers education in one category and manpower training in another.

I would hope the next step Congress may take will be to combine the administration of education and manpower training — either in a separate department or as a single division in the Department of Human resources President Nixon has proposed. This would accomplish two things: It would further remove the imbalance in educational programs between academic and career emphasis and it would reduce

the duplication, overlapping, and lack of coordination in Federally sponsored education and manpower training programs.

National Institute of Education

The concern I mentioned earlier which many of us have about the Federal establishment's pattern of neglect in career education, has its parellel in educational research. I have already called your attention to evidence of this in the administration of research funds under the vocational legislation of 1963 and 1968. It is for this reason primarily that I would like to suggest a clarification of language in the proposal to establish a National Institute of Education. Nowhere in the various bills that have been introduced is any mention made of career education research. Ordinarily this should not be necessary and its omission is entirely understandable, but under the circumstances that now prevail I would urge you to put it in.

I do so for two reasons: The need for research to help make this transition in the schools, which is barely getting underway; and the likelihood that without it the National Institute of Education will take too long to realize its necessity. The language I would recommend is to use the words "academic and career" education in specific instances throughout the bill instead of just education alone. Thus on page 111, line 11, of S. 659 the purpose of the Institute would be to "seek to improve [academic and career] education in the United States . . ."

Similarly on page 112, line 20, I suggest the wording be "status of [academic and career] educational research in the United States." On page 113, lines 3 and 4, the sentence should be changed to read "submit an annual report to the President on the activities of the Institute, and on [academic and career] education research in general, . . ." On page 114, line 13, the Division of Institute programs should

"(i) identify and describe major [academic and career] educational problems and opportunities . . ." Also on page 119, lines 20, 21, and 22 "academic and career" should be inserted before education and educational in each instance. I would suggest this be done throughout the remainder of the bill at the following places where the word "education" appears: page 115, lines 1, 3, 4, 15, 16, 17, 22; page 116, lines 1, 4.

One of the problems the U.S. Office of Education and the Office of Management and Budget seem to have had with vocational research has been its separate funding. I am reluctant to suggest that Congress change this, but it could be done by adding on page 117 of S. 659 an amendment to the Vocational Education Amendments of 1968 striking out the provision for research in that Act. This has one strong argument at least in its favor: it places the entire administration of educational research both academic and vocational, under one agency. But it has one strong argument against it also: half of the funds appropriated for research under the Vocational Education Amendments of 1968 go directly to the States, and the need for Federal funds to assist in developing research to solve State and local problems is critical.

There is one solution to this problem that I know of, and not only do I recommend it but I do so entirely apart from its connection with the Vocational Amendments of 1968. That would be to write into the NIE bill a provision making educational research funds for both academic and career education available to help develop State and local research and to support research activities of a State and local nature as well as those of strictly national significance. Education is a State and local responsibility, and if educational research is ever going to have the impact that it should have and result in benefits that are truly national in scope I believe very strongly it is going to have to be related much more directly

to all of the school districts in all of the States at the district level.

I recommend, therefore, that two provisions be added to the NIE bill, and I sould like to discuss one of them in some detail. This is that a network of State and local research coordinating units be established by the National Institute as a strong link between the Institute and the local schools in much the same way that Agricultural experiment stations and county agents have served so well in agricultural research. And borrowing from the experience with agricultural experiment stations located in land grant universities, I would recommend that educational research coordinating units be located in universities having educational research and training programs.

In making this recommendation I am, of course, borrowing from more than the highly successful agricultural research program: I am borrowing from the U.S. Office of Education's research coordinating unit program in vocational education. And I do so for several reasons, the first being my own experience with this program. It has produced various results in different States, but I will cite only two examples of a national impact already being felt: One is a delivery system for research information extending directly into classrooms and administrative offices; the other is a computer-based data system in many States upon which much of the accountability we are developing in education will have to depend.

Perhaps a more compelling reason for establishing a system of research coordinating units in the universities working with the National Institute is the need in educational research for a diffusion system. In medical research and to a large extent in scientific research diffusion systems already existed before the National Institutes of Health and the National Science Foundation were established. In those fields the practitioners are tied much more closely to research developments than in education through their own professional organizations. Education

is more like agriculture — teachers have so much to do simply meeting their classes, handling each day's crises, and trying to cope with mountains of paper work that neither they nor their professional organizations are inclined to look on research with any great awareness of its significance or possible effect on what they are doing.

For different reasons but in much the same way, educational researchers and especially administrators of educational research programs at the Federal level are too far removed from the daily routine of the schools. Too often educational research is of the hot house variety, conducted in a laboratory setting under artificial conditions that either do not lend themselves to the realities of an actual classroom or are never sufficiently modified to do so. The educational research coordinating units I am suggesting would be intended to correct this situation. They would serve both to identify problems in the educational system either in established practices or in the implementation of research and innovative programs, channeling this information from local districts all over the country into the National Institute, and to bring to the local districts the results of the research sponsored by the National Institute.

Dr. Gordon Swanson at the University of Minnesota has made an assessment of the vocational research coordinating units and their role in the total educational research program supported by the Federal government. I would like to insert at this point portions of Dr. Swanson's article which suggest to me the potential role of many of these same units and others like them if their purpose were broadened to include all educational research.

Background

The creation of a national network of Research Coordinating Units in the mid-sixties was a part of a widespread national movement to find new ways to place more reliance on research in education. It began in 1963 with the Research and Development Program

established under the Cooperative Research Act, a program which resulted in the funding of nine R&D Centers from among almost 50 applicants. Following the passage of the Elementary and Secondary Education Act of 1965, a network of Regional Educational Laboratories was created to complement the role of the R&D Centers and to hasten the implementation of research in education. The nine R&D Centers were university based, but the Regional Laboratories were rather deliberately designed to operate on neutral ground; they were established outside of the aegis of either universities or state departments of education.

The effort to institutionalize research in vocational and technical education began at about the same time. It was motivated by a recognition of similar needs. Two R&D Centers came into existence; one at Ohio State University, whose origin predated the Vocational Act of 1963, and the other at the North Carolina State University whose origin post-dated the Vocational Act of 1963. The creation of the two R&D Centers for vocational education increased to eleven the number of national R&D Centers.

The use of federal funds to create Research Coordinating Units was authorized in April, 1965 when the Commissioner of Education invited each State Agency to submit proposals for their establishment. By the end of the fiscal year, nearly half of the states had taken steps to create an RCU, and by the end of 1966, nearly all of the states had a unit or plans to establish one.

What were the motivating forces which stimulated the creation of Centers, Laboratories, and Research Coordinating Units during the mid-sixties?

First, it was recognized that education had a low capacity for generating new knowledge, that the instrumentalities for generating new knowledge, were weak and underdeveloped, and that there were fragile linkages between research, development and practice. Research undertaken as projects by individual researchers was valuable and necessary, but it was not sufficient to create a reliable flow of new knowledge for the field of education.

Second, it was recognized that the nation's largest public service enterprises, such as agriculture, medicine, and defense, were relying heavily on a flow of new knowledge made available by governmentally financed research and development at billion dollar levels, and operating within a great variety of government sponsored research centers, laboratories, clinics and experiment stations. As a fully acknowledged public interest enterprise, education was finally being permitted to establish similar knowledge producing capability.

Third, there was a recognition of the fact that there were few, if any, models of research and development which were readily applicable to the field of education. The field itself was recognized as being highly complex and crucially in need of incorporating new knowledge into institutional structures, technologies, materials and training programs. As a field, education had no models of programmatic research and development which had demonstrated a capability for system-wide intervention in educational practice.

The creation of Research Coordination Units was a part of this search for new ways to institutionalize reasearch in education. Leadership for their creation arose within the U.S. Office of Education in consultation with numerous individuals in the field of vocational education. During their early years, they have faced problems which parallel those encountered by all of the R&D Centers and the Regional Laboratories. In addition, they have faced some problems which are unique within the field of vocational education.

The Context of RCU Development

With a few exceptions, all of the R&D Centers, Regional Laboratories and Research Coordination Units have gone through a period of reassessment and redefinition of purpose and function. Most of the R&D Centers began by defining a mission that was too broad for concentrated or focused research efforts. Most of them have now completed a review of mission and have begun to concentrate within a narrower frame of reference and one which is more consistent with the scholarly resources available to them. . . .

Structural and administrative changes have also occured in most of the R&D Centers, Regional Laboratories, and Research Coordinating Units. More than half the R&D Centers have changed directors since their establishment. Most of the Regional Laboratories have revised their program functions since they were created, and four of them have now ceased to exist.

This brief review of the developmental history of R&D Centers and Regional Laboratories permits several observations about the research-development-dissemination emphasis which began in the mid-sixties:

1. First, there doesn't seem to be any normative pattern or natural trajectory in the creation of a research-development-dissemination chain in education. In the establishment of goals, objectives, and implementation-functions within an institutional setting, there is no "par" for the course.

2. Second, the mid-sixty intent to create knowledge-producing and implementing mechanisms for education has not been realized, but a number of modestly successful Centers, Laboratories and Research Units have been created. Their promisice for contributing to programmatic research is enormous.

3. Third, the greatest added-value to education is provided by research enterprises with a capacity to modify goals to mobilize staff in accordance with evolving and dynamic institutional change, in addition to the need for research intervention in the educational process.

Each of the foregoing observations have applicability to R&D Centers in general, but there are further, and more specific, observations that can be made about the Research Coordination Units.

1. There is an unfortunate implied limitation in the reference to the Units as "Coordination" Units. The implication is that research, development and dissemination is underway, and that a coordination function is essential but inadequate in each state. Actually the Research Coordinating Units can measure up to expectations only if they operate along the full continuum of research, development, and dissemination. The word "Coordination" is an unfortunate misnomer if it is taken to prescribe or to proscribe the functional limits of the Coordination Units.

2. Coordination Units have discovered that new knowledge

60-433 O - 71 - pt. 5 - 15

ordinarily becomes available in very small increments, and that there is no backlog of research evidence waiting to be disseminated to an eagerly awaiting constituency. Moreover, there are few new or dramatic research tools with unique applicability to vocational education, and there are few new technologies awaiting application in vocational education. The research-development-dissemination chain is most effective if viewed as a single entity, rather than as independent functions to be undertaken by separate or independent agencies.

3. The dismantling of the categorical structure of vocational education by permissive legislation in 1963 and in 1968 has introduced serious anamalies in efforts to carry on practitioner-oriented vocational research and development. Almost all of the practitioners in vocational education are employed as specialists in one of the categorically-oriented fields of vocational education as provided under enabling legislation established prior to the 1960's. Research and development conceived as a system of intervention for the improvement of current practice must necessarily take into account the nature of current practice and its need for modification. Its need for modification is not seen by school people as the need for abandoment of the specializations within which they work. Accordingly, the anomaly continues; should the RCU work closely with schoolbased problems and categorically oriented practitioners, or should it concentrate on problems which tend to avoid the categorical and specialized nature of school practice.

4. Reserach Coordinating Units have been established in Universities, as well as in State Education Agencies. Satisfactory arrangements for administration and operation have been realized in either setting. Unsatisfactory arrangements have likewise been realized in either setting

   Ordinarily, one would expect a university setting to be ideal for research and development. But idealism is not sufficient. Universities also have a tendency to pursue the discovery of new knowledge for which there is little demand, and to let new knowledge find its own application through obscure publication or teaching. Universities also have a tendency to pursue research questions as though there were no sense of urgency about the solution to problems. Moreover, the incentive and reward system of the usual university setting is more closely linked with project-oriented research within limited time-frames than it is to the programmatic activities of a research-development-dissemination sequence.

State Education Agencies also have some traditional limitations in their capacity to operate research and development functions. First, and most important, is the fact that they find that it is much easier to fund other entities than themselves. It is traditional, and almost axiomatic, for state agencies to be too overcommitted and too understaffed to carry out even the ordinary and usual functions of state leadership. Secondly, state agencies ordinarily find it easier to plan, administer and to evaluate vocational programs than to operate them in an institutional setting. It is more difficult, finally, for state agencies to expand or contract research activities in response to urgent or immediate needs than it is to be similarly responsive within a university. The nature of government employment often includes delaying difficulties in recruitment and employment.

5. The nature and function of Research Coordinating Unit operation requires an eventual commitment of state resources and a vital linkage with the State Plan program of vocational education. It is the only institutionalized function of the Nation's research-development-dissemination chain which includes statutory provisions for system-wide intervention through research (Vocational Amendments of 1968). Some states have exercised options for demonstrating unusal leadership in this regard, and all states have this challenge and opportunity available to them. . . .

A Basis for R.C.U. Evaluation

It is extremely difficult to move confidently toward a basis for evaluating any institutionalized structure engaging in educational research. Not enough is known about whether the conditions favorable to survival are also the conditions which maximize the educational significance of research output. The field of education includes the scattered wreckage of efforts to institutionalize a research and development function. Notable are the Bureaus of Educational Research which were common a few decades ago in many prestigeous universities. Most have now ceased to exist, or they have assumed a changed focus and mission. The field of education still awaits a durable model of institutionalized research productivity capable of attacking a broad range of educational problems and capable of serving as prototypes with respect to structure and function.

With the foregoing observations regarded as caveats, an attempt will be made to provide a list of basic conditions which, if present, should strengthen the role and function of Research Coordination Units.

1. Research and development should be conceived as a single entity, rather than as separate or independent functions. Specifically, research should be development motivated and development should be research-guided.

   The research-development-dissemination sequence can be described as a declining curve of risk. Research can include the risks of failure, but development and its disseminated output cannot tolerate such risks. A most important risk reducing exercise for Research Coordinating Units is to regard research and development as a unitary concept or as functions with reciprocal obligations and mutual responsibilities in the education improvement process.

2. Research and development should be viewed as a system of intervention for the purpose of improving educational practice. It may occur at two levels. It may seek to create new materials, new procedures, or new products. At either level, its ultimate goal is to improve educational practice. It may, however, have intermediate goals involving sub-systems (i.e., the state plan, the management information system or the inservice-training programs), but its ultimate goal is intervention for the purpose of improving educational practice.

3. In establishing the priorities for the work of an RCU, the focus should be along two lines. First, there should be a systematic assessment of the needs in the field of vocational and technical education, and an assessment of the degree to which these needs are being met by existing institutions and practices. Practices in the field are often legislated and established initially as administrative questions, while the important problems of practice await later attention. Some of the favorite research topics, i.e., student achievement, placement, student characteristics and guidance often reveal symptoms of restricted opportunity or other constraints within the system. Vocational education needs a systematically-operating early-warning system to articulate with the five-year extended state planning functions. The second line of focus should be toward school practice. In the long run, the contributions to the field made by Research Coordinating Units will be directly proportional to the reliance placed on them by those involved in school practice in local education agencies. With the need for local education agencies to establish long-term plans to articulate with state vocational plans, it becomes even more important for RCU's, as a system, to intervene for the improvement of practice, and also to allow those in school practice to intervene in the establishment of RCU priorities. An adequate approach to this is not solely through advisory committees or through dissemination efforts; it should include efforts to actually involve those in school practice.

4. The personnel of an RCU is the unit's most valuable and most costly asset. In the past, much has been said about the value of interdisciplinary and multidisciplinary effort, but there is still little evidence to allow conclusions regarding the optimum ways to mobilize such effort. Recognizing that such effort may have value that is yet unrealized, RCU's should also seek the benefit of team operations which involve personnel from local education agencies. School personnel are also specialists whose experience illuminates ideas and processes. Moreover, the involvement of school personnel is essential in the partnership needed for pilot programs, demonstrations, field testing and the various activities necessary to conceive of R and D as a single entity. Too often school-based personnel are involved as a last minute approach to expediting a plan. A deliberate plan to involve inter-agency personnel, as well as inter-disciplinary personnel, would appear to repay study by Research Coordination Units.

5. The product or output of Research Coordination Units is its visible sign of progress. Their work has paralleled the work of other agencies involved in R&D. The product has been mainly in the form of a collection of short-term projects, the establishment of a reference library or collection, the preparation of research bibliographies and summaries, and the conducting of dissemination conferences or institutes. Hopefully these efforts can continue and expand.

If the Committee feels that such a network of State and local research coordinating units should be established by the National Institute, this could be done I believe through an additional section in S.659 on page 116 following line 21 as follows:

"(g) The Secretary, through the Institute, shall establish a national system of educational research coordinating units by making funds available for this purpose to universities having educational research and training programs. Units established under this Section shall perform such duties as are prescribed by the Secretary, including the identification and communication to the Secretary of educational problems in the schools suggesting the need for research; carrying out research activities; dissemination of research findings among state agencies, educational institutions and individual educators; and assistance to state agencies, educational institutions and individual educators in implementing educational programs and techniques developed through research."

The second provision that I suggest be added to the NIE bill in order to relate the activities of the Institute more closely with State and local research is to make basic grants to the universities in educational research in much the same way the National Science Foundation does in scientific research. These grants, based on a formula taking into account the amount of research being performed and the professional resources of the universities, should be available to develop research proposals, conduct small research projects, and pay for a certain amount of the universitys' overhead costs in conducting educational research of all kinds. The return of this kind of support if properly administered, I believe, can be enormous. It could be included in the provisions for establishing research coordinating units,

or it could be provided separately. If you agree that it should be included I think language to that effect should be added to the bill, possibly in subsection (f) on page 116.

National Foundation for Higher Education

Funds for research, innovation, and improvement in higher education are no less important than in elementary and secondary education. Indeed, many of the problems in the entire educational system stem from practices in higher education, and solutions must be found here before a great deal of improvement can be made in the local schools. One example is the poor coordination of course work and student achievement between institutional levels. Elementary course content is often repeated at the high school level and even at the college and university level. Very little effort is made in most institutions to determine with any degree of reliability the levels of achievement students have obtained in particular subjects before assigning them to courses. Course requirements and course offerings at each institutional level are established primarily to serve that institution's own purposes, and too often have little reference to the actual results achieved at the preceeding level. There is too little provision for individual variations among students and the schools from which they come. Higher education is not entirely responsible for this situation, but if improvements are made here they will almost certainly set in motion a chain reaction in the secondary and elementary schools.

I am sure you are well aware of numerous instances of this kind in which improvements in education must begin with changes in higher education. I would like to cite two more that come to mind. The first is in student guidance and counselling. Since the counselling profession is a product of higher education any significant improvement will certainly involve the

colleges and universities and may have to be initiated here. Professional counselors in the schools are responsible for three distinct services: academic counselling, career counselling, and dealing with personality and emotional problems. Each of these areas of counselling require highly specialized training and a substantial amount of up-to-date professional knowledge. There is a general concensus both within the educational profession and among laymen that under these circumstances none of the counselling functions are being adequately preformed. It is not enough simply to expect the schools themselves to find their own solution. New concepts, new approaches, and perhaps a restructuring of this professional field are needed at the undergraduate and particularly graduate levels of higher education.

Another widespread problem in higher education and one which may be filtering down into the secondary and primary levels is that of the relationship between students and faculty. In its most disturbing form it is a problem of discipline, not necessarily the discipline of external authority although this is involved too. It is the problem of disciplined behavior by individuals who makeup a highly complex social system so that that system may function efficiently and effectively. One of its ramifications is the problem of intellectual discipline, and many areas of higher education are experiencing increasing difficulty in this regard.

These problems and many others will not be solved overnight and we may be sure there will be others to take their place when they are solved if ever. But the colleges and universities and other institutions of higher education need the resources and national purpose of the federal government in this effort. I cannot commend too highly the sponsors of this legislation nor urge too strongly that it be given the full support of Congress.

Amendments To The Higher Education Act

I would also like to add my support and that of the AVERA membership for the amendments to the Higher Education Act contained in S.659. In doing so, I would like to make one suggestion: increase the support for both the work study and cooperative education programs on page 36. An amendment to Sections 147 and 148 should be added for this purpose. There are compelling reasons, I think for taking this action.

In the first place, education at the college level no less than education at the elementary and secondary levels should help prepare students for the world of work. In most professions if not all, work experience during academic preparation has been found to be one of the most valuable parts of a student's education. If this is true in medicine, engineering, and teaching, it is no less true in business, accounting, law and every other career for which a college education is necessary. The cooperative education program should be greatly expanded simply to improve the quality of higher education if for no other purpose.

I suggest, however, that there is another purpose as well. Most college students today have had very little opportunity to learn the discipline of regular employment. Many of them have difficulty in making up their minds about a career because they have little or no actual experience in any field. The increasing numbers of students on college campuses, especially in colleges of liberal arts, who seem to oppose the idea of work altogether or at least are indifferent to it might not feel quite so alienated if they were introduced to it as part of their college education.

In the college work study program I should like to suggest that, while financial need should perhaps determine priorities, it should not act as a deterrent in providing employment for all students regardless of their financial status. Here again, as in the cooperative education program, experience gained from regular employment is as valuable as the money earned. Not all college programs are suited for the cooperative program, and in most college communities the opportunities for related work experience in business and industry are limited. But under the work study program a large number of employment opportunities exist.

Possibly nothing Congress can do in its legislation to support higher education would accomplish as much as this. Students planning careers in medicine and nursing could be employed by hospitals and clinics; municipal and county governments would benefit from additional help and students working in city halls and court houses would be getting a first hand knowledge of government as well as experience on a job. The list of examples is endless. But let me stress again, that to be completely effective this program should be available to all students, not just those whose financial need is greatest.

Mr. Chairman and Members of the Committee, again I appreciate this opportunity to express my views on a number of educational proposals you have before you. I have made several suggestions which I believe will strengthen and improve this legislation. If you have questions I will be glad to discuss any of these suggestions in more detail.

Thank you very much.

Senator PELL. The subcommittee will now recess, and will reconvene in about 10 minutes to hear our final witness of the morning, Mrs. Sherman Ross of the AAUW.

(Whereupon, a short recess was taken.)

Senator PELL. The subcommittee will resume its session. The witness is Mrs. Sherman Ross, Chairman of the Legislative Program Committee, American Association of University Women.

And I must say, I extend a particular welcome to her because I have had the opportunity to meet with and talk with her colleagues in my own state, I am very impressed with them and enjoy our times together.

STATEMENT OF MRS. SHERMAN ROSS, CHAIRMAN, LEGISLATIVE PROGRAM COMMITTEE, AMERICAN ASSOCIATION OF UNIVERSITY WOMEN; ACCOMPANIED BY MRS. ALISON BELL, STAFF ASSOCIATE FOR LEGISLATION

Mrs. Ross. I think the division you are on is a very good division.

Senator PELL. It is a very outstanding division. I agree.

We are going to have another rollcall vote in a short time so proceed as you would like. If you would like to read the statement—

Mrs. Ross. Shall I submit the statement——

Senator PELL. That would be fine.

Mrs. Ross (continuing). For the record and highlight. So may I introduce, although I am sure you know, Mrs. Alison Ball, who is our staff associate of the organization.

Senator PELL. She has been very helpful to us, I might add.

Mrs. Ross. I am sure she has, and to me, too.

I think I might pick up some of the highlights in particular.

We know that the committee is fully aware of the danger of weakening our institutions of higher learning by diversion of their non-Federal resources for the purpose of meeting the institution's share of cost-sharing Federal programs. We, too, recognize that many federally supported, socially desirable programs, frequently referred to as being part of the university's responsibility to the community, are also enacted on a cost-sharing or matching-funds basis.

We recommend that this committee take a hard look at the financial drain created by these programs and that greater assumption of fiscal responsibility by the Federal Government be provided for these social programs.

Among our principle concerns about Federal aid is the lack of continuity in these Federal programs. While colleges and universities are encouraged to utilize available Federal assistance, there are definite hazards in that many of these programs, once started, are not sufficiently funded, and we have to have a cutoff.

In our judgment, the dangers of Federal control of higher education, if it is exercised, will be by indirection as the character of an institution is altered by diversion of institutional resources from activities which have not Federal support to those that do—as we have suggested in an early paragraph of our state and we feel this is perhaps one of the important ways to view the concept of the National Foundation for Higher Education and the National Institute for Higher Education proposed in the administration's bills. Either one could

possibly develop very regrettable political implications unless the authorizing legislation and guidelines are carefully drawn.

In earlier statements to this committee, the Association has recommended the creation of a completely nonpolitical—I would say partisan political—Advisory Council on Education to the President which would have the status and function similarly to the present Council of Economic Advisors.

However, we continue to urge, as we have for years, a Department of Education of cabinet status. In view of the present executive department reorganizational proposals, we believe it important to restate this Association position at this time.

If achievement of either of these recomemndations is unrealistic in this session of Congress, we endorse, with safeguards against partisan politics, both the National Institute for Education and the National Foundation for Higher Education as a step toward elevation of education to its proper role as a major business with a top priority in this country.

We would also like to put special stress on immediate enactment of the extension of the authorization for the current operating programs in higher education. We feel that the enactment of this extension is imperative and we wish to speak to some revisions, which we note are included in the bill before this subcommittee.

We have questioned whether every student who graduates from high school should be encouraged to undertake the traditional 4-year academic degree. Therefore, we have wholeheartedly supported Federal programs which offer technical and vocational training, the development of community and junior colleges and other forms of post-secondary training for more effective mobilization of the country's intellectual resources.

We wish to urge that there be no diminution in community service and continuing education programs. We support the continuation of aid to developing institutions and recommend that the 23 percent which has been set aside previously in the earlier legislation for community colleges be continued.

I might digress for a moment and say that the position I also hold as chairman of the board of trustees of Montgomery Community College makes me increasingly aware of the very real impact that community colleges, because of their comprehensive character, can have and the advantages of being potentially more responsive to changing educational and economic roles and needs in our communities.

I think the broad range of students and the types of programs which cover both the academic, the career and the so-called community service kind of program, make them very peculiarly responsive to some of the needs of today's society.

We are concerned about the student who works up to a full day and thus takes longer to obtain his or her degree. Therefore, we believe that assistance should be available for at least 5 and possibly 6 years to such part-time students. We recognize that this opens up some new kinds of characteristics actually, but again speaking in part from my experience with the community college, I do recognize the very real value of making it possible for students to have this kind of education even though they may not be able to get it in the usual 2 or 4-year time, depending on which institution they are attending.

We understand the rationale of taxing a student on his earnings and then offering him a loan or grant equal to, or less, than the sum he has paid in taxes, but we wish a more direct approach could be devised.

Neveretheless, the Association opposes perennial proposals for tax credits or tax deductions for tuition paid. And we feel this will probably be one of the alternatives again suggested. We feel this approach is peculiarly unfair to lower-income families. We urge the committee to write considerable flexibility in the authority to transfer EOG money to work-study.

We are extremely interested in the provision of S. 659 which would provide every student undertaking post high school work a grant of $1,200, dependent upon a built-in income tax deduction factor. We are uncertain how effectively or how fairly this deduction factor can be implemented. Many college-age students are beyond the age of legal deductions. A majority of these students earn enough to receive little or no grant. This formula does not make allowances for those students who work 6 months or a year and go to college for 6 months, a year, or longer.

Senator PELL. Excuse me for interrupting. Give me an example of what you are driving at there.

Mrs. Ross. In terms of this?

Senator PELL. Yes.

Mrs. Ross. Well, if you have a student working full time for 6 months, in all probability his income would be sufficient so that he would not be able to get any grant. And yet, the other 6 months of the time he was going to college, he might need some substance aid.

Senator PELL. No, I think it is based on the annual income tax, and it would take a very successful student to earn an income so large he had to pay a tax of $1,200 on it.

Mrs. Ross. It is true except you also have families involved in this. And many of the college students, of course, if they get the major amount of their money from the family and then have to deduct the family's income tax, you would find that this is really a hardship. You have this sort of dual role with students, I think, these days, wanting to be independent of the families, yet actually in relation to this kind of a formula being forced back into a dependence.

And I think we question really whether this is a viable a concept for the current college student or from any of them. So we really question this in this sense.

Senator PELL. You would like it to go further?

Mrs. Ross. Yes, I think so. I think this is the correct way or else perhaps related just to the student.

There is a real problem in attaching it, I think, to the family where you have this desire which is perhaps being more evident these days, but I am not sure it is absolutely a new procedure as far as this college-age student is concerned.

And also I think we do have and have had since the end of World War II an increasing number of married students. And, again, you have a very funny mix here.

Senator PELL. But you cannot be carried as a dependent unless you agree to be carried as a dependent. So if the student does not want to be carried by his family as a dependent, it is his privilege.

Mrs. Ross. It is his privilege sometimes. I would submit some parents have a slightly different view. And I am not sure that is always worked out as well as you are suggesting it might be.

Senator PELL. Under the income tax laws, if you contribute more than half, I think you have to contribute more than half, to the welfare of the person. If the child refuses to accept help the family cannot carry him as a dependent.

Mrs. Ross. That is correct, but they do accept the help. And what I am saying, really, is I think some of this is a mixed factor. It is probably partly psychological as far as the students' attitude. And since many of our problems, I think, with students these days could be related to the psychological characteristics and their own view of it, I think this can be something that can cause difficulty.

I have heard students comment on this myself, not particularly on this bill, but on the whole concept of their dependence and their relationship.

One way, of course, of getting around it, I suppose, is to increase the amount, so that the deduction is not as great or that some benefit becomes somewhat more realistic.

I think really the other side of it, of course, if you have two students in college, again, you have this problem of what your income and the deduction and so on is. And I think for the middle-income family, this can become a real problem. Having had two in college myself at one time, I suppose I can speak somewhat upon that particular view.

But really, I think what we are talking about here is a look at whether it is desirable to involve the family income or if this is what the committee feels is desirable, certainly we feel that there should be a higher amount so that there is a more actual potential for aid.

Senator PELL. You reached the problem. I would like to make it available to all children automatically, but there is just not that much money in the Treasury. So you have to have a cutoff. We are not embedded in concrete on the $1,200 figure. It just seemed like a fairly good cutoff because that meant that the family that had up to about $10 or $12 thousand, depending on the number of dependents, would get a bit of help, more and more help, as income became less. This seemed to be a prettly good breakeven point.

If we followed your thought and opened it up higher, the cost would be a great deal more. And it should be remembered that our chances of getting funding for this approach are not as rosy as I would like.

Mrs. Ross. Well, I recognize there are problems, and I can emphasize with them even if I am not completely sure that as many would get the assistance. I am sure you are thinking of really offering assistance to more than I would think maybe really will get it under this. But I could be wrong, and I hope I am.

Senator PELL. I think once somebody is eligible for it, they work out their deductions in such a way that either they will spin off the youngster and he will be independent and not carried as a dependent or they will carry him, depending on which is more advantageous, human greed being what it is.

Mrs. Ross. Mrs. Bell?

Mrs. BELL. I was going to explain that our legislative committee meeting in March, spent a lot of time in discussion because they are very much in favor of your concept, but the $10,000 to $12,000 base,

where ~~people begin to get~~ less, or nothing, ~~concerns us because~~ ~~that~~ is where our membership lies, in the $10,000 and above level. Many of them realize there would be little help for the children they have attending college.

Senator PELL. All the other programs would remain, are built on top of this. This is just the floor.

Mrs. BELL. We are very grateful for that.

Senator PELL. The other grants would remain, and loan programs would remain. And they could get help under those.

Mrs. BELL. We hope so.

Senator PELL. You would expect it.

EDUCATIONAL OPPORTUNITIES FOR WOMEN

Mrs. BELL. Because we are supporting the continuation of the other programs for just this reason.

Mrs. ROSS. We again wish to draw your attention to an association project in which we are deeply interested. In other years, we have testified on and succeeded in stimulating considerable interest both in Congress and out in support of a provision written into the Higher Education Act or any other student aid program which would set aside specific sums or a stated percentage to be loaned or granted to women or men wishing to continue, or update, their educations for the purpose of entering or reentering the labor force.

It is our contention that a large and presently untapped reservoir of skilled womanpower would become available if such a program were enacted. We speak from experience, for the AAUW Educational Foundation recently conducted a very successful program of grants to such women who undertook either retraining or advanced training in their respective fields for the purpose of going into college teaching.

We also speak from the experience of our 84-year-old program of fellowships to American women and to women of other nations for graduate work.

So far as we know, there are no restrictions written into any loan or grant program which would keep these programs from being available to women or men wishing either to update their skills, or to finish an education as they try to enter or reenter the labor force. Nor do we mean to imply that there is conscious discrimination on the part of university financial officers.

But who can blame the loan or scholarship officer, whose funds are limited, who chooses the student with a current and excellent scholastic or recent work record over the woman who has been out of school and not working for a period of years. It is for this reason we would recommend a relatively small sum of Federal money be spent to enable women of postcollege age who have been out of the labor market and who wish to enter it to have the opportunity for retraining.

We would like to express our worry to this committee about the financial burden of any substantial educational borrowing—particularly to two kinds of families: One, the middle- to low-income family with more than one child in the family.

The other, newly married students, both of whom have borrowed all or most of the cost of their college educations. What position can the Federal Government take as these borrowers find themselves faced

with denying themselves and their families in some instances basic necessities or defaulting on their education loans? What will be the ultimate moral and economic effect in this country if these loans are made and not repaid?

As we said earlier, we are certain there will be a protracted debate over the very substantial changes in thinking, in philosophy, in programing, and financing which appear to be inevitable in higher education. So in conclusion, we again express our support for this committee if it, in the face of the country's very pressing and immediate needs, proposes renewed authorization of existing programs—funded at realistic levels for another 3 or 5 years.

Finally, in keeping with our strong support for forward funding, it is our opinion that provisions should be written into any new legislation which would give institutions of higher learning leadtime in which to adjust to shifting Federal policies.

We in the association wish to give voice to our awareness of the dedication and of the effort that members of this committee spend in promoting the welfare of this country's citizens. We also wish to express our appreciation for the privilege of again appearing before you.

Senator PELL. Thank you very much, indeed.

I imagine you feel particularly strong about the so-called negative dowry. What would be the maximum amount that a young woman could borrow in the course of her undergraduate or graduate career and then get married? What would be an extreme instance of what you think it would add up to?

Mrs. ROSS. I do not know as I feel strongly about the negative dowry. I think this is a possibility. But I think it is a combined factor, really, both on the man's part and on the woman's since both of them many times tend to work to pay it off. It is a very realistic and added burden, I think.

I really do not know what I would say what the amount is. Do you?

Mrs. BELL. We figured out in the committee it would be $10,000 maximum that they might be in debt when they were married. And this becomes a real problem if they had the students' loans and knew they started out with very heavy annual payments. And it would be roughly $800 a year in interest.

Mrs. ROSS. Another thing we discussed in the committee is that some of the students, I think, getting this loan do not quite comprehend, and perhaps they should, but I am not sure that they do comprehend, really, the extent of the percentage that they are going to be required to pay.

It sounds very fine when you say that there is a certain forgiveness or certain amount being underwritten by the Federal Government, but it can be really—a very substantial amount.

I am not so much in this instance talking about the people from the more informed communities, but I am speaking here primarily, I think, about the people who come from the underprivileged or less informed areas of the country where this loan sounds like a golden opportunity. And I think here is where we have some very real concern about the effect that this will have upon these people, the moral effect, when they realize what they have in a sense promised and whether this may not result in a very negative kind of a reaction to the whole educational program.

Senator PELL. I think the problem comes from childhood when so many children ask their parents, "Will you lend me 5 cents to buy some candies," when they mean, "Will you give me 5 cents to buy candies."

Mrs. ROSS. That is right. And I think the underprivileged who are not too well aware of the whole loan concept and paying off and its percentages, I think it is true, hopefully, the others may have heard their parents occasionally gripe about having to pay something off. So they have more familiarity with the whole interest concept.

So I would suggest that some of the other parts of our community probably are not familiar really with this concept.

Senator PELL. Even so, there is no excuse for its violation.

I am struck to be informed that in New York State, the guaranteed loan people say that women default less than men. Is that a national experience?

Mrs. ROSS. I believe this is true. I have heard this in relation to other kinds of situations; yes.

Senator PELL. If you have any followup information to insert in the record, it might be interesting.

Mrs. ROSS. I do not have any substantial data, but I have noted that this is the case that in general it seems to be true that women—I am not exactly sure of all the reasons behind it.

Senator PELL. Maybe it is because they have more money as a rule.

Mrs. ROSS. Maybe.

Senator PELL. Well, thank you very much, indeed, and forgive the interruption as we moved along.

And thank you very much for the help in the past.

(The prepared statement of Mrs. ROSS follows:)

PREPARED STATEMENT OF MRS. SHERMAN ROSS, CHAIRMAN, LEGISLATIVE PROGRAM COMMITTEE, ON BEHALF OF THE AMERICAN ASSOCIATION OF UNIVERSITY WOMEN

I am Mrs. Sherman Ross, Chairman of the Legislative Program Committee of the American Association of University Women. We in AAUW, an organization of about 170,000 college graduates organized into 1,685 branches in the fifty states, Guam, and the District of Columbia, wish to express continuing and staunch support for the concept of very substantial support for federal assistance to education at all levels.

Although the American Association of University Women is not an educational institution in the accepted sense, its principal motivation for the past 86 years has been support, by one means or another, for expanding educational opportunities.

The members of the AAUW like the majority of other Americans have accepted the concept that the more individuals pursuing education beyond high school, the greater the benefits accruing to society as a whole. Therefore, year after year, to this and other Congressional Committees we have recommended assumption by the federal government of a constantly expanding rôle in financing higher education.

Although we are increasingly aware that this concept is under question, that a considerable amount of current thinking and a number of well-received recommendations, including those of the Administration, advocate shifting the financial responsibility for education to those who receive it on the premise that it is the individual who profits, we have not come to the point where we are prepared to accept this new philosophy.

The American Association of University Women has been concerned for some time about how the increasing demands upon higher education institutions are to be met. Rapidly mounting enrollments, rising costs, and increasing demands

60-433 O—71—pt. 5——16

from the governments of the community for services—services which range from federal research contracts to local basic educational programs—have placed strains upon the plant, the staff and the budget which cannot be met by either public or privately supported institutions without federal aid.

Therefore, we have come to the conclusion that some form of aid to the institution must be adopted by the Congress. We see merit in several approaches to this problem. One is a formula based on enrollment or on the number of degrees granted, as in the Quie bill now before the House Committee, in twin E.O.G. grants—one to the student and another, a cost-of-education grant, to the institution. To use, cost-of-education payments to institutions for education of federally aided students, or perhaps for all enrolled students, seems a more appropriate way of attacking the financial problems of higher education institutions than a program of general institutional support.

It continues to be a principle of the Association that in the best interests of this country, every student coming out of high school who wishes it *should have the opportunity for some form of further training.*

Even before the introduction of the National Defense Education Act the Association, and its branches in roughly 1600 communities in the fifty states actively supported federal legislation designed to improve and strengthen higher education. We have been particularly interested in work-study, and grant and loan programs which provide financial assistance to students. At the same time, we have recognized that authorization of these programs has increased the problems of the institutions which these students attend. Therefore, the AAUW has supported the college housing provisions of the Housing Act and the Higher Education Facilities Act, among others. We have welcomed and supported such innovative programs as those drafted to provide special services for those whose earlier education has not prepared them for work at the college level; the cooperative education programs which provide alternate periods of full-time study and full-time employment; the Networks for Knowledge programs which develop and assist cooperative arrangements between institutions; federal assistance to developing institutions; the aid provided for improvement in graduate programs; and programs written to provide education geared to public service.

We have encouraged expansion of federal library programs. We have acknowledged through our support of the community service title of the Higher Education Act of 1965 the dependence of both urban and rural areas upon colleges and universities for help in meeting the nation's mounting social problems. We also have recognized and supported other programs enacted recently to alleviate poverty and the ignorance, disease and apathy that so frequently accompany it.

We know that this committee is fully aware of the danger of weakening our institutions of higher learning by diversion of their non-federal resources for the purpose of meeting the institution's share of cost-sharing federal programs. We too recognize that many federally supported, socially desirable programs, frequently referred to as being "part of the University's responsibiltiy to the community," are also enacted on a cost-sharing or matching-funds basis. We recommend that this Committee take a hard look at the financial drain created by these programs, and that greater assumption of fiscal responsibility by the federal government be provided for these social programs.

Among our principal concerns about federal aid is the lack of continuity in these federal programs. While colleges and universities are encouraged to utilize available federal assistance, there are definite hazards in doing so which must be eliminated. In instance after instance what has seemed to be an on-going commitment by the Office of Education and the Congress proves to be no such thing. Programs are usually enacted with much fanfare and national publicity. This publicity does not attend the inadequate or token funding which has been a recent pattern. In illustration we cite the International Education Act which up to this point has had minimal funding. We are happy to find that the Act would be extended under Part I of the Pell bill.

In our judgment the dangers of federal control of higher education, if it is ever exercised, will be by indirection, as the character of an institution is altered by diversion of institutional resources from activities whch haven't federal support to those that do—we have suggested in an earlier paragraph—or if, in what seems on the face to be an avenue for improving the quality of education, we place national education under political or other control. In fact, we think it is conceivable that the National Foundation for Higher Education and the National Institute for Education, proposed in the Administration's bills could develop very

regrettable political implications unless the authorizing legislation and guidelines are carefully drawn.

In earlier statements to this Committee the Association has recommended the creation of a completely non-political, I would say partisan political, Advisory Council on Education to the President which would have the status and function similarly to the present Council of Economic Advisors. However, we continue to urge, as we have for years, a Department of Education of cabinet status. In view of the present executive department reorganizational proposals we believe it important to restate this Association position at this time. If achievement of either of these recommendations is unrealistic in this session of Congress, we endorse, with safeguards against partisan politics, both the National Institute for Education and the National Foundation for Higher Education as a step toward elevation of education to its proper role as a major business with a top priority in this country.

It is quite obvious to us that very substantial changes are in the wind in higher education and that the debate over changes in institutional programs, over federal programs and funding will be going on for some time. With the authorization for existing programs running out within approximately eight weeks we are delighted to see before this and the House Education Subcommittee recommendations for extension of the authorization for these currently operating programs. We urge immediate enactment of extensions and wish to speak to some of the revisions which we note are included in the bills before this subcommittee.

We in AAUW have questioned whether every student who graduates from high school should be encouraged to undertake the traditional four-year academic degree. Therefore, we have wholeheartedly supported federal programs which offer technical and vocational training, the development of community and junior colleges and other forms of post-secondary training for more effective mobilization of the country's intellectual resources.

We wish to urge that there be no diminution in community service and continuing education programs. We support the continuation of aid to developing institutions and recommend that the 23 percent which has been set aside previously in the earlier legislation for community colleges be continued. We are concerned about the student who works up to a full day and thus takes longer to obtain his or her degree. Therefore, we believe that assistance should be available for at least five and possibly six years to such part-time students. We understand the rationale of taxing a student on his earnings and then offering him a loan or grant equal to, or less, than the sum he has paid in taxes, but we wish a more direct approach could be devised. Nevertheless the Association opposes perennial proposals for tax credits or tax deductions for tuition paid (which will be one of the alternatives again suggested), as unfair to lower income families. We urge the Committee to write considerable flexibility into the authority to transfer E.O.G. money to work study.

We in AAUW are extremely interested in the provision of S. 659 which would provide every student undertaking post high school work a grant of $1,200, dependent upon a built-in income tax deduction factor. We are uncertain how effectively or how fairly this deduction factor can be implemented. Many college age students are beyond the age of legal deductions; a majority of these students earn enough to receive little or no grant; this formula does not make allowances for those students who work six months or a year and go to college for six months, a year or longer. Demands other than those of the student upon the family income are not taken into consideration, e.g. a dependent or semi-dependent relative, or constant medical costs. In other words we in AAUW, while we believe the time for some degree of federal support for education beyond the high school level is at hand, are concerned that under the formula in S. 659 there will be little or no help for the student from the middle income family.

We again wish to draw your attention to an Association project in which we are deeply interested. In other years we have testified on, and succeeded in stimulating considerable interest both in Congress and out in support of a provision written into the Higher Education Act, or any other student aid program which would set aside specific sums or a stated percentage to be loaned or granted to women (or men) wishing to continue, or update their educations for the purpose of entering or re-entering the labor force. It is our contention that a large and presently untapped reservoir of skilled woman-power would become available if such a program were enacted. We speak from experience,

for the AAUW Educational Foundation recently conducted a very successful program of grants to such women who undertook either re-training or advanced training in their respective fields for the purpose of going into college teaching. We also speak from the experience of our 84-year-old program of fellowships to American women and to women of other nations for graduate work.

So far as we know there are no restrictions written into any loan or grant program which would keep these programs from being available to women (or men) wishing either to update their skills, or to finish an education as they try to enter or re-enter the labor force. Nor do we mean to imply that there is conscious discrimination on the part of university financial officers. But who can blame the loan or scholarship officers whose funds are limited, who chooses the student with a current and excellent scholastic or recent work record over the woman who has been out of school and not working for a period of years. We cannot speak too highly of the potential contribution to this country which could be the result of a relatively small sum of federal money spent to enable women of post-college age, who have been housewives and mothers, or who have been out of the labor force, to undertake further education.

We are aware of the interest of several members of this Committee in continuing education and we are in sympathy with proposals which would provide federal assistance to part-time students. Therefore, we urge this Committee to write a provision into the bill which it drafts will cover both the women of whom we speak and others who wish to undertake part-time study.

We should like to express our worry to this Committee about the financial burden of any substantial educational borrowing—particularly to two kinds of families: one the middle to low income family with more than one child in the family; the other, newly married students, both of whom have borrowed all or most of the cost of their college educations. What position can the federal government takes as these borrowers find themselves faced with denying themselves and their families, in some instances, basic necessities or defaulting on their education loans? What will be the ultimate moral and economic effect in this country if these loans are made and not repaid?

As we said earlier we are certain their will be a protracted debate over the very substantial changes in thinking, in philosophy, in programming and financing which appear to be inevitable in higher education. So in conclusion we again express our support for this Committee if it, in the face of the country's very pressing and immediate needs, proposes renewed authorization of existing programs—funded at realistic levels for another three or five years.

Finally, in keeping with our strong support for forward funding, it is our opinion that provisions should be written into any new legislation which would give institutions of higher learning "lead time" in which to adjust to shifting federal policies.

We in the Association wish to give voice to our awareness of the dedication and of the effort that members of this Committee spend in promoting the welfare of this country's citizens. We also wish to express our appreciation for the privilege of again appearing before you.

Senator PELL. The committee will recess until 10 a.m. tomorrow morning.

(Whereupon, at 12:50 p.m., the hearing recessed, to reconvene at 10 a.m., on Wednesday, May 26, 1971.)

EDUCATION AMENDMENTS OF 1971

WEDNESDAY, MAY 26, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF
THE COMMITTEE ON LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met at 10 a.m., pursuant to call, in room 4202, New Senate Office Building, Senator Claiborne Pell presiding.

Present: Senator Pell (presiding).

Committee staff members present: Stephen J. Wexler, subcommittee counsel; Richard D. Smith, associate counsel; and Roy H. Millenson, minority staff director.

Senator PELL. The Subcommittee on Education will come to order. Today we will touch upon the two subjects of greatest importance before the subcommittee this year, institutional aid and student assistance.

The inclusion of an institutional aid provision was considered unlikely when we started our hearings on higher education. However, over the past 6 months the support for some type of institutional aid has grown. Indeed I believe we will see some provision on this matter in the final bill.

Today our first witnesses who will be discussing institutional aid are executive directors representing the major public higher education institutions. We have invited them to appear for these gentlemen have been working most closely with the administration and the legislative committees on the Hill in our effort to meet this problem.

I welcome John F. Morse, director, Commission on Federal Relations of the American Council on Education; Ralph K. Huitt, executive secretary, National Association of State Universities and Land-Grant Colleges; R. Frank Mensel, director, Governmental-Urban Affairs, American Association of Junior Colleges; and Allen O. Ostar, executive director, American Association of State Colleges and Universities.

I bid you a particularly warm welcome because I know how closely you gentlemen have worked with this committe and staff and how much help you have been to me.

We felt it a good idea to hear the chiefs, rather than the Indians, because you are the ones who are going to have to work with this bill when it becomes law. For that reason we are particularly glad you are here.

Who is acting as chairman?

STATEMENTS OF JOHN F. MORSE, DIRECTOR, COMMISSION ON FEDERAL RELATIONS, AMERICAN COUNCIL ON EDUCATION; RALPH K. HUITT, EXECUTIVE DIRECTOR, NATIONAL ASSOCIATION OF STATE UNIVERSITIES AND LAND-GRANT COLLEGES; R. FRANK MENSEL, DIRECTOR, GOVERNMENTAL-URBAN AFFAIRS, AMERICAN ASSOCIATION OF JUNIOR COLLEGES; AND ALLEN W. OSTAR, EXECUTIVE DIRECTOR, AMERICAN ASSOCIATION OF STATE COLLEGES AND UNIVERSITIES

Mr. MORSE. John Morse. I will act as chairman.

Senator PELL. Proceed as you wish.

Mr. MORSE. Perhaps for the sake of the record I should identify these gentlemen again.

At the suggestion of the subcommittee counsel, Mr. Chairman, we decided we would not submit a written prepared statement but propose to discuss this question with you informally.

Senator PELL. If I may interrupt, I think that is an excellent idea. Any written statements or points you feel have not been made can be submitted in the next few weeks.

Mr. MORSE. Thank you. We did, of course, jointly submit testimony earlier in the hearings so there is a good deal of written material, and I have some other material with me this morning that is rather voluminous. You may not wish to put it in the record but you may wish to have it for consideration as you move through the legislative process.

The associations represented here this morning and the Association of American Colleges, representing the 4-year liberal arts colleges, and the Association of American Universities, representing the major research universities, are in rather complete agreement on a basic three-way approach to higher education. We have been in this basic agreement for some years.

The three-pronged approach that we believe essential and which we have testified to at length before this committee on previous occasions is adequate funds to support needy students who aspire to some form of postsecondary education; Federal support for the construction of academic facilities which are very much needed; and, thirdly, we believe the time has come when the Federal Government must pick up some share of the load of supporting the institutions as institutions. Whether we are talking about the private institution or the public institution, all sectors of higher education are in rather desperate trouble.

Financial strains began to appear 5 years ago for many different reasons, but certainly among them is the fact that enrollment has increased by roughly a million and a half students, full-time students. In the last 5 years, the colleges, like every other institution in the country, have been caught up in the inflation which has probably had more deleterious effect on higher education that almost any other segment of society.

And then, thirdly, something we all applaud, we have had the determination on the part of this committee, the administration, and the institutions, to open college doors to as many youngsters as possible regardless of their financial circumstances.

I have with me, and I believe you have seen, but if not I can make them available, several studies indicating the desperate situation in which colleges find themselves. There is a study of the financial condition of independent higher education institutions in the Commonwealth of Pennsylvania. There is a very recently released study of the financial problems of private colleges and universities in New York State. There is a publication put out by the Association of American Colleges, a study directed by William Jelema, which again documents the desperate financial situation with which 4-year liberal arts colleges are faced.

All of these I shall be glad to make available to the committee and leave it to your judgment as to whether they should be made a part of the record or simply used as study material as you work through the bill.

Senator PELL. Thank you.

Mr. MORSE. The groups that I have identified have worked on many different approaches that might be used by the Federal Government in providing this fraction of support for the higher education enterprise.

We have had as many as nine or 10 different formulas under study, and whereas we are not fixed in any particular direction, we ourselves have come to the conclusion, and offer it for your consideration, that any support coming from the Federal Government should be based on a fairly simple formula, one easily understood, easily administered, and relatively easily audited.

A simple formula we believe might best be based on full-time equivalent enrollment. There are other ways one could go about it, but the approach which seems to us perhaps soundest would be to relate Federal assistance to institutions on the basis of what is now beginning to be called "capitation."

We also believe that in such an approach it would be appropriate to give different weights to different levels of study. For example, let's say, to lower division studies a weight of perhaps 1.0; to upper division studies a weight of perhaps 1.5; to the graduate level a weight of 2.0, and perhaps something in addition for upper levels of graduate studies at the Ph. D. or doctoral level.

We would be glad, I think, to discuss other formulas, other approaches, if you care to do so. We simply submit this as one possible way by which the Federal Government might move.

Now, I have tried to cover briefly the position we have reached ourselves. I think I would like, if I may, to turn to Ralph Huitt and then my other colleagues for any additional remarks they might care to make.

Senator PELL. Go ahead. Thank you, Mr. Morse.

Mr. HUITT. This Indian wants to thank you for your invitation to come before the committee. I appreciate very much what this subcommittee has done for higher education in the years I have been connected with it here in Washington.

I am a little out of place here this morning because my usual position is on the first row wondering what the chief is going to say.

Let me say first of all the kinds of institutions our association represents. We represent part of public higher education but certainly not all of it. We have 118 members. We have land-grant col-

leges, one in every State. We have in addition to that State uinversities which are not land-grant colleges. Some great institutions such as the University of Michigan and the University of Texas are members, although not land-grant colleges.

There is quite a wide range of need here, from great research universities which are very much like Harvard, Yale, and Princeton, in some of their needs, to some black land-grant colleges among the poorest in the country.

Mr. HUITT. Five years ago there was not a single public university in the country which was running an operating funds deficit. Last year there were 12 that ended the year with a deficit. You may ask how can a public university have a deficit. The answer is some of them cannot, by law, but some of them can because they have private operating funds and so forth, so the trend toward going into debt continues to grow.

All of these institutions have taken stopgap measures. In some cases, as you would know, it has been a good thing to take up the belt and eliminate some of the fat. But there is a point beyond which that begins to be damaging. You can cut back on faculty positions, you can cut back on maintenance and put that off for several years, but there is a point at which that kind of economizing begins to be self-defeating.

We found, for instance, that among the economy measures taken the most frequent was in maintenance. Forty-four universities said they had put off repairs and changes. Forty-two said they eliminated new programs. Forty said that they had faculty and staff freezes. Seventeen had extension and research cutbacks. And then general reduction of expenditures.

The point is that you can cut back on faculty, for instance, to just such a point, and eventually this begins to add up and the problem becomes very real.

The University of California reports a backlog of major maintenance needs which now is standing at $6 million. Somewhere, some time, somebody has got to face that. Miami University in Ohio says at least a half million dollars in deferred maintenance. And this is a much smaller campus. So the seriousness of the situation is very marked.

At the University of California, for instance, more than 500 teachers, researchers and staff personnel will have to be terminated if the Governor's proposed 1971–72 budget is accepted. This is a pattern with which we have had to become familiar all over the country.

Now the question is: What are some of the unmet needs because of the lowness of the appropriations? In order of importance, our institutions have reported that additional faculty is the most drastic unmet need. Next to that are new programs. Next to that are additional classrooms. Beyond that are faculty and staff increases. Additional equipment, plant maintenance and research funds are all mentioned as unmet needs.

In this publication which we have for you we indicate how these are ranged in order of importance by the institutions that have sent them in.

What has caused the problem and what is the general character of it? We estimate in our institutions that if a university is to come

up with what we call a standstill budget that simply maintains what is going on at the present level, there must be a 10-percent increase in budget every year.

If you figure 6 percent as a cost-of-living increase and add to that increased enrollment and some of the other expenses—and for some reason educational costs seem to have risen a little more sharply than others—a standstill budget is a 10-percent increase each year.

We found that 42 among the 78 that responded have standstill budgets—more than half of them. These range from a 10-percent increase down to an increase of, in one institution, as little as 1½ percent. This is a step backward.

What could we look to for money to meet these needs? In the order of importance, in our institutions State appropriations come first. We do not get all our money from State appropriations—only about half of it comes from State appropriations—but that is the most important source.

The most important element in the decline, the financial decline, of our institutions, has been the decline of State appropriations. This is not to say that the States have been unmindful of higher education. It is to say that the whole of the State's offerings for public higher education have had to be expanded enormously in the past few years. There have been community colleges built, expansions of State colleges, undertakings in continuing education for adults, which means that generally speaking the appropriations that come to our kinds of institutions, like the appropriations that go to the others are put under a great strain.

Why not increase the student fees, some people say. The answer is that the student is picking up some of the burden. In our institutions in the last 5 years there has been roughly a 30-percent increase for resident students and 35 for nonresident students.

The truth, of course, is, as Dr. Harold Bowen has pointed out, that if you take into account the income that a student might have if he were working and add to that incidental expenses and what he actually pays in tuition and fees, you come up with the fact that the student now is paying about three quarters of the cost of his education at institutions across the country, so that we don't believe that the continued acceleration in tuition and fees is the answer to this problem.

We believe that experience shows that relatively low tuition is the best way that there is to increase educational opportunity in this country. So far as other sources of income are concerned, private giving has decreased, as you know. So far as the percentage that goes to public higher education is concerned, we are actually doing a little better than we did the year before by a very slight amount. But public higher education receives on the average only 20 percent of private giving so this is not from our standpoint a very promising way to get more money.

In Federal support, of course, some of our institutions have been hurt by the decline of the amount of money that goes into Federal contracts and Federal research grants and that kind of thing. Some of our institutions are very large; they have built great research facilities, in many cases in response to the encouragement of the Government to meet national needs.

When research money begins to taper off, it is not possible to say to a research institution, "We just don't need you for the next 2 years, let's wait." So we have been hurt by that kind of reduction, too.

So we come to the conclusion, Mr. Chairman, as you know, that the only way that our needs are going to be met—and I must say that in arguing for the meeting of our needs, we are arguing for the meeting of the needs of the private institutions, too—is if the Federal Government will pick up part of the operating expenses of our institutions.

We expect to expand, we expect to take in more and more students, we believe in more equal educational opportunities for people, but simply getting the kid to college with enough money in his pocket to pay the tuition fee at the university does not meet the need for educational opportunity.

There must be in place buildings, classrooms, and teachers to teach him and unless we can meet those expanded needs we can't meet expanding enrollment.

Thank you, sir.

Senator PELL. Thank you.

I would add here that I am aware of the problem and I do not need to be filled in on the critical nature of it. I am interested in your thoughts as to the most effective way to meet the problem.

Mr. Mensel.

PROBLEMS OF JUNIOR AND COMMUNITY COLLEGES

Mr. MENSEL. Thank you very much. It is a distinct pleasure to be here and to speak in behalf of the American Association of Junior Colleges and the many community colleges and junior colleges of this country which we represent; now some 1,100 in number.

You and your subcommittee have been very generous to us in the course of the past year in time and space in giving us the opportunity to build a comprehensive record before you on the needs of the 2-year colleges and so I think I can be brief in my initial comments of this morning.

I would simply like to make two points. We are very much on record in favor of institutional grants. The American Association of Junior Colleges has taken this position for a long time. We believe that operating grants to the institutions can have a tremendous beneficial effect in raising the floor of educational opportunity in higher education in this country.

I would like to concur in what my colleague, Mr. Huitt, has said about expanding educational opportunity in the States. We would concure in the fact that low tuitions are highly insignificant in expanding such opportunity, but many States and many community colleges are now faced with the prospect of raising tuitions unless they do find additional sources of support.

In some States the community colleges and junior colleges, the public ones, depend primarily on State support, on endowments from the legislature to conduct their operations. In many other States, of course, the communities themselves are making a sacrifice through the local tax base in order to establish and maintain a locally based lower division system of higher education, to provide the base of opportunity

they would find desirable and needed in the circumstances of our fast-paced technological society today for their constituents.

The other point I would like to make is that the community colleges are very much in a growing trend. We have been growing in enrollment by something on the magnitude of 10 percent annually for the last decade. Our college enrollments have tripled in the space of the last decade.

We don't see this petering out and it won't if the right mix of support is available, and we do believe that institutional grants as under discussion here can help to sustain that trend and the trend toward a strong base of general opportunity in higher education.

We would recognize that it won't be an easy task to come up with an equitable formula on which to launch this concept in Federal policy. We do concur in the statement of Mr. Morse as to the features of such a policy, at least in the starting concept or application of it.

We are generally in concurrence with the proposed formula as presented in Mrs. Green's bill in the House. She, of course, as you know, is trying to launch this concept in a formula that would support lower division work at the level of $100 per FTE based on an FTE of 12 credits earned and $150 at the upper level and $200 at the graduate level.

We would like to advocate one additional wrinkle to that approach which is an add-on or a doubling of the lower division grants as they apply to students from disadvantaged backgrounds. We think this will be vital to sustaining the institutional commitment to this constituency.

We would have no problem with such an add-on being earmarked especially for the instructional costs going into the assistance and education of the students in this category but we do feel there is a special problem here, that students who do come from disadvantaged circumstances, that the institutions helping them should have this kind of Federal support.

Thank you.

Senator PELL. Thank you very much.

Mr. OSTAR.

(The following material was subsequently supplied for the record:)

AMERICAN ASSOCIATION OF JUNIOR COLLEGES / **51st YEAR**

ONE DUPONT CIRCLE, N.W., WASHINGTON, D. C. 20036 / (202) 293-7050

EDMUND J. GLEAZER, JR.
Executive Director

WILLIAM G. SHANNON
Associate Executive Director

June 22, 1971

Senator Claiborne Pell, Chairman
Subcommittee on Education
United States Senate
4230 New Senate Office Building
Washington, D. C.

Dear Senator Pell:

We have done some further checking on questions raised during our May 26 appearance before your Subcommittee. Perhaps the following information and comment will be a useful addition to the record.

1. Tuition averages: In the hearing I estimated that tuition in the public community colleges across the country would run about $250, and our analyses by States now pretty well reaffirms that figure. In averaging out the annual tuition charged the students who reside within the college district; and excluding from the average, States or districts whose public community colleges charge no tuition at all, we find that these averages among the States average out at $245. See Analysis A attached.

The States with higher averages include New Mexico, $560.18; Pennsylvania, $482; Vermont, $475 and Ohio, $412. At the other end of the spectrum, of course, is California, with roughly 800,000 students or 30 percent of the nation's total two-year college enrollment, which levies no tuition on regular students in its 92 public community colleges.

2. Other student fees: In a spot survey of several States, we find that the fees that students pay in addition to tuition vary widely. They probably average less than $100 a year including both laboratory, shop and other educationally related fees and activity and health fees. Many community colleges do not support major competitive athletic programs and this probably helps to account for the comparatively low average for these fees. The spot check, as shown in Analysis B attached, provides only a very rough indication of what the pattern on student fees might be; still you may find the information helpful.

3. Instructional costs: The same nine-state summary (Analysis B) also provides a look at instructional costs, and pretty well substantiates the rough estimate I gave you during the hearing, although that estimate was perhaps a bit high. The average nationally may be closer to $1,100 than to $1,200, but rising rapidly under the impacts of inflation and more occupational courses. You will note that tuition on the average covers only one-fourth of the instructional costs.

Los Rios Community College District of Sacramento, Calif., has supplied some illuminating data in response to our checking. Their figures show that average costs of operation, based on FTE, run almost four times more for the University of California than they do for the community college districts, and almost twice as high for state colleges as for community colleges. Figures submitted to the 1971 Legislature show average costs per

FTE as follows:

State College System	$1,503
University of California	3,303
Public Community Colleges	851

Unfortunately, our survey did not turn up any figures that might accurately reflect a pattern of costs on remedial programs. Los Rios estimates these costs run at least $100 per year for each student who needs the remedial services. We do know that these services are a large cost for the many community colleges which are making a comprehensive effort to serve the less advantaged and non-traditional students. We also know that the need for such services is most acute in the lower division, particularly among freshmen. This is our reason for contending that should Congress adopt a formula of general capitation grants, these grants should be doubled for the low-income and federally aided enrollments measured by FTE.

The financial pressures on the community colleges are soaring also because their occupational programs are growing. In our nine-state sample, you will note that occupational enrollment is now 57% of the total in New York's community colleges, 50% in Pennsylvania, and rapidly approaching that figure in such States as North Carolina, Iowa and Colorado.

The costs of operating occupational programs are considerably higher than for transfer programs. At the institutions in the nine states, the costs of occupational training runs from 17 to 92 percent higher than for transfer programs. (Mean cost for occupational training is 49% higher).

Instructional costs generally have also risen considerably. Colorado reports an increase of 30%, Missouri an increase of 68%, and Rhode Island an

increase of 100% during the period from 1966 to 1971. The increased costs and the expensive occupational training costs are significant in these states since each state has a high proportion of its students enrolled in occupational programs.

The occupational boom shows no sign of slackening. According to data gathered last fall for AAJC by Western Illinois University from 975 junior and community colleges, the number of programs could almost double again by fall, 1972. Some of the significant points emerging from this survey include:

1. There are totally 10,624 occupational education programs with associate degree objectives now being offered in junior colleges. Note Analysis C attached.

2. There are totally 3,708 occupational education programs leading to certificates or job entry requirements below the associate degree now being offered in junior colleges.

3. There are totally 2,397 occupational education programs developed for adult students, usually for job up-grading and job mobility, offered in community service (adult and continuing) programs.

4. There are 3,970 occupational education programs now in stages of planning and development to be opened by 1972.

5. By 1972, there will be, counting those programs now being offered and programs under development, 20,699 occupational education programs in junior colleges in the fifty states.

No complete survey has been made of the number of students enrolled in these programs, but spot and selective surveys indicate that of the 2.5 million students currently in junior colleges close to 1 million are in

career programs.

We think you and the Subcommittee may also want to add to the record the data in Analysis D attached, a survey of various States breaking down their sources of financial support. As you can see, community colleges on the average draw about 50% of their support from the state, while the local commitment -- in the form of local taxes or tuition or both -- amounts to about 40%. The federal contribution averages only 8%. While these colleges generally typify the heaviest local support of any segment of public higher education, it should not follow that they be the segment receiving the least federal support, yet this unquestionably is the case. This seems hardly consistent with the public interest, considering that community colleges lead the national higher education community in low-income enrollments and occupational education, both national priority areas.

A final item we want to add to the record is the data in Analysis E attached. On several occasions we have urged your Subcommittee and the Congress to increase the set-aside for two-year colleges in Title III (Strengthening Developing Institutions), as well as eliminate the Title's five-year restriction on eligibility. As this data shows, some 300 community colleges have sprung into operation in 43 States in the last five years; and they now serve almost 600,000 students. It shows, we think, that the community colleges are in fact the nation's developing institutions not only in sheer numbers, not only in terms of low-income enrollments and manpower programs, but in terms of expanding opportunity, diversity and convenience in higher education for all Americans. Title III has served this interest well, but has not gone nearly far enough in accommodating the qualified two-year college applicants, as our earlier testimony shows.

We thank you again for your patient interest in our accomplishments, our promise, and our needs.

Sincerely,

Frank

R. Frank Mensel
Director of Governmental
Affairs

Analysis B—Nine State Summary of Instructional Costs

State	A. Average Tuition of Community College (1970-71)	B. Percentage of Instructional Cost by Tuition	C. Instructional Costs Per Student	D. Basis of Computing Instructional Cost
1. Colorado	$217	15%	$1415/FTE	45 quarter hr. = 1FTE
2. Illinois	$180-210/FTE (for 1971-72 avg. will be $210-240/FTE; 5 districts, incl. Chicago, charge no tuition)	By law, tuition cannot exceed 1/3 of instructional costs	$1250-1350/FTE	15 credit hrs. = 1FTE
3. Iowa	$318	33% for college Parallel Programs	$982 for college Parallel Programs	FTE determined on basis of 180 day school year
4. Missouri	$219.12 (1969-70)	22%	$1031 per capita Operating Cost	24 semester hrs.=1 FTE student
5. New York	$390 (1969-70)	47.8%	$708	12 credit hrs. a semester = 1 FTE student
6. North Carolina	$140	20%	---	12, sometimes 13, qtr. hrs. = 1 FTE student
7. Pennsylvania	$341	33% of Operating Cost	$1106	Divided operating budgets for 1970-71 by expected enrollment
8. Rhode Island	$225	15%	$718	15 credit hrs. = 1 FTE student
9. Washington	$68.50[a]	11.9%[b]	---	15 credit hrs. = 1 FTE student

(a) This is divided as $41.50 tuition earmarked for capital construction and $27.00 operating fee.
(b) This is a 1971-72 estimate. The 1970-71 figure based on a different fee structure showed that the revenue produced for instruction covered 14.2% of the instructional costs.

State	E. Funds from State Legislature to State Colleges (Using funds to Community Colleges as 100%)	to State Universities	F. 1966-71 Rise in Instructional Costs	G. Additional Student Fees
1. Colorado	---	--- no comparable data	30% plus	$0-255; average $100-150 10% educ. related 90% for services
2. Illinois	Approx. 186% of amount given community colleges (c.c.); $645/FTE in c.c. and closer to $1200 in state colleges and universities		---	Some have none; some, an activity fee/term of $0.75/hr. - $12; Some, a matriculation fee once or each term from $5-25; some, a graduation fee of $5-10; some, $1-12.50 for lab, studio fees, etc.
3. Iowa	Nearly equal; $405/FTE for c.c. and not more than 1/3 of the per student unit cost (max. of $433 in the 1969-70 allocations) for state colleges and universities; a max. diff. of 107% for state colleges and universities		(d)	Avg. of $10-66 per year for lab and shop fees and $10-33 for student activities; occasional special fees
4. Missouri	339%[c]	697%[c]	68% for operating	Avg. $20/semester; 50% educ. related
5. New York	---	---	---	$43 student activities $18 health and accident Special fees - $14 - graduation; $1 for transcript
6. North Carolina	---	---	---	$248; 9% educ. related, 11% for services
7. Pennsylvania	---	---	---	$15-20 activity fee; $5 lab fee
8. Rhode Island	Nearly twice as much	Over twice as much	100%	$20 student activities
9. Washington	---	---	---	$14.50 student services and activities fee

(c) The base used was $278/FTE, the amount received by public junior colleges in 1970-71, although Missouri law provides $320/FTE.

(d) Many schools were in the process of development 1966-71 so this figure is difficult to determine. The expenditures in the operating fund have risen at least 10% per year for the last two years.

State	H. Occupational Programs: % of total enrollment	Are costs higher than for transfer programs?	Examples of particularly high cost programs	I. Basis of Scholarship Money (excluding federal student financial aid)
1. Colorado	40%	Yes - instructional costs approx. 30% greater	Technical and industrial programs; Flight training, nursing, law enforcement programs	Financial need is basis for 75-100% of state scholarships
2. Illinois	25%	Yes - average instructional cost is $1600-1800	---	16% of students with state scholarships from families with income below $5000; no money available for part time students
3. Iowa	42%	Yes - In 1969-70 the avg. cost of a college parallel program was $982; the avg. cost for career educ. programs was $1810	---	Strong emphasis on academic ability though financial need is also considered. Almost none has been given to students in community colleges
4. Missouri	20%	Yes - Overall per capita operating cost avg. $1031; Avg. per capita operating cost of occupational programs is $1200	Nursing and health career programs - approx. $1800 per capita	---
5. New York	57%	Yes - for example, at one school the Technology Division cost/FTE was 281% of the Humanities'	Agricultural engineering ($24.50/student credit hr.), Electrical technology ($25.20), Air conditioning ($30.10), compared with Economics ($8.70), or History ($10.80)	Academic Merit
6. North Carolina	47.4%	Yes - avg. $150 more	Machinist and ADP programs	80% to low income students
7. Pennsylvania	50%	Yes	---	Financial need
8. Rhode Island	31%	Yes, sometimes even twice as much	Overall avg. cost/student/yr. is $1384; Nursing - $1870; Technology - $1922; Vocational-Technical - $1954	Financial need
9. Washington	34.98%	Yes, 30-50% greater	---	Financial need

NATIONAL TOTALS	299	569,005

Mr. OSTAR. Thank you, Mr. Chairman. I, too, appreciate the opportunity to speak to this issue which we think is No. 1 on our priority list.

Our association is comprised of 278 State colleges and universities. Our students come from the lower end of the economic scale. These are primarily first-generation college students.

The Carnegie Commission on the Future of Higher Education has described our institutions as the "Colleges of the Forgotten Americans." They offer a range of opportunities all the way from 1- and 2-year occupational programs to bachelors, masters, and, in a few instances, doctoral programs.

In September our association surveyed the financial problems of its member institutions. Over four-fifths reported that State appropriations were inadequate. Three-fourths reported that appropriations fell far short of budget requests. Many institutions were delaying new programs, reducing existing programs, postponing salary increases, and, in some instances, no salary increases at all.

Mr. Chairman, since you indicated that you are already fully aware of the crisis existing in the institutions and the problems, I will submit my statement on the crisis for the record and simply add to what my colleagues have said.

Our board of directors met 2 weeks ago, reviewed our present position with respect to Federal assistance to higher education, and agreed to list four priorities.

The first one is general institutional aid on a formula basis. The second one is increased funds for student assistance. The third one is for academic facilities and the fourth is for funds for research and development.

There is some feeling that perhaps the crisis exists primarily in the private sector and Mr. Morse has brought with him information on the private institutions.

I would like to call your attention to a report by the Carnegie Commission that suggests that the public institutions are even less well off than the private in terms of space per student and expenditures per student.

For example, in the State of Tennessee the student-faculty ratio in our State colleges and universities is 20 to 1 while in the private institutions it is 10 to 1. A similar situation prevails in New England.

Again, let me reiterate what my colleagues have said and what our own association has said, that the first priority at this point in time must be a program of general institutional aid.

(The prepared statement of Mr. Ostar follows:)

PREPARED STATEMENT OF ALLEN W. OSTAR, EXECUTIVE DIRECTOR,
AMERICAN ASSOCIATION OF STATE COLLEGES AND UNIVERSITIES

Fund shortages and budget cuts are for the second year in a row hitting institutions of higher education across the country with disastrous effects. Many schools are cutting back on faculty and other staff. Building programs are suspended. Maintenance is being cut. Qualified students by the thousands are being turned away. Faculty-student ratios are mounting. Financial aid to students is being cut and special programs for minority students are being scrapped. Faculty members caught in the inflationary spiral are receiving no raises, which leaves them making less money than before. We are facing a crisis in higher education.

When parents find that their children are unable to get into college and at the same time cannot find jobs, we will find ourselves in real trouble.

The number of college students grew from 1.5 million to 6.5 million between 1940 and 1967, according to U. S. News and World Report (May 10, 1970). Somehow the colleges and universities absorbed the growth. But

no more. Not with the budget cuts that they are facing. Something has to go.

We are paying right now for being penny wise and pound foolish. Let me give you some examples from some of the member institutions of the American Association of State Colleges and Universities. We represent 278 colleges and universities, educating almost two million students a year (one out of every four). This is what's happening:

The California State College at Hayward with 11,000 students, has been forced to hire 100 fewer faculty members. It enrolls the largest percentage of blacks in the state of California. The budget cuts will hit these students directly with deep cuts in the Educational Opportunity Programs.

Chicanos, who make up three to four percent of the student population, and who sorely need remedial work will be hard hit. With increased faculty loads, there just isn't anyone to do the job. Many of these students will simply have to drop out, losing their first big chance to make it.

California State College in Long Beach, with 28,000 students, has been asked to take MORE students, despite budget cuts. Classes will be increased from 25 to 35 students. Students working on masters theses or doing graduate research will be without adequate

faculty supervision. They are too short-staffed to adequately supervise student nurses interning at local hospitals.

They have 1,200 disadvantaged students. There are currently special tutorial classes and counselling programs. These must be cut down.

Registration has been closed. Four thousand students were turned away. There aren't enough buildings and no money to build any. Not enough faculty and no money to hire them.

California State Polytechnic College at San Luis Obispo has one of the largest architecture programs in the world and one of the biggest engineering programs on the west coast. They are job-oriented.

They have had to cut back over 60 faculty members. For every four teachers they lose a technical or a student assistant or a clerical position.

They have some 400 foreign students on campus. Their tuition has been raised from $600 to $1100, making it impossible for many of these students to afford to attend.

The school is unable to purchase any new books for the library. In addition, they will have to lay off library staff.

Research leave for the faculty has been eliminated. Out-of-state recruitment for students is almost wiped out.

They have turned down 3500 students: no buildings and no faculty to accommodate them.

The University of Maine will require $61.9 million to hold the line with reasonable costs and inflationary increases. It received $33.8 million from the state legislature.

As a result, the campus at Orono turned down 1700 QUALIFIED students. One, a Maine high school senior, ranked third in her class. She was a National Merit Scholar and ranked in the 600's in her college boards.

I could go on and on, but these examples tell the story that is repeating itself again and again across the country today. We are saying to our young people you can't go to school. We are denying them the education that we had access to. We are cutting out the minority students who were just getting their feet in the door and who were on the verge of getting an education, a job and breaking the poverty cycle.

We are watering down our education, running on an assembly line basis with ever larger classes.

Research is going by the boards. Library acquisitions are grinding to a halt.

If we truly believe in the value of education, we had better state our priorities before it's too late. And it almost is.

As Donald R. McNeil, Chancellor of the University of Maine, put it, "people are knocking on our doors and we're turning them away."

Senator PELL. Thank you.

FORM OF INSTITUTIONAL AID

As you know, there are two basic methods of institutional aid, that have been suggested. One is analogous to the formula that Dr. Hester of NYU has suggested—it is in the Green bill—where the aid goes to all institutions on a per capita count of the students. The other is found in S. 659 which has institutional aid following the student who is receiving the basic educational opportunity grants.

Which do you prefer and why?

Mr. MORSE. Senator Pell, I think I speak for all of us when I say we would prefer an approach that provided direct Federal aid to institutions in relation to their total enrollment.

There have been many suggestions for a cost-of-education allowance for disadvantaged students along the lines you have just suggested, and we see merits in that as Mr. Mensel has suggested, if its purpose is to provide training, extra education, remedial work, a special attention to youngsters who are coming not just from deprived backgrounds but deprived elementary and secondary schools.

But we don't really quite see the logic of seeking to assist institutions on the basis of some selected number of students.

Senator PELL. I think the reason for that is to have the institutions competitive, trying to attract the youngsters who are getting the basic educational opportunity grants.

If, on the other hand, you adopt the per capita approach, the institutions will continue to strive as they usually do for the students who will cause less trouble and achieve the greatest success and be the richest alumni in the end.

This was the purpose of tying the institutional aid to the students who receive the basic educational opportunity grants, recognizing also the problem, that there is an increased cost when youngsters come in without adequate training beforehand.

COMPETITION FOR STUDENTS

How would you handle this question of getting a little competition involved?

Mr. MORSE. Well it is my impression, Mr. Chairman, that virtually every institution in the country is committed to seeking out and enrolling as many youngsters from deprived backgrounds as their resources can carry.

I know of no institutions that aren't committed to enrolling young people who 5 to 10 years ago, before the advent of the various Federal student aid programs, could not hope to attend a postsecondary education institution of any kind.

Senator PELL. Isn't it correct to say that the institutions that try the hardest are usually the richest?

Mr. MORSE. I think I would like one of my colleagues to answer that.

Mr. HUTT. I don't know anything that supports that. If this is so I would be glad to see it. Let me talk just a minute to this competition.

I think the competition for disadvantaged students comes from the desire on the part of people in higher education to educate disadvantaged students. Unless you gave the disadvantaged students a really very large grant there would be no reason to compete for a student because when a student comes to a college, usually with tuition,

with grants or what not, he still represents an educational cost which exceeds what he brings in with him.

So to give the student $100 or $200 or $300 to go along with him when the cost may run $1,400 or $1,900 is not going to cause institutions to compete on an economic basis.

They will compete for these students because of a mission, but not on the basis of some kind of grant that goes along with the student.

CHOICE OF APPROACH

Senator PELL. So what you would prefer is the small per capita grant to a larger grant that follows the disadvantaged student?

Mr. HUITT. Yes.

Senator PELL. Do you all support that view?

Mr. MORSE. I believe we do, Senator. We have discussed it at length in so many, many meetings over the past 2 or 3 years.

Mr. OSTAR. I would like to just add a word to that.

The administration has proposed a program of student financial aid that would bring in an additional 150,000 students a year. We estimate that this would cost the institutions approximately $300 million over and above the resources now available, so the institutions are going to have to find additional operating funds just to accommodate these students over and above the crisis situation.

But there is another aspect to this. We must be sure that funds are available to help these students succeed in college. It is one thing to provide funds to enable them to go to college, it is another to give them an opportunity to succeed and this will require still additional funds in the form of remedial programs, counseling and a great many others.

It was interesting to note when the White House announced a program to the National League of Cities, a grant of $1 million to encourage veterans to go to college, no funds were provided to help the institutions give these veterans a chance to succeed. It is more than just getting them in the door, it is giving them a reasonable chance to succeed and this will require additional funds over and above the institutional funds.

Senator PELL. Mr. Mensel.

Mr. MENSEL. Mr. Chairman, I would like to add another comment if I may.

The community colleges are often identified as the colleges of the late bloomers, but this is taking on new and different meaning from the meaning it had perhaps, 10 or 20 years ago.

If you look at the typical community college today, the average of the student body is probably 25 or 26 years of age. In fact, we have illustrated this for you in the past. Cities like Dallas and Kansas City have documented this for us. This means that many of these students are full-time breadwinners, taxpayers, who may or may not come from lower-income categories, but they need the education in terms of career ladder opportunities.

They are late bloomers in the sense that they have awakened to an appreciation of their own talents late in age. We would prefer a formula that helps to strengthen the institutions across the board, rather than this targeting simply for the full-time, low-income student.

The institution needs strength across the board to serve this kind of constituency, rather than simply the narrow one of 18- and 19-year-olds from the lowest segment of the economic spectrum.

Senator PELL. Not only does it mean the institutions would dig harder to get the students with grants following them, but it would also mean that the students could select the institution to which he wants to go. This would cause the institutions to be attractive, for they could not just fill up with the warm bodies and get the grants.

If I was in your place, frankly, I would oppose this idea.

Mr. MORSE. Well, I think Mr. Huitt perhaps touched on the answer to that.

The amount of grant that might accompany a federally assisted student is still not likely to come anywhere near meeting the cost of educating him. Thus, I really can't see an economic factor leading to competition for these students.

COST OF INSTRUCTION

Senator PELL. What is the average tuition of the colleges of your association, the average fees other than tuition, and the average cost of instruction at these institutions? Perhaps you could submit this material for the record.

Mr. MENSEL. Yes; I would prefer to research this point. There are great fluctuations among the community colleges.

Senator PELL. I am interested in the average.

Mr. MENSEL. I think the average is probably for tuition somewhere in the vicinity of $250.

Senator PELL. What are the average fees other than tuition?

Mr. MENSEL. Probably another $150 on top of that.

Senator PELL. What would be the average cost of instruction?

Mr. MENSEL. This, of course, is going up rapidly from inflationary factors, but I would guess $1,200 or $1,250.

Senator PELL. Right.

Mr. MORSE. The American Council on Education really represents the entire spectrum of higher education, so I think I will pass to Mr. Huitt.

Mr. HUITT. I would like to submit a little later something a little more complete on this.

(Material referred to appears below.)

Mr. HUITT. Our lowest is the Federal City College in the District. The average would be $450.

Senator PELL. Tuition—and what was the average cost of fees other than tuition?

Mr. HUITT. This is very tricky because some institutions call tuition fees, some call tuition tuition and charge fees on top of that. There are universities in our group that charge no tuition whatsoever but may charge $400 or $500 in fees so that it is kind of hard to say. There is a mixture of tuition and fees.

The median for resident tuition and fees is $450. The highest, the University of New Hampshire, is $950.

Senator PELL. In other words, $450 would be the average for both fees plus tuition. And what would be the average cost of instruction?

Mr. HUITT. This I would have to try to come by. It is not easy because institutions don't make up their budgets that way and of course there are various kinds of education costs. If you are teaching freshman English it is relatively cheap. But I will try to get some figures.

(The following was subsequently supplied for the record:)

NATIONAL ASSOCIATION
OF STATE UNIVERSITIES
AND LAND-GRANT COLLEGES

OFFICE OF THE EXECUTIVE DIRECTOR

One Dupont Circle, Washington, D. C. 20036 202 293-7120

June 21, 1971

Mr. Steven J. Wexler
Counsel
Subcommittee on Education
Senate Committee on Labor and Public Welfare
4230 New Senate Office Building
Washington, D. C. 20510

Dear Steve:

When a group of association directors appeared before Senator Pell, he asked us for figures on average cost of tuition and fees for our kind of institutions and for the average cost of instruction. I believe that these data, as best we could get them, have been sent to you but I am enclosing more copies to make sure.

I am sorry to say that we have not done anything worthwhile on the cost of inter-collegiate athletics although we have called people most responsible for that. I suspect they may not be eager to have the figures themselves.

Sincerely,

Ralph K. Huitt
Executive Director

RKH/mab

PER STUDENT COSTS OF INSTRUCTION

The United States Office of Education surveys universities regarding current expenditures for "student education." This encompasses general administration, instruction and departmental research, extension and public services, libraries and operation and maintenance.

In addition to total figures, USOE analyzes this data in terms of current expenditures per full-time equivalent student. The office also issues projections on expenditures for student education by use of the trend of annual expenditures per full-time equivalent student over the 10-year base period and in conjunction with the projected enrollment of such students.

The latest data on current expenditures per full-time-equivalent student for the base year, the most current year for which actual statistics are available and the projection year are as follows:[1]

	Total	Publicly-controlled Institutions	Privately-controlled Institutions
1958-59	$1,355	$1,350	$1,361
1968-89	$1,772	$1,638	$2,100
1978-79	$2,089	$1,865	$2,833

These figures are slightly less than USOE figures for current expenditures for educational and general purposes, which are frequently quoted. Data on current expenditures for educational and general purposes also includes expenditures for organized research.

Figures on pure instructional costs per student, as most universities calculate them, generally exclude administration, operation and maintenance of physical plant, general and agricultural extension and research programs and library costs. However, there has not been a nationwide survey on pure instructional costs.

[1] From "Projections of Educational Statistics to 1978-79 (1969 Edition)", p.3, National Center for Educational Statistics, United States Office of Education.

MEDIAN STUDENT CHARGES AT STATE COLLEGES AND UNIVERSITIES[1]
1970-71

National Association of State Universities and Land-Grant Colleges

	Resident	Non-Resident
Tuition and Required Fees	$ 452.50	$1,106.00
Total Charges (Including tuition and required fees, room and board costs)	1,376.00	2,019.00

Range of Tuition and Required Fees:

	Resident	Non-Resident
Highest	University of New Hampshire ($905)	University of Vermont ($2,327)
Lowest	Federal City College ($97)	Prairie View A & M College ($454)

American Association of State Colleges and Universities

	Resident	Non-Resident
Tuition and Required Fees	$ 374.00	$ 843.00
Total Charges (Including tuition and required fees, room and board costs)	1,215.00	1,689.00

Range of Tuition and Required Fees:

	Resident	Non-Resident
Highest	East Stroudsburg State College ($740)	University of Toledo ($1,602)
Lowest	D.C. Teachers College ($72)	University of Guam ($370)

[1]From a "Joint Report on 1970-71 Student Charges," National Association of State Universities and Land-Grant Colleges and American Association of State Colleges and Universities, October, 1970.

Senator PELL. Mr. Ostar, what would be your answer to those two questions?

Mr. OSTAR. We do combine our tuition and required fees so that the students know what it is going to cost them. I will have to get these figures for you and submit them for the record.

We also have some figures on educational cost to the institutions.

Senator PELL. Submit the two figures, the average cost plus tuition plus fees, and the average cost of instruction.

(Material referred to appears on page 2455.)

Mr. OSTAR. The students on the average will pay in our public institutions about 30 percent of the instructional cost.

Senator PELL. My point here is twofold. One, that a flat grant of $1,000 a student would be a substantial help. I believe that if you thought about it you probably would prefer students who bring $1,000 along with them as well as being able to pay their tuition as opposed to students who don't and I think the schools would enter into a certain competition to attract those students.

STANDARD MANAGERIAL PRACTICES

The other point these replies bring out is the necessity for some form of common fiscal measurement for institutions of higher education. One of the amendments we are working on would support some form of unified accounting to enable you to figure out what the cost of instruction is and also be able to break down the total costs simply. It may be a very good idea to continue giving a course on some abstruse subject with a student body of two but you still ought to know what the cost-benefit ratio is.

What would be your feelings along that line, so that in the future we would not have to compare figs and lemons with apples and oranges?

Mr. MORSE. And Indians with chiefs.

May I come——

Senator PELL. I am not referring to any of you as figs or lemons. (Laughter.)

Mr. MORSE. We are getting to be quite a salad, sir.

Can I try coming at that in a somewhat different direction. First, as to the cost of instruction, one very careful study has been made by the Coordinating Committee for Higher Education of the State of Tennessee under Dr. John Folger, executive director of the Tennessee Higher Education Commission.

Their cost analysis by level of instruction indicates throughout the Tennessee system a cost of $1,004 for lower division students and a cost of $1,400 for upper division students. Whether Tennessee is typical, I can't be sure, but this gives you some picture of the record.

Now to get to the other point, Senator, if all needy students were supported entirely by the Federal programs, perhaps the approach of institutional aid as a bonus going with them might make sense, but one must remember that probably far more students, in this country, are helped by non-Federal programs than by Federal programs.

Many of the States have generous State scholarship programs, sufficiently generous so that in many instances if a student receives a

State award he is so no longer in need of Federal assistance. You have many, many, many endowed scholarships which are going to very needy students but every single student who receives aid as far as I know in 95 percent of our institutions receives it on the basis of need.

Senator PELL. I still want to get your specific reaction to the idea of uniform system of cost-benefit analysis and management so that the answer to questions of this sort which we have been pressing for some months will be readily available.

Mr. HUITT. I would like to react to that.

I think it would be very useful to all of us if we could have some kind of dependable uniform system with which we could compare figures. So that I should like very much to see efforts made in that direction.

I would be a little—I would be scared to death of something put into a bill which is going to set this up automatically. There is going to have to be a sophisticated study made. And whether that ought to be done by the Government as a requirement of the law is something I am not sure about.

As you can see, we are all bedeviled by the fact that some questions you ask us we can't answer. In my time in the Federal Government in this area I am in now, the most frustrating thing has been that the figures you really need you never have. You have all kinds of figures but not the ones that answer your questions.

So I should like very much to see—in fact I think it is imperative to do something along this line.

Senator PELL. I noticed in one of your tables, the Carnegie book there—I have been, in a laborious way, trying to go through all the Carnegie reports. It is pretty tough reading I find. They are unfortunately not written in the same style as the Newman report. But I know they compare apples and oranges in the international system, and there are no common denominators.

COMPENSATORY EDUCATION

What is the cost, relative cost, of compensatory education for underprivileged youngsters for the freshman year, and then thereafter, I imagine it would be higher in the freshman year than it is in the following year, but what are the follow-through costs in the post-professional years?

Mr. MORSE. I don't believe we have an answer to that. I would have presumed that most of the costs of compensatory education would come in the first year except that in many instances when youngsters are really not prepared to carry the full academic load their program is strung out over a period of, let's say 4 or 5 or 6 years.

I believe this is exactly the plan in effect in New Jersey, for instance, at Rutgers, in which instance probably the cost of compensatory work would be roughly level straight through the program, but I don't know of any figures.

Once again, as Mr. Huitt has said, it is terribly frustrating not to be able to snap back an answer to a perfectly sensible question but we are rather helpless in this area.

Mr. OSTAR. Mr. Chairman, a survey of some of our institutions on the question of compensatory costs in the first year—I don't have any

figures on subsequent years. The estimate is that the cost is approximately $500 in the first year for each disadvantaged student who requires compensatory assistance. This is over and above the normal cost of instruction so if we are talking about $1,400 of instructional cost for an undergraduate student or a lower division student, then you would have to add the $500 to that.

TUITION INCREASES

Senator PELL. One thing that has always disturbed me is that when we increase student assistance, for some reason tuition seems to go up in proportion to it.

Do you see any way of inhibiting that habit?

Mr. MORSE. I wonder if maybe it isn't the reverse order. Certainly in private institutions, and I have spent most of my life in private institutions, a tuition increase comes first. And then if one is not to freeze students out, one must automatically increase the budget for student aid.

Sometimes it is suggested, if institutions are running a deficit, that if they would simply reduce the amount of student aid they are awarding, the deficit might be wiped out, but the plain fact is that if student aid were reduced, so too would be the size of the student body in those private institutions.

As a matter of fact, that is one of the problems they have. Our concern is that as fees go up, and they do, even in the public institutions. one automatically builds in a need for greater and larger student aid programs.

COST OF ATHLETIC DEPARTMENTS

Senator PELL. Another somewhat unrelated question is in regard to the athletic departments, I mean spectator sports. We have become a nation now of spectators.

Do you have any total figures as to whether they produce a deficit or net profits?

Mr. HUITT. I think that most of the studies will show that this is a profitable activity at the big universities that win. The smaller schools have found this to be a real deficit operation. Some of them are going out of football and some of the conferences have tried to share the wealth with their more successful members by splitting the Rose Bowl fees and that kind of thing.

I think this is a big-time activity which like other spectator sports makes a lot of money if the team succeeds and if it doesn't, not much.

Senator PELL. Are there any figures showing the total cost of an athletic department as opposed to the total fees of spectators watching it?

Mr. HUITT. We can try to get that for you. My guess is that it would be a horrifying thing to find out, and I guess it would not change anything either because what academics have done in the last years is to prove overemphasis on athletics without much effect.

Senator PELL. I think it would be interesting to find out. I have always been struck by the fact that the sports that had the greatest participants are usually those that cost the least. If you have any figures of that sort I think we would find them most interesting.

COST OF INSTITUTIONAL AID

Do you have any idea of what the total Federal cost would be for the type of institutional assistance you support?

Mr. MORSE. Well, Mr. Mensel mentioned a specific bill that is in the House committee.

Senator PELL. That is President Hester of NYU's approach.

Mr. MORSE. Yes. It is a modification of the formula that President Hester and his colleagues suggested. President Hester had suggested a greater weight than the House bill——

Senator PELL. 200, 400 and 500.

Mr. MORSE. I think he suggested 100, 150, 200, and 400, and then perhaps for the major research universities, a percentage of the total Federal obligation for academic science. That was I believe President Hester's original suggestion.

In the bill, though, that is now before the House committee the weights are written in terms of dollars at three different levels of education. And that costs out under current enrollments in all institutions at about $872 million.

Senator PELL. Thank you all very much indeed. You have been very kind to give us this hour and if we have more questions we will feel at liberty to contact you.

We hope to get into executive session before too long and hope to come out with some sort of bill that will meet with the approval of a total consensus within the committee.

Mr. MORSE. Thank you very much, Mr. Chairman.

Senator PELL. Our next witness is Dr. Frank Newman whose report I had the pleasure of reading in full. It really made quite an impact certainly on the governmental side of education. He has a good promoter in the Secretary of Health, Education, and Welfare. We all have benefited by reading it.

STATEMENT OF FRANK NEWMAN, STANFORD UNIVERSITY, CHAIRMAN OF THE AD HOC COMMISSION WHICH ISSUED THE NEWMAN REPORT

Dr. NEWMAN. If it is all right with you, Mr. Chairman, I would like to make an informal statement, if for no other reason than to put me in the position of being in agreement with my colleagues who have just preceded me.

Senator PELL. Do you agree with the substance, too?

Dr. NEWMAN. No. But it is nice to start with some point of agreement.

Senator PELL. Always.

Dr. NEWMAN. I would like to comment, if I could, from the perspective of our report and our task force, but relating that, if I could, to the nature of the problems that I think are before you and the two crucial problems that have received the most discussion during the year are the questions of how to provide adequate financing for students and adequate financing for the colleges and universities which are obviously now facing some uncertain future.

This legislation is undoubtedly going to serve for the rest of the decade. Only those two were not enough. There were some other crucial

60-433 O - 71 -pt. 5 - 19

problems that deserved attention as well. The past couple of decades have been a period of tremendous growth and I think tremendous accomplishment.

Some of the things my colleagues were describing give some measure to the tremendous step forward that higher education made in this immediate past year. But I think, as often is the case, we have been a long time in the same direction, allowing certain distortions to creep in, and I think it is important to recognize those.

But when I say that, I don't mean to argue that the institutional needs are not important. I am very concerned about doing something in terms of student aid.

You were asking a question about the importance of funding, a bill for the disadvantaged student, and it seems to me that one of the great changes and steps forward in the last couple of decades was the gradual concern over the disadvantaged student.

And now we are faced, because of the sharp rise in the total demand for student aid which has been running faster than even the increase and supply of student aid, with the question of trying to decide priorities among different types of students.

And I would disagree with something Mr. Morse said in the sense that he was pointing out the commitment that has been made—maybe that isn't quite right. I think he is right that the commitment to the disadvantaged student runs right across the spectrum of educational institutions but it is also very apparent that that commitment is failing, that there is a declining concern over meeting that particular set of problems of disadvantaged students.

Something we should view nationally, I think, with a great deal of concern—not only have we slowed down in the rate of enrollment increase but it seems to be apparent that unless we do something it will even be hard to hold onto the gains that have come about.

We remain at the point where black students are approximately half represented, Chicano students about a quarter, and I think the press of other problems and the decline in fervor that came from the period of 1967 and 1968 is leading us to put this aside as a national issue.

For example, blacks at college student age are about 12 percent of the population and within the student population about 6 percent of that, a little over 6, depending on how you look at the statistics, are black. Chicano is about a quarter and Indians about 10.

That has been, as a percent of population, jumping up relatively slowly. Blacks, for example, in 1967, up until 1967, as a percentage of the population, student population, were actually declining slightly.

CRITERIA FOR ADMITTANCE

Senator PELL. How do you handle this question of access, the problem of youngsters who graduated from nonacademic high schools and then want to go to college.

Basically when a youngster goes to college he should be able to write a grammatical and coherent paragraph. But one can graduate from high school in home economics or some other kind of subject and really not have any concept of language. Do you think they should be admitted or should there be some kind of preliminary years for com-

pensatory education prior to going to college? And if so, should a college carry the cost?

Dr. NEWMAN. I think that question encompasses a very broad set of problems. Some students—take the American Indian population. There is a common assumption that Indians just cannot cut it. But there have been a number of institutions, Stanford, Dartmouth, Minnesota, and several others that have run fairly extensive Indian programs and are finding that indeed they can do ordinary college work.

So to some degree—and I think this is also true widely throughout—there is a percentage of those minority students who are equipped to do college work.

And, incidentally, one of the fascinating things we discovered when we made an analysis is that generally speaking, minority students are doing better at the poorer colleges, or let's say better at the selected colleges.

Senator PELL. Isn't it another point that, as far as adjustment goes and doing well goes, the student reflects his own background rather than their color?

I am familiar with one very specific institution where the difference between the youngsters from the black middle class and the black ghetto families is just as great or greater as between black and white.

Dr. NEWMAN. There are very sophisticated Chicano kids and black kids.

Another element you were mentioning, how do you deal with students who are ill-prepared for college. What is college and should there be different types of colleges and are we going down the path of thinking that college is really essentially one kind of experience?

One of the things we became very concerned about is that we are, through a series of unintentional but very powerful forces, coming to a college system increasingly similar in its approach. We prided ourselves on our diversity of colleges.

Senator PELL. This is what you call the "lockstep."

Dr. NEWMAN. Really the section most applicable to that is the section of homogenization.

But going back to lockstep for just a minute, one of the concerns we had in looking at the question of student aid is that in addition to the question of financing students, I think an essential question to ask is: Are our student aid policies or programs encouraging the pattern of college attendance?

A growing trend has been lockstep. That is to say students start in kindergarten and somewhere about 13 years later they get a high school diploma and go on to college whether they are ready or not, and when they graduate go directly on to the graduate program and somewhere some 20 or 22 years later arrive at the point of a Ph. D., now having spent a great deal of their life within the academic walls. This pattern is a growing one.

Mr. Mensel quite rightly pointed out that the community colleges are probably the best at breaking that pattern but I guess we would be prepared to argue that there would be great benefit in trying to create circumstances in which students, instead of going when it was the socially pressured thing right out of high school, went to college when they were able to learn, not simply at one point in their lives, and had an opportunity to come back and continue college when it was the appropriate thing.

For example, one of the fascinating pieces of evidence is the question of how successful returning Peace Corps and GI students have been. I think we have all accepted this as a very important experience in American higher education.

Two interesting sidelines: One, there is no study that we have been able to find that supports that fact. I believe it is true that returning GI students are better students. Every person I have ever talked to believes it. One of the interesting things is we have never studied it.

But assuming it is true, and I think every scrap of evidence encourages it——

GI BILL

Senator PELL. Do you have any statistics as to the percentage of returning GIs who are taking advantage of the cold war GI bill as opposed to after World War II?

Dr. NEWMAN. We may have done it. We did examine that question and we were also interested in the difference in the GI's. There is a considerable difference in those coming back this time as opposed to the previous war.

Senator PELL. In what way?

Dr. NEWMAN. Well, there are a couple of changes.

One is in the World War II situation. The returning GI's largely were students of the social economic class that would have been more likely to go to college. It extended down lower than it had previously but still in today's world with the expansion of college enrollment concepts, those students that went would more likely have gone anyway. Today's GI's are usually another notch down that spectrum.

College deferment means that students who would normally go to college do go and returning GI's tend to be people who didn't intend to go to college.

The second thing is that generally speaking, in the case of World War II returnees, there was an—everybody was in the service. Today that is not so. The concept of going to college wasn't as established as it is today.

So you have a different cut of student. But the principal still holds. By and large everybody feels that the returning GI is a better student and certainly better than he himself would have been had he gone directly from high school.

This is one of the fascinating things we have taken no account of.

Senator PELL. Just to carry that further, when do you think one's learning ability is reached?

Dr. NEWMAN. It varies by the individual.

Senator PELL. Do you have an average individual?

Dr. NEWMAN. I really don't think an average is meaningful in the sense—there is a widely held theory that the highly academic reach a peak of their powers as they go through a Ph. D. program at the age of 23 or 24—I used to have a man who worked for me who had completed his Ph. D. at 23. That is one category.

There are many other students who do not catch fire until 20 or so. Others at age 30 are really ready. Our problem is at the moment that we say the time one should go is 18. Parents insist upon it and——

Senator PELL. It seems that, with the exception of Joseph Conrad—all great creative works have been produced by people usually in their

30's or 20's, and afterward you are just trying to keep up with the standards established.

Dr. NEWMAN. It may not be, though, that creativity in and readiness to learn can easily be equated because most people are not in the Conrad category.

But one of the things is the expansion of the concept of the GI bill. Right now we assume, it seems to me, a very fundamental concept—a student if he serves his country—and serve in this case means serve in the military—that one way to reward him is educational benefit, and this has the advantage of providing useful student aid, of bringing into college students ready to learn, who have had outside experience.

And I would argue it would be very important for us to consider expanding that to other kinds of service.

AVAILABILITY OF STUDENT AID

Senator PELL. You advocate making student aid available over a broader range of time.

Would you have the same kind of aid going to a 19-year-old student as to a 29-year-old student?

Dr. NEWMAN. That deserves some serious consideration and it may be that one—I think we are really just beginning to think about that issue. I think we need to think that through.

We could make some simple adjustments. If a student is on the EOG, he then is locked in and must go 4 years. There are some students that ought to stop at the end of 2 years and come back later. That is a kind of modest change I think to create very useful progress.

Turning from student aid to the question of institutional support, if I can, it seems to me that we are in a period of uncertainty. I think as a result of the studies they were mentioning, the dimensions are more clear of the financial problems.

But I think it is still unclear as to how to best resolve these. I also think there is a very uneven effect of the financial crises. Not only certain categories but certain institutions themselves. For some institutions it is more a period of warning, a sense that things are not good and something should be done.

Not all institutions are in equal trouble but the trend is not very encouraging.

But another category ought to be examined. We were very concerned about the question of whether the institutions of higher education are in fact meeting the needs of society as best one can analyze that. That is a very hard question. I think it is very hard to define that.

But even so I think it is important to ask the question and part of this comes to the question of diversity. You mentioned the problem in dealing with the student who is poorly prepared academically or the problem of the student who is reasonably prepared but does not like academic work.

Many of them are among the most effective people in our society. Some of the most effective people just don't like academic style learning. Many students learn very well by learning by doing. Many learn by teaching. You give them a task to teach and they learn. Many learn by some very task-oriented process but we are increasingly encouraging one style of academic learning.

I think this trend is accelerating if anything and we were very concerned about how can one create a sense of diversity. We discovered a number of institutions around the country that had very different styles of learning and dealt very effectively with the student you described.

It is always remarkable to me—you take a student who does very poorly at psychology, algebra, barely hanging on in school and you explain to him that he is going to be the quarterback and he learns the system of operation, how to think about a complex variable in an extraordinarily difficult situation, and for a couple of reasons.

One, his motivation is very high and we teach him very differently. The coach does not say we are going to have a 3-year course in football, the first course will be fundamentals of strategy, and then brings somebody from the faculty to lecture on this.

He takes him out on the field and says try running it your way and after the fellow gets up off the ground he says now let show you what was wrong. There is some great advantage.

I don't recommend that that is the way we teach everybody but there are alternate styles.

Senator PELL. In other words, the difference between cognitive learning and associative learning.

Dr. NEWMAN. Particularly in the degree of abstractness of it.

Senator PELL. Right. But how one learns football is by associative learning.

Dr. NEWMAN. Right. There is absolutely no reason—there are a number of very successful institutions that work on the assortative style in teaching, not football, but English, for example, and the services have been extraordinarily good using this style of learning. We don't like to think of the Defense Department on campuses these days as excelling in any category that we are in, but, in fact, they often do a superb job in training people to think about problems who are not academically oriented.

So my point is that there ought to be a great many different styles of institutions and, when one thinks about the problem of institutional aid, a question that ought to be asked is, Will this style of aid provide and encourage that diversity?

One of the things that troubles me greatly is it tends to discourage it.

You mentioned earlier the question of competition, and it seems to me that an essential element of encouraging diversity is that element. I think there is every evidence that in fact competition within higher education is an effective force. It can be an effective force not only in creating diversity but in creating change.

A lot of the change that has come about in higher education in the past 10 years or so has come through the mechanism of competition, States wanting to have a better system than the others, public institutions competing with private institutions.

You mention, Senator, grants following students. I think we came to the conclusion that this is a very beneficial way of thinking about institutional support.

INSTITUTIONAL AID—METHOD

Senator PELL. You rather like the idea of the institional aid following the student?

Dr. NEWMAN. Absolutely. And I disagree entirely with the point that this is not effective. The National Science Foundation provided this kind of mechanism. And even though the cost of education in the field was way, way beyond the grant, the fact that that student carried about $1,000 provided a very strong incentive and in fact the institutions did compete for that student.

But it seems to me that what we want is all sorts of different prestiges. Not one but many. One might deal with training people who are not very skilled, one in training people in a professional career sense. There ought to be many different ways.

I think the kind of grant you are talking about, if it goes to the institution as a piece of money following a student, can be very effective.

There are other categories one could identify. Here is a GI student that we would like to see go back to college. And if the grant also goes with that student it seems to me there would be a great deal more tendency to recruit those students and adjust the curriculum to be effective for those students.

So at any rate—incidentally, one can think of other kinds of students. There is a great deal to be said for thinking in terms of a broader set of problems, at least a couple of which are how can a pattern be established that encourages a student to go to college and stay out when he is not ready. How can we encourage diversity and change and differences in institutions?

S. 659

Senator PELL. Then in broad outline, you would support the concepts of S. 659, the bill that the subcommittee is reviewing at this time.

Dr. NEWMAN. I have one difference with it and I think the principal strikes me as very appropriate. One difficulty with it is it makes essentially a payment or a fee or an amount of money cover the combined subject of institutional support and student support, and I think there is a great advantage in separating those.

One of the difficulties is that first there is no incentive to an institution that has tuition higher than that amount and yet if one merely——

Senator PELL. I must add here that the present amendment calls for a flat thousand dollars to the institution going with any student getting the basic education opportunity grant, period.

Dr. NEWMAN. I wasn't aware of that. That, seems to me, is an excellent way of going.

And I think you would find a very real incentive on the part of those institutions. I come from an institution not known for its low budgets but we are reducing our budgets and I think one of the things

to be said in our favor which I am very proud of is that we have been early in seeing the financial crisis in the determined effort of reducing our own budget.

But what I mean is our tuition is not low. Since I paid it many years myself I can testify personally. Our Governor believes that taxes and tuition should hurt and they do hurt.

But in spite of that when we see a student who brings to the institution a thousand dollars, after all that student is going to have to find himself somehow. He is going to have to. But that thousand dollars comes to us. We are very interested in that thousand dollars.

I have been to many, many community colleges in recent years and I am sure that community colleges—seeing a student coming in who carries with him a thousand dollars along with a student who carries nothing, there is a very strong incentive——

Senator PELL. The competition would also raise an important point: Are we serving that student's needs? The difficulty of the per capita formula is that the student's needs and the society's needs are essentially ignored as long as one can fill up the place with bodies.

However, for example, in the graduate field, where we have provided most of the money on an institutional basis and then allowed the institutions to give out the money, we have had a steady, very sharp growth in graduate education. The growth in graduate education has tended to be growth that is most comfortable for the institutions themselves, rather than most desirable for society.

There is now a great deal of furor over oversupply of Ph. D. candidates. But long ago it was apparent in certain fields the number of Ph. D.'s being turned out was in excessive demand anyway.

UNIFORM MANAGEMENT PRACTICES

Senator PELL. I read your report very carefully and one of the things that struck me was your section on cost accounting, and we are working on an amendment to try to bring about some form of uniform management practices in higher education. So that we will know what the cost effectiveness is, what the cost of a course is, the effectiveness of an individual professor.

But as you can see there can be certain objections. What is your thought?

Dr. NEWMAN. I think that deserves very careful attention because there is a danger here. There are several groups working on it. WICHE, which is a Western States' consortium, has a determined effort and I think they will do some very good things but they face a problem.

The real benefits from this are going to come when we make it an intellectual problem that the faculty member recognizes there is not one standardized way of teaching. Some are more effective and cost somewhat more, some are equally effective but cost less.

One of the difficulties is that he will see cost effectiveness as something that those fellows off in the comptroller's office are struggling with. Until we make it an intellectual problem in the classroom that education can be measured even crudely, but effectively when it is doing more with less resources, that is what we have got to get to and one has to be careful that in writing such an amendment we don't drive the professor further way.

It is a real challenge.

Senator PELL. It is. We don't necessarily follow the most cost effective method of choosing food or entertainment. But by the same token we do crank it into our mind as we make our decisions.

Dr. NEWMAN. I was in England last fall. I had some other things to do, but I also wanted to do some research, and I had the chance to visit a number of friends from Minnesota who were involved in this marvelous debate about the expansion of the enrollments was forcing them away from their traditional teaching method of tutoring.

But at any rate the conversation turned to this question of couldn't one find better methods. So I said why don't you consider instead of going to seminars—they have TA's—why don't you have your TA's run large lectures and keep the faculty solely devoted to the question of tutoring.

And in the process of that they tried to then respond to that, as to what was wrong with that, and they kept coming back to me with they couldn't do that, and finally the response was: Mr. Newman, I just have to put it in these terms, we could not do that in an English university. And it is that absolute refusal which keeps us in prison.

Senator PELL. I am delighted that you were able to be here today for the report is a very sound one indeed.

I understand in general you would support S. 659 in preference to the other alternatives.

Dr. NEWMAN. Strongly.

Senator PELL. I am delighted to hear that and in view of the fact that your report comes out under the Department of Health, Education, and Welfare, I wish you would try to make your views known to them as well. [Laughter.]

Dr. NEWMAN. Thank you, sir.

Senator PELL. We will now receive a statement for the record from the Senator from Florida, Mr. Lawton Chiles, who has a great interest in this subject.

STATEMENT OF HON. LAWTON CHILES, A U.S. SENATOR FROM THE STATE OF FLORIDA

Mr. CHILES. Back in 1787, our country made a commitment to education with the Northwest Ordinance. To fulfill that commitment requires new ideas and dedication to the difficult job. We need to remove existing financial barriers to attendance; we need to increase the resources flowing into higher education; but at the same time we must maintain the uniqueness and diversity and autonomy of the individual institutions.

It would be too much, I am sure, to expect State and local governments to provide necessary funds to do the job. Even if it could be done at those levels, the major source of funds would probably be increased sales and property taxes, and this would hit another lick at low- to moderate-income families.

Recognition of the benefits of increased education should compel us at the Federal level to provide the needed funds and resources for higher education because the States and localities by themselves cannot subsidize education at a desirable rate and because the methods they will most likely choose will not be the best one from the point of

view of insuring the equality of opportunity and preserving the diversity of a partially private system.

Helping students finance their education through loans has been a practice of the Federal Government for a number of years. Presently, the most significant loan program is the federally insured student loans of the Office of Education in the Department of HEW.

This is an interesting program because it involves the cooperation of American business with the Federal and State governments. The loans are obtained directly from a bank or other commercial lenders. The loan is guaranteed by a State or private nonprofit agency or is insured by the Federal Government; this protects the lender against loss by death or default of the borrower; second, the Federal Government assists some students with interest payments on their loan. Regulations governing the program vary from State to State but follow Federal guidelines.

Since 1966, when the program began, the number of loans has increased from 48,495 to 879,308 in the first 9 months of this fiscal year. The amount in loans has grown from $77 million to $863 million at a cumulative cost of around $225 million for the 5 years of operation. This includes the special incentive allowance made to lenders. Seventy-one percent of these loans have gone to students with adjusted incomes of less than $9,000 and 45.3 percent to those with less than $6,000. Sixty percent of all the students are between 21 and 28 years old and 34 percent are between 18 and 20 years old. In the fiscal year 1970, 921,325 students received aid totalling $840 million which costs the taxpayers less than $74 million. The three other major programs—NDEA loans, college work study and education opportunity grants provided aid to 1,121,000 a cost of $512 million. It is obvious that for each dollar expended there appears to be more aid generated by the federally insured loan program than practically all three other programs combined.

In the next 10 years the growth in the total higher education student population will be around 8 million with most of these students coming from low-income families. The need for available resources is growing dynamically and the $3 billion that we have loaned out will seem trivial.

At the same time, banks and private lending institutions are becoming increasingly cautious about lending out more money.

The reason for this can be seen in the nature of the loan itself and in the failure to provide for a secondary market for the lending institutions. The loans can amount to $7,500 and it might be 5 to 10 years before payments begin on the principle and 15 to 20 years before they are paid off. The thin profit and long-term nonliquidity nature of these loans often prevent the lenders from even providing funds for their own customers.

Then, too, when a few banks in an area fail to participate in the program, their nonparticipation puts an increased burden upon other banks to service the needs of their own customers as well as the nonparticipating banks. In this way many banks have become overloaded with loans and loan requests before they have been able to take care of their customers.

In the biggest county in Florida, before this past March, only 12 out out of 67 banks participate in the program and the few that do cannot meet the overflowing demand.

This kind of program has done an initially effective job with limited program resources. It has grown amazingly in an extremely difficult economy. What it has been able to do in the past is only an indication of what it can do in the future.

Considering the nature of our society, its divergencies of resources, needs, desires and capabilities, any program that will provide aid to our students will of necessity have to be extremely flexible. Without the flexibility to change as the economy changes and the needs of the students change, any program of aid will become highly structured and thereby result in aid being available to a limited number of students who fulfill certain requirements or to students who were just lucky enough to get some money before it ran out.

By adding to the capabilities of the present student loan programs, namely the federally insured loans, we can manage the problem of getting money to the great many students who need it by using our present free enterprise structure of banks, savings and loan institutions and other private lending agencies without an overwhelming dependence on a Federal bureaucratic structure.

By providing a release valve for the lenders it will be possible to encourage many of the more hesitant institutions that have not cooperated in the past to join in the enterprise of seeing to it that the future of our country is in the hands of a more highly educated citizenry.

Senator Pell, last summer I spent a lot of time talking with people around my home State of Florida. I talked with a lot of college students who were in a bind over finding enough money to pay their next year's expenses. They talked about federally insured loans and about how difficult it was to obtain one even though they had heard that this was the only program available to them in the State. Practically every single student I talked with was either putting himself through school or with a little help from his family was picking up the largest portion of his expenses.

Today, the expense of continuing one's education seems to be getting out of the reach of even solid middle-income families and it is doubtful that these costs will decrease at any time in the near future. What's more, summer jobs and opportunities to earn next year's expense money are becoming scarcer, in fact I'm reading more everyday where even graduates are having the most difficult time finding employment than any recent graduating class has faced. Yet, we simply can't stop students from continuing their education by closing off sources of financial assistance, the societal costs we would have to pay later would be too great.

The problem as I see it boils down to the fact that given the present costs of education, minority and disadvantaged students are going to need massive financial assistance, most likely in the form of direct grants but the students from low- and middle-income families that don't qualify as disadvantaged need financial assistance as well. In Florida, this particular group is sizable, as I am sure it is in many States.

The guaranteed student loan program has served those students well who have managed to participate in it. To overlook providing any form of financial assistance to this group of students and parents would only enhance the idea present in the minds of many that higher education is only for the very well-off or the very poor. Obviously, trying to finance the needs of this lower to middle income group directly from

Federal sources would quickly drain tremendous amounts of money that are needed for other services, while at the same time not involving the student or any other sector of the society and economy in the effort of securing increased financial assistance to students.

The guaranteed student loan program and the federally insured loans provide the means to get the needed assistance to that group of students who need them, students from low- to middle-income families. They also involve the student in assuming a greater part of the responsibility of paying for his education at a time when young people are making tremendous strides in all fronts in assuming the mantle of responsibility and leadership. Furthermore, the resources that would be used for providing the funds to students would come from the commercial banking and lending community. But in order to encourage and assist the financial community, it is most important that the loans and the servicing structure be developed so as to minimize the problems that arise out of the nature of loans to students who are continuing their education. Many banks and lending institutions have been hesitant to participate or to continue their participation because the loans can amount to $7,500 and it can be 5 to 7 years before the payments begin on the principle and 15 to 20 years before the loan is paid off. The thin profit and long term nonliquidity aspect of these loans often make bankers and lenders hesitate in even providing funds for even their own customers. As the program has been in operation now for 5 years many banks, savings and loans, and credit unions, etc. have built up their student loan paper to the point where it has become impractical from an operating standpoint to continue making these loans especially when the Federal Government seems to be so undecided as to the direction it will take in providing financial assistance to students.

If the Guaranteed Student Loan Program is to be continued, and I believe it should, its effectiveness at this time will to a great extent be determined by the presence or absence or a secondary marketing facility with an adequate warehousing feature.

Since taking office in January, I have been deeply involved in this entire situation. As an example, in the biggest county in Florida, only 12 out of 67 banks were participating in the program as of last March. I have visited that county several times and have picked up commitments from many of the bankers that they will begin participating in the program. Already, they are being deluged with applications. I have also sought the cooperation of the banking and lending communities throughout the State. The response of these activities is reflected in some of the correspondence that I am providing with this statement.

In conclusion, let me say that last year I found there was a workhorse element in our society who among other things would like to see his children continue their education, but because he doesn't qualify as disadvantaged he can't obtain grants for his children's education yet he can't afford the high costs at even State institutions, his children have a hard time finding summer jobs, and the avenue to obtain a loan through the banks, savings and loan, and credit union, where he does business is blocked because the 5-year-old program has built up a long-jam of nonliquid paper which the institutions can't move so that they might be able to supply a continuing resource of funds. Because of all this and much more, he is frustrated and his children are frustrated. In one small but significant way the Congress of the United States can help. The purpose of S. 1755 and S.1756 is just that, to help.

CHIEF COUNSEL AND STAFF DIRECTOR

United States Senate
COMMITTEE ON
GOVERNMENT OPERATIONS
WASHINGTON, D.C. 20510

May 24, 1971

Honorable Claiborne Pell
Chairman
Subcommittee on Education
Senate Labor and Public Welfare Committee
Washington, D. C.

Dear Senator Pell:

In order to facilitate the deliberation on the two bills I have introduced, S. 1755 and S. 1756, which were referred to your Subcommittee, I would like to provide the following explanation of each piece of legislation.

S. 1755 establishes a Secondary Student Loan Marketing facility that is designed to assist the proven effectiveness of the Guaranteed Student Loan program in helping students finance their continued education after high school.

The Guaranteed Student Loan Program is designed to utilize private capital for student financial assistance. Unlike other government sponsored programs, private lender participation is voluntary and discretion in making loans is left to individual banks, savings and loan associations, credit unions, etc. However, the requirements of long periods of deferred repayment, modest yields, and overall program complexities have made these loans unattractive to lenders--thus loan accessibility has suffered. To insure adequate participation, lenders must be given a "break-even" rate of return and relief from liquidity problems caused by these long-term loans. While the rate has been generally improved through the Special Allowance, the liquidity problems have reached a critical stage. The solution I have proposed is a secondary market which includes a warehousing mechanism.

The secondary market for many types of obligations purchased by commerical banks, savings and loan institutions, and other types of lenders, is an established means of replenishing their cash resources, and their reserves. For example, the banks are the largest purchasers of new issues of U. S. Government bond issues. They are able to function as a ready source of funds for the Government because the secondary market for government bonds operates so smoothly, often disposing of billions of dollars in bonds in a week. Likewise, new municipal and corporate issues are readily sold to the banks during normal money periods in the market for the banks know that these obligations can be disposed

of in a regularly functioning secondary market. In the mortgage market, FNMA has for years provided a secondary market for government insured mortgages by purchasing them in a market that reprices the insured mortgage in accordance with ever-changing money market conditions.

A critical problem in the field of student loan financing is finding an established and consistent means of financing a group of lenders who will make student loans. A secondary market for student insured notes is necessary for banks, savings and loan associations, and other institutions which need to sell or warehouse their notes to obtain liquidity. Lenders are always under pressure to meet the various other banking needs in their localities, and to have funds available for further investments in student loans.

Consistent availability of lender sources will be a definite result of the secondary market to be provided by legislation I have introduced. In doing so, the secondary market operation of the association will render a great service to the lending institutions who make insured loans, and to the economy in general, by smoothing out the peaks and valleys of capacity to make student loans among lenders throughout the economic system.

The proposed Secondary Student Loan Market must be a constant mechanism that would provide stability to the supply of insured student loans. Lenders need to know that there is a constant purchaser of insured student notes with sufficient funds at its disposal. When money is plentiful, and the banks are overloaded with funds for investment for long periods, it is probably that little supplementary financing will be required of the association. But even in such a period, the association will need to be ready at all times to provide the services which it is capable of providing, i. e., the purchase and sale and warehousing of insured student loans, and the issuance of standby commitments to lenders.

The FNMA secondary marketing principles can be readily applied to federally insured student notes. In its operations, FNMA has used commitments, which are of a type commonly referred to in secondary markets as standby commitments. These commitments have not been used for regular immediate purchase of loans. Holders of the commitments pay a fee for a standby commitment from FNMA to purchase later.

In addition, FNMA makes direct purchases of loans under its secondary market operations. FNMA purchases loans in its secondary market operations

within a range of market prices for the particular class of mortgage involved. All mortgage purchases under its normal secondary market procedures are either insured by the government, guaranteed by Veterans Administration, or otherwise backed by the Federal Government.

In creating a secondary market for any type of obligation, the object is to create a market place for the obligation, where the obligation in small units or perhaps, only in sizeable blocks, can be sold by original, or by secondary holders.

In the case of student notes, blocks of such notes aggregating $10,000, $25,000, $50,000, and other amounts, could be brought to a central point and sold for cash to a central institution, i.e., the association. The selling price might be at a pre-determined price by the Secondary Market Association or it might be an auction market price at an auction market held in the offices of the Association.

Warehousing on the other hand, would involve, as the term implies, depositing blocks of the student notes in a warehouse - i.e., a bank or depository, against cash advances by the bank (i.e., by the Secondary Student Loan Market Association) at the rate of $.80 on the dollar, or $80,000 on $100,000 of student loan notes. The notes would remain with the lenders, but would be put up as security for the advance of cash, (i.e., warehoused).

A secondary financing activity such as I have proposed is designed as I have stated to ride out the peaks and valleys in the market. Under variable market conditions or a softening in the market as opposed to tight money and high interest rates, the opportunity for the sale of paper held by marketing facilities should be excellent. As interest rates declined and sufficient money becomes available, guaranteed student loans could become attractive to an investor or servicer.

Perhaps one of the most significant considerations should be the fact that many lenders who are not currently participating in the Guaranteed Student Loan Program would participate if they knew a secondary facility was available. If at some future point in time they faced a liquidity crisis, they could obtain relief through either sale or warehousing of their paper. Many lenders, I am sure would not use the secondary facility but the mere knowledge that it was available if a crisis developed, would provide adequate incentive for their participation.

The warehousing aspect of the secondary marketing activity is essentially designed to provide for the temporary relief of a lender's liquidity problem. The purchase and/or sale of insured paper provides a more meaningful solution and permits the negotiated movement of paper in accordance with prevailing market conditions.

Warehousing only postpones a lender's liquidity crisis. The time will arise when the lender must either withdraw the paper from the warehouse and repay the amount borrowed or he must make additional loans and substitute the new notes for those which have matured to the point where repayment commences. Under these conditions and without the ability to negotiate and sell paper, his liquidity problem is compounded. The purchase and sale of paper by the secondary market would be on the basis of prevailing market condition, i.e., par, premium, or discount. The rise and fall of the market would dictate the basis for the negotiations and provide earnings to the secondary facility assuring its existence on a self-sustaining basis.

The two activities should operate in tandem. For example, when a lender is experiencing liquidity difficulty and the market would dictate that the price to be paid for paper is 97, or a 3 point discount, the lender could very well decide that he would not sell at that price but would warehouse his paper for perhaps a 6 month period in anticipation of a better market. At that time, the lender could very well withdraw his paper from the warehouse and negotiate its sale if the market had improved to his satisfaction.

S. 1756 is designed to improve the present laws providing for the Guaranteed Student Loan Program and the Federally Insured Loans.

The following is a delineation of what each amendment would accomplish.

1. Section 2(a) authorizes extension of the Federal Insured Student Loan Program for five years through June 30, 1976.

2. Section 2(b) provides that students who obtain loans prior to June 30, 1976 may obtain additional loans until they complete their education, but in no event later than June 30, 1980.

3. Section 3(a) continues the present maximum loan per academic year at $1,500, but provides that, according to regulations of the Commissioner of Education, the annual loan amount may be increased to $2,500 if the student has been accepted for enrollment or is attending an eligible institution and taking a course of study for which the educational costs are unusually high.

4. Section 3(b)(1) provides that the Commissioner will insure interest on a loan as well as principal. This will encourage lenders to make loans more liberally, as they will not have to incur any loss if a student defaults. It will also enable additional lenders to participate, since some lenders by law

may invest only in obligations which are insured 100 percent as to principal and interest.

5. Section 3(b)(2) provides that loans insured by the Commissioner will be backed by the full faith and credit of the United States Government. This will provide lenders greater assurance that their investment in student loans is sound and that they will be reimbursed in the event of default, even though the amount of insurance premiums collected might not be sufficient to pay all claims. In addition, this should provide greater assurances to the investors in obligations of a secondary market, thus reducing the cost on its obligations.

6. Section 4 amends the program of Federal loan insurance to remove the minimum 5 year repayment period and the minimum 9 month grace period prior to commencement of repayment. Under present law, the legal obligation signed by the student borrower must be written for not less than a period of 5 years commencing not earlier than 9 months, even though the borrower may wish to commence repayment sooner and to repay the loan over a period of less than five years. This amendment provides greater flexibility and will permit the lender and the student to work out mutally agreeable repayment provisions. In addition, any reduction in the length of the grace period as may be mutually agreed to will result in savings in interest benefit payments by the government.

7. Section 5(a) provides for a 5 year extension of the authority of the Commissioner of Education to pay interest subsidy and further provides that at the end of such extension, students who obtained prior loans may continue to obtain loans with interest benefits in order to complete their education but in no event later than June 30, 1980.

8. Section 5(b) provides for the elimination of the 5 year minimum repayment period and the 9 month minimum grace period under the State and private guarantee agency programs similar to the Federal Insured Student Loan Program.

9. Section 5(c) requires lenders making loans under State and private non-profit guarantee agency programs to provide interest subsidy to students on the same basis as provided for under the Federal Insured Student Loan Program. This corrects a legislative deficiency in the original law which was provided under Federal loan insurance in Section 427 (a)(2)(E) of the original Act.

10. Section 6 increases the insurance premium for federally in-

sured loans from one quarter of one percent to one-half of one percent per annum. This will make the program of Federal loan insurance consistent with the State and private non-profit guarantee agency programs. In addition, the increase to one-half of one percent should provide sufficient income to enable the Federal Insured Student Loan Program to be maintained on a self-sustaining basis.

11. Section 7 amends Section 434 of the Act to eliminate the 15 percent restriction for participation in the student loan program by federally chartered credit unions. Many credit unions have reached this limitation and are currently prohibited from making further loans, even though they have the assets and the desire to do so. In addition, it appears inappropriate for this legislation to regulate otherwise federally regulated lending institutions. There are no restrictions in this Act placed on federally chartered banks or savings and loan associations. If such restrictions are essential, it would appear more appropriate for this to be imposed by the Federal Credit Union Administration and other Federal regulatory agencies.

12. Section 9 amends the Act to provide authority to the Commissioner of Education to withdraw the eligibility of any educational institution for purposes of the Guaranteed Student Loan Program if the Commissioner determines that the educational institution is acting in a manner counter to the purposes and best interests of the program. Under present law, there are numerous ways in which an educational institution can become an "eligible institution." However, there is no provision of present law to enable the Commissioner to suspend or terminate the institution's eligibility.

13. Section 10 amends the Emergency Insured Student Loan Act of 1969 by extending the authorization to pay the special allowance for an additional 5 years through June 30, 1976.

14. Section 11 amends the Truth-in-Lending Law to exempt guaranteed student loans and National Defense Student Loans from the disclosure requirements. The major requirement (finance charge, number and amount of monthly payments, total of payments, annual percentage rate) cannot be disclosed until such time as the student graduates fromcollege and commences repayment. Thus, one of the original purposes of Truth-in-Lending (to inform borrowers prior to the loan) cannot be met. These

are the only two programs mentioned by name in Regulation Z. Both the footnotes and formal interpretations by the Federal Reserve Board have caused much confusion. Some lenders have withdrawn from the program due to the extra paperwork related to tieing truth in lending to student loans. As all terms of the loans are established by Federal law and included in the notes, there is no useful purpose served by requiring student loans to comply with this law.

I hope that this explanation will prove helpful to your committee in its consideration of these two bills. If you would like any further explanation, please do not hesitate to let me know.

Most sincerely,

LAWTON CHILES

Senator Lawton Chiles
Senate Office Building
Washington, D.C.

Honorable Chiles:

It is my understanding that legislation is presently being considered to change the present laws concerning Federally Insured Educational Loans. As a law student at the University of Florida and one in need of financing, I attempted to obtain one of these loans. I applied at eight banks and two saving and loan associations. None of the banks I contacted were offering loans and those that had given loans were not then extending any more.

It is my understanding from one of the loan officials that when a bank gives these loans they first give them to old customers (one said that they had a requirement of 2 years in the city and a patron of their bank). However, in my fathers bank in which he has considerable money being held subsequent from his retirement, they would not consider my application.

I have talked to at least 25 people that have applied for these loans and not one has recieved any assistance. It appears that for the most part the loans are a fiction. It appears that the banks have to loan their own money, and these loans are at low interest rates, beginning after graduation. They are not anxious to loan under these terms.

I hope that something comes as a break to us students. Perhaps- this is a very unprofessional opinion- but a thought- that the government loan the money through the banks- or some such arrangement.

Thank you for your interest in this matter.

Sincerely,

Robert W. Spence
Democrats

Sen. Lawton Chiles
Old Senate Office Building
Washington, D.C.

Dear Sen. Chiles:

Today, as I was glancing at The Florida Alligator, the student newspaper at the University of Florida, I came across an article which was urging students to write their Congressmen and Senators, concerning the bills dealing with federally insured loans. Since I have been turned down for what I felt was an unfair reason, I decided that I would exercise my rights through writing this letter.

I am presently a second quarter freshman at the University of Florida. I have a $1,000.00 National Defense Loan and a $450.00 Florida Regents Scholarship. I live at 2101 Northeast Fifty-first Street in Fort Lauderdale. I graduated fifteenth out of a class of six hundred from Northeast High School in the same city.

Last March I applied for a federally insured loan at Guaranty National Bank in Fort Lauderdale and was promptly turned down because my parents had filed bankruptcy five years ago due to an investment in a travel agency. Feeling that this was an inequitable decision, I wrote a letter to Presidnet Nixon, stating my feelings that a politician's rhetoric was of no use to a student who was unable to afford a college education. I waited several months and had just about given up any hope of obtaining a reply when I received a telephone call from a Mrs. Mallory in the Department of Health, Education, and Welfare. She asked me if I would like her to call Mr. James Turner, financial aid director at the University of Florida, to see whether the school would increase my National Defense Loan from $750.00 to $1,000.00. I told her that I would appreciate it very much. She did

this, so when I arrived at the University, I talked with my financial aid counselor, Mr. William Wall and my loan was increased the $250.00.

Mrs. Mallory also suggested that I try once more to obtain a federally insured loan, which I did in November. However, when I spoke with Mr. J. Ronald Fisher of Guaranty National Bank, he was extremely smug. He informed me that what the government said they guaranteed was one thing and what they really guaranteed was another. My father also reminded him that once I graduated, I would be twenty-two years of age; therefore, my parents would have no legal responsibility for repayment of the loan. He merely replied that my intentions to complete college may be excellent now, but what about next year.

I am in desperate need of this added assistance, as a year ago my father broke his ankle on a construction job and was out of work for eight weeks. During this eight weeks, he was receiving the paltry sum of $49.00 per week from Workman's Compensation. In addition, this past June, due to the state of the economy, he was laid off his construction job with the idea that in September he would return to it. However, as of yet, he has not returned to it and has therefore been forced to take a job as maintenance man for a condominium, receiving a salary of $76.00 a week.

Next year the Board of Regents are planning to raise tuition anywhere from $15.00 to $45.00 per quarter. I also have a brother who will be entering college a year from this September. With all of these things taken into consideration, it will be increasingly more difficult for my parents to assist me in obtaining my education.

Consequently, I urge you to do everything in your power to aid the college student in his plight. As Ely Chinoy states in his book, Sociological Perspective, "...it is simpler to make political speeches lauding America as a land of opportunity than to try to assess how much opportunity exists, for whom it exists, and whether it is increasing or decreasing."

Thank you for your time and any help which you may be able to give.

Sincerely,
Yvonne Rauch

March 19, 1971

Senator Lawton Childes
Washington, D. C.

Dear Senator Childes:

I know this is just one of your minor problems but to us teenagers of today it is a great major catastrophe.

The general public probably can not see the need of additional space exploration. What they do not see is that since is did get a start and families got a foothold in job security it then not only served as scientific progress but a help to the economy as well. Now that many thousands have been laid off at Cape Kennedy, many hate to distrupt their families and move if a job could be found elsewhere, but are hanging around town taking odd jobs, hoping for additional space contracts and a return to their Cape jobs. So consequently many of the wives have gone back to work to help keep food on the table. So who wants to hire an unexperienced teenager when they have all these desperate unemployed experienced people. I myself am getting very discouraged trying to find a summer job to put myself through college but don't intend to get into trouble while roaming the streets looking for work. But I can see that it definitely isn't any help to Juvenile Delinquency at all.

My father is lucky enough to have a job although his take home pay is only $63 a week for a family of four. His is a very responsible job guarding all the secrets to the Missile program and after the Assistant Security Manager was laid off he assumed parts of his job too. But the pay is so low that my mother went to work at our school cafeteria. But still their combined salaries for 1970 were only $4500 - not much over Relief or County Welfare payments.

I want very much to become a teacher and am maintaining a near straight A average and was tapped for National Honor Society, but hopes seem so slim.

I admire your technique of getting directly to the public by your walking campaigns. Us little guys appreciate it rather than these $100 a plate dinners that we couldn't afford anyway. Keep up the good work and keep plugging for Cape Kennedy and the space program.

Sincerely yours,

Diana Peeples

Dear Senator,

I am writing this letter because I feel perhaps you may be able to do something for me. I am the father of four girls, one of which is in her third year at the University of Florida. My other daughter is graduating from high school this June and is in the top 10% of her class. She would also like to attend the university but I find it financially impossible to send her. I have been trying to get a student loan through various lending institutions in Miami but none are available. I would appreciate a reply from you as to what can be done pertaining to this situation.

Sincerely yours,
Sam Lager

Sen. Lawton Chiles
Senate Office Building
Washington D.C.

Dear Sen. Chiles,

I have heard of the Federal Student Loan Program for college. My father has checked with several banks and was not able to find a Miami bank that loans money on this program. Could you tell me which bank, in the Greater Miami Area, to place an application. It's a fine that there is such a program set up, but what good is it if local banks will not help??
So, I ask you, what should we do?

I thank you for your time and effort.

Sincerly,
Philip R. Brown

NEWS OF THE
SOUTHEAST
Empire
The Atlanta Journal and CONSTITUTION
2-D SUNDAY, MARCH 14, 1971

FLORIDA

Even with New York City's nearly 50 per cent hike in taxi fares, Miami's are still the highest in the nation. A $2 ride in NYC costs $2.30 in Miami . . . Three firms involved in a Tampa Bay oil spill paid the state $150,000. The state originally sought $10 million in damages . . . Former Gov. Haydon Burns failed to even carry his home precinct in his losing bid for a return to politics as mayor of Jacksonville, a job he held for 16 years before becoming governor . . . Florida's new junior U.S. senator, Lawton Chiles, has a promise of 10 million for student loan programs from Greater Miami bankers and savings and loan associations. The program had been lagging badly in Dade County and throughout Florida . . . The Florida Turnpike is going to experiment with artificial turf on its median strips. Officials say they can't hire sufficient employes any more to mow grass along the turnpike . . . Land has been cleared and site improvements are being made for Dade County's first modular public housing, 328 prefab townhouses at three sites . . . Miami Public Defender Phillip Hubbart is using teams of law students from the University of Miami to look for "lost cases" — prisoners who may have been behind bars for weeks or months because paperwork is going undone somewhere in the judicial process . . . Elwyn K. Thomas, who served on the Florida Supreme Court for 22 years, died at the age of 76. . . . U.S. Sen. Adlai Stevenson III, in Miami for a series of appearances, criticized President Nixon for making "incompetent and mediocre" high level appointments. He described George Bush's elevation to the United Nations as "an insult" to the world organization.

I am a graduate of Bucknell University in Lewisburg, Pennsylvania. I am now attending Emory University School of Medicine in Atlanta, Georgia. I am married and have one child and at the present time money is hard to come by since my wife only works parttime and I can not work till this summer.

Could you also tell me where to write for my loan application so that I may get the ball rolling as soon as possible?

Thank you for showing concern about the student loan program and thanks for any help you can offer me.

Sincerely yours,
William J. DeVaul

March 16, 1971

Dear Senator Chiles,

This is the first occasion I have to write you and I want to tell you that it was very exciting to see you elected to the Senate. In the beginning I thought it looked as though it would be impossible for someone as young and foresighted and truly concerned about people as you are, to ever be elected by Floridians. I am happy to say that I was so concerned about your running that I registered on the last day of registration and when I voted for you in September it was the first time I ever voted at all. I also voted for you in both runoffs by absentee ballot since I am a Floridian away at school. There was a lot of personal satisfaction for me to see someone ~~with~~ win who had the support of the little guy and the often disenchanted people who are written off by most politicians as unimportant.

If you have a newsletter for constituents could you put me on your mailing list? I am anxious to follow your performance while I am away at school and at present the only news I get about what's happening is the little column that I've enclosed. It appears in the Sunday Atlanta Journal

and Constitution.

I am very pleased to read that Miami bankers and loan officials are finally becoming Concerned ~~in~~ about something other than big business and condominiums. Education is an investment in the future and I've been repeatedly turned away by banks and savings and loan associations because I could give them no immediate return. My father's bank would only offer us educational support on an installment basis but if we could have afforded an installment loan we would not have been applying for educational assistance. What we needed was a long term loan ~~tht~~ that was payable when I finally became a wage earner. My father banks with one of the biggest bank - I think First National Bank of Florida (or of Miami) - the only thing I can remember is that their symbol is the sun.

Anyway, could you send me a list of the banks and savings institutions which have promised $10 million in loans. I wish to test ~~there~~ their promise since I am in desperate need of funds to continue my education and I'm a little bit suspicious of this sudden change of heart.

Dear Senator Chiles:

I should like to express my sincere gratitude for actively supporting more loans for students from South Florida banks. You certainly did a wonderful job persuading the bankers to pledge ten million dollars when they had only been loaning one hundred and fifty thousand.

As a recent Duke U. grad who wishes to attend Law School at your alma mater, U. Fla., this greater availability of loans will be a great help for me. I won't forget your efforts six years from now.

Please continue the good work.

Sincerely,
Charles McL Hadley III

Debbie Jacobson
740 Majorca Avenue
Coral Gables, Florida 33134

Senator Lawton Chiles
House of Representatives
Washington, D.C.

Dear Senator Chiles:

I sincerely appreciate your concern and interest in the financial needs of the students. I am one of these students and I am writing to you in hopes that you will inform me on how I may receive a loan for college. I am presently attending Miami Dade Junior College, South Campus. In the fall I plan to go to University of Florida. My major is special education . My ultimate goal is to teach mentally retarded children. Right now there are 5.4 million mentally retarded children in the U.S. and the level will never decrease but steadily rise. They don't have proper teaching and sanitary facilities let alone willing and helpful people.

As it stands now, Miami Dade doesn't have enough funds to grant me a loan. They didn't have enough for me last summer and probably hundreds of other students. My father is a DAV. He hasn't worked since April due to the fact that he was in the hospital and our income isn't enough to put me through four years of college plus the additional time to get a masters degree. Also, I have gone to a few banks and they claim they don't have enough money. Truthfully speaking, I can't conceive of a bank not having money.

Again I must say, I want to dedicate myself to these children. I have been to different institutions and I have enough experience to know that drastic changes must be made or at least attempted. I am in a dilemma and don't know where to go from here. I would more than appreciate your help in any way possible.

Sincerely,

Debbie Jacobson

Debbie Jacobson

Honorable Senator Chiles:
A few months ago I wrote you about how difficult it was to try and get a student loan for my daughter. I told you that I have one child who is in the junior year at the University of Fla., and another child who is preparing to go this fall. You wrote me giving a list of banks that you said were participating in these loans, I have called these banks for the past two months, and none of them have given me any definate information. The City National Bank says that they will probably go into it but don't know when, they also said, if they do go into it, it will probably be for only their customers. The

60-433 O - 71 - pt. 5 - 21

First National Bank of Miami, as of today still hasn't gone into it. They said their waiting for Atlanta to clear up some details. The other banks have similar excuses, meanwhile time is running out and I would like to know what I should do. I have four daughters who are very eager to go to college. What do you tell a child that wants to go to college? I would like to hear from you as soon as possible.

Sincerely yours
Samuel Sager

Dear Senator Chiles:

I wish to commend you in your efforts to expand the government's program of guaranteed loans for college students.

When my husband & I went to speak to our local bank (where we have been depositors since 1933) regarding a student loan for our granddaughter, whom we are putting through college - even though she was born on Miami Beach & is an honor student - we were laughed at. They refuse to grant any student loans.

We are praying all your efforts - & trust ~~that~~ this one will produce concrete results soon -

Sincerely -
(Mrs. Max) Rae F. Dobrin

Donald R. Fox

Miami, Florida 33134

Hon. Lawton Chiles
Senate Office Bldg. (Florida)
Washington, D. C. 20510

Dear Senator Chiles:

In reading the May 6th Miami Herald I noticed an article whereby you are introducing two bills, one to raise the loan limit for college students, the other to achieve a secondary market for loans that will make them more appealing to loan institutes.

I am most interested in this, as I have one son who is now attending the University of Florida. We tried to obtain a student loan from banks in Dade County and could not find a single bank w hich said they participated in this program. I even called the local Health, Education and Welfare Board, but they told me they could not give me any information as to which bank did or did not participate in student loans.

Would it be at all possible for you to give me the names of some of the banks in Dade County that participate in this program? It is most urgent that we have financial assistance in this matter.

I know you are one who has the people's interest at heart and so do not feel that this letter is just a waste of time. I pray that you have strength and courage in your new role as a United States Senator from the State of Florida, and do not let problems discourage you.

Sincerely yours,

Donald R. Fox Sr.

Honorable Lawton Chiles
United States Senator
Washington, D. C. 20510

Dear Senator Chiles:

I received your recent letter and have read with interest your two bills, S. 1755 and S. 1756. As you know, the general purpose of these bills is to make it easier for college students to borrow money to cover the cost of their educations. While I know you had the best of intentions in introducing these bills, I must say that I do not think the general idea of lending money to students in order to finance their college educations is a good one. And I hasten to say that this conclusion is not just a general idea on my part, but is based on many long years of experience.

I have practiced law in Florida for nearly fifty years. During these years I have had several clients who had no close heirs, who had money to leave, and who wanted to leave it in a way that would accomplish some good in the world. Several of these clients have left funds to a trust of which I am serving as Trustee, and over the years this trust has probably had something over $100,000.00 in it. Consequently, I have had a lot of experience in disbursing these funds.

One of the first things I started to do with these funds when they first came under my control was to lend them to students who wanted to attend college. I have made a great many loans of this kind, and I regret to say that they have not proved to be very successful. It is easy for a young man who wants to go to college to promise to repay a loan just as soon as he finishes college and gets a job. Usually he has the best of intentions in making such promises, but in a great many cases the promises

are simply not kept.

When a young man gets out of college, one of the first things he needs is an automobile if he doesn't already have one. He usually buys one on time, and the monthly payments frequently extend over a period of years. The next thing he does is to get married, and of course this takes money. Then before long a baby comes along, and of course that means more expense. The net result of all this is that the young man pays his current expenses as he goes along, and simply does not have any money to make payments on the loan he negotiated to pay his college expenses. Over the years I have received dozens and dozens of letters from young men and young women to whom I have made loans for their college educations, telling me how badly they would like to repay the loan but why they cannot do so. And I regret to say that in some cases the young man seems to feel that paying for his college education is like paying for a dead horse, and that there is something unethical in expecting him to repay the loan. In other words, a large number of young people seem to feel that they are entitled to a college education and that they shouldn't be required to pay for it.

In addition to the conclusions I have reached because of my own long experience in this field, I am convinced that our colleges and universities are overcrowded and are getting entirely too large. I think the idea that every young man and young woman is entitled to a college education is not a sound one. I feel that college educations should be available only to students who have the mental capacity to absorb them and get the most good out of them, and that such students should be given outright grants instead of loans to enable them to attend college.

In conclusion, let me say that I voted for you, I think you are making a United States Senator of whom Florida can be very proud, and I wish you the best of everything.

Sincerely yours,

Ralph Richards

Honorable Lawton Chiles
United States Senate
Washington, D.C. 20510

Dear Senator Chiles:

Thank you for your letter with regard to the Student Assistance Act and the Secondary Student Loan Market Act. I think this is excellent legislation.

At the American National Bank, we have interest in helping students with loans. At the present time, we have approximately $700,000.00 outstanding in loans to students.

If your bills are passed, I think it will encourage other banks to enter into this area.

Sincerely yours,

Foy B. Fleming

ESTABLISHED 1889

The Bank of Pasco County

Dade City, Florida 33525

June 4, 1971

The Honorable Lawton Chiles
United States Senator
State of Florida
Washington, D. C. 20510

Dear Senator Chiles:

Thank you for your letter in regard to the Student Assistance Act which you have introduced. I am pleased to advise you that the Bank of Pasco County has participated in the Student Loan Program since its inception and continued to do so through the tight money period in '69 and early '70. We have presently outstanding 127 student loans in the total amount of $155,900.00. Earlier this year our Board approved a plan whereby we allocated 1½% of our total deposits to the Student Loan Program. We felt that by putting it on a percentage basis it would allow us to increase our available funds for the Student Loan Program as our bank, our area, and our student needs grow. We wholeheartedly support the legislation you have introduced.

I have heard many favorable comments on your visit here two weeks ago, both on your remarks at the Court House as well as your speech at the F.F.A. Banquet.

Please let me say thanks for the job you are doing, and best wishes from all of us.

Sincerely,

Hjalma

RECEIVED
JUN - 7 1971
Washington, D. C. 20510

Senator Lawton Chiles
United States Senate
Washington, D.C. 20510

Dear Senator Chiles:

In response to your letter regarding the two bills you introduced concerning assisting students in financing the cost of education, it is our opinion that the current amount of $1,500 a year is ample. I realise the cost of education has gone up but I do not believe that any government program should provide for practically all the students expenses while going to college.

It is possible that a graduate student in the professional field such as law, medicine and so forth would need up to $2,500 but I can't see how an under-graduate student would require so much assistance.

We agree that the elimination of some of the now approved schools is a good move and that the secondary market warehousing feature is also a good idea.

We have made approximately $325,000 in student loans so far and to date we have not had a complaint about the $1,500 being insufficient.

When I left college I know I had some money to repay from a program that they had and it was a burden on me for several years. I am afraid that a young person going to college would not be aware of the fact that he would have to repay $10,000 plus interest after he got out of school.

To summarize, the bill appears fine to me with the exception of the $2,500 for under-graduate students.

Yours very truly,

J. M. Croson

June 2, 1971

Honorable Lawton Chiles
United States Senator
Washington, D. C. 20510

Dear Sir:

In reply to your letter received June 1, 1971, where you referred to the Student Assistance Act of 1971 and the Secondary Student Loan Market Act of 1971, I would like to advise that Southeast Banking Corporation and The First National Bank of Miami are reviewing these Bills. Southeast Everglades Bank of Fort Lauderdale is an affiliate of Southeast Banking Corporation and also The First National Bank of Miami is an affiliate. When this review has been completed this bank will be so advised and we will act accordingly.

This bank was one of the few banks in Broward County that made available loans to students under the USAF and also the USGL Plan. We had commitments under these two Programs exceeding $100,000.

I believe the two Bills introduced by you to the United States Senate are good Bills and I sincerely hope that proper action can be taken on them.

Very truly yours,

Robert V. Ruckman

GEORGE N. BUTLER
EXECUTIVE VICE PRESIDENT

June 1, 1971

The Hon. Lawton Chiles
United States Senate
Washington, D. C. 20510

Dear Mr. Chiles:

This acknowledges your letter addressed to Mr. Millsaps, President of our bank, and to me, with reference to The Student Assistance Act of 1971 and the Secondary Student Loan Market Act of 1971.

While we are not fully informed as to the detailed activities of other banks in our area insofar as student loans are concerned, we have been reasonably active in the program, even though in most instances we have handled loans for students whose parents have a banking connection with us. At the moment I know of no reason why we will not continue the program on the same basis. I presume that as an organization we will give reasonable support to legislation on the subject.

Now, on a personal note, I lean to a more conservative type of government than we have in some areas of our national politics. I feel that we will all concur that there has been too much unrest and radical behavior on our campuses; and, while we do not have full facts, it appears that a good number in this movement are perhaps in school on scholarships or student loans. I have a strong personal feeling that thus a number of so-called "students" in colleges "with public support - taxes" would be much better off in either trade schools or on a job more fitted to their inclinations. Isn't it likely that we are not placing enough responsibility on these young people and are, to the contrary, handing them too much on a silver platter, thus, not teaching them the basic responsibilities of life.

THE FIRST NATIONAL BANK
FORT LAUDERDALE, FLORIDA

The Hon. Lawton Chiles -2-
June 1, 1971

Somewhere along the line, the public might rebel at spending billions of dollars on unworthy causes.

I feel that government is already much too much involved in matters which should be turned back to Municipal or State level responsibility. Education is over-played and over-protected.

Am pleased that you are on the Florida Bankers' schedule at the Americana, and look forward to your participation.

Sincerely,

G. N. Butler
Executive Vice President

P.O. DRAWER 1327 • FORT WALTON BEACH, FLORIDA 32548

June 3, 1971

Senator Lawton Chiles
United States Senate
Washington, D.C. 20510

Dear Senator Chiles:

We appreciate the letter sent to us recently concerning two bills directed to the problem of assisting students in educational costs in college. The Student Assistance Act increasing the amount that could be borrowed to $2,500 for high cost courses of study, insuring the principal and interest of the loan, providing for interest subsidy and strengthening participation restrictions meets with our approval; however, we feel that repayment limits should remain as they have been in the past. We wholeheartedly support the Secondary Market Act since this would give us an opportunity to further serve students. It is my understanding that 80% of our outstanding student loans would be purchased thereby enabling us to make additional student loans.

I feel that passage of these bills would revive our interest in making further student loans since we have been refusing these loans recently.

If you are ever down this way, please feel free to call on us and thanks for the fine work you are doing for these students as well as our organizations.

Very truly yours,

Theodore P. Booras

RECEIVED
JUN - 7 1971
Washington, D. C. 20510

The Honorable Lawton Chiles
United States Senate
Washington, D. C. 20510

Dear Lawton:

Thank you for sending me a copy of the bills you have introduced which will assist students in financing the costs of their higher education.

Both pieces of legislation are excellent and I have several suggestions that may be helpful:

1. The amount that could be borrowed should be increased to $3,500 (rather than $2,500). This would be of great assistance to those students attending privately-owned liberal arts colleges, where the cost runs 30-40% higher than state-owned universities.

2. I do not think the interest subsidy is necessary. Once these students graduate, the highest majority will be happy to repay the true cost of their educational loans.

3. The Secondary Market idea is excellent. It might be helpful to allocate quotas to lending institutions to ensure an equitable spread of the money available. (There will never be enough.)

Come see me on your next trip to Tallahassee. I miss you in the Florida Senate.

Cordially,

SAM TEAGUE

Committee on Government Operations
Washington, D. C. 20510

Dear Lawton:

I appreciated your letter and the copies of the two bills -- the Student Assistance Ace and the Secondary Student Loan Market Act which you introduced. We have been active in this field since the beginning and know that these two bills meet a definite need. First, the present loan ceiling often gets the student into trouble because it is insufficient to meet the needs. And, of course, one of the problems in this type of lending is that the money is tied up for a long period of time and there is no liquidity in it. As you suggest, the secondary market will enable us to stay active in the market. We congratulate you.

Keep up the good work. You're off to a good start!

Sincerely,

Roy

Dear Senator Chiles:

Thank you very much for your recent letter and copies of the two bills you introduced in the United States Senate which are directed to the problem of assisting students in financing the cost of continuing their education after high school. I am highly enthused by these bills and the actions you have taken.

I have discussed these with my colleagues who, in the past, have handled student aid loans. They agree that the bills you have introduced cover the type of program banks need in order to provide students with loans, particularly those students who live outside a bank's trade area but attend a university in the town where the bank is located. At present it is only sound business practice for a bank to invest in students who live and who will return to become a useful citizen in the bank's community.

I whole heartedly endorse the legislation you introduced and will be happy to assist in its passage in any way I can.

Sincerely,

Wendell Jarrard, Jr.

Washington, D. C. 20510

Dear Lawton:

I am in receipt of your letter and the copy of the Congressional Record pertaining to The Student Assistance Act and Secondary Student Loan Market Act.

Our bank has been making "Student Loans" of one nature or another since 1964 and we were certainly relieved when Title IV of the Higher Education Act of 1965 became operative. Like other lending institutions, however, we had to stop consideration of these loans some eight months ago because of the large amount outstanding and the long repayment period involved.

I am gratified that the Senator from Imperial Polk County has had the foresight to try to alleviate some of the major roadblocks in the existing bill, enabling us to reopen this important segment of our loan portfolio.

Please rest assured that we will contact the other members of Congress from Florida, asking them to support you in this legislation and please call upon us if we can be helpful in any other way.

Keep up the good work and stop to see us when you're "home".

Yours truly,

FROM THE OFFICE OF
THE PRESIDENT

June 1, 1971

The Honorable Lawton Chiles
United States Senate
Washington, D. C. 20510

Dear Senator Chiles:

Your education bills, just introduced, should prove quite helpful to eligible, deserving students who might otherwise be unable to continue their education.

You have asked for comments and I have just two. Section 477 apparently does not provide for direct sale of obligations on the open market, but rather it seems to require that any sales be made by the Secretary of the Treasury. Perhaps authority for direct sales could be given directly to the Secretary of Health, Education and Welfare after advice and consent of the Secretary of the Treasury if you agree this might prove important in the future. Of much lesser importance, the second sentence of Section 481 apparently has misprinted the word "American" where "Association" was intended.

As you know, Savings and Loan Associations have been empowered for quite some time to make education loans and, yet, many have been reluctant to do so for a variety of reasons.

Your proposals should make this type of paper more desirable while at the same time providing means for moving money from areas of surplus to areas of need.

You can be sure we will follow your bills with interest since, if they are passed, we will certainly want to reevaluate our posture in this important area of activity.

Very truly yours,

Loy Anderson

Dear Senator Chiles:

I was interested in looking over the information you sent the other day, on the two bills relating to financing the cost of education.

It would seem that the best way to encourage higher education, and thereby increase the earning capacity of our oncoming generation, would be to grant a tax deduction for money spent on college education. I would imagine that some government body, somewhere, either has or could develop figures that would show that this would actually make money for the Treasury Department in the long run.

If this idea appeals to you, would it be possible for you to introduce such a measure in the Senate?

Very truly yours,

Washington, D. C. 20510

Dear Senator Chiles:

I appreciate very much your letter of May 25, relative to the guaranteed student loan program. I also appreciate the interest you are already showing in this program in the Senate.

The student loan program is already helping a great number of students who might not be able to attend college otherwise. It is also appreciated by the rank and file taxpayer.

Our program was implemented with a view toward service and wide public acceptance of our institution as opposed to a profit motive. We have made loans totaling approximately $300,000, in the past 2 years, and have authority to grant an additional $250,000. It appears that servicing will certainly be a major problem as the program matures. I hope you will make sure that the rates permitted will enable the lender to break even, since many banks and savings and loan associations are not participating for this reason. A second market and a proper fee for servicing would insure the continuing success of this program.

Again thank you for your interest.

Very truly yours,

Washington, D. C. 20510

Dear Senator Chiles:

We have been active in the student loan program for approximately the past year and continue to grant loans to students, whether they or their families are customers of this institution or not. We intend to continue to be as active in this program as we can.

We have communicated our thoughts on the program to a member of Congress in the past and your legislation seems to strengthen the exact areas that we felt needed to be strengthened.

I have felt that from strictly a business standpoint that the financial institution needed to be assured that funds it had invested in student loans would earn for it an interest rate from time to time that would be competitive with other investments. This would be especially true during economic periods when interest rates could fluctuate. The other area, of course, was the establishment and maintenance of a secondary market in these loans.

We will be happy to support your legislation.

Sincerely,

J. R. Shirek

Washington, D. C 20013

Dear Lawton:

Thank you for your recent letter, for your active interest in the Federally Insured Student Loan Program and for forwarding the copies of the bills that you plan to introduce in the Senate.

To assist in proper communication I am returning the bills with my humble remarks and suggestions for your review. I trust that you will find them of some benefit.

First, I will refer to the bill that I have labeled "A". I feel that the title of the Act is most appropriate for I like the word "loan" as opposed to "give-away".

In Section 2 of your Bill and Section 424 (a) of the Higher Education Act should not the ceiling of $1,400,000,000 be increase accordingly to accomodate the great increase in student loans that may be anticipated?

Perhaps in Congressional Bills specific dates must be included but, I feel that by 1980 we will really be moving in this area and I would dispair seeing another delay such as the one we are faced with now. This is specified under Section 2 (b)of your bill.

Under Section 3 of your Bill and Section 425 (a) of the Act I would insert the maximum loan allowable in any academic year to $2,500.00. However, some criteria must be established for eligible institutions where fees are unusually high! Still under Section 3 (2), I would increase the aggregate to $12,500.00 to accomodate those students who are enrolled in five year courses such as pharmacy or engineering in high cost institutions.

The Honorable Lawton M. Chiles
Old Senate Office Building - Suite 421

April 15, 1971
Page 2

Under your Section 3 (b) (1) I definitely concur that interest should be included. I believe most lenders would take the same stand. Why lose money on a program that is now difficult to market?

Under Section 427 (a) (1) (C) I believe the institution should be more realistic and accurate in their estimate of a student's expenses. Too often I receive applications where the student has obviously completed this item.

Under Section 4 of your Bill and Section 427 (a) (2) (B) of the Act I firmly believe this should read as follows "(B) provides for repayment---of the principal amount of the loan in regular monthly installmants over a period to be determined by an agreement between the student borrower and the lender but no more than ten years beginning not later than one year after the date---."

Under Section 4 (b) I am definitely in favor of including the accrued interest on a loan under the insurance liability.

Under Section 427 (b) I am definitely opposed to a fixed interest rate but if we must live with this philosophy then we must assuredly continue with the subsidy program established by the Secretary of H.E.W. The recent quarterly subsidies are probably quite adequate with Northern banks but here in the South it leaves much to be desired.

Under Section 428 (a) (1) (ii) (b) I would certainly recommend that the adjusted family income of $15,000 be increased to $20,000. I am basing this recommendation on the continually increasing cost of living and the increased cost of education. Also, consider that many families have more than one child in college. To reduce this figure would do a great disservice to numerous families and to increase it would be more equitable.

Under Section 5 (b) of your Bill and Section 428 (b) (1) (D) of the Act, I would once again recommend strongly that repayment be arranged between the borrower and the lender. I feel strongly on this subject for the present Act makes it extremely difficult for lenders to service the loan and for the student borrowers to repay their obligations promptly, in an orderly manner, and in accordance with their income.

Under Section 5 of your Bill and Section 428 (b) (1) of the Act, I am in complete accord that the insurance premium should be increased to one half of one per centum in order to properly administer the program and to provide a reserve for anticipated defaults that will increase as the number of loans increase.

The above concludes my remarks on your proposed Bill identified as "A". I think it is an excellent Bill, far superior to any of the many others that I have read.

Your second Bill which I have referred to as "B" is exactly what the banking community needs to inspire participation in the program. As a result I have no suggestions to add to the Bill itself. However, I would like to offer the following comments.

On Page 5, Line 18, I am in complete agreement with the warehousing provision.

In conclusion allow me to add the following points. Earlier I mentioned the necessity for continuing with the subsidy program on qualified loans. I feel that without such a subsidy and with our "roller coaster" interest rates that a lenders incentive to get into the program or to stay in the program would be considerably reduced.

With this program I feel that there are a great many lenders who are not aware of the program. Letters or bulletins from the American Bankers Association, State Banking Associations and personal contact with lenders encouraging participation would help a great deal.

It is my understanding that some plans have been suggested in regard to the operation of a Student Loan Marketing Association, plans to the extent that a student loan will be sold at a discount. If this is correct I do not think you will find many lenders willing to sell a low yield loan at a discount but, if this discount is necessary in order to establish the marketing arrangements then I would like to offer the following recommendation: (1) that student loans will be purchased at par by the association if the proceeds of the sale will be invested in new student loans and, (2) that if a student loan is sold to the Association at a discount, the proceeds of the sale may be invested in any manner by the lender.

I believe that the student loan program should in no way be construed as a give away program even though the government will subsidize or pay a portion of the interest. I would hope that the advocates of the program would consider that this program will make college and vocational school possible for many hundreds of thousands of students and that with this improved education the intellectual and economic wellbeing of our country will be considerably improved. Also, economically speaking, if such an improvement exists the income of today's students students or proposed students will increase substantially over their average working life time and the government will benefit by the collection of income tax on these higher earnings. I believe a statistition could determine the amount that the government will pay out in subsidies and interest as opposed to the amount that will be returned by taxation and I feel that the taxation will far out weigh any government payments.

With the adoption of a sound and reasonable student loan program I feel that the financial aid advisors of the colleges and universities should emphasize to

student applicants that this is basically a hometown program and that they should contact the bank in their hometown in order to obtain the student loan. This would take the pressure off small banks in large university cities such as Gainesville. I realize that Congress works slowly in some areas but I would hope that a student loan bill would be passed in the immediate future in order that prospective students may make their plans for attending the college and/or university of their choice in May or June. If action is delayed until the latter part of the summer or September there will be many hundreds of thousands of students unable to attend college because of the necessity of completing the required paperwork.

I hope that these suggestions will in some small way be of assistance to you and if I may help in any way, please let me know.

Sincerely,

Dick

Senator Claiborne Pell
325 Old Senate Office Building
Washington, D. C.

Dear Senator Pell:

I respectfully request your support for Senate Bills 1755 and 1756 which would create a secondary money market and provide a warehousing vehicle for Federally Insured Student Loans. Many of our local banks do not participate in the Federally Insured Loan Program because they are required to hold all papers for 5 to 10 years. These Bills would attempt to correct this problem.

I would like to also request that you hold hearings at which college administrators could testify concerning this program.

Any assistance you might render concerning this matter would be greatly appreciated.

Sincerely yours,

Ronald W. Reinighaus

June 14, 1971

Senator Claiborne Pell
325 Old Senate Office Building
Washington, D.C.

Dear Senator Pell:

Tampa Technical Institute is an eligible institution to participate in the Federal Insured Student Loan Program. As I see it, student loans are specifically designed to enable children of low income families to afford an education. Our experience is that the local banks refuse to lend to students unless their families have "experience" with the bank, however, those students which need the most assistance from this program are in the poorest position to secure a loan.

Perhaps what the Senate needs most is to have hearings held in which college administrators could bring testimony that would reflect the local banks attitude on Federally Insured loans.

The bills introduced by Senator Chiles #1755 and 1756 creating a secondary market and providing warehousing for FISL will strengthen the Federally Insured Loan Program in the area of low income families.

I strongly urge you to support the passage of this bill.

Sincerely,

E. Begue'

June 16, 1971

The Honorable Claiborne Pell
325 Old Senate Office Building
Washington, D. C.

Dear Mr. Pell:

It is our understanding that Senator Chiles has recently offered two bills (Senate Bills 1755-1756) that would tend to alleviate the problems our students are experiencing in obtaining Federally Insured Loans.

I would like to advise you that it is very difficult, and many times impossible, for a community college student to find a willing lender in Brevard County. My office has widely advertised the fact that this program exists; however, we repeatedly find that students are simply unable to obtain these loans. The banks that are participating in the program in a very limited way often tend to restrict the loans to students in their junior or senior year at college or to students whose parents are favorable clients of the bank.

I recommend that you support these bills. I would be willing to provide additional information, if needed.

Further, I recommend that you hold hearings at which college administrators could testify as to the nature and extent of the problem.

Very truly yours,

BREVARD COMMUNITY COLLEGE

60-433 O - 71 - pt. 5 - 23

Senator PELL. The final witness today will be Mr. Allan W. Purdy, chairman of State and Federal program relations of the National Association of Student Financial Aid Administrators, accompanied by Dr. Carroll Parish, president of the National Association of Student Financial Aid Administrators and Mrs. Eunice L. Edwards, president of the Southern Association of Student Financial Aid Administrators.

I look forward to hearing from this panel who represent individuals who have to implement the legislation after it is passed.

They, too, are Indians and not chiefs, and have the responsibility for making some sense and order out of the sometimes imperfect legislation that comes from the Congress. On their shoulders rests very real responsibility, too, of finding the fraction amount of aid to each student that they have in their area of cost.

I know the subcommittee will benefit from your views.

STATEMENT OF ALLAN W. PURDY, CHAIRMAN, STATE AND FEDERAL PROGRAM RELATIONS, NATIONAL ASSOCIATION OF STUDENT FINANCIAL AID ADMINISTRATORS; ACCOMPANIED BY DR. CARROLL PARISH, PRESIDENT, NATIONAL ASSOCIATION OF STUDENT FINANCIAL AID ADMINISTRATORS, AND MRS. EUNICE L. EDWARDS, PRESIDENT, SOUTHERN ASSOCIATION OF STUDENT FINANCIAL AID ADMINISTRATORS

Mr. PURDY. Mr. Chairman, we three Indians are pleased to visit with you today concerning the operation of these programs where the students are——

Senator PELL. Before he leaves, I would like to welcome Dr. James E. Allen, former Commissioner of Education, who was kind enough to listen and whom we all enjoyed working with so much.

Mr. PURDY. We have a prepared statement which I will go over and then we will welcome questions.

I might call attention to the error of the date. This was prepared for a earlier hearing which needed to be postponed so this is our statement and we will follow it for the first few minutes.

Mr. Chairman and members of the committee, the National Association of Student Financial Aid Administrators appreciates your invitation to discuss legislative proposals concerning financial assistance for institutions and for worthy students in post-secondary education.

Ours is an organization of more than 2,000 student financial aid officers who administer the aid programs at the local level. It is composed of representatives of schools, colleges and universities both large and small, public and private, black and white.

We were particularly encouraged by the President's commitment that we move to make aid to students a reality now, so that our youth will have the assurance that, indeed, they do have an opportunity for additional education. We agree with the concepts expressed in S. 1123 that there should be no insurmountable economic barriers to obtaining postsecondary education and training for all who are able to benefit by attending college or by going to a vocational, technical, or trade school.

The intent and the objectives of this bill have been the objectives of Congress for a number of years. You have already provided basic

programs of assistance toward meeting these needs. The fact that we are still short of our goals reflects not so much that the existing programs are inappropriate, but that they have not been adequately funded to keep pace with the increasing needs.

Workable programs of grants, work-study, and loans have enabled millions of young people to advance their education and training and thus become more productive citizens in our society. We are pleased to see that the legislation introduced by the chairman and other members of this committee proposes the continuation of these programs.

Due to the success of current programs we support your desire that they be extended. Previous testimony before this committee indicates we have suggested revisions which can make these programs more effective. These are listed at the end of this statement.

The educational opportunity grant and the work-study programs each use federal appropriations which do not return to the U.S. Treasury. It was your intent in each program that the funds go to students who had a genuine need for help. On the final page of this testimony are the U.S. Office of Education summaries of the four fiscal years 1966 through 1969, showing how this money has been used. Approximately one-third of it went to students from families with annual gross incomes of less than $3,000 which is poverty level and below. In 1969, the latest year for which data are summarized, 73 percent of the work-study money, and 91.8 percent of the EOG funds went to students from families with annual gross incomes of less than $7,500.

Money used above the $7,500 level was received by students who had real need, when we take into account the number of dependent children, the number in college, unusual medical expenses, and other pertinent factors. Few social service programs can show a better record of having used the money more effectively as Congress intended.

We have encouraged high school graduates and college students to plan ahead and get their written applications in early so we would have time to evaluate their needs and inform them of the help which would be available. They have followed our instructions and we need to be able to give them an answer. From a practical standpoint it is late indeed to consider major program changes for 1971–72.

There are some 250 more institutions including vocational schools and community colleges which are eligible and have been approved to participate in the financial aid programs for 1971–72. This fact, combined with the realities of inflation and unemployment, have created a combined need considerably greater than that of last year.

The administration has recognized these facts and has asked for increased funding. Therefore, if action could be taken to provide this increase along with forward funding, it would permit us to administer these programs with greater effectiveness.

WORK-STUDY PROGRAMS

The work-study program, now in its seventh year, has proved to be an excellent student aid program. It has provided an opportunity for deserving students to earn a portion of their educational expenses, and thereby become partners in sharing the responsibility for developing their own potential.

The students gain meaningful work experience, and at the same time make a valuable contribution to the operation of the school, or to

off-campus community projects. A program which will help to develop skills, maturity and responsibility certainly is one which should be continued without change. This is particularly important at this time of high unemployment when jobs for students are difficult to obtain.

The NDEA loan program has also proved to be a very successful method by which a student is enabled to carry a portion of the responsibility for his educational costs. Repayments are now making an estimated $105 million available annually for relending. This is helping to create a revolving fund which is one of the most practical means of providing loan funds for students in real need. We realize that annual appropriations of NDEA funds do show on the budget, but with an adjustment in teacher cancellation the cost of this program in the long run could be made less than that of the guaranteed loan programs. Hence, we strongly favor continuing the NDEA loans.

Another of our concerns is that the administration's bill does little to brighten the hopes of the lower middle income families who would be able to provide some assistance for their children to get an education. For example, when the income goes above $7,500, indicating that one or both parents are working and making an honest effort to aid their children, then the grant and work benefits are eliminated and subsequent aid depends entirely on loans. Full funding of the present programs and improvements we have suggested will assist the needy student from these families to secure a postsecondary education.

Historically the U.S. Senate has sponsored excellent educational programs and has given strong support to legislation providing financial assistance needed by millions of young people; S. 659 proposes to add to this tradition. The provision that each student be assured a grant of $1,200, less the amount of his parent's income tax, is directed to the principle that every high school graduate will have the assurance of financial help toward further education. We support this principle to the fullest extent.

Senator PELL. Thank you for that support.

Mr. PURDY. There is a high degree of correlation between the family income tax paid and the amount which the parents can provide toward education beyond high school. However, there are cases where the income tax does not reflect the family assets, certain nontaxable income, and family financial emergencies. Hence, it might be helpful to add some flexibility in order to assure that the real objective is attained.

Financial problems for schools and colleges have mounted rapidly in recent years. The provision of the $1,200 grant to the institution, less the amount of fees or tuition, is recognition of the acute need for help in higher education. In practice it would appear that these particular guidelines would be of significant help to the public institutions, but in most cases would be of no help to private colleges. Therefore, a change in this provision would assure assistance over a wider spectrum of the educational community.

Senator PELL. I am glad to say that we have an amendment that does this and provides a flat thousand-dollar grant that would follow the student. It is a simpler way of handling the problem and also meets the very point you are making now.

Mr. PURDY. Previously we have backed the idea of a "secondary market" or a "warehousing" plan to provide liquidity to the private

lender in the guaranteed student loan program. We recognize the contribution of the commercial lending community in providing access to higher education through the availability of insured student loans. It would be unfortunate if this source of student aid funds were allowed to dissipate due to a lack of liquidity on the part of these lenders. Not only would such an occurrence place an additional and perhaps unbearable demand upon other aid programs, but it would dissolve an effective partnership of Federal, institutional, and private resources.

As financial aid officers, we do not have a particular preference as to the vehicle utilized to safeguard against such liquidity problems. We do urge that the mechanism employed be as uncomplicated as possible in order to maximize its usage by the commercial lender. Any method with complex administrative demands will be of limited benefit to lenders, and in turn to potential student borrowers.

In this regard, it is important to recognize that the success of the insured loan program thus far has been brought about by the voluntary participation of the commercial credit community. There is every reason to believe that this cooperation will continue as long as the conditions of participation do not become unduly restrictive.

Although the availability of these loans has not been uniformly good throughout the country, the contribution to the overall financing of higher education is obviously substantial. In our opinion, it would be undesirable to place strictures on the program which might jeopardize the willingness of the private sector to participate in this venture.

Again, in our opinion the provision contained in S. 659 which prohibits the lender from restricting loans to students with a previous business relationship will be harmful to the present level of participation in this program. Rather, we would prefer to see the problem of accessibility approached from the standpoint of encouraging each member of the lending community to do his part, in which case such lender restrictions would be of little consequence.

We commend the ideas contained in S. 659 aimed at furtherance of educational opportunity. We recognize that the funding requirements may go beyond the current budget capabilities. The intense competition for Federal funds necessitates the establishment of priorities in educational aid as well as in other areas. Hence, our first priority would be to adequately fund the present programs at a level commensurate with demonstrated needs and then add basic grants and institutional aid to the extent that additional resources are available.

RECOMMENDATIONS FOR STUDENT ASSISTANCE PROGRAMS

Our recommendations for improvement of Federal student aid programs are:

General recommendations:

(1) Authority for NDSL, EOG, CWSP, and GLP should be continued for 5 years.

(2) All programs should be on a fiscal year basis and forward funded at least 1 year in advance.

(3) Each program should provide for a carry over of funds under such terms and conditions as may be established by the Commissioner.

(4) Exempt college and Federal loan program from provisions of the Truth-In-Lending Act.

(5) Institutional authority to transfer funds between programs is requested.

National defense loan recommendations:

(1) Increase the undergraduate loan limit from $1,000 per academic year to $1,500 or more, and raise the total which a student may borrow as an undergraduate from $5,000 to $7,500.

(2) Allow an institution which determines a defense loan is uncollectable after 18 months of due diligence, to assign the note to the Comsioner and thus remove it from the institution's accounts.

(3) Cancellation provisions for national defense loans for all first-time borrowers should be limited to death or permanent disability of the borrower, and to teachers in rural and urban deprived areas.

Educational opportunity grant recommendations:

(1) Extend an additional year of EOG eligibility to students enrolled in curriculums where the normal completion period is 5 years.

(2) Extend EOG eligibility for a period of one academic year, or its equivalent, beyond the normal time required for the completion of the regularly prescribed curriculum when it is necessary for the student to carry less than a full-time academic course load and the institution approves the program of study.

(3) Eliminate any matching requirement for EOG.

(4) Provide for a single authorization of funds to include both initial year and renewal awards with the proviso that the renewal commitments must be honored first.

College work-study recommendations:

(1) College work-study funding and all accounting procedures attendant thereto should be placed on a fiscal year basis as are the other programs.

Guaranteed loan recommendations:

(1) The mandatory grace and minimum repayment provision should be permitted to be accelerated at the student's discretion.

(2) Graduate or professional loans should be increased to a maximum of $2,500 annually, with a total aggregate of $10,000 allowable during both graduate and undergraduate years.

(3) A satisficatory secondary market be established for guaranteed loan paper.

(4) The institution in certifying an application for a guaranteed loan should be permitted to make a recommendation concerning the size of the loan and the student's eligibility for interest subsidy.

Thank you for your thoughtful attention and we will welcome your questions.

We call your attention to the statistics on the back page which perhaps is the best single set of figures showing the effectiveness of the current programs.

(The statistics referred to follow:)

*Distribution of Federal Funds to Students from Various Family Income Levels Under the EOG and Work-Study Programs 1966-1969

	EDUCATIONAL OPPORTUNITY GRANTS				WORK-STUDY			
Fiscal Year	1966	1967	1968	1969**	1966	1967	1968	1969
Percent distribution of students aided by gross family income category	100	100	100	100	100	100	100	100
$ 0-2,999	28.3	27.7	29.0	33.3	35.5	31.1	28.0	28.0
$ 3,000-5,999	42.4	40.4	40.0	44.6	42.3	36.6	32.6	29.5
$ 6,000-7,499	16.7	17.2	16.0	13.9	16.3	15.1	16.0	15.5

**Based on a tabulation of initial year awards for the period July 1, 1969 to June 30, 1970.

2550

Mr. PURDY. The question has been asked whether the current programs are meeting the needs of low-income students. I think one of the answers to that question, Mr. Chairman, is to note where the money is going that is now being administered under the three campus-based programs.

We said earlier a sizable percentage of it is going to those under the $3,000 family income level and the most of it is certainly going to those who are under the $7,500 annual family income.

So with that brief statement, we would welcome your questions.

Senator PELL. Thank you very much. You are very good to come.

Are the students having difficulties under the new regulations for educational opportunity grants and the work-study programs?

Mr. PURDY. When you say the new regulation, are you referring to the fact that——

Senator PELL. The ones going into effect next year.

Mr. PURDY. Have we actually seen them in writing?

Mrs. EDWARDS. No.

Dr. PARISH. No.

Mr. PURDY. We hear rumors about them. We have not seen them in writing but we are interested to see what guidelines are going to be proposed.

(The following was subsequently supplied for the record:)

ALLOCATIONS OF EDUCATIONAL OPPORTUNITY GRANTS AND WORK-STUDY GRANTS PROPOSALS BY THE COMMISSIONER OF EDUCATION

NOTE.—It was later explained that Senator Pell's question was intended to refer to difficulties caused by the new allocation procedures for EOG and Work-Study funds proposed by the Commissioner of Education. Indeed, there have been directives which were quite disturbing to financial aid administrators. We feel that there was considerable confusion caused by the manner in which applications were solicited and that much of the data obtained was unreliable. We asked for a hearing to discuss this with the Commissioner but it was not granted.

Senator PELL. What are the default rates on the student loans? Do you have any figures on those?

Mr. PURDY. The default rates on national defense loans are variously reported in different States. It is running perhaps around 3, 4, or 5 percent. This is not a loss rate, this is those with which we are having difficulties making collections. They are slow accounts and ones we have to give special attention to.

The default rates in the guaranteed loan program have been reported by various States at running from 4 to 6 percent and again that isn't a loss rate, that is the ones on which they are having to put forth a very special effort to get some collection.

There are some loss rates. It is awfully early to tell what those are because most of them we are still trying to collect.

Senator PELL. Can you submit for the record the default and loss rates for both the National Defense Education Act loans and the guaranteed student loan program?

Mr. PURDY. We will be glad to.

(The following was subsequently supplied for the record:)

DATA ON LOSS RATES FOR NDEA AND GUARANTEED STUDENT LOAN PROGRAM

Data on loss rates of NDEA loans are difficult to evaluate because the law provides no way to declare delinquent loans as bad debts and mark them off the

books. There appears to be between 1% and 1½% of the repayable loans which are seriously over-due. How many of these can eventually be collected we don't know. Hence, even though these delinquent NDEA loans have not yet been declared uncollectible, we might realistically predict that the eventual loss rate will be somewhere within this range.

The Guaranteed Loan Program has been in operation for a much shorter period than the NDEA, and a smaller percentage of the outstanding loans are in the repayment stage. Again, there are delinquencies which are still being pursued. The actual loss rate is still difficult to determine. Perhaps it will not be too far different from that of the NDEA experience. There is some early indication, as yet not confirmed, that collection difficulties may run somewhat higher for borrowers in proprietary and vocational type schools than for those in colleges and universities.

Senator PELL. What is your reaction to the idea of the student aid proposal form in S. 659? The safeguards will be worked into it if we are successful in getting it through. We must strive to avoid the abuses of which you are aware.

The obvious one is the family who has $100,000 a year from municipal bonds and pays no income tax. We will have to find a solution to that problem.

Are there any other particular comments you would care to make?

Dr. PARISH. Sometimes financial aid officers and certainly I do, in my office, have to create an income for an individual where the tax situation is obviously not the way it appears and so in many cases if a man is living, like on $60,000 a year—for instance, in Beverly Hills we have a very wealthy doctor who has an income of $2,000 a year because of writeoffs, and with a new Cadillac and so forth, and the best home in Beverly Hills. He submits an application for aid for his daughter to go to college.

Mrs. EDWARDS. I would like to make two or three statements.

One, I think I would very strongly favor the tie-in with the EOG to the grant because as you suggested, there would be competition for a student. And at the present time any institution which is having difficulty—if you have two students one who has and one who has not, you would very humanly accept the student who has not. If the grant is tied to the EOG certainly that would give the financially inadequate student a better opportunity. And I would hope that would be maintained.

You mentioned the loss figure. When Mr. Purdy gives his report I am sure he will include the statement that most of the percentage of loss is due to the early loans when the financial aid officers themselves were not too aware of what was involved and students were not told clearly.

I know in my own institution that most of our loss money is from this kind of loan. Those made since 1960–61 I am told are paid very much on time.

I think, in listening to all the testimony this morning, that you know the problem of the private institution and certainly we would support the grant to the institution tied into the EOG.

ASSISTANCE FOR OLDER STUDENTS

Senator PELL. Good. Thank you very much.

One final question: Should student aid for older students be structured differently from younger students?

Mr. PURDY. The position of the older student varies a great deal when he comes to you. He may be a person who is working full time or part time. It may be a mother whose children are now in school and wants to go back to college.

It looks to me like there would need to be a great deal of flexibility in the handling of the older student. Let's say that we support fully the idea that aid should be extended to the older people and to those going to school part time. It isn't often that someone employed quits a full-time job and goes to school full time.

There is one other angle on which I want to probably raise a question. Dr. Newman indicated that we were losing our enthusiasm for helping the low income. I wonder if that is true.

I think, if you total up the effort that is being made by the institutions, both private and public, you will find that a great deal of money is going into these programs for the low income student aside from what the Federal Government is doing.

And certainly I hope that we will not accept the idea that there is any less interest in aiding the disadvantaged for whom we want to keep the door of opportunity open.

Senator PELL. These are the ones we wish to help the most and S. 659 is most designed to try to help.

Mr. PURDY. This is true.

Senator PELL. I thank you all very much, Mr. Purdy, Dr. Parish and Mrs. Edwards, for coming up here today.

The meeting is recessed to the call of the Chair.

(Whereupon, at 12:06 p.m., the hearing was recessed, to reconvene at the call of the Chair.)

NASFAA

NATIONAL ASSOCIATION OF STUDENT FINANCIAL AID ADMINISTRATORS

CENTRAL OFFICE AND PLACEMENT SERVICE
Lafayette, Indiana 47907
(317) 749-3676

June 19, 1971

The Honorable Senator Claiborne Pell, Chairman
And all members of the Senate Subcommittee on Education
Senate Office Building
Washington, D.C.

Gentlemen,

I hope that it will be helpful to you to have some additional comments and clarification of our testimony presented at your committee hearings May 26.

At the close of the hearings the chairman asked for more definite data on the delinquent and loss rates on National Defense Student Loans, and the Guaranteed Student Loans. The following brief statement was submitted for the record:

> Data on loss rates of NDEA loans are difficult to evaluate because the law provides no way to declare delinquent loans as bad debts and mark them off the books. There appears to be between 1% and 1½% of the repayable loans which are seriously overdue. How many of these can eventually be collected we don't know. Hence, even though these delinquent NDEA loans have not yet been declared uncollectable, we might realistically predict that the eventual loss rate will be somewhere within this range.
>
> The Guaranteed Loan Program has been in operation for a much shorter period than the NDEA, and a smaller percentage of the outstanding loans are in the repayment stage. Again, there are delinquencies which are still being pursued. The actual loss rate is still difficult to determine. Perhaps it will not be too far different from that of the NDEA experience. There is some early indication, as yet not confirmed, that collection difficulties may run somewhat higher for borrowers in proprietary and vocational type schools than for those in colleges and universities.

During the questioning we were asked if the new directive from the U.S. Office of Education for the coming year had caused us difficulty. We were puzzled as to which directive the question related to. After the hearing it was explained that Senator Pell's

question was intended to refer to the difficulties caused by a series of directives starting in September 1970. (The institutional application blanks for participation in the federal programs were changed on short notice, and we were directed to provide information on which most colleges had no reliable figures. The confusion resulted in much unreliable data. Then on February 4, the Commisioner of Education published his "Proposed Rule Making" in the Federal Register relative to allocation of funds to institutions on the basis of these data in which we had no confidence at all.)

The above caused considerable difficulty and we asked for a formal hearing in order to help clear up the confusion. Our request was never acknowledged, and a hearing was never granted!

I would like to re-emphasize certain points which we made in our written testimony.

(from page 1)

We agree with the concept that there should be no insurmountable economic barriers to obtaining post-secondary education and training for all who are able to benefit by attending college or by going to a vocational, technical or trade school. The Congress has already provided basic programs of assistance toward meeting these needs. The fact that we are still short of our goals reflects not so much that the existing programs are inappropriate, but that they have not been adequately funded to keep pace with the increasing needs.

(bottom of page 6)

The intense competition for federal funds necessitates the establishment of priorities in educational aid as well as in other areas. Hence, our first priority would be to adequately fund the present programs at a level commensurate with demonstrated needs and then add basic grants and institutional aid to the extent that additional resources are available.

(pages 7 and 8)

Note that these recommendations are for the improvement of the present programs.

(page 9)

Note that we offer these U.S.O.E. data to back up our contention that the current programs are being used to reach the low income families as Congress intended.

The terms "basic grant" and "assurance" are goals which we support. At your hearing August 18, 1970, we said we welcome these goals as soon as the budget could support them. But these terms lead to frustration unless the money is there to back up the promises. We strongly suspect that the basic grant provisions of the S-659

will require funding beyond the capabilities of the current budget. This fact is recognized in sec. 406 (b)(2): "If the appropriations pursuant to sections401 (b) for any fiscal year are insufficient to pay the full amount of the basic grants for which all students are eligible in that year, the payment to each student shall be ratably reduced, . . ."

If Congress is indeed ready to commit "such funds as will be necessary" to assure the basic grants to all qualified students this would require assured funding such as we have for the GI Bill--except a much larger dollar amount.

The size of an Educational Opportunity Grant in the first years of the program was determined by ". . . $1,000 minus the amount of the parents' expected contribution toward college costs." The use of $1,200 minus the income tax is not too foreign. However, we do point out (page 5) that the income tax in many cases does not reflect family assets, non-taxable income, etc. For example, consider the inequity of judging family financial status by income tax paid by laborers or salaried parents with no assets to that paid by parents who own businesses, farms, stocks, bonds, etc. The current methods of the College Scholarship Service and the American College Testing Program for calculating parents' financial ability to help support a child in college are not perfect, but they do iron out many of the inequities found in the income tax system.

Institutions need assistance for two basic reasons. One reason is that they are using many of their resources in aiding low income students with grants, part-time jobs, and loans, along with extra services of tutoring, counseling, etc. For this reason it is logical to propose a "cost of instruction allowance" based upon the number of low income students helped.

Another reason institutions need help is because operational costs have gone up, and the institutions can't just keep on raising tuition and fees forever. We talk a lot about the students we assist with some type of federal aid. We say very little about perhaps three times that number who are in school without aid or by the help of private, community, or state aid which far exceeds the federal government's contribution to education. Many hard working middle income families are asking no individualized aid from anyone. But if tuition and fees keep going up, then they too will have to ask for help. Assistance to the institution in this case needs to be on a per-student-enrolled basis.

Therefore I see a need to calculate institutional assistance (a) because a school is making an honest effort to educate the lowest income student, and (b) because it is also educating many low and lower-middle income students as well. If the private and public schools are annually spending $1,200, $1,600, or $2,000 (according to the course of study) to teach each student, then it would not be unreasonable for the Federal budget to share $100 to $200

of this. It would be a good investment. After all, in two to four years each student becomes a federal income tax payer!

We appreciate the dedicated thought and generous support which this committee has always provided to bring about wise and workable programs. If we can be of further help at any time please call on us.

Sincerely,

Allan W. Purdy, Director
Committee on State and Federal
Program Relations

Statement
by
Richard W. Petrie

President
of
National Council of Higher Education Loan Programs

and

Executive Director
of
Louisiana Higher Education Assistance Commission

Before the
Special Subcommittee of Education
of the
Committee on Education and Labor
U. S. Senate
Washington, D. C.

Tuesday, May 18, 1971

MISTER CHAIRMAN AND MEMBERS OF THE COMMITTEE

The members of the National Council of Higher Education Loan Programs wish to thank you for your invitation to appear before this Committee concerning the Guaranteed Loan Program. The Council is composed of the directors of 24 state and non-profit agencies who administer the loan program in the states and whose agencies have guaranteed approximately $2 Billion in student loans since November, 1965. Two out of every three dollars in guaranteed loans are now insured by agencies which comprise the Council.

We had the privilege of appearing last year before this Committee to discuss the Higher Education Opportunities Act of 1970 (S-2636). At your invitation, we have returned to share with you our views on the somewhat changed legislation, the Higher Education Opportunity Act of 1971 (S-1123); and you have asked us to comment on Senator Pell's Education Amendments of 1971 contained in S-659.

As we have reviewed this legislation, we find ourselves in the position of repeating many of the concerns and recommendations we shared with you last year. At that time, we recommended (1) that further study be given to the "problem of providing a sound, balanced and equitable financial aid 'package' for students . . ." (2) that the three existing college based programs be funded at a more adequate

level, (3) that the Guaranteed Loan Program be continued through the use of commercial lending institutions, and (4) that interest on guaranteed loans should continue to be paid by the federal government on behalf of the student while the student is in school or in an authorized deferred status, but paid by the student when in repayment status. It is difficult for us to make recommendations now which are essentially different from those of last year.

A TIME CRISIS IN STUDENT AID

However, we do urge that the Congress recognize the situation as it exists today and take immediate action to extend the various basic student aid programs whose statutory authority will expire June 30, 1971.

It is now less than 45 days to June 30 and more than 900,000 students will be looking to the Guaranteed Loan Program for assistance. The time crisis is upon us again as it was at this time in 1968. These almost one million students have no assurance that the funds or programs will be available to them unless Congress acts quickly!

S-659 - EDUCATION AMENDMENTS OF 1971

We wish to compliment you, Senator Pell, and your associates for your action in sponsoring S-659 to provide for the extension of (1) the guaranteed loan program and (2) the special allowance which supplements interest earnings of student loans on recommendations

60-433 O - 71 - pt. 5 - 24

each calendar quarter by the Secretary of HEW, and (3) the college-based programs which are complemented by the guaranteed loan program.

Some people may disagree with the propriety of five-year extensions with the appropriation authorizations. However, this kind of aggressive action is what is needed to allow school officials, lenders, and the guarantee agencies, as well as the students and their parents, to plan ahead on post-secondary education. Everyone should know in early spring what the requirements may be and what student aid resources are available after July 1.

One desirable feature which is not in S-659 and which we believe you would want to include in your legislation is to exempt loans under Title IV of the Higher Education Act of 1965 and Title II of the National Defense Act of 1958 from provisions of the Truth in Lending Act (15 U.S.C. 1603). In both instances, the interest and repayment provisions affecting the consumer student borrower are effectively controlled by both federal and state statutes and regulations. The extra paperwork required by the Truth in Lending Act is unnecessary and serves no useful purpose.

SECONDARY MARKET

We appeared before this Committee last year to urge the Congress to adopt a secondary market which would provide needed

liquidity for commecial lenders. As lenders have continued to make student loans, their loan portfolios have grown considerably. Student loans, even under our existing programs, are long term investments. As each succeeding year of loans is added, the lender finds the necessity of liquidity relief becomes more acute since student loans are made far more quickly than they are repaid. We remain convinced that a secondary market is needed although prevailing economic conditions have made the case less convincing than when we were here in July of 1970.

The National Student Loan Association, as proposed in S-1123, is far more than a secondary market. Clearly, the provision to accommodate the funding of loans made by educational institutions first gives preferential treatment to that category of lending. Only after the needs of "eligible institutions" have been met will NSLA be able to deal in loans from other sources.

In S-659, the education warehouse concept of the secondary market seems to have great merit, in our opinion. None of us are experts in the secondary market field, but we would like to offer our comments on Section 145 of S-659.

Proposed: The agreement between the Commissioner and the lender will require that the eligible lender will use the proceeds of the educational warehouse loan to make insured student loans.

Council Suggestion: We believe this should be optional with the lender. The money market may be such that it will be desirable and possibly profitable to reinvest all of the proceeds in student loans. On the other hand, the lender will pay some premium for the warehouse loan and he may have an opportunity to invest the proceeds in a highly profitable venture which will offset the administrative costs and low yield of student loans for a short period while loans are in warehouse.

Proposed: The agreement is to contain an assurance that the lender will not use discriminatory practices such as requiring a business relationship with the student or his family, etc.

Council Suggestion: We believe such a restriction will endanger the success of the educational warehouse program. There was an extremely negative reaction by lenders when a similar provision was discussed as a potential requirement in the Emergency Insured Student Loan Act of 1969. The lender participates in the guaranteed loan program on a voluntary basis, which may be terminated at his pleasure, and he generally allocates specific sums for student loans, some for customers and some for non-customers. To insist that a lender disburse his entire allocation of student loans on a first-come-first-served basis would cause many to terminate their participation, which would overburden the remaining lenders and endanger their continued participation. Studies by Lybrand, Ross Bros., & Montgomery and the American Bankers Association, show that these discriminatory practices are not widespread.

Proposed: The education warehouse loan shall be repaid at such time and bear interest at a rate prescribed by the Commissioner based on yield on education warehouse certificates negotiated, assigned, or sold by the Commissioner.

Council Suggestion: The holder of the warehouse certificate may not be able to justify a rate on the warehouse loan equal to or better than the rate on the student loans in possession of the lender. At any rate, the lender could not afford to take a reduction in interest income. Especially would this be so if he were required to reinvest the funds he receives from the warehouse in additional student loans.

Proposed: The Secretary of the Treasury is authorized and directed to purchase any notes or obligations from the Commissioner and issue securities for a public debt transaction to be known as education bonds.

Council Suggestion: Under the National Student Loan Association version of the secondary market in S-1123, the Secretary of the Treasury is authorized to purchase at his discretion on his terms and conditions, any obligations of NSLA. We hope adequate study by competent fiscal experts will result in the proper assignment of liability of the Treasury so that the secondary market will establish a sound financial structure.

STUDENT AID REFORM

Our Council is in complete support of the President's goal "that no qualified student who wants to go to college should be barred by lack of money." We support the concept of the Administration that every needy student be provided an assurance of student aid support. The debate is not over the objective, but rather the best way to achieve it.

Again this year, the Council applauds the desire of the Administration to solve a number of problems which exist with the programs currently operating. It has been suggested that the proposed bill S-1123 would solve most of these problems by providing adequate availability of funds, expanding the loan program drastically, eliminating the increasing interest expenditure of the guaranteed loan

program from the federal budget, reducing the uncertainty of students about how much and in what forms student aid is available, and by providing equity in the distribution of federal student assistance funds.

Clearly, the Council accepts these as worthy objectives to be pursued, but we have sincere and persistent reservations that the strategies for achieving these goals are not present in the Act as it is now structured. Nothing has led us to believe, even after thorough study of the bill and the information provided by the Administration, that the guaranteed loan program will be able to continue to provide a volume consistent with our current level ($863 Million during the first nine months of FY 1971) of activity if these measures are adopted.

Let us make it clear that this Council does not come before the Committee today merely to defend the status quo. The goal of every agency represented here is, first of all, to provide as much financial aid to students as is needed to allow them to acquire the education and skills necessary for life in another century. That is our business. If we are convinced that another program can accomplish that goal more readily and completely than ours, we would, as a Council, support it wholeheartedly. However, that does not represent our thinking about the proposals suggested in S-1123.

The following objectives are favored:

(1) the concept of a "federal floor of student aid" to every needy student as as assurance,
(2) the capacity to establish the concept early in the educational experience of every American that the future is limited only by imagination and desire to achieve,
(3) the increase in grant/work study funds of $242 million in FY 1971, and
(4) the targeting of resources to assure that every needy student is aided.

A LOOK AT THE CURRENT RECORD

Federal and state guarantee programs have grown from $77 Million annually (48,500 loans) in student loans in fiscal 1966, to $840 Million annually (921,896 loans) in fiscal 1970. Through March of fiscal 1971, $863 Million has been made available to students.[1] In our testimony last year we noted the interrelationship of the three college based programs with the guaranteed loan program. That is, when the Educational Opportunity Grants (EOG), National Defense Student Loans (NDSL), and College Work Study funds do not meet the needs of financially needy students, the guaranteed loan program moves toward that level of unmet student need.

The record shows the guaranteed loan program is doing a fine job of student assistance through private lending institutions and most of the loan recipients are from families of lower than middle income. We are always searching for ways to improve the program, but the radical changes proposed in S-1123 will destroy it.

(1) Student Loan Notes No. 48, April 1971, Guaranteed Student Loan Volume, DSFA, Insured Loans Branch, U. S. Office of Education

To illustrate loans by income, we note that the most recent Office of Education figures on the guaranteed student loans show that 66% of the recipients are coming from families with adjusted incomes of $9000 and below. There is every indication that lenders have continued to favor the more needy students. Yet, the program has also served the "middle income class," as difficult as that term is to define. The Office of Education has stated before this Congress that the 1969 median family income was $9,433.[2] The range between the median and the base of the top quartile of family income is $9,433 to $13,499. As you can see in Table 1, 30% of guaranteed loans have gone to families with adjusted incomes between $9,000 and $14,999, and only 4% to over $15,000.

Table 1
Distribution (in percentages) of Loans[3]
By Family Income (FY 1971)

			Adjusted	Gross
-0-	-	2,999	24	11
3,000	-	5,999	20	12
6,000	-	8,999	22	17
9,000	-	11,999	19	20
12,000	-	14,999	11	19
15,000	-	over	4	21

(2) Chart presented in testimony by Office of Education before House Special Education Subcommittee

(3) Guaranteed Student Loan Volume, Op. Cit.

We believe the proposals contained in S-1123 would have the effect of shifting the responsibility for this type of student credit activity from the commercial lending institution to the college, an institution which we believe is not appropriately equipped nor especially desirous of entering into large scale financial transactions of this type.

We will not comment in detail about the mix of grant/work study arrangements suggested by this bill, but rather focus our attention on what we believe will be dwindling participation by commercial lenders. As we have discussed the proposals with them, they have expressed complete disenchantment over the thought of making "subsidized" and "non-subsidized" loans in small amounts of approximately $400 per year, extending repayment over as much as 20 years and providing extension clauses that when sequentially added to the repayment period plus the in-school period would allow a student who first borrowed at age 17 to complete repayment just nine years prior to becoming eligible for social security benefits.[4]

In effect, this bill proposes to create an NDEA type loan program which would be centered in the colleges, financed from the private money market and either administered by the colleges or by the National Student Loan Association (NSLA). We have doubts that

---

4) Assumes student borrower begins at age 17, completes schooling at age 24, has borrowed the maximum allowed under the Act ($17,500) enters military service, uses the five-year "wild card" deferment and uses the total repayment period for which he is eligible (20 years). He would be 43 years old when the debt is retired.

commercial lenders will respond favorably by purchasing participation in NSLA. Obligations of NSLA will have to be at least as attractive and probably more so than any other government security. This is an effort to transfer the funding of student loans from the federal budget to the private money market. NSLA is structured in such a way as to give preferential treatment to colleges, in effect requiring them to become lenders as a precondition to participation in the other programs. The Council's experience, and indeed that of the federal government with the NDEA program is that this probably is not an appropriate role for educational institutions. You will undoubtedly hear conflicting testimony on this point. We will leave that part of the discussion to our colleagues from the colleges.

THREE CATEGORIES OF LOANS - ONE STUDENT

As we understand the bill, there would be three categories of insured loans:

(1) resource equalization loans of a probable limit of $400 to be made by the educational institution (from funds created within NSLA) or commercial lenders;
(2) cost of education loans to be made only by an educational institution with a limit of $1500 carrying an interest subsidy similar to the resource equalization loans;
(3) non-subsidized loans made to "non-needy students" by commercial lenders with accrued interest deferred and added to principal and amortized over the repayment period.

This might mean, for example, that a single student could obtain a resource equalization loan from a commercial lender ($400), a cost of education loan from his educational institution ($1500), and a

non-subsidized loan from another commercial lender ($600) for a total of $2500 from three separate sources. At payout time, all must be repaid simultaneously. This example may be an extreme case, but it serves to illustrate the complications which can result in further confusing an already intricately involved program. The most common complaint about the current guaranteed loan program is not rate, but the program's complexity. Some savings and loan associations have documented their reluctance to participate for that reason in an article appearing in the March 1971 Savings and Loan News. If installment credit personnel in commercial banks have trouble administering the current program, colleges will be totally unprepared for the multi-phase proposed program. We should keep it as operationally simple as possible.

We believe the enactment of S-1123 would result in the following:

(1) place far too heavy emphasis on borrowing as a means of educational finance,
(2) effectively curtail the private lender/student aid partnership we have so carefully built in the guaranteed loan program over the last few years,
(3) engage educational institutions in large scale lending, an activity for which they are not suited nor adequately staffed to accomplish,
(4) result in substantially diminished participation on the part of commercial lenders. The estimate of $1 Billion in non-subsidized loans from the commercial lender resource seems to us to be unrealistic.

RECOMMENDATIONS

After carefully examining the Administration's bill which is largely unchanged from last year, we remain convinced that the proper approach to the federal government's involvement in the student assistance programs is adequate funding of the existing three college based programs (CWS, EOG, and NDEA) and the continuation of the additional resources of the guaranteed loan program from the private money market.

THE COUNCIL THEREFORE MAKES THE FOLLOWING RECOMMENDATIONS TO THE COMMITTEE:

(1) That since current programs expire in June of 1971, a continuation authorization of at least two years should be enacted during which time federal and state governments should work cooperatively to develop balanced and equitable financial aid programs to complement each other in the light of clearly established and agreed upon policies; (5)

(2) That during this two year continuation period the existing programs be funded sufficiently to enable the colleges to assist every needy student in having sufficient parental and self resources to meet educational costs;

(3) That the guaranteed loan program continue to be a subsidized student loan effort funded through the nation's commercial financial institutions and available on terms now provided for in existing legislation;

(4) That the Emergency Insured Student Loan Act of 1969 (P. L. 91-95) be continued for at least two years to provide the flexible cushion of earnings on student loans above the statutory rate as the money market fluctuates. This legislation has proven its worth.

(5) We would recommend an "incentive act" which would encourage the creation of comprehensive student assistance programs in all states where they do not exist. The task of removing financial barriers to higher education should be a joint venture of the states and federal government. Such an "incentive act" might be regarded as a specialized form of revenue sharing.

ADDITIONAL COUNCIL RECOMMENDATIONS

(1) We believe the application of a simple, realistic needs test by the financial aid officer for a subsidized loan, with the financial aid officer recommending the amount of the loan, but with the lender determining the actual amount to be advanced is entirely appropriate. One suggested alternative might be to reduce the adjusted family income level to $10,000 and omit the needs test concept. There is considerable discussion in the Council regarding the reduction of the adjusted family income level. Our concern here would be that areas of the country where per capital income is higher not be excluded from participation in the program and that large families above this income level also be eligible.

(2) We continue to express our concern over the mandatory nine-month grace period following graduation before a student is allowed to begin monthly installment repayments on his loan. We again recommend the elimination of the reference to "not less than five years" and substituting instead a provision to the effect that

> ". . . repayment of loans shall be in installments over a period of not more than ten years, except where limited by state statutes, beginning not later than one year nor earlier than nine months after . . . unless the borrower requests in writing that his legal monthly repayments begin at an earlier date . . ."

(3) We find no rationale for the exclusion of the benefits of the federal program reinsurance and incentive allowance in those states who have been willing to undertake a direct student loan program. Indeed, we would recommend that S-1123 be amended or additional legislation be introduced to encourage each state not now operating a comprehensive student loan program to enter into a federal/state partnership.

REACTIONS TO SUGGESTED PROGRAM CHANGES

A number of proposed changes would alter the guaranteed loan program substantially. Many of our suggestions are repeated from our testimony of last year. To conserve time, we have appended our comments as an attachment to this presentation. (See Attachments I and II.)

Attachment I

REACTIONS TO SPECIFIC PROGRAM CHANGES FOR "SUBSIDIZED AND NON SUBSIDIZED" LOANS IN S-1126

Proposed: Remove the 7% interest rate and allow the Secretary to prescribe a maximum "market rate" which could change from time to time (from one loan to another).

Council Suggestion: We urge the maintenance of a fixed interest ceiling (7%) while the student is in school or deferred loan status. Allowing a fluctuating rate would cause great confusion and likely mutiny among lenders since a student borrowing five times during his schooling might have five different rates.

Proposed: Repeal the interest subsidy and special allowances under the existing program on loans made after July 1, 1971.

Council Suggestion: We urge the maintenance of the interest subsidy payments on guaranteed loans during the in-school and deferment periods. Our reasons are: 1) to prevent the high accumulation of interest to students not in a position to make periodic interest payments during the time in school, 2) to prevent the creation of another class of loans which would result in high lender attrition and 3) to prevent lender withdrawal from a program in which no income activity occurs in the loan account during a period of five to seven years.

Proposed - On loans made after June 30, 1971 the interest subsidy would be paid at a rate prescribed by the Secretary on subsequent loans of certain amounts determined by student need when made by the college, commercial lenders, direct state lenders or NSLA (suggested limits of $400 per loan). The interest subsidy would be paid by the Government while the student is in school, and all over 3% would be subsidized following maturity.

Council Suggestion - We do not believe it wise to revive the matter of partial subsidy during the repayment period. In addition, certainty of payment of interest while the student is in school is essential if lenders are to be expected to meet loan demand. Consider, for example, the situation of a student repaying a $2500 loan, $400 of which was granted on the basis of need and thus providing a subsidy during the repayment period. This involves extremely complex bookkeeping procedures if the student has already borrowed under the existing programs with multiple rates, "special allowance" and outstanding loans from several sources.

Proposed - Authorize guarantee of "non-subsidized" loans with no interest payable by the Government, and increase the maximum combined loan limit to $2,500 per year, for 7 years of study, for a maximum loan limit of $17,500.

Council Suggestion - Maintain the present loan limit for "subsidized loans" of $1,000 to $1,500 per year, and a maximum student loan limit on "subsidized loans" of $7,500. Although the Council recognizes the need to provide increased maximum borrowing levels because

of sharply rising educational costs, we are clearly concerned that students may, under the suggested changes, incur educational indebtedness of as sizeable proportions as a mortgage. Attachment II indicates the gravity of borrowing at the increased $2,500 per year level and shows clearly the repayment costs which a student would have to meet under those conditions.

Proposed - Extend the repayment period to 20 years and authorize a 5-year deferment at the student's request, plus deferments for military, Peace Corps and Vista.

Council Suggestion - We believe it imprudent to allow students to encumber themselves with an indebtedness which would extend over half of their business lives. The present 10 year maximum repayment period with deferment and forbearance provisions places few students in hardship conditions. If loan limits are kept at a reasonable level, a longer repayment period is not necessary. We recommend retention of the present 10 year period.

Proposed - All loans be exempted from the Truth-in-Lending Act.

Council Suggestion - We favor this position which would eliminate very costly paper work on a type of loan not designed to fit the lending practices covered by Truth-in-Lending.

Proposed - Only undergraduate full time students would be eligible for subsidized loans.

Council Suggestion - We urge the continuation of eligibility for graduate and professional students for subsidized loans under the Guaranteed Loan Program. At present 11% of insured loans are made to students at the graduate or professional level. The exclusion of half time students from participation would mean that many students now enrolled at community colleges would not be able to receive assistance to continue schooling.

Proposed - The definition of "eligible institution" used for resource equalization and cost of education loans does not include the possibility that a state-wide agency be used as a collective instrument for servicing loan programs for all schools within a higher education system.

Council Suggestion - That wherever appropriate State Government agencies charged with the centralized administration of financial aid be permitted, if it is determined to be appropriate, for an educational system to act as a collective "eligible institution" for all institutions within the system.

Proposed - Loans made at different interest rates can be consolidated into one per-student, per-lender at a rate that is "agreeable to both".

Council Suggestion - The specific language of this proposal leaves much to be desired in actual administration to prevent inequality of treatment and inability to reach agreement between the parties. The Council suggests that the Secretary or Commissioner set forth a schedule of rates applicable under varying conditions.

60-433 O - 71 - pt. 5 - 25

Attachment II

TYPICAL REPAYMENT REQUIREMENTS OF STUDENTS
OBTAINING NON-SUBSIDIZED (MARKET RATE)
EDUCATIONAL LOANS, AS PROPOSED IN HR 5191

AMOUNT BORROWED - $10,000 (4 years @ $2500)

Repayment Period	7% Simple Interest		9% Simple Interest	
	Monthly Payment	Total Payment	Monthly Payment	Total Payment
10 years	$142.52	$17,103.00	$163.73	$19,648.07
15 years	$109.60	$19,728.63	$131.09	$23,597.69
20 years	$ 95.16	$22,840.34	$116.29	$27,911.80

AMOUNT BORROWED = $17,500 (7 years @ $2500)

Repayment Period	7% Simple Interest		9% Simple Interest	
	Monthly Payment	Total Payment	Monthly Payment	Total Payment
10 years	$270.75	$32,490.48	$316.46	$37,975.50
15 years	$208.21	$37,478.36	$253.38	$45,609.27
20 years	$180.79	$43,389.66	$224.78	$53,947.51

ASSUMPTIONS:

1. Simple interest (not compounded) accrues during school enrollment and a nine-month grace period.

2. Accrued interest is added to AMOUNT BORROWED to determine PRINCIPAL to be financed by payout (installment) note.

Statement of Thomas L. Burch,
Vice President, United Student Aid Funds, Inc.,
before the Subcommittee on Education
of the Committee on Labor and Public Welfare,
United States Senate

May 18, 1971

Mr. Chairman: My name is Thomas L. Burch. I am Vice President of United Student Aid Funds, Inc., 845 Third Avenue, New York City. I should like, with your permission, to offer for inclusion in the transcript at this point, a statement which up-dates the views we presented on this general subject to your subcommittee last year.

You will recall that United Student Aid Funds is a non-profit, tax-exempt corporation formed in 1960 to encourage low-cost loans to college students by guaranteeing repayment. We have guaranteed more than $300 million worth of these loans so far, and our operations, started in 1961, have for several years covered all 50 States.

It is a pleasure, Mr. Chairman, to appear before this committee. I should perhaps warn you in advance that most of the recommendations I shall present here today will not vary greatly from those Mr. Marshall made last year. Time and experience have served only to deepen our belief that these recommendations would make for a more efficient, practical and helpful student aid program.

Following is a summary of our recommendations made last year:

1. We supported the proposal for a secondary market, but warned against hobbling it with conditions that would interfere with its effective functioning.

2. We said it would be a mistake to put colleges still deeper into the business of making, administering, and collecting loans -- a very demanding role for which few of them are qualified

3. We urged that loan eligibility be based not on family income, but on family ability to contribute. We voiced our concern -- a concern shared by nearly every knowledgeable person in the guaranteed loan field -- about the Office of Education's insistence that the student aid officer at the college may neither inquire into a student borrower's financial circumstances nor recommend a specific dollar loan amount to the lender.

4. We proposed eliminating the in-school interest subsidy for students at all income levels, and applying the money so saved to other educational needs.

Our support of each of these positions is even stronger now. I shall take them up one at a time. Before doing so, however, let me make this general comment. Many bills are before you for consideration. These include a constructive bill introduced by

the subcommittee Chairman and cosponsored by a number of his colleagues. Included also is a broad set of proposals by the Administration. We will not comment on all the student aid items encompassed by these and other bills. Instead, it seemed to us we could be most helpful to you if we limited our observations to those few steps -- four in number -- that, in our view and based on our experience, will improve the present guaranteed loan program. And when we speak of improving the present program, we must not become so impatient or critical that we lose sight of the great contribution it has made, and is making, to financing education for America's young people. The whole concept of guaranteed loans is a good concept. Lenders, guarantors, colleges and students have all done a great job in making it work. We at USAF are happy to have helped pioneer its development. We want to continue helping it grow and flourish, in its own proper balance -- and in perspective with other elements of today's total student aid package. It is most important that all of us keep the guaranteed loan program in perspective -- and remember that it has never purported to do the whole aid job by itself. It has never presumed to be a competitor with any other aid element. It is willing and able to supplement the other aid elements, as they supplement it.

In this setting we offer our suggestions for improving the effectiveness of the present guaranteed student loan program:

First, the secondary market. It is urgently needed -- and it is urgent that it be set up in such a way that it will work!

Few would deny that with the volume of guaranteed loans running at $800 million a year, and heading toward $1 billion a year, some way must be found to "lay off" outstanding loans in order to free money for further lending. Otherwise, the money that lenders can afford to set aside for this nonprofit service will be steadily and drastically reduced, and many will finally have to drop out of the guaranteed loan program altogether.

But there is a danger that some changes now proposed in the underlying student loan program may make a secondary market unworkable. For example: Increasing the loan limit to a maximum of $17,500 for one student over seven years of study. Extending the repayment period to as much as 20 years. Giving a borrower the option to impose his own five-year moratorium on his obligation to repay. Changing the interest rate on a loan, and so on. We are persuaded that before any secondary market can be viable, there must be solid investor confidence that the underlying loan program is sound, established and not subject to abrupt, experimental or whimsical change. This level of investor

confidence is critical to the success of any secondary market device. If this confidence doesn't exist, or if substantial and unproven experiment is likely in the underlying loan program, then the secondary market approach will fail. We believe most of the underlying concepts of the present guaranteed loan plans have proven themselves. They should be altered only on overwhelming evidence that a change would be beneficial -- and even then that change should be made with caution. Since a secondary marketing is feasible only as part of a stable, on-going program, we urge most strongly that only those minimal and absolutely necessary changes be made in the basic program.

Second, the proposal to make these loans an all-college operation. One of the changes being pushed would have colleges rather than banks make, administer and collect guaranteed student loans. We feel such an arrangement would be disastrous for the program, the students, and the schools themselves.

To expect the average college or university to participate effectively in a banking operation of this size, is, in our view, totally unrealistic. Except for a very few of the larger schools, they lack both the facilities and the experience for this kind of operation.

We believe the net result of a nationwide college lending program would be a new and unnecessary burden on the college, a less

effective loan repayment program, and in the long run substantially higher costs to the Federal treasury and the taxpayers.

Under some of the proposals, educational institutions would be not only the principal lenders but, for certain categories of loans, the sole lenders. They would have no choice in the matter. They would have to lend on a substantial scale in order to qualify for desperately needed grant and work funds -- funds which, by the nature of things, only colleges can handle. We suggest that most colleges have problems enough with National Defense loans, without the added burden of administering, refinancing, reporting, and collecting subsidized and guaranteed loans. And in our judgment if the colleges do take the amount of responsibility envisaged under the Administration bill, they would soon have to take it all -- because private lenders would have no particular reason to stay in the program. Indeed (even apart from the proposed college-lender involvement), they would probably pull out in great numbers anyhow if Congress enacts some of the other substantial changes proposed. Mr. Broadway, Past President of the National Council of Higher Education Loan Programs, recently calculated that under some of the proposed arrangements a student who first borrowed at age 17 might still be paying off his loan when he was only nine years away from eligibility for social

security benefits. Banks are simply not going to continue participating in a complicated program where the payout may stretch over a period of 36 years.

Nor would such a program be attractive to a secondary market. Thus, the burden would surely fall back on the Treasury, resulting in precisely the kind of large-scale Federal spending the guaranteed loan concept was devised to avoid.

Third, the matter of family income as a criterion for guaranteed loans.

As we have stated many times, we are strongly in favor of returning to the college financial aid office the responsibility for deciding the type and amount of aid to be given to the individual student. We believe that the aid officer should not be foreclosed from considering the student's whole financial picture, including the family's ability to contribute. Assessment of ability to contribute can produce quite a different result than consideration of family income alone. The ability of parents to help their children through school often depends on many factors in addition to income.

A man making an excellent salary may nonetheless be in trouble when it comes time to pay for his son's or daughter's college education. If two or more children are in college at the

same time, the problem is compounded. Financial emergencies are no respecters of persons, even those with earnings well above the national average.

Inflexible standards of eligibility, such as a cut-off above some specific family income level, would complicate, not simplify, the guaranteed loan program. And they would be unfair. I repeat that the person best qualified to judge a student's overall financial situation -- and to help him make a rational decision as to borrowing -- is his financial aid officer. That officer, rather than being prohibited from doing so, ought to be encouraged -- indeed perhaps required -- to counsel the student about his total education finance picture. Further, he should make -- rather than be prohibited from making -- a recommendation on the dollar amount to be borrowed.

Fourth, the in-school interest subsidy.

The Administration bill would eliminate in-school subsidies for all students except those from the lowest-income families. We believe these subsidies should be dropped completely, with the savings going on to other pressing educational needs.

If we truly believe, as I am sure we do, that an education should increase both citizenship potential and earning capacity, it makes good sense to postpone all guaranteed loan payments,

principal and interest alike, until the borrower has completed his education. Prior to the passage of the Higher Education Act, most guaranteed loan programs, including our own, operated on this sound principle.

But in our opinion it does not make sense to forgive the in-school interest. That would be like saying that the education has not really achieved its purpose -- that the graduate is still not able to make his way in the world. On the contrary, he should be perfectly able to pay off his loan without hardship, unless economic disaster strikes -- and if it does, most lenders will gladly make special arrangements for the duration of the emergency. They do so now.

The in-school interest subsidy is at best of marginal value to the borrower. In the case of an average payout note of $2,000, his cost of repayment would be raised no more than $8 a month. Surely this can't be a great item for a young person then earning a good living. But the cost to the government of paying that in-school subsidy for all borrowers comes to around $100 million a year already, and will soon exceed $300 million a year. There are a great many pressing needs (education needs) that could use that kind of money.

Conclusions

In sum, United Student Aid Funds believes a secondary market is essential. We do not see, however, any way that such a market can work, unless the guaranteed loans are made on the least complex basis possible, and with the minimum of change in the present program.

We believe it would be a serious mistake to put colleges deeper into the loan business, a function for which so very few have any capability. Not only would this dim the prospects for a viable secondary market, but it would inevitably depress private lender interest in the guaranteed loan field as well.

We would like to see ability to contribute rather than famil income used as a consideration of eligibility for various categories of loans. And we believe the decision on what a student needs to borrow should be shared actively by the financial aid officer.

Finally, we recommend the complete elimination of the in-school subsidy, and the diversion to other educational purposes of the $100 million or more that this step would save.

I thank you for your attention. We know there has been some interest in the default problem and anticipating your questions have prepared a statement of our observations. This is attached as an Appendix. We shall be glad to answer your questions.

APPENDIX

OBSERVATIONS OF UNITED STUDENT AID FUNDS, INC., ON DEFAULTS BY STUDENT BORROWERS WHOSE LOANS HAVE BEEN GUARANTEED

United Student Aid Funds, Inc., has for a number of years been concerned about the problem of student borrowers who default on their loans. Purely as a matter of averages, we expect the number and dollar amount of defaults to rise as the volume of loans coming due increases. This has happened, but in addition there has been a small but steady growth in the actual percentage of defaults in loans coming due.

Our policy at USA Funds from the beginning has been to urge lenders to be most lenient with the borrower who is in trouble but who also shows an honest desire to repay and to make an arrangement with the lender even on a basis which materially extends the payment date. Lenders have cooperated in this undertaking.

On the other hand, we believe the willful defaulter should be pursued diligently. We have tried to do this. We believe this must be the policy of all guarantors, the Federal government included. A number of agencies will guarantee loans for students in the same area -- even at the same institutions. If the impression is created that loans guaranteed by even one of the guaranty agencies are not regarded as real obligations that need to be met,

it will have an adverse effect on all guaranteed student loan repayments.

A few years ago we adopted a plan of aiding lenders to encourage borrowers to meet their obligations at the first indication of a probable default. Briefly the plan, a strictly voluntary one, is as follows:

A lender notifies us that a borrower has failed to make payments on time. Immediately we send the delinquent borrower a night letter urging him to bring his account current, and reminding him of the financial and legal penalties of default. We send copies to parents, co-maker (if any), college attended, and lender.

Some 2,000 of these "delinquency" wires have been sent out so far this year. Lenders report that they get borrowers back on schedule in more than half the cases as a direct result of these reminders by wire.

We follow a similar plan after we pay lenders who are forced to come to us for payment in those cases where a borrower's delinquency persists. Such efforts on our own behalf are much less effective at this late stage, but we still avert losses on about 15% of these confirmed defaults.

Parts of this plan have been adopted by other guaranty agencies.

This, however, was an attempt to cure the disease. More recently we have added a plan that we hope will aid in preventing it.

We have prepared a leaflet (copy attached) telling graduating borrowers the importance of credit. Also, how important to their own future credit eligibility is the repayment of their student loans. The pamphlet urges them to make prompt arrangements now for later repayment of their loans. This is being sent in quantity to college financial aid officers with an explanation of the guaranteed loan program and the request that the leaflets be distributed to graduating borrowers.

We also write to the president of each college, pointing out the importance to the college of a good repayment record by its graduates. We ask his personal and official support of the financial aid officer's efforts.

In addition, we have prepared an advertisement (copy attached) on the subject and sent it to campus newspapers suggesting it be run for the benefit of readers who have borrowed.

It is too early to tell the effect of the new plan, but we are sure with the cooperation of lenders and school authorities

it should be helpful. The following is a description of our past experience:

We endorsed our first student loans in 1961. First repayments were made in 1962. The first loss through default came a year later. In ten years of operation we have endorsed 456,000 loans totaling $301,000,000. $67,000,000 of that has been fully repaid, and $104,000,000 more is currently being repaid on time. But about $9,000,000 has not been repaid to lenders. It is worth emphasizing here that while this $9 million default figure amounts to about 3% of our total loans, it is slightly in excess of 5% of the loans in repayment stage -- a much more significant point of comparison. We have had to make good on behalf of the 9,900 defaulting borrowers by paying this $9 million to lending banks to cover their loans which we guaranteed. We continue diligently to pursue these defaulters, and ultimately recover after collection costs are paid about one-half of the amount paid to lenders on their behalf.

The growing percentage of defaults to the amount "subject to repayment" -- that is, paid in full or due for installment repayment -- is shown below.

1964 - 1.25%
1965 - 2.17
1966 - 2.97
1967 - 4.00
1968 - 4.69
1969 - 4.98
1970 - 5.49

In contrast to the State-supported programs whose borrowers reside in a single area, United Student Aid Funds embraces the whole United States. Our program includes students of some 960 sponsoring colleges. It includes 14 States we have served as guaranty agency, and 13 more States for whom we have administered funds advanced by the U. S. Commissioner of Education. 10,000 lenders, in all States, make student loans with our endorsement.

With this range and diversity of borrowers -- and lenders -- it is significant that both the proportion and trend of overall defaults in our varied program parallels closely those reported by the New York and Pennsylvania student loan guaranty agencies.

It is difficult to classify the sources of default within such a broad spectrum without analysis too costly for us to afford. However, the record in a few broad categories may be useful. We can report the following percentages of default:

College borrowers prior to 1966 (effective date of Federal guarantee)	1.9%
College borrowers since 1966	6.3
Vocational school borrowers (since 1966)	9.6

This experience we believe is about the same as that of other plans of comparable size and maturity.

In conclusion, we should emphasize again our belief that each lender and guarantor must diligently pursue all willful defaulters because of the adverse effect on the future credit standing of the borrower and also because of the adverse effect on the default experience of all guarantors.

Mr. Chairman and Members of the Committee:

The following information is submitted to you concerning New York Higher Education Assistance Corporation's experience in handling defaulted student loans and a compilation of default statistics.

New York Higher Education Assistance Corporation has been in existence since 1958. Until recently our default experience had not been a disturbing factor but during the past year the number of defaults have greatly increased and the situation is now of major concern.

After students have left school they are provided a nine month grace period but for better administration students are urged to visit the lending institution as soon as possible after they leave school to arrange for monthly payments at the end of this period. Based on reports from schools which are initiated by this Corporation, we are advised that the student is no longer in school. The students and the lending institutions are then notified through a notice that the student has left school. In addition to this notification, lenders also send notices to the student and make other efforts to contact the student. Lenders follow their normal collection procedures and do what they can to have the student come into the bank or respond by mail to complete repayment arrangements. After the grace period, if the student has not made the necessary arrangements a claim for reimbursement is filed with New York Higher Education Assistance Corporation. When claims are received by the Corporation efforts are made through letters, telegrams and personal contact to advise the students that if they do not make arrangements with the lender that New York Higher Education Assistance Corporation will have to purchase the claim. We point out that this action will hurt the individual's credit record and in some cases result in paying the full interest rate rather than the 3% interest rate they will pay to the lender. As a result of these procedures New York Higher Education Assistance Corporation is averting about 50% of the claims received from lending institutions.

In arriving at statistical information concerning the default purchase ratio the Corporation determines the dollar volume of the loans subject to or in repayment, the amount repaid by students to lenders and the dollar amount of default purchases and computes the default purchase ratio by determining the ratio of default purchases to the total amount of money which is subject to repayment.

We do not include the dollar amounts outstanding to students who are in school or in the grace period because those amounts are not at that time subject to repayment.

	Cumulative as of Periods Ending ($000 Omitted)		
	12/31/68	12/31/69	12/31/70
DEFAULT PURCHASE RATIO:			
Converted Loan Amounts			
Subject to or in repayment	$ 86,000	$110,000	$147,000
Repayments	89,000	121,000	170,000
Default Purchases	6,800	9,200	14,550
Total Converted	$181,800	$240,200	$331,550
Default Purchases	$ 6,800	$ 9,200	$ 14,550
PURCHASE RATIO	3.7%	3.8%	4.4%

We have further analyzed these statistics to separate higher education borrowers and vocational borrowers. At the end of the last fiscal year the default purchase ratio for students in vocational programs stood at 7.3% and those in higher education stood at 4.2%. The increase in the vocational default ratio is shown on the graph marked Exhibit 1. We must point out that after defaults are purchased by the Corporation collection efforts are actively continued. This includes efforts by the Corporation itself and also the use of attorneys to obtain judgement to effect the collection of these defaulted loans.

	Cumulative as of Periods Ending ($000 Omitted)		
	12/31/68	12/31/69	12/31/70
ANTICIPATED DEFAULT LOSS RATIO:			
Total Converted	$181,800	$240,200	$331,550
Anticipated Amount of Losses*	$ 3,400	$ 4,900	$ 8,700
LOSS RATIO	1.9%	2.0%	2.6%

*Anticipated Losses - Estimated amounts which NYHEAC does not expect to recover.

We are sure you are also interested in the actual dollar amount of the expenditures made by the Corporation to purchase defaulted loans. For the New York State fiscal year which ended on March 31, 1970 the

Corporation expended $3,018,408 and at the end of that fiscal year had expended a total of $10,201,764 to purchase defaults since the start of operations on June 30, 1958. For the fiscal year ending March 31, 1971 the Corporation paid out $6,212,095 for defaulted claims. This is more than a 100% increase over the preceding fiscal year and in the last two years the Corporation has purchased more claims than it had for the first ten years of its existence. Due to rising volume, the amount of default purchases would have risen somewhat but the accelerated rate of these expenditures in so short a period of time is disturbing to members of our Board of Directors who are cognizant of their obligation as responsible stewards of public funds.

In trying to determine some of the trends in the program it is apparent that, while New York State has provided approximately 10% of the loans it has made in the last two years to students in vocational programs, 35% of the default claims paid are on behalf of students who have enrolled in vocational programs. The average amount of the claim paid on vocational schools is less than the amount paid on higher education students due to the fact that there is normally a smaller loan required and that in most cases there is only one year or less of schooling while higher education students normally spend a longer time in school before they are subject to repayment.

In Exhibit 2 we show the number of claims paid by the Corporation during the last three fiscal years and indicate the type of school the borrower attended. Not only has this number increased drastically but the big increase has been in the area of beauty schools and trade schools. Nursing students generally are meeting their obligations promptly and the business schools, which includes in our statistics a number of computer schools, is beginning to grow faster than we had anticipated. We must state however that the normal two year business school default rate seems to be fairly stable and further refinements in our analysis process will enable us eventually to separate the normal business school from those engaged in a computer school type of operation. The schools which have shown the greatest percentage rate of growth are those which do not require high school graduation for admission.

I am certain that beside outlining this very disturbing problem that for true perspective you should know New York records show that in this last fiscal year students have repaid to lenders, in accordance with their installment obligations or through lump sum payments, $49,473,129. Fortunately, the great majority of youth who have obtained loans are still promptly meeting their obligation. However, these statistics point out that there are

areas where distinct problems are apparent and our Board has commissioned a consulting firm, Derryck Associates of New York, to make a study of the vocational program to try to determine some of the reasons for the default ratios climbing so rapidly in this area. This report has recently been completed and early next month the Board of Directors of this Corporation will have a meeting with the consulting firm to review their findings and recommendations.

THE AMERICAN BANKERS ASSOCIATION 1120 CONNECTICUT AVENUE, N. W., WASHINGTON, D. C. 20036

CLIFFORD C. SOMMER
PRESIDENT

SECURITY BANK AND TRUST COMPANY
OWATONNA, MINNESOTA 55060

June 9, 1971

The Honorable Claiborne Pell
Chairman, Subcommittee on Education
Committee on Labor and Public Welfare
United States Senate
Washington, D. C. 20510

Dear Mr. Chairman:

The American Bankers Association appreciates this opportunity to present its views on the various amendments to the Higher Education Act of 1965, in particular those relating to the guaranteed student loan program.

As you know, The American Bankers Association has testified before your Subcommittee a number of times in support of this legislation.

Since the enactment of the 1965 legislation, the growth in insured student loans has been impressive. According to statistics furnished by the U. S. Office of Education, the number of insured student loans granted since the passage of this Act now totals more than 3.4 million, amounting to $3.15 billion. Commercial banks have made more than 81 percent of these loans. But, we have increasingly become convinced that changes in the program are absolutely essential if we are to retain, let alone increase, the present level of participation.

During the decade of the 1970's, the demand for student loans will continue to rise. While the rate of growth in college-age population is expected to slow down as compared with the past decade, a greater percentage will be attending college, and tuition and other expenses are expected to continue to increase. Thus, the demand for funds is likely to rise substantially. We feel it appropriate to point out that these and other demands for long-term credit during the 1970's are likely to swamp commercial banks and other lenders, unless a broader market and a mechanism for making these loans more liquid are devised.

As a socially desirable undertaking, the student loan program is, and should be, high on the list of national priorities. The banks have amply demonstrated their concern that no deserving young person should be denied the chance to go to college for lack of financial assistance. In the search for alternatives, we firmly believe that the Congress chose wisely in relying on the loan insurance or guarantee method for encouraging a healthy flow of funds from private lending institutions into student loans. We continue to believe that the insured loan program will adequately meet the need for a rising volume of student loans in the years ahead, if an appropriate secondary market facility is established.

Turning now to the legislation relating to this program which is pending before your Subcommittee, we would like to comment on S. 659, S. 1123, S. 1161, S. 1755, and S. 1756.

S. 659

S. 659, entitled the "Education Amendments of 1971," is a comprehensive bill covering the entire field of higher education. As participants in the student loan program, our primary interest is in Sections 144, 145, and 146 of Part D, Student Assistance.

Section 144 would continue the guaranteed student loan program for an additional five years. Section 146 would continue the Emergency Insured Student Loan Act of 1969, special interest rate allowance, for two years. Section 145 would establish a loan warehousing procedure.

Section 145 requires discussion in greater detail since it is of primary concern to us. Warehouse loans would be made only to eligible lenders under terms and conditions set by the Commissioner of Education. However, the maximum amount advanced would be 80 percent of the unpaid balance of eligible loans. Repayment would be required at a time and in a manner the Commissioner may require. In addition, all warehouse advances would be conditioned upon reinvestment in new student loans.

Funds for warehousing would be obtained by the Commissioner of Education from the sale of "education warehouse certificates" and by the establishment within the Treasury of an "education warehouse revolving fund." This fund would be financed through the sale of obligations by the Commissioner to the Secretary of the Treasury at an interest rate matching market yields on Treasury issues maturing in five years. The Secretary of the Treasury would be empowered to borrow through the issuance of "education bonds" to make the money for the revolving fund available.

Commenting briefly on these proposed changes, we endorse the extension of the present special interest rate allowance provisions to 1973 and other required changes to permit the present program to continue beyond the June 30, 1971, expiration date.

However, our Association regards the so-called secondary market provisions embodied in S. 659, which provides only for warehousing facilities, to be inadequate. As indicated in our testimony last year, we feel that the basic purpose of student loan warehousing is to accommodate holders of State and privately insured or guaranteed loans. This would provide liquidity for loans which lack the uniformity of terms and conditions needed to be acceptable in a national market.

In view of the requirement to make repayment eventually, a warehousing loan can be considered by lenders as only a temporary source of liquidity. The most critical need is for a true secondary market such as the one provided by FNMA. Such a market combined with warehousing arrangements would provide the fullest degree of flexibility. In this connection, I would like to quote from the statement made last August before your Subcommittee by Under Secretary of the Treasury Charls E. Walker:

I want to stress this point. Warehousing will not solve the long-term liquidity problems created by a sizeable student loan portfolio. The lenders must at some point repay the advance. The flexibility to adjust to changing market conditions would not be provided by warehousing alone.

We also believe that the warehousing procedure under S. 659 would be needlessly expensive for the Government. All of the advances from the Treasury to finance the revolving fund would be a budget expense.

We recognize from your statement when this bill was introduced that you and many members of your Subcommittee "have come to the conclusion that Congress should not adopt loans as the major Federal method of financing higher education," but would prefer a program of direct grants. However, according to the National Urban Coalition's Counterbudget, "such a program would cost $35-$40 billion a year by 1976 -- a prohibitive price given the amount of Federal resources we expect to be available during the next five years." With this in mind, it seems imperative to us that Congress continue the existing program, and also include a viable secondary market.

The Administration Bill

The Administration bill, S. 1123, introduced by Senator Prouty and others, has many aspects of the student loan provisions which are the same as those proposed in 1970. Similarly, Part D, Title IV, of the pending bill again proposes to establish a National Student Loan Association (NSLA) to operate as a secondary market and warehousing facility.

The major provisions of S. 1123 directly affecting insured student loans include:

- The repeal of the special interest adjustment allowance and all other government interest payments, except on loans to needy students.
- Replacement of the regular 7 percent interest rate limitation by a maximum rate lenders may charge, to be determined by the Secretary of HEW in consultation with the Secretary of the Treasury and NSLA. This rate could not be less than the average rate of interest on all interest-bearing obligations of the United States at the beginning of the fiscal year.
- An increase in the total of all loans permitted, from $1,500 to $2,500 per year, over a maximum 7 years of academic study.
- Extension of the longest repayment period from 10 years to 20 years.
- Repayment to begin 9 months after completion or stoppage of academic study plus military or other eligible government service.

- Interest to accrue during in-school, government service, and the 9-month grace period to be added to principal and covered by insurance.

- In addition to the required deferment of interest and principal payments during in-school and other grace periods, another voluntary 5-year deferment of all payments could be arranged by agreement between borrower and lender.

- Lenders would be required to prepay an insurance premium of ½ of 1 percent for in-school and other grace periods. This cost may be passed on to the borrower.

- Exemption from truth-in-lending requirements for all student loans.

Types of Loans Under S. 1123

The insured student loan program would encompass three categories of advances: (1) Resource Equalization Loans, (2) Cost of Education Loans, and (3) Nonsubsidized Loans.

The first two would be subsidized to the extent of full interest payment by the government during in-school and grace periods. All interest above 3 percent would also be provided by the government during the first 10 years of the repayment period, but none thereafter.

The Resource Equalization Loan limit is expected to be set at $400 per year. These loans would be available only to needy students to supplement grant/work-study assistance. In addition to these loans, Cost of Education Loans up to $1,500 per year would be available to needy students depending on the costs at a particular school. It is expected that the limitation on eligibility for these two types of loans would be based on family income (said to be not more than $10,000 except where the number of dependents reduces the family contribution below what could be afforded at that income level or where more than one dependent is qualified for post-secondary education). Only the academic institution involved would be eligible to make Cost of Education Loans. All recognized lenders would be eligible to participate in making Resource Equalization Loans. Nonsubsidized loans would not require a means test. Accordingly, up to the limit of borrowing, all students would be eligible for such loans.

Before going on to the establishment of the National Student Loan Association, we would like to comment on the changes in loan provisions under S. 1123.

Comments on Loan Provisions of S. 1123

We feel that few bankers would participate in Resource Equalization Loans totaling only $400 per year. The paper work involved would inevitably make such

loans prohibitively expensive. Moreover, since many of these loans would be combined with Cost of Education Loans which only schools are permitted to provide, being billed for two sets of loans would be burdensome for the borrower.

However, our primary concern is for the great majority of students from families with incomes falling above the cut-off point for assistance under S. 1123. For these students the bill provides only the nonsubsidized insured loans. As spelled out in the bill, the maximum annual amounts of borrowing, the total years of study covered, and the longest permissible time for repayment would produce monthly or quarterly payments exceedingly onerous for the borrower. In addition, lenders cannot be expected to completely forego income during the extended periods of deferment under the bill. For those reasons, our Association cannot support the proposed new loan arrangements.

As we stated last year, the maximum 20-year payout period is too long in our opinion. Moreover, with an annual loan limit of $2,500 during a 7-year academic period under H.R. 5191, the amount borrowed could reach $17,500, a total which begins to approach a home mortgage in size (as well as in term to maturity). With in-school and other grace period deferments, many borrowers would be making very substantial payments into middle life. During this period, they would be taking on other obligations: marriage, children, a home. Quite conceivably, both husband and wife might be saddled with large amounts of school debt during such time. Thus, the total amount payable over such a long period would certainly prove burdensome.

(An appendix to this letter provides tables on aggregate amounts of interest payable based on interest accrued and level payments at 7 percent interest, both for maximum loans and repayment periods under S. 1123 and for loans in comparison with the present system.)

The maximum 7-year in-school period, plus a 3-year term of military service, plus the 9-month grace period, all mandatory under the bill before repayment begins, would mean that interest would be deferred for periods up to more than 10 years. We cannot support a provision which would force lenders to carry loans for that possible length of time before payments of any sort would be forthcoming. To make the unsubsidized loans practicable, some arrangement for meeting the deferment problem will have to be devised.

Obviously, we strongly oppose the additional 5 years of deferment by mutual agreement between borrower and lender recommended in S. 1123, not only because it would mean carrying debt without income for so long a time but also because it would add very significantly to the burden of debt. For example, 5 additional years of deferment at 7 percent simple interest (noncompounded) would add 35 percent to a debt already increased by in-school deferment and also perhaps by government service plus the extra 9 months of required grace period, before repayment begins.

We also wonder why the bill exempts lenders from truth-in-lending requirements. We find no reasonable justification for this, particularly in view of

the lack of financial sophistication on the part of most prospective borrowers and their families.

National Student Loan Association

The American Bankers Association certainly continues to endorse a secondary market for student loans and, indeed, urges the establishment of a viable facility such as the National Student Loan Association (NSLA), as originally conceived in last year's bill. Although its basic features have not been significantly altered in the present bill, we have some concern over how these provisions would be carried out.

In summary, NSLA would be authorized to make advances on loans held as security (warehousing); and to buy, service, sell and deal in loans insured under the Higher Education Act of 1965 (secondary market operations). To provide for financing, NSLA would issue common stock but would rely mainly on its ability to borrow in the capital market, based on a full government guarantee of its debt service obligations.

Accordingly, NSLA notes or debentures should quickly resemble other Federal agency issues in yield, marketability, pledging for public deposits, eligibility for discounting, and so on. Such issues can be offered at lower rates of interest than private obligations and only fractions of a percentage point higher than those on U. S. Treasury issues, the floor for all market rates.

It has been said that interest rates on future student loans may be tied to NSLA borrowing costs. In the current market environment for Treasury and agency issues, if NSLA sells intermediate-term obligations, say up to 5 years maturity, the rates required would be substantially lower than on long-term issues. Yet, student loans are clearly long-term obligations resembling mortgages. Hence, they should command long-term rates and also include appropriate servicing costs. In its zeal to help students, NSLA may argue for more liberal terms based on cost of money, rather than on going long-term rates such as on mortgages. Moreover, default and delinquency rates which appear to be rising and would reflect some loss of interest, should also be taken into accounts.

Other matters of considerable concern to us pertain to the position and treatment of academic institutions in NSLA operations. It is apparently intended by those in charge of the student loan program that schools be encouraged to make loans to the greatest extent possible, perhaps including unsubsidized loans. They may also be given immediate priority in claims on NSLA funds.

For example, higher education institutions, including proprietary schools, would be permitted to sell the loans they originate directly to the Commissioner of Education while awaiting the inception of NSLA operations. In turn, the Commissioner would be entitled to resell such loans to NSLA as soon as it begins to function. Moreover, all of these sales and all subsequent school sales to NSLA would be priced at par.

In contrast, banks and other nonschool lenders would be subject to full market risk on their student loans portfolios. That is, NSLA would buy their loans, priced on the basis of going market rates, or at its discretion, at even lower prices to discourage lender offerings.

These possibilities raise serious problems. First, if colleges are encouraged to make loans and are assured the right to sell them to NSLA at par, the schools become rather thinly disguised conduits to NSLA funds, in effect putting NSLA virtually in the position of direct lender. Second, expanded school lending and immediate unloading of the loans would probably glut NSLA loan holding capacity. As a result, NSLA's ability to absorb nonschool loans would be greatly curtailed. The combination of unequal price treatment and favored access to NSLA funds may well stunt, if not effectively kill, a truly viable secondary market.

Continued private sector participation requires an NSLA whose warehousing activities would be confined mostly to accommodating lenders holding State and privately insured or guaranteed student loans, and one whose secondary market purchase and sales practices would treat all lenders alike. This is the FNMA approach.

S. 1161

Another bill, S. 1161, entitled the "Student Assistance Act," introduced by Senator Mondale, is a comprehensive bill covering various phases of financial aid to students for higher education purposes. It includes: grants to needy students, and aid in the form of fellowships to graduate students, generally on the basis of need; the establishment of a "Higher Education Loan Bank"; and programs designed to assist the disadvantaged through incentive and training grants. In addition, the legislation calls for the creation of a "National Advisory Council on Student Assistance."

As participants in the student loan program, our primary interest is in the "Higher Education Loan Bank." According to the proposed bill, the Bank would not be an instrumentality of the Government, although its board of 15 directors would be appointed by the President with one of them selected to be chairman.

The bill does not cover the issuance of capital stock of the Bank nor does it make provision for start-up funds. However, the Bank is empowered to issue up to $5 billion in market obligations with principal and interest guaranteed by the full faith and credit of the United States.

The Bank would lend money to students not to exceed the cost of education and according to "other terms and conditions as the board deems necessary." The loans, not to exceed 30 years for repayment, would contain provisions as nearly similar to loan agreements under the present Act as the board finds practicable. However, payments of both interest and principal would be deferred for the academic period plus three years each, for service in the military, the Peace Corps, and VISTA, or any service designated by the President as comparable to those services.

The American Bankers Association does not favor the "Loan Bank" approach. The plan would reduce private participation merely to the purchase of the Bank's

market obligations. Although empowered to sell student loans out of portfolio, the Bank could incur heavy losses unless the loans carry realistic market rates of return. It is highly unlikely that going rates would be charged and there would be little incentive for private lenders to buy any student loans. Servicing costs are likely to be large and, presumably, these costs as well as losses would be charged to budget appropriations. Without portfolio sales, the Bank would be required to issue an ever increasing volume of new marketable securities to finance a rapidly expanding student loan program.

Moreover, the bill carries no specific provision requiring the Bank to buy existing student loans. Hence, it would not function as a secondary market and, thus, existing lenders would remain locked into presently held illiquid, mostly unprofitable, long-term student loans. In the process, these lenders who have contributed so fully towards making the present program work, would no longer be able to participate actively and directly in this highly worthwhile social enterprise.

S. 1755 and S. 1756

Two bills have recently been introduced by Senator Chiles: S. 1755 and S. 1756.

S. 1755 would create a secondary market for the student loan program similar to the Federal National Mortgage Association. This is something this Association has long advocated if financial institutions are to continue to participate in this program. A secondary market would not only, we feel, increase the participation by banks, but would also attract those financial institutions that are not now in the program. We assume that, unlike the Administration's bill, this would treat all lenders on an equal basis.

S. 1756 would, among other things, continue the existing guaranteed loan program and the interest subsidy for five additional years. It would also increase the amount that could be borrowed in any year from the present $1,500 to $2,500, and increase the aggregate amount from $7,500 to $10,000. It also pledges the full faith and credit of the United States on all amounts which may be required to be paid under the default provisions of the Higher Education Act.

We feel that the two bills introduced by Senator Chiles would be most beneficial to the success of the guaranteed student loan program. The continuation for five years of the existing programs, as proposed in S. 1756, would give the Congress, the Office of Education, and the lenders a time certain in which to evaluate the existing administrative techniques and the problems of collection in light of the experience during the first major repayment cycle of the program.

The creation of a true secondary market, as proposed in S. 1755, would go far to solve the liquidity problems that have confronted so many lenders.

Summary

In conclusion, we support the continuation of the existing programs and we urge the immediate establishment of a Student Loan Marketing Association as

THE AMERICAN BANKERS ASSOCIATION

CONTINUING OUR LETTER OF June 9, 1971

SHEET NO. 9

a truly viable and equitable secondary market facility. The need for such a market increases with each loan made, but it must contain appropriate safeguards for the equitable treatment of all lenders. We further feel the warehousing should generally be confined to providing liquidity for State and privately insured or guaranteed student loans due to variability in their terms and conditions.

We hope that the Congress, in its wisdom, will see fit to act on this legislation as expeditiously as possible so as not to deprive any needy student of the opportunity to further his education in this coming school year, or any school year.

Sincerely,

Clifford C Sommer

Clifford C. Sommer

APPENDIX TABLE 1

Maximum Aggregate Amount of Interest
Payable under S. 1123 -- Guaranteed Student Loan Program

Assuming: (1) Maximum allowable borrowing; (2) Maximum academic period; (3) Maximum repayment period; (4) 7 percent interest rate; (5) Quarterly level payments during repayment period.

A. Without 3-year interest deferment for government service:

Total borrowed, $2,500 x 7 years	$17,500
Accrued interest, in-school period 1/	5,512
Total amount to be amortized during 20-year post-academic period	$23,012
Aggregate amount of level quarterly payments $536.67 x 20 years x 4 quarters	$42,934
Less: Total originally borrowed	17,500
Aggregate amount of interest payable	$25,434

B. With 3-year interest deferment for government service:

Total borrowed, $2,500 x 7 years	$17,500
Accrued interest, in-school and government service periods 2/	9,188
Total amount to be amortized during 20-year repayment period	$26,688
Aggregate amount of level quarterly payments $662.38 x 20 years x 4 quarters	$49,790
Less: Total originally borrowed	17,500
Aggregate amount of interest payable	$32,290

1/ Interest accruing at 7 percent during the in-school period without compounding is equivalent to about 6 percent compounded quarterly.

2/ The accrual of interest during 3 years of government service in addition to the in-school deferment without compounding is equivalent to about 5.6 percent compounded quarterly.

APPENDIX TABLE 2

Aggregate Amount of Interest Payable by the Student
Under S. 1123 and Under Present Insured Student Loan Program

Assuming: For comparability, maximum allowable amount of borrowing and maximum repayment period under present program; borrowings, $1,500 per year for 5 years; repayment period, 10 years; 7 percent interest rate throughout.

A. Under present program: Interest during in-school and 3-year government service periods paid by government

Total borrowed, $1,500 x 5 years	$ 7,500
Total amount to be amortized during 10-year repayment period	7,500
Aggregate amount of level quarterly payments, $262.29 x 10 years x 4 quarters	10,492
Less: Total originally borrowed	7,500
Aggregate amount of interest payable	$ 2,992
Interest as % of total borrowed	39.9%

B. Under S. 1123: Interest during in-school and 3-year government service periods defered and paid by borrower

Total borrowed, $1,500 x 5 years	$ 7,500
Accrued interest during deferment periods	1,838
Total amount to be amortized during 10-year repayment period	$ 9,338
Aggregate amount of level quarterly payments, $326.55 x 10 years x 4 quarters	$13,062
Less: Total originally borrowed	7,500
Aggregate amount of interest payable	$ 5,562
Interest as % of total borrowed	74.2%

May 11, 1971

The Honorable Stuart Symington
Senate Office Building
Washington, D. C. 20510

Dear Senator Symington:

A representative of our bank recently attended a meeting in Jefferson City, sponsored by the Department of Health, Education and Welfare, concerning federally insured loans for college and secondary education expenses.

Our bank has been involved in the United Students Aid Funds program since its inception and we are fully aware of the needs for assistance for deserving college students and the importance of either program. We understand that there will no longer be a USAF sponsored program and that all of the direct student loans will be made through lending institutions under the U. S. Office of Education program.

There has been some concern on our part for the past year or so as the demand for these loans is steadily increasing and there is a limit to the amount each individual bank can invest in the program. As you may or may not know, not all home town banks participate in the student loan program and this has placed an unusually heavy burden on the remaining banks who have realized the needs and are willing to participate. I think our bank is the only local lending institution currently active in this loan program. The volume of loans we have made has continued to increase and due to the length of time before repayment is eventually completed, it is conceivable that the demand would be large enough that it would be impossible to make new loans to deserving students. So far, repayment is a small portion of the loan volume so new funds from this source are limited.

The point I am trying to make is to encourage you to support a secondary market program for these loans. Attached is a copy of an article outlining the basics of HR 7248 currently being considered by Rep. Green's (Ore.) House Education Subcommittee. I suppose this would be similar to the Federal National Mortgage Association and government NMA. If a secondary market were available, we would be more than happy to consider processing all the loan applications that we receive from students in this area, whether they were customers of our bank or not.

As the institutions of higher learning are continually pressed for funds and there is a limit to direct government participation in this program,

it seems to me that the banking institutions and others can do this job if we can have a source of a secondary market fund where eventual servicing is made and thus free local funds to be put back into the program.

Any consideration you can give to support this position will be appreciated by the students who are going to be seeking loan funds to go to college this fall. The situation has become critical enough with us that we may not be able to make loans available to all the deserving students who have already started on their college education and who currently have one or more loans outstanding.

Sincerely yours,

John R. Cline

CONNECTICUT ASSOCIATION OF STUDENT FINANCIAL AID ADMINISTRATORS

March 5, 1971

Senator Claiborne Pell, Chairman
Senate Sub-Committee on Education
United States Senate
Washington, D.C.

Dear Senator Pell,

The Executive Committee of CASFAA (Aid Officers at 3 public and 2 private institutions) met yesterday to discuss and prepare comments on Bill S 659 - Education Amendments of 1971. We agreed to restrict our comments to that portion of the bill, Part D, wherein our presumed expertise is applicable.

We strongly support the basic philosophy of the bill as spelled out in your introductory remarks, especially those referring to a Federal commitment which is more than mere lipservice. Institutions, financial aid officers and students need some long range planning and continuity in student aid. We are already in the middle of admission and aid discussions for 1971-72!

The following sections of Part D have been singled out for specific comment:

Section 142: Excellent idea for base amount of EOG. Recommend
(a) 3-4 year average of income tax paid to indicate normal level of living.
(b) The maximum of $1200 or an amount not to exceed ½ of the student budget at that institution.
(c) Must be a full-time student making normal progress towards a degree.
(d) Establish a 4 academic year commitment leading to a Bachelor's degree which the student can "draw against" depending upon type (cost) of institution he attends.

Cost of instruction allowances- We are unsure of amount intended for this allowance. We strongly recommend a guarantee of full-funding for basic EOG prior to considering other allowances to the institution or special programs.

Section 143: Special services should be responsibility of the institution which the student attends. Any funding for improving accessibility of admissions for disadvantaged students should go to students to meet expenses.

Mr. Stanley P. Marland Jr.
Commissioner of Education
U.S. Office of Education
Washington, D.C. 20202

Dear Commissioner Marland,

In response to the invitation issued by Secretary Richardson and yourself the following comments concerning 45 CFR, Parts 175, 176, are submitted for your perusal on behalf of the Student Financial Aid Officers at 39 Connecticut Institutions of Higher Education both public and private:

1. We decry this attempt to revert to "stone age" practices of determining financial aid eligibility. Fifteen years of development by college Financial Aid Officers and College Scholarship Service are being ignored

2. Those institutions keeping valid statistics which they duly reported on line 30, Section E, Application to Participate in Federal Student Financial Aid Programs, will be penalized for honesty unless some specific steps are taken to verify "estimates".

3. There is no indication of complete review and overhaul of CWSP. Annual reviews by panels continue and compound inequities. Those institutions large enough to establish employment offices have "cornered the market" on CWSP funds creating impossible difficulties for smaller institutions.

We strongly recommend more emphasis on Work -Study type programs as opposed to long term loans.

Sincerely,

P. Jerome Cunningham
President, CASFAA.

May 27, 1971

The Honorable Claiborne Pell
U.S. Senate
Washington, D.C.

Dear Sir;

Enclosed is a recent letter which we submitted to Mr. James Nelson, Director of Financial Aid Division regarding our government allocations. Also included is a copy of a study we did at our college that I hope will be of use to you in your fight for more funds for Higher Education. We at the college level appreciate your efforts and would be most happy to help in any way possible.

Sincerely,

Gene Hamilton

Mr. James Nelson
Director of Student Financial Aid
Department of Health, Education, and Welfare
Office of Education
Washington, D.C. 20202

Dear Mr. Nelson:

The award letters for the National Defense Student Loan, College Work Study Program, and Economic Opportunity Grant programs have caused considerable concern here at Saginaw Valley College. I know you are extremely busy, but if I can take just a few moments of your time I might be able to convey to you the urgency of our situation.

Saginaw Valley College has grown from an enrollment of 84 in its first year (1964), to 1839 at the present. We are projecting an enrollment of 2500 in the fall of 1971. This will be about a 31% increase. We are located in an area of 400,000 population. It is a heavily industrialized area with a minority population of 55,000. At the present time we are the only degree granting college within commuting distance of these people. We have been exerting strong efforts toward making college education a reality for many of the low-income students in our area. We have recently undertaken a program whereby numerous culturally disadvantaged students will be admitted.

I am new to the financial aid office since November. When our tri-part application for the federal programs was submitted last October, the former director had no type of data to make projections as to our student body make-up for the upcoming school year. As a result his estimates were quite low. What is of so much concern at the present time is that we did not even receive what we had requested by our low estimates. We even experienced a severe cut in our initial year EOG's.

Over the last 4 weeks we have conducted a survey of our students by which we discovered that our former estimate of students with income of below $6,000 was low by 85%. The complete results of our survey showed 551 full and part-time students below the $6,000 income. This compares with the low estimate of 82 on our tri-part application. We have also found that of this number, 83 are culturally deprived minority students.

If we are to continue the fine work we have started with the low-income students in our area, we are going to need more money than has been awarded

us by the letters received last week. I realize an appeal is rather late at this time. I would like to point out, however, that notification of the regional review panel on January 12, 1971 indicated that we were being recommended for full funding. We therefore had no cause for an earlier appeal.

We feel that with our recently acquired data, we can readily substantiate our appeal for reconsideration in hopes that we will be awarded additional monies especially in the areas of EOG and CWSP. It is apparent when studying the various tables of our survey that with each year our Freshmen Class includes more and more minority group students. This generally calls for increased aid through initial year EOG funds. With this point in mind I feel we have been placed at a great disadvantage since our initial year funds were cut 50% from last years total. We are still processing applications for financial aid and already we have over 60 initial year applicants which do qualify for EOG in the $0 to $6,000 bracket alone.

Our present allocation for 1971-72 allows for only $14,669. That sum of money will not even take care of half of our applicants if we are to give them adequate sums to maintain them comfortably.

For additional information on our situation I would invite you to refer to the narrative of our study.

We anxiously await our reply.

Sincerely,

Gene Hamilton
Director Financial Aid

2622

NARRATIVE WITH RESPECT TO SURVEY

CONCLUSION:

Total students under $6,000 is probably close to 332 x 1.66 = 551 students for all classes.

NOTE:

Tri-part application in Oct. 1970 reported 82 under $6,000. This is a factor of 6.71 low.

RESUME:

1. For all classes but Freshman, survey seems to represent total student population distribution with respect to need for aid (on basis of $6,000/yr) fairly well. Hence, we cannot upgrade data by class; but can upgrade relative total enrollment data.

2. Similar problem arises when our survey returns break out minority groups in terms of their college class relative to enrollment. So again, our most reliable upgrade of data is by total enrollment.

3. We thus choose factor of 1.66 to multiply into survey return to approximate total under-privileged students on campus. (Table IV)

4. If we subtract 100 part-time under-privileged found in survey (and thus assume we have caught most or all of them), we get 551 - 100 = 451 full time under-privileged or 119 more than survey detected in its head count. The figure 451 is probably a reasonable approximation.

OFFICE OF THE GOVERNOR
FRANKFORT, KENTUCKY 40601

LOUIE B. NUNN
GOVERNOR

June 2, 1971

The Honorable Claiborne Pell
United States Senator
Senate Office Building
Washington, D. C.

Dear Senator Pell:

We have noted that Senate Bill 1410 has been referred to the Subcommittee on Education of the Committee on Labor and Public Welfare. The bill provides for a federally administered program in which college students will work as assistants to state, local and federal officials while earning college credit.

Because of our success with programs almost identical to the one provided for in S. 1410, we want to encourage you to give this bill your serious consideration.

Upon assuming office in 1968 we immediately innaugurated Kentucky's "Legislative Intern Program." This program brings twenty students from Kentucky's colleges and universities to Frankfort when the General Assembly is in session to work as assistants to the Legislators. In addition, the interns take three college courses, write research papers and task force reports, and earn a total of fifteen hours of college credit. As the first state program of its kind exclusively for undergraduates, the Legislative Intern Program has been widely emulated by other states.

The program has been enthusiastically received by the universities because it offers an exciting supplement to classroom education, and by the General Assembly whose members find the interns invaluable as staff. Generally, we have

The Honorable Claiborne Pell
June 2, 1971
Page Two

found these young people extremely able in all assigned tasks: dealing with constituents, answering mail, writing reports, and even working for specific legislation.

Such programs, by encouraging young people to participate in and learn about the intricate functions of their government, can have only a positive impact. By enlightening our future leaders about the intricacies of State and Local Government, and showing them that challenge and fulfillment await them in government service, we can continually upgrade the quality of government at all levels.

In light of our experience, I hope you will give Senate Bill 1410 your support.

Sincerely,

Louie B. Nunn

LOUIE B. NUNN
Governor

THE UNIVERSITY OF IOWA,
OFFICE OF THE PRESIDENT,
Iowa City, Iowa, May 26, 1971.

Senator HAROLD E. HUGHES,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR HUGHES: As you undoubtedly know, the University of Iowa has just gone through a very trying period. The events of the last few weeks, while unfortunate in some respects, have had the salutary effect of strengthening the unity of this institution. The vast majority of our students, the faculty, and the staff have worked together admirably to ameliorate the excesses of the few students, nonstudents, and former students previously suspended. We were aided immeasurably in this task by the cooperation we received from responsible civil and law enforcement officials. As a result, the University looks not backward but rather to the future as it seeks to strengthen its role as a major center of higher learning.

The pending Higher Education Act of 1971 is of special importance to us as we plan for the future. The two critical elements in this proposed legislation, it seems to me, are student aid and institutional aid.

In the area of student aid, I urge legislation that retains the basic procedures that have worked well since 1958, that assure that the greatest amount of aid goes to the neediest student with a spectrum of assistance that concentrates grants at one extreme and gradually phase through work-study in the middle of the spectrum, to loans at the other extreme, and that distributes funds to institutions in direct proportion to a need that could be demonstrated by actual data.

Student aid, in and of itself, will not provide the resources necessary for the effective utilization of our facilities and personnel here at the University of Iowa. It must be coupled with federal institutional aid. With State support declining as a percentage of our total revenue, additional expenditures associated with increased enrollments in the professional areas, the need to improve programs, and rapidly increasing costs, it would be self-defeating since this would negate the beneficial effects of increased student aid.

I have reviewed the various formulae that have been proposed for institutional aid, and while the University of Iowa can make special claims, I believe the formula proposed by Mrs. Green would be the most equitable for the various types of institutions that would be affected.

I thank you for this opportunity to discuss some of our concerns with you and am most appreciative of your continuing support and understanding.

Sincerely yours,

WILLARD L. BOYD.

EDUCATION AMENDMENTS OF 1971

WEDNESDAY, JUNE 9, 1971

U.S. SENATE,
SUBCOMMITTEE ON EDUCATION OF THE COMMITTEE ON
LABOR AND PUBLIC WELFARE,
Washington, D.C.

The subcommittee met, pursuant to notice, at 10 a.m., in room 4202, New Senate Office Building, Senator Claiborne Pell (chairman of the subcommittee) presiding.

Present: Senators Pell, Javits, Prouty, Schweiker and Beall.

Committee staff members present: Stephen J. Wexler, subcommittee counsel; Richard D. Smith, associate counsel; and Roy H. Millenson, minority professional staff member.

Senator PELL. The subcommittee will come to order and resume hearings on the Education Amendments of 1971.

Today we will discuss with the administration, the question of institutional aid, a subject that has been discussed within the subcommittee and is being brought up increasingly by the witnesses. It is my own view and that of some others on the subcommittee that it would be a good idea to have some form of institutional aid included and we provided for it in S. 659. Now quite frankly it has become a question of not whether we should include it or not but what method of institutional aid should be included. In this regard we are interested in knowing what kind of institutional aid—I am not sure whether to put it—which the administration prefers the most or would dislike the least. We would be very much guided by your own thinking in this regard.

At this time we welcome Senator Nelson, a member of the full committee.

STATEMENT OF HON. GAYLORD NELSON, A U.S. SENATOR FROM THE STATE OF WISCONSIN

Senator NELSON. Thank you, Mr. Chairman.

Mr. Chairman, I am here to testify this morning in support of the proposal of Senator Pell to provide independence for the Teacher Corps. His proposal appears in section 152 of the Education Amendments of 1971. The proposal by the chairman of the subcommittee would provide, first, that the pay of the Director of the Teacher Corps will be at grade 18, the level now common for a Bureau Chief in the Office of Education. And then the amendment states in paragraph (b) that the Commissioner of Education may delegate authority to run the program only to the Director of the Teacher Corps, thus making the Teacher Corps, as this committee has long intended, an independent entity within the Office of Education.

As the members of the committee will remember, when we originally proposed the Teacher Corps back in 1965 we set the Director's salary at a grade 17 level which was at that time the salary paid bureau chiefs. It was our intention in setting that salary level that the

Teacher Corps would operate as an independent unit within the Office of Education. In fact the Teacher Corps did operate substantially as an independent unit until February 1968 when it was consolidated in the Bureau of Education Development. Since that time this committee has repeatedly made clear by letter and by committee report its intention that the Teacher Corps should be independent within the Office of Education.

I ask unanimous consent that the excerpts from the committee reports concerning the Teacher Corps for 1968 and 1969 be included and printed in the record.

Senator PELL. Without objection.

(The text of the committee reports follow:)

EXCERPT FROM THE REPORT OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE ON THE HIGHER EDUCATION AMENDMENTS OF 1968 (S. REPT. 90–1387, S. 3769)

* * * * * * *

D.—INDEPENDENT STATUS OF TEACHER CORPS

In drafting the Teacher Corps legislation in 1965, the committee took care to specify that the Director would be equal in pay level to the then current rate for bureau chiefs. It was the committee's intention that the Teacher Corps be independent within the Office of Education reporting directly to the Commissioner.

The committee intended that the Teacher Corps not be an ordinary teacher education program. It recognized that the Teacher Corps needed maximum possible independence and visibility if its full potential as a recruiter of new teachers and an innovator in teacher education was to be reached.

This is the way the program worked until this March when it was placed within the new Bureau of Education personnel development.

During the early years of the program, when funding was uncertain, the Teacher Corps was operated first as a Task Force and then was attached to the Bureau of Elementary and Secondary Education. The committee understands that during this period the Teacher Corps, in effect, reported directly to the Commissioner. Now, however, the committee understands that the Teacher Corps has been made an ordinary division of the new Bureau of Education Personnel Development.

The committee is concerned that with the severely limited independence of a division in a bureau in the Office of Education much of the promise of the Teacher Corps as conceived by the committee may be lost.

FROM REPORT OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE ON THE ELEMENTARY AND SECONDARY EDUCATION AMENDMENTS OF 1969 (S. REPT. 91–634, H.R. 514)

* * * * * * *

Section 804 of the bill amends title V–B–1 of the Higher Education Act of 1965, which authorizes the Teacher Corps. The amendments—

(1) authorize a new component, the Student Teacher Corps,

(2) adjust the salary rate for members of the Teacher Corps, and

(3) increase the authorization of appropriations for the program.

In recent years college students have volunteered by the tens of thousands for tutorial programs. However, these programs have often lacked the careful training, selection and integration into school programs and community life essential for success in teaching children from poverty homes.

A new movement has also begun that uses high school, junior high school, and in some cases even elementary school pupils from the higher grades in tutoring their younger school mates. Careful research shows that such tutorial programs are very successful, both for tutor and tutee.

These amendments are designed to provide an opportunity to expand these programs at the local level in conjunction with local Teacher Corps projects.

The Teacher Corps is a suitable vehicle because its present structure requires universities, school systems and community groups to work together in designing and operating innovative training and teaching programs under local control.

Already a number of innovative programs involving both adult and young pupil tutors have been developed as part of ongoing Teacher Corps programs. This new legislation will provide the legislative authority necessary to carry on this work in the 80 projects now supported by the Teacher Corps and in the new projects that the increased authorization would make possible.

The amendment also increases the authorized ceiling for the pay of regular Teacher Corps members to $90 a week. The present level of $75 a week has been ruled taxable income by the Internal Revenue Service since Teacher Corps interns are paid by local schools systems (with 90% federal funds) for more than half time work. In several large cities the resulting take-home pay after deductions amounts to $50 to $60 a week. When Congress established the $75 per week rate, the amount was thought to be comparable to the non-taxable stipends under other teacher training programs. It is not mandatory that all Teacher Corps interns should be paid at the higher rate, but in cases where the costs of living are high the Commissioner would have the discretion of reimbursing school systems for compensating teacher-interns at rates up to the higher figure.

With respect to compensation for the student tutors the amendment provides that tutors and instructional assistants shall be compensated at rates consistent with the practice under comparable work study programs.

In commenting on the Teacher Corps in its report on the Higher Education Amendments of 1968 the Committee reasserted its intention that the Teacher Corps be operated in the Office of Education as an independent "Corps" program. In this report the Committee again emphasizes that this was and is the Congressional intention in setting up this special program.

TEACHER CORPS APPROPRIATIONS,
SALARY AND EXPENSE ALLOTMENTS
AND STAFF, FY 1967-1971

Senator NELSON. Let me quote briefly from the report of 1968, Senate Report 90–1387.

In drafting the Teacher Corps legislation in 1965 the Committee took care to specify that the Director would be equal in pay level to the then current rate for Bureau Chiefs. It was the Committee's intention that the Teachers Corps be independent within the Office of Education reporting directly to the Commission. The Committee intended that the Teachers Corps not be an ordinary teacher education program. It recognized that the Teachers Corps needed maximum possible independence and new teachers and an innovator in teacher education was to be represented.

That is from the 1968 report.

In 1969 the committee again underlined its concern and in the committee reports stated its intention that the Teacher Corps be operated in the Office of Education as an independent corps program.

Now let me quote from a letter that I wrote to the Honorable Secretary Elliot L. Richardson just a year ago, June 29, 1970. In that letter I said:

I am writing this letter to urge you as you begin your service as Secretary of Health, Education and Welfare to take full advantage of the extrordinary opportunity the Teachers Corps represents to American education and to American young people. The support young people give the program is shown by the fact that despite a negligible recruiting effort nine young people apply for each Teacher Corps job.

Another example, the Teacher Corps receives as many inquiries in response to joint mailing to college seniors as the Peace Corps and the Vista combined. Local school systems and universities have demonstrated authority of their own Teacher Corps program by contributing more than $4 million over and above the required 10 per cent salary matching funds during the last year.

One hundred sixty school systems joined with local universities in this year to submit concept papers for the thirty new programs available. Long term support has also come from the National Education Association, the American Federation of Teachers and other professional groups. Editorial support has been widespread coming from such newspapers as The New York Times, The Washington Post, News Week, Life Magazine.

In 1967 Life Magazine characterized the Teacher Corps as the best bargain in American education. This broad support is based on the fact that the Teacher Corps is a program for school life innovation, not simply another teacher training effort. For a local school the Corps means teams of able young people led by experienced teachers to train dedicated flexible manpower needed to test out new ideas.

The Teacher Corps executives have emphasized this opportunity to local schools. The result has been effective innovation such as the tutoring, corrections and Indian reservation programs, new staffing patterns and new curriculum at scores of schools and universities across the nation.

Support among Senators and Congressmen has grown rapidly as survey data indicates a very high proportion of Teacher Corps graduates remaining in education and the astonishing figure of 72 per cent of these remaining in poverty classroom work.

In drafting the legislation Senator Kennedy and I and the committee saw the program as a corps; that is, a program operating on the model of a Peace Corps reporting directly to the Commissioner of Education with as much integrity, visability and flexibility within the Office of Education as possible. As the Senate Labor and Public Welfare Report on Higher Education Amendment stated in 1968, the committee set the pay of the Teacher Corps Director at the rate of the Bureau Chief so that the Teacher Corps could be an independent program within the Office of Education with Bureau status. Although the Teacher Corps operated semi-independently for a while, since February 1968 it has been simply another division within the Bureau of Education Personnel Development.

Administrators of the Teacher Corps have fought very hard to continue it as an exciting, flexible program with a mandate a good deal broader than teacher training. They have succeeded in this to a point but only at the price

of devoting an enormous amount of their time to internal bureaucratic problems. There was, I am glad to say, nothing partisan about bureaucratic decision on the Teacher Corps. It was placed in the Bureau during the former Administration.

Commissioner Allen, although he stated at his confirmation hearing in response to my question that he would seriously consider a more independent role for the Teacher Corps, confirmed the earlier decision. This letter, then, is in no sense partisan, I am simply asking you to consider seriously the opportunity which the Teacher Corps offers us to engage thousands of young Americans in helping local schools and universities make an effective impact on poverty education.

This year from the same legislation (the elementary and secondary education amendments of 1969) that added three new programs, Congress increased the authorization for the Teacher Corps from $56 million to $100 million. This year for the first time Congress will approve at least the full Administration request for the program. I believe that with greater freedom within the bureaucracy and an increase in the Administration request for funds that the Teacher Corps can begin to reach its potential.

I hope that you will give favorable consideration to this matter. I would be glad to meet with you or anyone else on your staff to discuss the matter.

That is the end of my letter to the Secretary.

At the time the Teacher Corps was first proposed we had long discussions with the Office of Education as to whether the program should be independent or run as part of the regular bureaucracy. At that time Senator Kennedy and I argued that the Peace Corps would have never become the symbol and the success that it now is if it had been part of the regular AID bureaucracy. We argued that the bureaucracy one way or another would serve to stifle the program.

Mr. Chairman, I believe you now have statistical evidence that the fears Senator Kennedy and I had back in 1965 have in fact been realized within the Office of Education. Commitment and priority within a bureaucracy are expressed not through process but through hard decisions about budget and staff allocation. The Teacher Corps after a precarious start has grown steadily in appropriations.

In 1967 the Teacher Corps had an appropriation of $11,900,000. It had a staff of 75 and an administrative expense of $315,000. In 1971 this congressional appropriation had nearly tripled from $11,900,000 to $30,100,000. In 1972 funds will total $37,800,000, but its staff has declined from 75 it had in 1967 to 42. Actually I believe there are under 40 professionals now at work on the Teacher Corps staff and its expense allowance has declined even more precipitously from $315,000 to $97,000.

Meanwhile the Office of Education as a whole has increased its appropriations from $4 billion to $4,400,000,000 while staff increased by over 200 individuals. So the Teacher Corps is in serious trouble in the Office of Education lacking for adequate staff, lacking for adequate expense money. It is my understanding that the Public Affairs Division of the Teacher Corps, absolutely essential in my opinion for a program that lives on its public image and its performance, has been eliminated all together or rather consolidated in the Office of Education's centralized public affairs.

I understand that its grants management function, again a crucial part of the corps, is to be consolidated at the bureau level. So we see a situation in which the responsibilities of the Teacher Corps have been dramatically increased by the Congress over the past few years as its staff and funds for operating expenses have been dramatically cut by the Office of Education.

There is in my judgment no villian in this story except the bureaucracy itself. The Teacher Corps has been forced to operate since the winter of 1968 as a division of the Bureau of Education Personnel Development instead of reporting directly to the Commissioner as the Congress intended and as this committee repeatedly asked. Therefore, it has had to compete with the other divisions of the Bureau for staff salaries, expenses, and money.

The Commissioner of Education, Mr. Marland, has been strong in his support of the concept of the Teacher Corps as was Commissioner Allen before him and Commissioner Howe before him and Commissioner Keppel before him. Nevertheless, the Teacher Corps remains in a secondary position within the Office of Education.

In fact, when I looked at the latest table of organization for the Office of Education, the Teacher Corps does not even appear. One might ask why the Teacher Corps has been so successful if it has suffered so harshly at the hands of the Office of Education. I think it has been successful for three reasons.

First because its format works. Local school officials have complete control over the local Teacher Corps programs, more than over their regular teachers who are often tenured and supported by union contracts. Therefore, they feel secure despite the fact that the Teacher Corps is often pressing for innovation. Teacher Corps programs put the resources of the school, the local university and highly dedicated team members together in a way have proven successful for all three groups.

Second, the willingness of thousands of young Americans to volunteer for training in service and poverty schools in the Teacher Corps. Applications continue to run at nine for every Teacher Corps position.

Finally, I believe as important as any other element is the extraordinary leadership provided for the program from the beginning by Richard Graham.

In conclusion I would like to point out and have printed in the record comments of the GAO on the program on the Navajo Reservation. It is not very often that we will find praiseworthy reports from the GAO about any operation of any of the Federal bureaucracy.

Senator PELL. Without objection that will be entered in the record.

REPORT TO THE CONGRESS

Assessment Of The Teacher Corps Program At Northern Arizona University And Participating Schools On The Navajo And Hopi Indian Reservations B-164031(1)

Office of Education

Department of Health, Education, and Welfare

BY THE COMPTROLLER GENERAL OF THE UNITED STATES

MAY 13, 1971

2633

COMPTROLLER GENERAL OF THE UNITED STATES
WASHINGTON, D.C. 20548

B-164031(1)

To the President of the Senate and the
Speaker of the House of Representatives

This is our report on the assessment of the Teacher Corps program at Northern Arizona University and participating schools on the Navajo and Hopi Indian Reservations. This program, which was authorized by title V of the Higher Education Act of 1965 (20 U.S.C. 1101), is administered by the Office of Education, Department of Health, Education, and Welfare.

Our review was made pursuant to the Budget and Accounting Act, 1921 (31 U.S.C. 53), and the Accounting and Auditing Act of 1950 (31 U.S.C. 67).

Copies of this report are being sent to the Director, Office of Management and Budget; the Secretary of Health, Education, and Welfare; and the Commissioner of Education, Department of Health, Education, and Welfare.

Elmer B. Staats
Comptroller General
of the United States

COMPTROLLER GENERAL'S REPORT TO THE CONGRESS

ASSESSMENT OF THE TEACHER CORPS PROGRAM AT NORTHERN ARIZONA UNIVERSITY AND PARTICIPATING SCHOOLS ON THE NAVAJO AND HOPI INDIAN RESERVATIONS
Office of Education
Department of Health, Education, and Welfare B-164031(1)

DIGEST

WHY THE REVIEW WAS MADE

Because of interest expressed by committees and members of the Congress in the Teacher Corps program as a part of the overall Federal effort in the field of education, the General Accounting Office (GAO) has reviewed the program, nationwide. This report, one of a series, assesses the impact of the Teacher Corps program at Northern Arizona University and participating schools on the Navajo and Hopi Indian Reservations.

The Teacher Corps was established in the Office of Education, Department of Health, Education, and Welfare (HEW), under the Higher Education Act of 1965. The legislative objectives of the program are:

--To strengthen educational opportunities for children in areas having concentrations of low-income families.

--To encourage colleges and universities to broaden their programs for training teachers.

The Teacher Corps recruits and trains qualified teachers (team leaders) and inexperienced teachers (interns) for service in areas having concentrations of low-income families. Members of the Corps are assigned to schools in teams consisting of a team leader and interns. During their service, interns also engage in courses of study leading to college or university degrees and to qualification for State teaching certificates.

Local educational agencies are expected to pay at least 10 percent of the salaries of Teacher Corps members; the Office of Education pays the balance and also pays the costs of the interns' courses. (See p. 7.)

From its inception in July 1968 to May 1970, the program at Northern Arizona University (Navajo-Hopi program) had spent about $766,500 of Federal funds.

Sheet

MAY 13, 1971

Of the 12 participating schools, 11 are on the Navajo Reservation--nine in Arizona and two in New Mexico. The 12th school is on the Hopi Reservation which is within the Navajo Reservation in Arizona. The Navajo Reservation has a population of 130,000; the Hopi Reservation has 6,000. (See p. 9.)

FINDINGS AND CONCLUSIONS

Strengthening educational opportunities

The Navajo-Hopi program increased the educational opportunities available to Indian children in schools to which corps members were assigned. (See p. 15.)

Corps members provided individualized instruction that otherwise would not have been available. (See p. 15.) They also introduced several new teaching methods that made the instruction more relevant to the culture and background of the children, such as

--use of Navajo-related stories, rather than Anglo-American-related ones, to teach reading;

--use of a unique 40-character alphabet, with a different character for each distinct sound, to teach reading;

--introduction of Navajo history into social studies; and

--simulation of transactions in a store to teach mathematics. (See p. 16.)

School officials stated that the new teaching methods had been successful and had been adopted by their regular teaching staffs. (See p. 18.)

Corps members participated in various education-related community activities benefiting children and their parents, such as

--visiting children's homes;

--attending tribal government, parent-teacher association, and school board meetings;

--teaching the Navajo language to local teachers; and

--teaching adult education classes. (See p. 20.)

Corps members devised and carried out a cultural exchange project in which 25 Hawaiian children visited the Navajo Reservation and 24 Navajo children visited Hawaii. It was the first trip away from the reservation for some of the Navajo children. One teacher cited a subsequent noticeable increase in the Navajo children's interest in social studies. (See p. 20.)

GAO noted that only 5 percent of the teachers in Bureau of Indian Affairs schools on the reservations were Navajo or Hopi Indians. (See p. 10.) Navajo or Hopi Indians constituted 42 percent of the Teacher Corps interns. (See p. 12.)

Exposure to Indian members of the Teacher Corps gave the Indian children incentive for their own schooling, because they could see what an educated Indian could accomplish. (See p. 15.) The program director plans to increase the number of Indian interns, if the program is funded in the future. (See p. 14.)

School officials believed that the interns were better trained for teaching the Indian children than were teachers trained by traditional methods. About three fourths of the 26 interns who had completed the program as of the time of GAO's review had been hired as teachers in reservation schools, and most of the interns still in training planned to accept such positions after their graduation. (See p. 21.)

Broadening teacher preparation programs

The Navajo-Hopi program had some degree of success in broadening Northern Arizona University's teacher preparation program. The university

--provided courses designed to give interns an understanding of the rudiments of the Indian language, culture, and history and

--modified existing courses to make their content more relevant to teaching Indian children. (See p. 23.)

For example, interns took courses in the Navajo language and community, the growth and development of Indian children, community relations, and the teaching of English to students from homes where another language is predominant. They were trained to teach mathematics and other subjects by using language, symbols, and concepts familiar to Indians. (See p. 23.)

Experience with the Teacher Corps influenced the university to make some changes in its regular teacher preparation program and to establish student-teaching centers where students in the regular program live, teach, and take academic courses.

University officials stated that the Teacher Corps program had fostered a more cooperative relationship among the various colleges within the university, through the program's use of some courses from outside the College of Education. Some professors who taught the interns became more aware of the environment of the Indian reservations. (See p. 24.)

GAO noted, however, that much of the special curriculum offered to Teacher Corps interns was not offered to students in the university's

regular teacher-training program. The university has begun a study to identify aspects of the Teacher Corps program that should be made available to other students. (See p. 25.)

Role of the Arizona Department of Education

Officials of the Arizona Department of Education agreed with GAO's opinion that the effectiveness of the Teacher Corps program could be enhanced through dissemination by the department of information on successful Corps innovations and teaching methods to other educational institutions in the State. The officials plan to increase their efforts in that area. (See p. 28.)

RECOMMENDATIONS OR SUGGESTIONS

The Secretary of HEW should see that the Office of Education

--stays abreast of the progress of the university's study of the ideas, experiments, and techniques used in the Navajo-Hopi program and encourages the university to incorporate the successful ones in its regular teacher preparation program (see p. 26) and

--cooperates with the Arizona Department of Education in its plans to disseminate information on successful innovations and teaching methods to other educational institutions in the State (see p. 29

AGENCY ACTIONS AND UNRESOLVED ISSUES

HEW's Assistant Secretary, Comptroller, concurred with GAO's recommendation regarding the university's study. He said Teacher Corps headquarters would provide technical assistance to ensure timely evaluation of future Corps programs at the university. (See p. 26.)

He said also that HEW concurred in GAO's recommendation that the Office of Education cooperate with the Arizona Department of Education but preferred to delay action until the Department could provide staff and expertise to carry out its plans. (See p. 29.)

MATTERS FOR CONSIDERATION BY THE CONGRESS

Committees of the Congress, in their deliberations on extending the Teacher Corps program, may wish to consider the information in this report and others in the series on the program's effectiveness in achieving legislative objectives and on steps needed to improve effectiveness.

ASSESSMENT OF THE TEACHER CORPS PROGRAM AT NORTHERN ARIZONA UNIVERSITY AND PARTICIPATING SCHOOLS ON THE NAVAJO AND HOPI INDIAN RESERVATIONS
Office of Education
Department of Health, Education, and Welfare B-164031(1)

D I G E S T

WHY THE REVIEW WAS MADE

Because of interest expressed by committees and members of the Congress in the Teacher Corps program as a part of the overall Federal effort in the field of education, the General Accounting Office (GAO) has reviewed the program, nationwide. This report, one of a series, assesses the impact of the Teacher Corps program at Northern Arizona University and participating schools on the Navajo and Hopi Indian Reservations.

The Teacher Corps was established in the Office of Education, Department of Health, Education, and Welfare (HEW), under the Higher Education Act of 1965. The legislative objectives of the program are:

--To strengthen educational opportunities for children in areas having concentrations of low-income families.

--To encourage colleges and universities to broaden their programs for training teachers.

The Teacher Corps recruits and trains qualified teachers (team leaders) and inexperienced teachers (interns) for service in areas having concentrations of low-income families. Members of the Corps are assigned to schools in teams consisting of a team leader and interns. During their service, interns also engage in courses of study leading to college or university degrees and to qualification for State teaching certificates.

Local educational agencies are expected to pay at least 10 percent of the salaries of Teacher Corps members; the Office of Education pays the balance and also pays the costs of the interns' courses. (See p. 7.)

From its inception in July 1968 to May 1970, the program at Northern Arizona University (Navajo-Hopi program) had spent about $766,500 of Federal funds.

2641.08

Of the 12 participating schools, 11 are on the Navajo Reservation--nine in Arizona and two in New Mexico. The 12th school is on the Hopi Reservation which is within the Navajo Reservation in Arizona. The Navajo Reservation has a population of 130,000; the Hopi Reservation has 6,000. (See p. 9.)

FINDINGS AND CONCLUSIONS

Strengthening educational opportunities

The Navajo-Hopi program increased the educational opportunities available to Indian children in schools to which corps members were assigned. (See p. 15.)

Corps members provided individualized instruction that otherwise would not have been available. (See p. 15.) They also introduced several new teaching methods that made the instruction more relevant to the culture and background of the children, such as

--use of Navajo-related stories, rather than Anglo-American-related ones, to teach reading;

--use of a unique 40-character alphabet, with a different character for each distinct sound, to teach reading;

--introduction of Navajo history into social studies; and

--simulation of transactions in a store to teach mathematics. (See p. 16.)

School officials stated that the new teaching methods had been successful and had been adopted by their regular teaching staffs. (See p. 18.)

Corps members participated in various education-related community activities benefiting children and their parents, such as

--visiting children's homes;

--attending tribal government, parent-teacher association, and school board meetings;

--teaching the Navajo language to local teachers; and

--teaching adult education classes. (See p. 20.)

Corps members devised and carried out a cultural exchange project in which 25 Hawaiian children visited the Navajo Reservation and 24 Navajo children visited Hawaii. It was the first trip away from the reservation for some of the Navajo children. One teacher cited a subsequent noticeable increase in the Navajo children's interest in social studies. (See p. 20.)

GAO noted that only 5 percent of the teachers in Bureau of Indian Affairs schools on the reservations were Navajo or Hopi Indians. (See p. 10.) Navajo or Hopi Indians constituted 42 percent of the Teacher Corps interns. (See p. 12.)

Exposure to Indian members of the Teacher Corps gave the Indian children incentive for their own schooling, because they could see what an educated Indian could accomplish. (See p. 15.) The program director plans to increase the number of Indian interns, if the program is funded in the future. (See p. 14.)

School officials believed that the interns were better trained for teaching the Indian children than were teachers trained by traditional methods. About three fourths of the 26 interns who had completed the program as of the time of GAO's review had been hired as teachers in reservation schools, and most of the interns still in training planned to accept such positions after their graduation. (See p. 21.)

Broadening teacher preparation programs

The Navajo-Hopi program had some degree of success in broadening Northern Arizona University's teacher preparation program. The university

--provided courses designed to give interns an understanding of the rudiments of the Indian language, culture, and history and

--modified existing courses to make their content more relevant to teaching Indian children. (See p. 23.)

For example, interns took courses in the Navajo language and community, the growth and development of Indian children, community relations, and the teaching of English to students from homes where another language is predominant. They were trained to teach mathematics and other subjects by using language, symbols, and concepts familiar to Indians. (See p. 23.)

Experience with the Teacher Corps influenced the university to make some changes in its regular teacher preparation program and to establish student-teaching centers where students in the regular program live, teach, and take academic courses.

University officials stated that the Teacher Corps program had fostered a more cooperative relationship among the various colleges within the university, through the program's use of some courses from outside the College of Education. Some professors who taught the interns became more aware of the environment of the Indian reservations. (See p. 24.)

GAO noted, however, that much of the special curriculum offered to Teacher Corps interns was not offered to students in the university's

regular teacher-training program. The university has begun a study to identify aspects of the Teacher Corps program that should be made available to other students. (See p. 25.)

Role of the Arizona Department of Education

Officials of the Arizona Department of Education agreed with GAO's opinion that the effectiveness of the Teacher Corps program could be enhanced through dissemination by the department of information on successful Corps innovations and teaching methods to other educational institutions in the State. The officials plan to increase their efforts in that area. (See p. 28.)

RECOMMENDATIONS OR SUGGESTIONS

The Secretary of HEW should see that the Office of Education

--stays abreast of the progress of the university's study of the ideas, experiments, and techniques used in the Navajo-Hopi program and encourages the university to incorporate the successful ones in its regular teacher preparation program (see p. 26) and

--cooperates with the Arizona Department of Education in its plans to disseminate information on successful innovations and teaching methods to other educational institutions in the State (see p. 29).

AGENCY ACTIONS AND UNRESOLVED ISSUES

HEW's Assistant Secretary, Comptroller, concurred with GAO's recommendation regarding the university's study. He said Teacher Corps headquarters would provide technical assistance to ensure timely evaluation of future Corps programs at the university. (See p. 26.)

He said also that HEW concurred in GAO's recommendation that the Office of Education cooperate with the Arizona Department of Education but preferred to delay action until the Department could provide staff and expertise to carry out its plans. (See p. 29.)

MATTERS FOR CONSIDERATION BY THE CONGRESS

Committees of the Congress, in their deliberations on extending the Teacher Corps program, may wish to consider the information in this report and others in the series on the program's effectiveness in achieving legislative objectives and on steps needed to improve effectiveness.

CHAPTER 1

INTRODUCTION

We evaluated the effectiveness of the Teacher Corps program at Northern Arizona University, Flagstaff, Arizona, and participating schools in accomplishing the legislative objectives of Teacher Corps. The schools were located in Arizona and New Mexico on the Navajo and Hopi Indian Reservations. The objectives of the program are:

--To strengthen the educational opportunities available to children in areas having concentrations of low-income families.

--To encourage colleges and universities to broaden their programs of teacher preparation.

To accomplish these objectives, the Teacher Corps is authorized to (1) attract and train qualified teachers who will be made available to local educational agencies (LEAs) for teaching in areas of low-income families,[1] (2) attract and train inexperienced teacher-interns who will be made available for teaching and in-service training to LEAs in such areas in teams led by experienced teachers, (3) attract volunteers to serve as part-time tutors or full-time instructional assistants in programs carried out by LEAs and institutions of higher education serving such areas, and (4) attract and train educational personnel to provide training, including literacy and communications skills, for juvenile delinquents, youth offenders, and adult criminal offenders. The latter two means of achieving the objectives were authorized subsequent to the commencement of our review by Public Law 91-230--an act to extend programs of assistance for elementary and secondary education--approved April 13, 1970, and therefore were not within the scope of our review.

---

[1]The enabling legislation permitted experienced teachers to be assigned to LEAs individually or as the heads of teaching teams. Public Law 90-35, approved June 29, 1967, amended the legislation by permitting experienced teachers to be assigned only as the heads of teaching teams.

This review was one of several made by GAO at selected universities and LEAs throughout the Nation.

OPERATION OF THE TEACHER CORPS PROGRAM

The Teacher Corps was established in the Office of Education, Department of Health, Education, and Welfare, pursuant to title V, part B, of the Higher Education Act of 1965, as amended (20 U.S.C. 1101). The Teacher Corps is basically a locally controlled and operated program. The Office of Education provides funds to operate approved Teacher Corps programs which have been locally conceived to meet local needs and which have been approved by the applicable State educational agency. To be eligible for approval, a program must be designed to serve children in areas having high concentrations of poverty.

Persons eligible to be enrolled in the Teacher Corps are (1) experienced teachers, (2) persons who have baccalaureate degrees or their equivalents, and (3) persons who have completed 2 years in programs leading to baccalaureate degrees. After selection, the corps members are placed in teams consisting of a team leader and a number of interns. During their service, the interns receive training and instruction leading to degrees from the participating colleges or universities and to qualification for State teaching certifications. The training consists of academic courses, work in the classrooms of local schools, and participation in community-based education activities.

While in the schools, corps members are under the direct supervision of officials of the LEAs to which they are assigned. With certain exceptions, LEAs are authorized to (1) assign and transfer corps members within the school systems, (2) determine the subjects to be taught, and (3) determine the terms and continuance of the assignment of corps members within the system. Corps members, however, may not be used to replace any teachers who are or otherwise would have been employed by the LEAs.

The Teacher Corps program operates on a cycle basis. Generally a cycle consists of preservice training--a period of no more than 3 months during which corps members' suitability for acceptance into the program is determined--and

2 academic years with an intervening summer. Certain programs, however, operate for shorter periods of time. The authorizing legislation provides for enrollment of corps members for periods up to 2 years. A new Teacher Corps cycle has started each year, the first cycle having begun in 1966.

The cost of the interns' courses and the administrative costs of the colleges or universities and the LEAs are paid by the Office of Education. The LEAs are expected to provide at least 10 percent of the corps members' salaries and related benefits while they are in the schools, and the Office of Education provides the remainder.

A team leader is to be compensated at a rate agreed to by the LEA and the Commissioner of Education. At the time our review began, an intern was compensated at either a rate which was equal to the lowest rate paid by the LEA for teaching full time in the school system and grade to which the intern was assigned or $75 a week plus $15 a week for each dependent, whichever amount was less. Public Law 91-230, however, amended the compensation authorized by providing that an intern be paid at either a rate which did not exceed the lowest rate paid by the LEA for teaching full time in the school system and grade to which the intern was assigned or $90 a week plus $15 a week for each dependent, whichever amount was less.

FUNDING

From inception of the Teacher Corps program in fiscal year 1966 through fiscal year 1970, funds authorized and appropriated by the Congress for the Teacher Corps program, nationwide, were as follows:

Fiscal year	Authorization	Appropriation
1966	$36,100,000	$ 9,500,000
1967	64,715,000	11,323,000
1968	33,000,000	13,500,000
1969	46,000,000	20,900,000
1970	80,000,000	21,737,000

The Navajo-Hopi program has been operational since the third Teacher Corps cycle, which began in 1968. As of May 1970, Northern Arizona University and the participating local schools involved in the Navajo-Hopi program had expended about $766,500 of funds provided by the Office of Education, as follows:

Grantee	Amount expended
Northern Arizona University	$338,400
Participating reservation schools:	
Bureau of Indian Affairs schools	342,500
Tuba City Public Elementary School	60,300
Keams Canyon Public School	25,300
Total	$766,500

PROGRAM PARTICIPATION

Certain nationwide data relating to Teacher Corps program participation from its inception in fiscal year 1966 through fiscal year 1970 is shown in the tabulation below.

	Entered program			Completed program			Rate of dropout		
Cycle	Interns	Team leaders	Total	Interns	Team leaders	Total	Interns	Team leaders	All corps members
							(percent)		
I	1,279	337	1,616	627	170	797	51	50	51

V[a]	1,445	221	1,666	-	-	-	-	-	-

[a]Participants had not completed program at time of GAO review.

CHAPTER 2

NAVAJO-HOPI TEACHER CORPS PROGRAM

The Navajo-Hopi Teacher Corps program has been a cooperative effort involving Northern Arizona University, 10 elementary schools operated by the Department of the Interior's Bureau of Indian Affairs, two public elementary schools, local communities, and the Arizona Department of Education. Of the 12 schools that have participated, 11 are located on the Navajo Indian Reservation--nine in Arizona and two in New Mexico. The other participating school is located on the Hopi Indian Reservation in Arizona.

There is an extreme shortage of Navajo and Hopi teachers on the reservations. The program is designed to improve the educational opportunities available to children on the reservations by developing teachers, primarily of Navajo or Hopi descent, who, without the program, would remain potentially able to teach on the reservations but who might not actually try teaching. It was the view of program organizers that traditional teacher preparation methods applicable to middle-class public schools were not producing entirely effective teachers for Indian children. Therefore the program was intended to provide a curriculum to the interns that was geared specifically to the Indian children's culture.

The Navajo Reservation encompasses parts of Arizona, New Mexico, and Utah and has a population of about 130,000. The Hopi Reservation, which is situated inside the boundary of the Navajo Reservation and entirely within Arizona, has a population of about 6,000. Appendix I is a map of these reservations.

Northern Arizona University is located near the southwest corner of the Navajo Reservation. During the 1968-69 school year, the university had a full-time enrollment of about 6,500 undergraduate and 500 graduate students. The university's College of Education graduates about 400 teachers annually. According to a university official,

about 34 teachers trained in the university's regular teacher preparation program between 1968 and 1970 have taken positions on the Navajo and Hopi Reservations.

For the 1970-71 school year, the Bureau of Indian Affairs employed about 1,000 teachers for its schools on the Navajo Reservation and about 50 teachers for its schools on the Hopi Reservation. Less than 60, or about 5 percent, of these teachers were Navajo or Hopi Indians. About 400 additional teachers were employed by the public schools on the reservations. Appendix II is a comparison of ethnic backgrounds and other general information pertaining to teachers and children at certain schools included in our review.

The Navajo-Hopi program has been funded for two cycles--cycle III which operated from July 1968 through May 1970 and cycle IV which began operation in June 1969 and which is scheduled for completion in May 1971. Interns received their training in four basic phases: (1) preservice, (2) first-year in-service, (3) intervening summer, and (4) second-year in-service.

The preservice and intervening summer training phases were conducted at the university. The major purpose of preservice was to give interns an understanding of what they could expect to encounter on the reservations. Training during the intervening summer consisted of the interns' taking academic courses, including a course dealing with teaching English to students coming from homes where English is not the predominant language. During the two in-service training phases from September through May of each year, the interns lived and received on-the-job training at the reservation schools where they were assigned. They participated in community activities and took academic courses.

Because the reservation schools were located long distances (40 to 225 miles) from the university, the interns could not take their academic courses at the university during the in-service training phases. In 1969, after finding that it was impractical to send instructors to central locations where the interns were assembled or to the individual schools, the university decided to use a video

tape technique. This involved recording courses on video tape at the university and distributing the tapes to the schools where the interns were training.

Although joint program proposals were developed by them, the university, the Bureau of Indian Affairs, and the public schools prepared separate budgets and financial reports and submitted them to the Office of Education for each cycle in which they participated. They also received separate grants from the Office of Education.

The Navajo-Hopi program was administered by a program director who was on the faculty of the university's College of Education. Designated coordinators, who acted in behalf of the Bureau of Indian Affairs and the superintendents of the public schools, administered the program for the participating schools.

SELECTION OF INTERNS

The Navajo-Hopi program's selection process was generally effective in providing interns qualified to be trained as teachers of disadvantaged Indian children.

Interns for the third cycle were selected by a panel consisting of representatives from the university and some of the participating schools. For the fourth cycle, one or two community representatives and team leaders and interns from the third cycle were added to the selection panel.

The Navajo-Hopi program director told us that representatives from each of the participating schools were invited to all the selection panel meetings but that many did not attend. He stated that community representatives were not asked to participate in the selection of interns for the third cycle, because the program was scheduled to begin shortly after its authorization by the Office of Education.

The program director informed us that the university had tried to recruit as many Navajo and Hopi Indians as could meet the established qualifications. The program for the third cycle was designed to include students who were working toward either bachelor's or master's degrees. In the fourth cycle the program was intended to be exclusively for undergraduate students. It was desired that an intern have at least a C-grade average and be from 21 to 30 years old.

Approximately 150 persons applied for intern positions in cycles III and IV of the Navajo-Hopi program. Of these 150 persons, 72 were accepted for training as teachers of children on the Navajo and Hopi Indian Reservations, including 30 (42 percent) who were either Navajo or Hopi Indians. As of June 1970, 26 interns, including 19 who planned to teach on the reservations, had completed the third cycle and 27 interns were still participating in the fourth cycle which was not scheduled for completion until May 1971. This data, as it relates to the respective program cycles is shown in the graph on the following page.

Of the 72 interns in the two cycles, 19, or 26 percent, dropped out of the program before completion, for the following reasons.

Dissatisfied with university staff	3
Unexplained reasons	3
Personal problems	3
Dissatisfied with university courses	2
Personal conflict with program implementation	2
Financial problems	2
Dissatisfied with local school system	1
Lacked interest in teaching as a career	1
Accepted other employment	1
Transferred to another program	1
Total	19

We noted that 17 percent of the 30 Navajo and Hopi Indians dropped out of the program during training, whereas 31 percent of the 42 other interns dropped out. To increase the number of Indian interns for future cycles, the program director plans to send posters to other universities near the reservation and to solicit applicants from the Navajo (junior) Community College on the reservation and through the Indian club at Northern Arizona University.

During cycles III and IV, 11 experienced teachers were recruited to serve as team leaders. Of these 11 teachers four completed the program and five were still participating in the fourth cycle as of June 1970.

CHAPTER 3

DID THE PROGRAM STRENGTHEN EDUCATIONAL OPPORTUNITIES FOR CHILDREN OF LOW-INCOME FAMILIES?

We believe that the Navajo-Hopi program strengthened the educational opportunities available to Indian children in participating schools where the Teacher Corps teams were assigned. We found that participating schools were in areas having concentrations of low-income families.

The interns provided the children with more individualized instruction, which gave them additional educational opportunities that would not otherwise have been available. Exposing the children to Indian corps members provided an educational stimulus by showing the children what an Indian could accomplish through education.

Some new approaches to educating children were introduced in the schools. Many of these ideas were adopted and used by regular teachers after the interns completed their assignments. Corps members initiated or participated in certain community activities, which resulted in increased interest on the part of the children or parents in various aspects of education. Also about three fourths of the corps members who had completed the program as of the time of our review were retained as teachers in reservation schools.

WORK PERFORMED BY CORPS MEMBERS IN PARTICIPATING SCHOOLS

Corps members were assigned to schools in teams consisting of a team leader and from four to nine interns. Team leaders were responsible for supervising the interns and acted as liaison officer between the interns and the regular teachers, principals, and university officials. The responsibilities of team leaders were designed to prepare them for supervisory positions in the Bureau of Indian Affairs schools and public schools on the reservations. While at the schools, the teams were under the supervision of the principals and teacher supervisors and worked in cooperation with regular teachers.

60-433 O - 71 - pt. 5 - 30

Utilization of interns

On the basis of discussions with school principals, teacher supervisors, and interns in five schools, we learned that the interns generally began their training by observing regular teachers in classroom situations and gradually expanded this training by planning lessons, tutoring individuals, and working with small groups, until they ultimately taught entire classes. (See photograph furnished by the Office of Education on p. 17.) The interns were rotated periodically, to expose them to a number of regular teachers and teaching situations and to give them the opportunity to teach classes in many different subjects.

Our analysis of information obtained from interns showed that they generally spent about 60 percent of their time training in classrooms in the schools to which they had been assigned, 20 percent of their time in community activities, and the remaining 20 percent on academic study.

Innovative teaching approaches introduced by corps members

The schools participating in the Navajo-Hopi program did not develop plans which identified and outlined innovations that would be tested with the help of Teacher Corps interns. Rather, the interns were generally allowed, and in some cases encouraged, to innovate in the classrooms. As a result, several innovative teaching methods were introduced in the schools where the interns were assigned. These new teaching methods included:

--Using Navajo rather than Anglo-American-related stories to teach reading.

--Simulating transactions in a store to teach mathematics.

--Introducing instruction in Navajo history in social studies classes.

--Comparing Navajo and English expressions in the instruction of English.

INTERN READING TO A SMALL GROUP OF NAVAJO INDIAN CHILDREN

2657

--Using a unique 40-character alphabet, with a different character for each distinct sound, in teaching reading.

--Establishing a language laboratory using tape recordings for use in teaching children to read.

--Using team teaching--two or more teachers sharing responsibility for teaching a group of students and alternating their subject presentations.

Comments of school officials on work performed by corps members

In December 1970 we interviewed officials of five of the six schools that completed their participation in the program in May 1970. Most of these officials told us that teaching innovations introduced by corps members had been found to be successful and had been adopted by members of their teaching staffs.

The principal at one of the schools stated that the team-teaching concept, which had been initiated entirely by the interns, had been expanded and carried on at his school. He said that team teaching was being used in approximately one third of the school--all the third, fourth, and fifth grades. He stated also that the interns seemed to be somewhat more enthusiastic about teaching than did the average member of his teaching staff. It seemed to him that some of this enthusiasm had rubbed off on the other teachers.

Although this principal acknowledged that the interns had contributed good ideas to the school, he commented that they seemed to arrive at the school with an idea that everything there would be wrong. He believed that it would be helpful if Teacher Corps officials would impress upon the interns the importance of arriving with a more objective outlook.

The superintendent and former principal at another school informed us that new teaching techniques introduced by corps members had made the instruction to the children more relevant to their culture and background and thereby

had made it easier for the children to understand the teachers' presentations. He stated that these techniques, which the interns had applied very successfully, had been adopted by many members of his teaching staff. He stated also that he had initiated a study to identify additional ways to make courses more relevant.

Another principal stated that, although she could not point to specific teaching innovations which the interns had introduced and which had been carried on by some members of the teaching staff, she believed that the interns had made the other teachers more conscious of the need to make the academic courses in the schools more relevant to the children's backgrounds.

A teacher-supervisor at another school told us that the expanded use of the team-teaching technique at his school was the result of the interns' efforts. He also pointed out that the interns had introduced certain discussions of Navajo history and culture into the social studies classes. He stated that the expanded curriculum had been continued in the social studies classes even though the interns had left and that the school was in the process of developing a text to teach Navajo history and culture.

Another school official whom we interviewed was of the opinion that interns seemed to have the philosophy that they had to change the way that children were being taught in the school and that they did not give fair consideration to whether changes were in order. He pointed out that he did not feel that this philosophy was particularly a fault of the way the Teacher Corps program was being operated but rather that it was due to the personality of the individual interns assigned to his school.

EDUCATION-RELATED COMMUNITY ACTIVITIES

Although the legislation does not specifically require the involvement of corps members in community activities, the Teacher Corps guidelines encourage such involvement. The intent of the corps members' involvement in community activities is not only to give the interns an understanding of the children and their environment but also to educate parents and children of low-income families.

We learned from discussions with team leaders and school officials that corps members participated in various community activities and projects. One community project provided for 25 Hawaiian children and their chaperones to visit the Navajo Reservation and for 24 Navajo children and their chaperones to visit Hawaii. The project was selected, planned, and carried out by the interns at one school. It offered some of the children their first opportunity to travel away from the reservation and to see other people of similar complexion. The principal and teachers at the school believed that the project was worthwhile, and one teacher cited a subsequent noticeable increase in the children's interest in social studies.

The project was received favorably by the local community. It was financed primarily with Federal funds obtained through the Bureau of Indian Affairs and the Office of Economic Opportunity. The interns planned a similar exchange project for the 1970-71 school year.

A team of interns at another location visited numerous homes in the community and learned that the parents were very interested in having an adult education program. This interest led to the establishment of adult education classes as a community project. Attendance at classes varied from 15 to 40 adults, and 13 adults ultimately passed most parts of a high school equivalency test. The project was considered quite successful by the school principal, team leader, and interns and was subsequently adopted by the local high school.

The team assigned to two other schools made a survey to acquaint themselves with the political organization, the economic conditions, and the educational needs in the local

communities. As a result of suggestions by adults in the communities, the interns established adult education courses. Another community project involved the teaching of the Navajo language to the local teachers.

The interns also visited students' homes; worked with Girl Scouts; and attended tribal government, parent-teacher association, and school board meetings.

Team leaders and officials of the schools where the corps members were assigned told us that the community activities undertaken by the interns had been successful.

RETENTION OF CORPS MEMBERS AS REGULAR TEACHERS

Of the 26 interns who had completed the Navajo-Hopi program as of May 1970, 19 (about 75 percent) had accepted teaching positions in reservation schools. Of the 19 teachers retained, seven were Navajo or Hopi Indians. As of May 1970, 27 additional interns, including 17 Navajo or Hopi Indians, had completed the first year of their assignments. Through interviews, we learned that at least 23 of these interns planned to teach in reservation schools after they graduated in May 1971.

Principals and teacher-supervisors at the reservation schools where the interns trained generally considered the graduates of the Navajo-Hopi program to be better trained for working with Indian children on the reservations than were teachers trained under traditional methods. They pointed out that teachers prepared by the traditional methods, which emphasize subject matter and teaching methods applied to the typical middle-class public school, are deficient in such practical aspects as Indian culture and language. Although some school officials believed that the interns were not as well prepared academically and in teaching methods as were other teachers, they considered the interns to be well prepared from a practical application standpoint, and most believed that the interns would be better overall teachers as a result.

The director of the Navajo-Hopi program stated that the graduated interns who were employed as full-time teachers in the reservation schools could strengthen the educational

opportunities available to the Indian children by becoming catalysts for educational changes at the schools. We noted that three of the four team leaders who completed the program in May 1970 had taken positions in Navajo Reservation schools. One team leader was to be a teacher-supervisor and the other two were to be teachers. School officials planned to offer the latter supervisory positions as soon as such positions became available.

CONCLUSION

It is our opinion that the Navajo-Hopi program has strengthened educational opportunities available to children on the Navajo and Hopi Indian Reservations, in line with the legislative objective of the Teacher Corps program.

The objective was accomplished by recruiting and training, as teachers of disadvantaged children, persons who, upon completion of their assignments, were considered by school officials to be better trained for teaching Indian children than were teachers prepared by traditional programs. Schools on the Navajo and Hopi Reservations willingly offered teaching positions to the interns who graduated. We believe that the number of Indians in the program who have taken or plan to take teaching positions will significantly increase the number of Indian teachers in schools on the reservations. Estimates furnished by local officials of the Bureau of Indian Affairs showed that, at the time of our review, about 60 Navajo or Hopi teachers were employed at the Bureau's schools on the Navajo and Hopi Reservations.

The Teacher Corps interns provided more individualized instruction and introduced some new approaches to educating children, and many of the approaches were continued in the schools after the interns had completed their assignments. The interns' efforts gave the children educational opportunities that otherwise would not have been available to them. Exposing the children to Indian corps members provided the children with an educational stimulus. Community activities which were organized by the corps members provided additional educational benefits to children and adults on the reservations.

CHAPTER 4

DID THE PROGRAM BROADEN NORTHERN ARIZONA UNIVERSITY'S TEACHER PREPARATION PROGRAM?

The Teacher Corps program at Northern Arizona University had some degree of success in broadening the university's teacher preparation program. The university trained the Teacher Corps interns by (1) providing courses that were designed to give them an understanding of the rudiments of the Indian language, culture, and history and (2) modifying courses to make the content more relevant for preparing the interns to teach Indian children. Experience with the Teacher Corps influenced the university to make certain changes in its regular teacher preparation program; however, much of the special curriculum offered to the Teacher Corps interns was not offered as part of the university's regular teacher preparation program.

As stated on page 21, principals and teacher-supervisors at the reservation schools where the interns trained generally considered the graduates of the Navajo-Hopi program to be better prepared for working with Indian children on the reservations than were teachers prepared by traditional methods. No formal procedures were established by the university, however, for evaluating the various ideas, experiments, and approaches that were used by the Navajo-Hopi program until December 1970--2-1/2 years after the program started.

ACADEMIC COURSES OFFERED TO TEACHER CORPS INTERNS

The teacher preparation curriculum offered to other students at Northern Arizona University was revised extensively for the Teacher Corps interns. The changes were designed to prepare the interns for teaching on the reservations. For example, the interns took several courses that were not in the teacher preparation curriculum of other students. These courses related to such subjects as the Navajo language, the Navajo community, the growth and development of Indian children, community relations, and the teaching of English to students coming from homes where English is not the predominant language.

Instructors at the university informed us that they had adjusted the content of the interns' courses so that the courses would be more applicable to the Indian culture in which the interns were being trained to teach. For example, a mathematics instructor stated that, although he had not changed basic mathematical concepts when he worked with the interns, he had explained the application of the concepts in language and symbols that would be better understood by Indians. A psychology instructor explained that the implementation of principles of learning varied among various cultures and that he had emphasized the Indian applications when working with the interns. He illustrated his point by stating that other elementary school children normally are encouraged to compete with each other to learn, whereas Navajo children must be encouraged to work as groups since they will not compete with one another.

INFLUENCE OF TEACHER CORPS ON THE UNIVERSITY'S REGULAR TEACHER PREPARATION PROGRAM

University officials informed us that a lack of available positions for student teachers in the elementary schools in the Flagstaff area had caused the university to look elsewhere for such teaching positions. Drawing upon its experience in providing courses to the Teacher Corps interns while they were training away from the university, the university took the further step of establishing two student-teaching centers near Phoenix, Arizona, where there were still student-teaching opportunities available. At these centers students in the university's regular teacher preparation program live, teach, and take academic courses. The centers became operational in the fall of the 1970-71 school year. The officials stated that the university would consider establishing a similar center on the Navajo Reservation if the first two centers were successful.

The dean of the university's College of Education told us that the Teacher Corps program had fostered a more cooperative relationship among the various colleges within the university through the college's use of certain courses from outside the College of Education. The assistant dean felt that certain university professors who taught the interns' courses had become more aware of the environment on Indian reservations. He stated that he included a discussion of the opportunity to teach on Indian reservations in

his own introductory education course. He also planned to make a film which would highlight the unique aspects of teaching on reservations.

We noted that, as of August 1970, only one of the specially designed courses for the Teacher Corps interns had been offered in the university's regular teacher preparation program. This course, involving internship in schools and communities on Indian reservations, is offered as a substitute for student teaching in the elementary schools in Flagstaff. The regular students' curriculum, however, includes only one semester of this course, compared with four semesters for Teacher Corps interns, and the university has not established a method of providing other courses to the regular students while they are training on the reservations.

The Navajo-Hopi program proposals for cycles III and IV, submitted to the Office of Education in March and December of 1968, respectively, outlined the specialized curriculum which would be offered to interns and emphasized that the program would enable Northern Arizona University to study the effects of this specialized curriculum and consider applying it to other students at the university.

The study had not been undertaken at the time that we completed our fieldwork at the university in August 1970. In April 1970, we had discussed with university officials the apparent need for such a study in furthering the objectives of the Teacher Corps program. In December 1970 the assistant dean of the College of Education told us that the study was under way and should be completed by May 1971.

CONCLUSION

We believe that the Navajo-Hopi program had some degree of success in encouraging the university to broaden its teacher preparation program. The university provided the interns with courses more relevant to their needs as prospective teachers of Indian children. Experience with the Teacher Corps influenced the university to make certain changes in its regular teacher preparation program. The university, however, did not undertake an evaluation of the Navajo-Hopi program to identify those aspects which warranted inclusion in its regular teacher preparation curriculum until December 1970--2-1/2 years after the program started.

RECOMMENDATION TO THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE

We recommend that the Secretary of HEW provide for the Office of Education to stay abreast of the progress of the university's study of the various ideas, experiments, and techniques used in the Navajo-Hopi program and encourage the university to incorporate in its regular teacher preparation curriculum those aspects of the program that are found to be successful.

- - - -

The Assistant Secretary, Comptroller, HEW, commented on a draft of our report by letter dated March 8, 1971. (See app. III.) He stated that our conclusions were sound and that our recommendations were sufficiently objective to produce the action required to make the program more effective. He said that HEW's comments were the product of a review of the draft of our report by cognizant departmental and Office of Education staff and of the responses from the director of the Navajo-Hopi program, the dean of the Northern Arizona University College of Education, officials of the Arizona Department of Education, and local school officials associated with the program.

The Assistant Secretary stated also that HEW concurred in our recommendation that the Office of Education stay abreast of the university's study and encourage adoption of successful program features into the university's regular

teacher preparation program. He noted that, after our review had been completed, three additional Teacher Corps courses had been made available to students in the university's regular teacher preparation program. He noted also that the university's College of Education had established a student-teaching center at one of the schools participating in the Teacher Corps program on the Navajo Reservation. The first non-Teacher-Corps students were to be assigned to the center for the spring semester of 1971.

The Assistant Secretary pointed out that Northern Arizona University had submitted an impressive proposal for a sixth-cycle Teacher Corps program, which demonstrated planning to ensure program continuity as Federal funds were withdrawn. He stated that the Teacher Corps headquarters would monitor the sixth-cycle program and provide technical assistance to encourage and ensure timely evaluation of program activities.

CHAPTER 5

ROLE OF THE ARIZONA DEPARTMENT OF EDUCATION IN THE PROGRAM

Teacher Corps legislation requires that the appropriate State educational agencies approve program proposals. The Office of Education encourages State agencies to review proposals in the light of the States' educational objectives and priorities.

Officials of the Arizona Department of Education advised us that they considered the department to be a minor participant in the Navajo-Hopi program. They stated that the department had reviewed the program proposals to satisfy itself that they were educationally sound and had obtained clarification of the contents, when considered necessary, before notifying the Office of Education of its approval. Department officials stated also that they had visited the university during the preservice orientation phase of the program to meet with the corps members and learn more about the program's operation.

The Department's director of teacher certification, who was the former liaison officer for the Teacher Corps program, said that the type of curriculum given the Navajo-Hopi program interns appeared to be very good for preparing the interns for teaching on the reservations. It was his opinion that all students who intended to teach on the reservations should be given the same or similar-type curriculum. Department officials stated, however, that they had not disseminated information on the operations of the Navajo-Hopi program to other universities in Arizona.

We apprised officials of the Arizona Department of Education of our view that the department could contribute to the achievement of Teacher Corps objectives by obtaining information on successful techniques and results of the Teacher Corps program and disseminating this information to other educational institutions in the State that could benefit from such information. We noted that about 40 percent of the approximately 180 new teachers hired for schools on the Navajo and Hopi Reservations for the 1970-71 school year

came from three colleges in Arizona--Northern Arizona University, the University of Arizona, and Arizona State University.

Department officials stated that they planned, through visits to program sites, to learn how educational innovations introduced in the schools and the university were working out and planned also to disseminate information about successful innovations to other educational institutions in the State.

RECOMMENDATION TO THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE

We recommend that the Secretary of HEW provide for the Office of Education to cooperate with the Arizona Department of Education in its plans to assume a more active role in disseminating information concerning successful techniques and teaching methods to other educational institutions in the State.

- - - -

The Assistant Secretary stated that HEW concurred in our recommendation but preferred to delay specific action until such time as the Arizona Department of Education indicated that it could provide staff, time, and personnel expertise to carry out its plans. He stated also that a closer relationship had been established between the Arizona Department of Education and the Teacher Corps program and that the department had established a new procedure for keeping itself informed of Teacher Corps activities and of changes in Northern Arizona University's teacher-training program.

CHAPTER 6

SCOPE OF REVIEW

We reviewed the legislative history of the Teacher Corps program and the related policies, procedures, and guidelines of the Office of Education. We reviewed records relating to selection of corps members, activities of corps members in the schools and at Northern Arizona University, retention of corps members in teaching after completion of Corps service, and various administrative aspects of the program.

Our review was performed at the Teacher Corps headquarters in Washington, D.C., Northern Arizona University, the Navajo Area Office of the Bureau of Indian Affairs in Arizona, and Bureau of Indian Affairs schools and public schools on the Navajo and Hopi Indian Reservations. We also interviewed interns, team leaders, teachers, local school officials, Northern Arizona University officials, Teacher Corps officials, and Arizona Department of Education officials.

APPENDIX III

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
WASHINGTON, D.C. 20201

'ICE OF THE SECRETARY

MAR 8 1971

Mr. Philip Charam
Associate Director
United States General
Accounting Office
Washington, D.C. 20548

Dear Mr. Charam:

The Secretary has asked that I reply to your letter dated December 28, 1970, with which you forwarded the draft report of the General Accounting Office review of "Assessing the Impact of the Teacher Corps Program at Northern Arizona University and Participating Schools in Arizona and New Mexico on the Navajo and Hopi Indian Reservations." We appreciate the opportunity to review and comment on the report, the conclusions and recommendations.

The report indicates that a very comprehensive review was performed and presents an accurate account of the strengths and weaknesses of the Teacher Corps Northern Arizona Program. The conclusions are sound and the recommendations are sufficiently objective to produce required remedial action to make the Teacher Corps Program more effective.

Detailed comments on the recommendations, together with the statements of actions to be taken to implement them, are set forth in the enclosure hereto. They are the product of a review of the report by cognizant Departmental and Office of Education staff and the responses from the Director of the Program at Northern Arizona University, the Dean of the School of Education, Department Chairman and local school officials associated with the program.

Sincerely yours,

James B. Cardwell
Assistant Secretary, Comptroller

Enclosure

APPENDIX III

Department of Health, Education, and Welfare
Comments Pertinent to the Draft of Report to the Congress of the United States by the Comptroller General of the United States on Assessing the Impact of the Teacher Corps Program at Northern Arizona University and Participating Schools in Arizona and New Mexico on the Navajo and Hopi Indian Reservations

The GAO recommended that the Secretary provide for the Office of Education to stay abreast of the progress of the University's study of the various ideas, experiments, and techniques used in the Navajo-Hopi program and encourage the University to incorporate in its regular teacher preparation curriculum those aspects which are found to be successful.

Department Comment

We concur in the recommendation.

The Director of Northern Arizona University (N.A.U.) as well as the Dean and Department Chairman informed us that "Teacher Corps courses, since last year, have been available to non-Teacher Corps personnel. After the GAO review ended a survey was done that indicated a need for additional offerings, which resulted in three additional courses available from the College of Education in September of 1970. Students other than Teacher Corps will also receive on site advisement."

Teacher Corps Washington, via its monitoring and technical assistance efforts, will encourage and assure evaluation in the 6th cycle of this project.

Northern Arizona University has submitted an impressive proposal for the 6th cycle which demonstrates planning to ensure program continuity as Federal funds are withdrawn and clearly overcomes the evaluation shortcomings noted by GAO.

The GAO recommended that the Secretary provide for the Office of Education to cooperate with the Arizona Department of Education in its plans to assume a more active role in disseminating information concerning successful experiments and teaching methods to other educational institutions in the State.

Department Comment

We concur in the recommendation but prefer to delay specific action until such time as the Arizona State Department of Education indicates it has staff time and personnel expertise to do the tasks outlined in the recommendation.

2674 68

APPENDIX III

However, in the interim the Director of Northern Arizona University informed us that "The Dean of the College of Education encourages the State Department to visit, observe, and disseminate information of Teacher Corps and regular N.A.U. programs on the Reservation."

Also, the State Department indicated a new procedural set up has been initiated that will keep them alerted to activities, changes in the teacher training program at N.A.U., and hopefully, evidence from the field where the programs have been affected by the Teacher Corps.

Finally, before the signature from the State Department of Education goes on the final documents endorsing the 6th cycle program, the Department has requested the goals and objectives of the Teacher Corps program be sent to them for information and review purposes. A closer relationship is being established between the Arizona State Department of Education and the Teacher Corps program.

The Director at N.A.U. indicated the College of Education has begun a student teaching center at Dilcon Boarding School, a Cycle 4 School on the Navajo Reservation. The first non-Teacher Corps student teachers will be assigned there Spring Semester of 1971. Teacher Corps interns at the school will aid in orientation of the new student teachers.

APPENDIX IV

PRINCIPAL OFFICIALS OF THE

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

RESPONSIBLE FOR THE ACTIVITIES

DISCUSSED IN THIS REPORT

	Tenure of office	
	From	To

U.S. GAO Wash., D.C.

2678

Senator NELSON. I just would like to point out that the GAO noted that only 5 percent of the teachers in the Bureau of Indian Affairs schools—if you can imagine, only 5 percent on the reservations—were Navaho or Hopi Indians. But Navaho or Hopi Indians constituted 42 percent of the Teacher Corps interns.

Another comment. Exposure to Indian members of the Teacher Corps gave the Indian children the incentive for their own schooling because they could see what an educated Indian could accomplish. The program director plans to increase the number of Indian interns if the program is funded in the future. School officials believe that interns were better trained for teaching the Indian children than were the teachers trained by the traditional methods. Three-fourths of the interns who had completed the program at the time of the GAO review had been hired as teachers in reservation schools and most of the interns still in training plan to accept such positions after their graduation.

These are excerpts from the GAO report on their study on these two reservations.

Now, Mr Chairman, almost 7 years have gone by since Senator Kennedy and I introduced this bill and since this committee addressed itself to consideration of the functions of the Teacher Corps. Four Commissioners of Education have given their strong personal commitment to the program. Four Commissioners discussed it with Congress.

We have put language on independence in Committee Reports because we did not want to legislate it. We thought that if we expressed our intent that the intent of Congress would be persuasive with the Office of Education and the Department of HEW. Quite obviously our specific written intent and repeated expressions of intent have not been persuasive for whatever reason I will never understand. Therefore I think it is critically important that this committee write into the statute what we have been requesting and directing the Department to do since 1965, and I hope we will pass it.

So long as the Teacher Corps is in the Department of Education, I think it ought to be independent as we intended. There is a proposal by the administration that the Corps be transferred to the new volunteer organization along with Vista and the Peace Corps and a group of other functions. I have no notion what the Congress will decide about that, whether it will accept that recommendation of the administration and pass legislation to that effect. But whether it does or not, until the Teacher Corps is placed in some other agency I think that the Congress is entitled and should adopt the amendment proposed by the chairman of this committee to do what the committee has been asking the Office of Education and the Department of HEW to do since 1965 under two administrations.

Senator PELL. Thank you, Senator Nelson. I well understand your concern and interest which you have expressed in the full committee on this subject through the years. I think I know how concerned you are at what appears to be the ignoring of the will, the intent of the Congress by the administrative office.

I think your words here are extremely—and I use the word advisedly—relevant to the Department of HEW. Very often, indeed too often, the intent of Congress unless it is spelled out in a mandatory fashion, which we are reluctant to do, is ignored. I can think of the

Council on Excellence in Education which we established is Public Law 91–230 which is being ignored from the viewpoint of its implementation by the administration lies

I am struck by the amounts that are being withheld from obligations that we have made, by the administration. I think that what we are groping at here, is the traditional argument that we have as to whether we are simply a sort of House of Lords or whether we are really the board of directors of the corporation of the United States and the executive branch is the principal executive officer to carry out the will the board. In the bill that is before us, of which you are a cosponsor, your wishes are incorporated in a more mandatory way.

I don't mean to divert the attention of the Secretary and the witnesses from the main thrust of today's testimony, the subject of institutional aid, but it would be unfair if I didn't ask the Commissioner if he didn't want to make a brief rebuttal to the points that are being raised by Senator Nelson.

Senator NELSON. May I say one word first.

As I stated in my remarks there is not anything in any way partisan intended. The fact of the matter is that this administration has simply continued a policy instituted by the previous administration. So it is less culpable, if anything than my party's administration.

I emphasize also that all the Commissioners of Education, including Mr. Marland, the present Commissioner, have been very praiseworthy of the program. But after some 7 years during which we have asked, requested, and written in committee reports our intent and that intent has not been acted upon by the previous administration or this administration that it is necessary and appropriate that we should go ahead and legislate the independence of the Teacher Corps.

Senator PELL. What you are setting forth is the traditional argument between the legislature and the administrative department, not between Democrat and Republican.

Mr. PROUTY. You might say Democrats and Republicans never argue.

Dr. MARLAND. Responding to your invitation, I would make a very brief comment, not as a rebuttal but as a very warm endorsement of the statement that Senator Nelson has offered. I do express considerable enthusiasm for this program and I would hope in a very short phrase to describe our action on this subject.

The fact that I have been quoted as equally enthusiastic, along with three previous Commissioners, is noteworthy, but I would add that I may have even somewhat better credentials for my enthusiasm in that, unlike my predecessors who were denied the opportunity to have a Teacher Corps program in their own immediate environment, as the Senator knows, I was among the early Superintendents of Schools to react warmly to this idea when it first emerged from Congress in Pittsburgh, I found it an exceptionally useful and effective instrument for school leadership for the introduction of the kind of teacher that comes to the Teacher Corps, and I applaud it both in philosophy and in its practicality.

Very briefly, as to the ways in which we are attempting to increase the effectiveness and to build upon the present thrust of the Teacher Corps, while I acknowledge the limited resources so far available in the way of dollars and people to the program, I might add that any

reduction in personnel in the Teacher Corps during my tenure have been the result of universal reductions in staff across the Office of Education. There have been no direct reductions of personnel in the Teacher Corps specifically, but rather only general reductions in staff.

What we have done in an effort to offset limited staff and limited funds is to combine with the Teacher Corps two other instruments of the Office of Education allowed and authorized by Congress; namely, the career opportunities program and the urban rural teacher program which have pooled resources so as to triple the number of personnel and to more than double the dollars available for this program, moving it from $30 million in the current year to some $67 million. This has greatly increased the number of people affected in the field.

We are, if you will, Senator Nelson, building upon the philosophy of the Teacher Corps in the Office of Education and capturing its style, its freedom and, as you say, its exciting creative and flexible nature in attempting to instill this kind of style across the Office of Education.

As to the Senator's comments on an internal administrative organization of a Teacher Corps, I would have to say that if Congress establishes the ways in which we should organize administratively we will of course immediately comply. Left to our discretion at this stage, we would prefer that the Congress not take such action.

Senator PELL. Thank you very much.

Senator Prouty? Senator Beall?

Senator PROUTY. No questions.

Senator BEALL. Not on that.

Senator PELL. Thank you very much, Senator Nelson.

Senator NELSON. Thank you.

(The following material was subsequently supplied for the record:)

UNIVERSITY OF SOUTH FLORIDA
TAMPA • ST. PETERSBURG

June 3, 1971

Senator Claeborne Pell, Chairman
U. S. Senate Government Operations Committee
U. S. Senate
Washington, D.C. 20201

Dear Senator Pell:

I am writing to you as chairman of the National Field Council Teacher Corps. The Field Council is a representative body of 30 persons made up of local project directors, public school coordinators, team leaders (master teachers), interns, principals, and community representatives. We were elected by our peers at the last National Conference to represent people in local projects on National Teacher Corps policy.

In Atlanta, Georgia in April the Field Council voted against the integration of National Teacher Corps into the new Action Agency. I realize that the bill enacting this transfer will come before your committee in the next month or so. We are most interested in having a chance to testify at the hearings on this bill in order to contribute information on the valuable National Teacher Corps program. I would much appreciate it if you could notify me concerning your committee's hearing on the bill and, if possible, include us among those who give testimony. Thank you for your interest.

Sincerely,

Miller Newton

Miller Newton, Chairman
Teacher Corps National Field Council

MN/mb

Senator PELL. Secretary Richardson.

STATEMENT OF HON. ELLIOT L. RICHARDSON, SECRETARY OF HEALTH, EDUCATION, AND WELFARE; ACCOMPANIED BY HON. SIDNEY P. MARLAND, JR., U.S. COMMISSIONER OF EDUCATION; HON. PETER P. MUIRHEAD, EXECUTIVE DEPUTY COMMISSIONER; HON. STEPHAN KURZMAN, ASSISTANT SECRETARY FOR LEGISLATION; AND CHRISTOPHER T. CROSS, ACTING DEPUTY ASSISTANT SECRETARY FOR LEGISLATION (EDUCATION)

Secretary RICHARDSON. Thank you very much, Mr. Chairman.

I appreciate your generosity in including the New York Times article in the record. I trust that this does not now hold me to a standard that I shall hereafter be unable to sustain. In any case I am pleased to be here with the Commissioner and Deputy Commissioner.

I do have a statement that addresses itself to a number of the issues and problems in the area you described earlier, and I think although it is fairly long it also represents a considerable amount of thought and perhaps it would be well if I just went straight through it, Mr. Chairman.

Senator PELL. Fine.

We welcome Mr. Muirhead.

Mr. MUIRHEAD. Thank you.

Secretary RICHARDSON. Mr. Chairman and members of the committee, I am pleased to be here today to present the administration's views on the various proposals before the Congress for new forms of assistance to institutions of higher education. I refer in particular to the provision in your bill (S. 659), Senator Pell, providing cost-of-instruction grants to institutions for federally aided students. But my remarks also bear upon other institutional aid proposals such as Senator Mondale's bill and the bills submitted by Mrs. Green, Mr. Quie and Mr. Perkins in the House.

All of these bills have been introduced largely in response to deepening concern about the financial health of our colleges and universities. Particularly in the past few months since the administration's higher education program was submitted to Congress there has been considerable publicity about a financial crisis in higher education. The Carnegie Commission has released a study entitled "The New Depression in Higher Education." And the educational associations have communicated their concern to you, and to us, that a new economic situation now affects higher education which demands an immediate and vigorous Federal response.

We believe that in light of these concerns the matter of increased institutional support for higher education does deserve renewed consideration. There are three interrelated issues which I wish to discuss this morning: (1) What are the dimensions of the current financial difficulties? (2) To what extent are the current legislatives proposals responsive to these difficulties? (3) What new steps should be taken?

DIMENSIONS OF THE CURRENT DIFFICULTIES

The Department has had several studies underway for some time which provide valuable information for analyzing this issue. A study of 50 4-year public and private colleges has substantially improved our

ability to evaluate trends in class size, faculty wages, instructional costs and significant indices of institutional health. An intensive study of the resource allocation processes of a small number of institutions has provided valuable insights into how different kinds of institutions have responded to recent economic conditions and how they would be likely to respond in the future to various new modes of support. In addition, we have analyzed and profited from studies of higher education finance prepared for the Carnegie Commission and the Association of American Colleges. And we have consulted the work of many individuals.

Yet despite all these studies, it is not possible for us or anyone else to arrive at a clearcut set of conclusions about the financial health or additional needs of institutions of higher education. We are dealing with a constantly moving target as to which aggregate data are nearly always out of date. More importantly, there are many different indices for determining whether or not higher education institutions are in trouble. Some people base judgments on the fact that some institutions have severe and/or frequent operating deficits; other individuals are concerned with rising tuition charges; still others with a longer-term condition under which institutional costs seem to be rising at a faster rate than revenues.

Such judgments, moreover, are complicated by the fact that there are no clear performance objectives for higher education institutions. We therefore have no clear standard for saying when an institution is unable to perform its vital mission. It will not do to look to the aspirations of the institutions themselves, because by that standard all institutions with high aspirations are in financial trouble all the time.

Bearing all this in mind there are, however, some things that can clearly be said and to which most all observers would agree. First, the differences in need among institutions and to some extent categories of institutions are considerable. Private institutions have turned more and more to tuition increases to obtain added revenues, running a much greater risk than public institutions of pricing themselves out of the market. Yet among private institutions there are also great differences which are compounded by the fact that advantages are unevenly distributed: those institutions which have one advantage (such as the ability to raise tuition without losing students) tend also to have others (such as endowments to fall back on). Similar disparities exist within other categories: the black colleges for example, both public and private, are in worse straits than most other colleges.

We know, too, that different categories of institutions are experiencing distress for different reasons. Community colleges have large capital needs because they are rapidly expanding. Many private institutions are in financial difficulty because they cannot attract students to fill their available spaces. State-supported institutions have been hurt by less generous appropriations from State legislatures. Large research-oriented universities are almost alone in feeling the impact of a declining rate of growth in Federal research funding and shifts in research dollars to newly favored fields.

Third, we know that some causes of the current financial difficulties are temporary while others are chronic. Many of the problems of public institutions, for example, can be attributed to the increased competition for tax resources which occurs during a recession and to other

temporary factors such as political reaction to student behavior. On the other hand, private institutions are all affected by the chronic problem that they must compete with subsidized public institutions which more and more resemble them in educational offerings and "quality."

Thus, while most institutions either have or feel they have financial problems, we conclude that what higher education faces at present is not a general "crisis" but a "crunch"—a crunch which affects institutions differently, and has been brought on by the convergence of a number of different economic and political forces. We recognize at the same time that this crunch has created a general sense of crisis on the part of leaders in higher education. And we recognize that some aspects of the present crunch reflect continuing and serious problems which must be addressed in the near future. How, then, should the Federal Government respond to this situation?

One mode of response which has been proposed by higher education organizations and is reflected in several bills in Congress is new and unprecedented legislation for general institutional aid. By this I refer to funds which (1) are intended to support the general operating budgets of institutions rather than to accomplish a specific Federal purpose, and (2) are distributed to all or nearly all postsecondary institutions by a formula based on some measurable institutional characteristic such as student enrollment, degrees awarded or instructional costs.

SHORTCOMINGS OF GENERAL FORMULA AID

General formula aid has been suggested as an answer to the "crisis" which many feel higher education is in. Yet it is hard to imagine a mode of financing less suited to alleviating an immediate, short-term crisis than general formula aid. It is much too blunt an instrument for dealing with acute problems of particular institutions, for it would provide support to all institutions regardless of their needs without substantially affecting those which are in the greatest difficulty.

In fact, general formula assistance is addressed to no particular problem but to the perceived need for a general strengthening of all postsecondary institutions. We believe that general formula aid must therefore be assessed for what it really is—a whole new approach to financing higher education involving a major reallocation of responsibilities for support of institutions with major educational and economic consequences for the institutions themselves.

Three major sets of questions must be answered before this administration would be prepared either to propose or to accept legislation containing a new program of general institutional aid. The first concerns the Federal role. Throughout over 100 years of providing support for higher education, the Federal Government has always distributed its funds on the basis of the services or functions which higher education institutions perform for our society. The States, in contrast, have provided basic and general support to public institutions.

Before federalizing this responsibility, we must ask what level of government should support what sectors of higher education for what purposes? A series of questions follow from this one. Do the community and junior colleges, State colleges, and universities perform

services which benefit the whole Nation equally? Or should States and localities support some of these institutions and the Federal Government others? Should the Federal Government support all curriculums at all levels or concentrate on curriculums which meet high priority national needs; for example, for skilled manpower in health and scientific research? Is there as strong a national interest in assisting all American citizens of all income levels as there is in equalizing educational opportunities for particular groups?

These are questions which must be answered through the democratic process of discussion and debate. Not only educational institutions but State officials, members of boards of trustees, and many others must be engaged in this debate. A debate has begun, but we have not had a national discussion on this issue on anything like the level or scale of public discussion that has centered on welfare reform, health policy or strengthening State services through revenue sharing.

If we assume for the sake of discussion that providing general support is an appropriate Federal role, a second set of hard questions must be asked about the consequences of any general formula. For example:

What would be the impact on other forms of Federal assistance to higher education? General formula aid might compete for the funds now provided for aiding students and for support of existing categorical programs. What proportion should go to each? Should general formula aid replace some existing categorical programs?

What would be the impact on State and private support for higher education? General institutional aid might encourage some States and some private givers to reduce their support for higher education. Hence formulas must be designed with this problem in mind.

What would be the impact on the differential costs of public and private institutions? Unless general formula aid were disproportionately channeled toward private institutions or States were induced by a general formula to support private institutions, general aid might have no impact or an adverse impact on the chronic problem of price competition between public and private institutions.

What would be the impact on the independence and flexibility of institutions? Higher education institutions coming under a general formula could well be exchanging a short-run dollar windfall for some serious long-run problems.

RELATIVE MERITS OF PROPOSED FORMULAS

A final set of questions must be asked about the relative merits of the particular formulas which have been proposed. Each formula contains not only a method of distributing funds among States and institutions, it also contains built-in inducements for each institution to act in certain ways which might enhance or compromise its capacity for independent and flexible action and its capacity for change. Do we want to encourage all institutions to expand enrollments by a formula base on capitation payments, or all institutions to stress credentials and select students most able to acquire them by a formula based on degrees awarded? If capitation payments are based on institutional size, what incentives and contraints are being created for certain organizational forms and not others? If payments vary according to

levels of education, what assumptions are being made about the length of time students are required to spend in order to earn a degree?

In summary, we are convinced, both by what is known and by what is unknown about the results of general formula aid, that it would not be in the best interests of higher education to pass such legislation without a great deal more study and debate.

GUIDELINES FOR INSTITUTIONAL AID

Our analysis of the nature of the difficulties faced by institutions and the problems besetting general formula aid approaches do, however, help us see and understand how we can and should help higher education in the immediate future. The foregoing presentation, it seems to me, suggests four guidelines by which we can judge new forms of institutional aid.

First, institutional aid should be related to the effort which the institutions themselves are making to fulfill a recognized national purpose. New institutional aid should, at least for the time being, carry through on commitments the Nation has already undertaken, such as equalizing opportunity, stimulating reform and innovation, sponsoring research, and encouraging specific programs which are in the national interest.

Second, additional aid should, to the extent possible, benefit those institutions and categories of institutions which are experiencing the greatest distress.

Third, additional aid should not inadvertently, and perhaps irreversibly, produce major and premature reallocations of responsibility among the supporters of higher education—the Federal Government, other levels of government, and private donors.

Fourth, institutional aid should not impose upon institutions a uniform Federal bias as to how higher education should be provided—as, for example, through a formula which assumes a certain length of time required for a degree, the validity of degrees, and so on.

In short, Mr. Chairman, we believe that your efforts and ours should be devoted to determining how we can meet the major needs of institutions in the light of our major Federal priorities, and do so in a way that will avoid the many dangers we see in some of the blanket approaches now before Congress. It follows from this that no single new program will provide the optimum solution. There are many arrows in the Federal quiver and each can carry a specific Federal interest to a specific target of national and institutional needs.

Over the past month we have reviewed existing Federal authorities for higher education to see if there might be some vehicles, already in place, which might be used. We encourage you to do so also. We encourage you to consider the impact of our proposals for student aid which will free up institutional resources now devoted to this purpose. We hope, too, that you will consider our proposed National Foundation for Higher Education which will, we believe, substantially help institutions to become more productive centers of teaching and learning.

We have also reviewed new forms of institutional aid. This search has led us—as it has lead many others—to conclude that a new program of cost-of-education allowances is the most appropriate new ini-

tiative, beyond the legislation we have already submitted, which the Federal Government could now take. We have a particular proposal to present to you. But since you, Senator Pell, as well as Senator Mondale and Chairman Perkins of the House Education and Labor Committee have all introduced different versions of the cost-of-education allowance concept, I would like to discuss the central issues involved in designing a cost-of-education program which will fulfill the guidelines I mentioned previously.

Our first guideline was that additional aid should be related to the effort which the institutions themselves are making to fulfill a recognized national purpose. Cost-of-education allowances can build upon and extend the Federal commitment to equalizing opportunity for college attendance. It can do so by providing institutions with (a) an incentive to enroll the students who bring with them a cost-of-education allowance and (b) extra resources so that meaningful educational programs can be developed which will serve particular needs of these students.

Whether a cost-of-education allowance formula will serve the Federal objective of equalizing opportunity depends, however, on a number of important features. It depends most of all on the extent to which the student aid program upon which the cost-of-education allowance is based is itself well targeted on the neediest students.

It also depends on how powerful the incentive is to compete for the students. If, for instance, the student aid was provided directly to the students, such as the monthly payments to veterans receiving the GI bill subsidies, and the cost-of-education allowances also were given to the students to be turned over by them to institutions of their choice, we would have a true market system. But if the student aid and cost-of-education allowance are allotted to the institutions for distribution, as in the present Office of Education campus-based programs, the incentives are weaker and depend upon how precise and uniform are the Federal criteria for determining eligibility which the financial aid officers must follow.

Finally, it depends, of course, on whether the institutions use the extra resources to improve educational programs for the particular students in question, for the general student body, or for other needs such as faculty salaries which would be only indirectly related to the educational process.

Some have objected to a cost-of-education allowance on the grounds that there is no evidence that institutions do make larger educational outlays for low-income students; and that economically disadvantaged students are not necessarily educationally disadvantaged, and hence require no special treatment. Our response to this, which we would like to have on record, is that low-income students are more frequently less prepared for a traditional academic education than other students.

Further, we believe that the institutions which are undertaking a major commitment to serve these students should have the additional resources necessary to redesign programs suited to the interests of the ever-widening spectrum of students entering colleges and universities. These need not be remedial programs at all but rather programs more challenging than the ones now in existence.

Our second guideline was that additional aid should, to the extent possible, benefit those institutions which are experiencing the greatest

financial distress. In terms of this guideline, a cost-of-education allowance based upon our proposed EOG, Work-Study, and NDSL programs would do a better job of distributing funds to the neediest institutions than, for example, the general formula aid bill (H.R. 7248) introduced in the House by Mrs. Green. However, none of the cost-of-education proposals before the Congress precisely target on the neediest institutions. All must be justified primarily in terms of equalizing opportunity.

Whether or not a cost-of-education proposal will meet the third guideline—the avoidance of major reallocations among programs or supporters of higher education—will be affected both by the level of funds contemplated for the proposal and the conditions under which it is granted. For example, S. 659 proposes a "cost-of-instruction" allowance under which the sum of $1,200 would be paid to institutions for each recipient of a basic EOG grant after a deduction is made for the amount of tuition charged the student.

At an institution now charging less than $1,200—a typical public institution—tuition charges to students could be reduced and the Federal Government would make good the loss in tuition revenue in the case of every student eligible for a basic EOG. The other supporters of the institution—typically State and local government—would have to make up the tuition loss only in the case of students not eligible for basic EOG's.

Senator PELL. Forgive me for interrupting but there is an amendment we put in a few weeks ago to simplify this. As presently conceived it provides for a flat $1,000 grant without any deduction for tuition.

Secretary RICHARDSON. Yes, I understand this is true, Mr. Chairman, and I will touch on that on the next page.

Senator PELL. Thank you.

Secretary RICHARDSON. We thought it worthwhile for analytical purposes to cover all the proposals since what I am doing is highlighting the questions to be addressed rather than arguing with any particular approach.

Senator PELL. I understand.

Secretary RICHARDSON. If, for example, the institution charged $300 for tuition and more than a quarter of its students were eligible for basic EOG's, the State or local government would find that it had shifted part of its financial burden as well as those of students to the Federal Government.

Variants of this situation are common among public institutions but exceedingly rare among private ones. As a result, many public institutions would be encouraged to reduce tuition. Private institutions on the other hand would be neither encouraged nor enabled to take similar steps. The result could well be a wider gap between the charges of public and private institutions. This would be an added competitive disadvantage for the private institutions.

I understand, Mr. Chairman, that an amendment to S. 659 is under consideration which would provide a flat $1,000 per federally aided student to colleges and universities without a deduction for tuition. This proposal would not provide an incentive for reduction of tuition charges at public institutions, and would deal even handedly with public and private institutions. The amount of the payment is so large, however, that considerable substitution of Federal for State and pri-

60-433 O—71—pt. 5——32

vate funds would result. Moreover, there would still be a strong tendency for institutions to recruit students barely meeting the eligibility requirements for student aid in preference to those from families paying only a few dollars more in income taxes.

Another example is provided by Senator Mondale's bill (S. 1161) for a cost-of-education allowance. Under the student aid proposal on which his cost-of-education allowance is based, no student would have to pay a large share of any tuition increases unless the institution he attended already charged more than $2,500. Institutions with low charges, especially public ones, could thus shift the burden of their general support to the Federal Government via increased charges. The cost-of-education allowance in S. 1161 would then operate to give them a positive incentive to make such a shift. It would provide a bonus for transferring burdens to the Federal Government.

Our fourth guideline was that additional aid should not undermine the independence and flexibility of the institutions themselves. We recognize that any formula grant program carries this threat, but we believe that a cost-of-education allowance is the type of formula least likely to do so. Cost of education allowances provide one known incentive to institutions—an incentive to attract those students who will bring more funds to the campus. It avoids placing the heavy Federal hand on courses, credits, degrees, instructional costs or other variables basic to the educational process.

SUMMARY

To summarize, Mr. Chairman, the problems of general formula aid I have discussed, the criteria for a more promising approach I have mentioned, and the particular hazards of some cost-of-education allowance proposals just examined all suggest to us that a cost-of-education allowance should have the following three features:

(1) It should be based on a student aid program that equalizes opportunity. Only then will it give an incentive to colleges and universities to expand equal opportunity, and that must be its main justification.

(2) It should match the dollars of Federal student aid going to the institution, not the numbers of students aided. Otherwise, it will create incentives to spread aid thinly over the maximum number of students in order to obtain more cost-of-education allowances.

(3) Both the level of funding for the program and the structure of the student aid program on which it is based should enable us to avoid creating artificial inducements for State and local governments to shift major financial burdens to the Federal Government.

We are now developing a cost-of-education allowance proposal having these features and based on our student aid proposals now before you. We will be prepared to send you shortly the detailed language and estimates for such a program.

It is especially important to recognize that no cost-of-education proposal can do everything. No one proposal can simultaneously promote equal opportunities and target funds precisely to those institutions which need them most and achieve other worthwhile Federal objectives. Efforts to do so would produce a proposal with as many problems as general formula aid. This is an area, Mr. Chairman, where whatever we do, we should do it straightforwardly.

That concludes my prepared statement, Mr. Chairman.

Commissioner Marland has a prepared statement and I believe a summary of that statement which he would like to give you orally.

Senator PELL. All right.

STATEMENT OF HON. SIDNEY P. MARLAND, JR., U.S. COMMISSIONER OF EDUCATION, ACCOMPANIED BY PETER P. MUIRHEAD, EXECUTIVE DEPUTY COMMISSIONER

Dr. MARLAND. Mr. Chairman, my prepared statement is in the hands of the staff. I am happy to appear before you today to discuss the administration's views on the various provisions of S. 659, the Education Amendments of 1971.

Senator PELL. The full statement will be inserted in the record.

Dr. MARLAND. Thank you, sir. My prepared statement is highly technical and detailed and with your permission I would like to accept your invitation to place it in the record and merely highlight some of our major concerns quite briefy.

(The prepared statement of Dr. Marland follows:)

FOR RELEASE UPON DELIVERY

Statement by
Honorable Sidney P. Marland, Jr.
U.S. Commissioner of Education
Before the
Subcommittee on Education
Committee on Labor and Public Welfare
United States Senate
Wednesday, June 9, 1971
10:00 p.m. EDT

The Commissioner is accompanied by:

Mr. Peter P. Muirhead, Executive Deputy Commissioner

Mr. Chairman and Members of the Subcommittee:

I am happy to appear before you today to discuss the Administration's views on the various provisions of S. 659, the Education Amendments of 1971. As you know, I have appeared before the Subcommittee on three previous occasions to discuss the major provisions of the Administration's proposal, S. 1123, the Higher Education Opportunity Act of 1971. My testimony today is designed to "fill in the gaps" left by my prior appearances and to comment on areas previously uncovered in testimony.

Extension of the Higher Education Act of 1965

Title I--Community Service and Continuing Education: S. 659 extends the existing Title I program for five years, with an authorization level of $60 million for each fiscal year. Two new sections are added. Section 106 would authorize the Commissioner to reserve up to ten percent of the sums appropriated for special programs and projects relating to national and regional problems. We have no objection to the inclusion of such a section, since it would broaden Title I programs to those of national as well as local concern. In addition, such a set-aside would apply only to the extent that the appropriation exceeds $9.5 million, the current level of funding for Title I, so no State programs would suffer.

A new Section 110 would authorize metropolitan area programs, with an additional authorization of $5 million for each fiscal year. Metropolitan area programs are thoroughly consistent with the intent of Title I and, indeed, can be conducted under existing law. We would oppose the additional authorization for such programs. Since the overall authorization for the title far exceeds current appropriations levels, additional authorizations seem unnecessary.

We also feel that a five-year extension of the title is questionable; S. 1123 would only extend it for two years. Recognition that the title deserves further study is implicit in Section 104 of S. 659, which authorizes the Commissioner to conduct a review of programs carried out under the title and to report to the Congress his findings not later than July 1, 1974. A two-year extension of the program, as proposed by S. 1123, would allow for further Congressional consideration at the conclusion of the study.

Title II--College Library Programs: S. 659 extends existing programs of college library resources, training, and research for five years, with a total authorization of $130 million for each fiscal year. The formula is amended to earmark 70 percent of the appropriation for Part A (Library Resources) and 30 percent for Part B (Training and Research Programs). We would prefer that no such change be made for two reasons: it decreases the flexibility available to the Administration and the Congress in determining the appropriate funding for these programs, and we do not seek to extend Part B in its current form.

S. 659 earmarks no more than 25 percent of the sums available for Part A for special purpose grants. This is in direct contrast to S. 1123, which seeks to target additional funds on special purpose grants and to reduce the amount available for basic and supplemental grants to 50 percent of the sums appropriated for library resources programs. This would continue the redirection of the Title II program which has already been begun administratively, concentrating grant funds on those institutions of higher education with critical financial needs. These include developing institutions, junior and community colleges, and those institutions with a high proportion of disadvantaged students. Funds under the College Library Resources Program have assisted many institutions in improving their

2692

library resources. The time has come, however, to marshall support in those institutions in greatest need; S. 1123 would do this.

S. 659 requires the use of two-thirds of the funds available for Part B for library training programs and one-third for research and demonstration. This would continue the narrow categorical programs currently in existence. S. 1123, on the other hand, seeks to coordinate library training and research with other general training and research authorities. To this end, it repeals the separate research authority, since research and demonstration projects in the library field can be carried out under the general authority of the Cooperative Research Act. In fact, this has been the appropriations pattern in recent years and we intend to continue to seek funding of such research under this authority in future years.

Similarly, S. 1123 makes Library Training a new Part G of the Education Professions Development Act, the Office of Education's general personnel training authority. This would allow the librarianship training programs to be better coordinated with other education personnel training programs.

S. 659 authorizes a waiver of the maintenance of effort requirement in the basic grants program in the case of special and unusual circumstances which might prevent the applicant from making the required assurances. This seems consistent with the intent of the title, and we do not oppose its inclusion.

Finally, S. 659 extends Part C, the Library of Congress provision, for five years. S. 1123 repeals this part; the provision is merely an appropriations item for the Library of Congress and should not be included in Office of Education legislation. This year, for the first time, the House Appropriations Committee has approved a direct appropriation to the Library of Congress for this purpose.

Title III--Strengthening Developing Institutions: S. 659 rewrites the Developing Institutions title and adds a new focus--institutions which enroll a high percentage of students who have been educationally deprived. We would have no opposition to the inclusion of such a revised definition, since the present Developing Institutions population does enroll high numbers of such students.

We do question the reason that S. 659 has amended the definition of "developing institution" in the case of junior colleges to include those which do not require high school graduation for admission as regular student. Coupled with the new definition of "junior and community college," which does not include any requirement that the institution be nonprofit, we are concerned that these changes would open up the program to institutions for which it was not intended.

New Section 304 of S. 659, which enumerates permissible uses of funds, basically restates existing law. However, it explicitly limits supportable activities in addition to those itemized.

We are pleased that S. 659 incorporates the Administration's proposal that junior colleges not be required to have been in operation for five years to be eligible for Title III assistance. Community colleges are being established at the rate of 60 a year, and five-year limitation would cause undue hardship to such institutions.

Similarly, the proposed amendment to the Professors Emeritus program which would allow professors emeritus from developing institutions to participate in the program is identical to the Administration's proposal. The Office of Education has found that these faculty members often understand the unique problems of students at developing institutions much better than retired faculty from more developed schools.

S. 659 provides that priority be given developing institutions under titles II, IV, VI, and VII of the Higher Education Act. We have serious reservations about this provision, even though we are sympathetic to the motivations behind its inclusion. It would seem to cause serious administrative problems, especially in the light of allocation formulas and "equitable distribution" requirements contained in the other titles.

Title IV--Student Assistance: S. 659 contains amendments and extensions of existing student assistance programs and merges the National Defense Student Loan Program into Title IV of the Higher Education Act. We have already testified before the Subcommittee in some detail about the Administration's student assistance proposals and strongly urge their adoption. In addition, we have some comments on the new assistance proposed by S. 659.

Section 142 would establish a new program of Basic Educational Opportunity Grants, making the existing Educational Opportunity Grant program supplementary. We find a number of serious defects in the basic EOG program proposed:

First, reliance on the amount of tax imposed on the student or his parents is not a measure of the family's ability to contribute toward the student's education. Middle and upper-income families with some sophistication in dealing with tax matters could easily emancipate their college-age children at little tax loss to the family, in comparison with the $1,200 basic grant to which the student would be entitled. Lower-income families, whose children could not afford to go away to school, would be unable to to effect such emancipation. The result would be smaller grants for students from low-income families.

In addition, a system based on tax imposed does not take into account the family's assets, which have a direct bearing on the amount a family is able to contribute for higher education. Similarly, the system does not take account of

unusual but necessary family expenses, unless such expenses can be classified as tax deductions. Such expenses would, however, affect the family's ability to contribute toward college expenses. Under present tax legislation, certain types of income, such as State and local bond interest, are exempt from Federal taxation. Primarily for economic reasons, capital gains are taxed at 50 percent of the rate imposed on income from wages. Certain fringe benefits are excluded from taxable income. All of these would affect the ability of a family to contribute to their child's higher education, but would not be reflected in the amount of a Basic Educational Opportunity Grant. Finally, under existing tax laws, certain persons with high incomes incur very little or no tax liability. As a result, students from these families would be eligible for Federal support.

Other problems also arise with the proposal. The information furnished on individual income tax returns is generally considered to be confidential. Many families have a strong reluctance to divluge information which they have submitted to the Internal Revenue Service. They may look at it as an attempt to audit their tax return. Others may see the inquiry as a way of verifying information that they have given to other agencies, such as the welfare department, and may be concerned that disclosure of the information may affect the benefits that they are receiving. In any case, reluctance to disclose necessary tax information could cost needy students Federal aid.

The cost of the proposal is staggering. Estimates show the total costs of the Basic Grant portion alone to amount to $1.7 billion for academic year 1971-72. These projections assume that no basic grants will be made to families with incomes above $10,000, since their taxes generally exceed $1,200. However, if upper-income families elect to emancipate their college-age children, the cost

of providing $1,200 grants to such students would have to be added to the cost estimates. The projections also assume a minimum grant of $200. The legislation provides for no such minimum, unless appropriations are inadequate to fund all grants fully. Presuming full funding, the cost could be vastly increased, as several million more students became eligible for insignificant amounts of Basic Grant money.

In addition, the cost of the Basic Grant program cannot be looked at in a vacuum, since Supplemental Grants and Cost of Instruction Allowances hinge on the receipt of a Basic Grant. The Supplemental Grant program has been estimated to cost $266 million. The Cost of Instruction Allowance provision, if retained at the level of $1,200 less tuition charged, could cost approximately $1.4 billion. If the Cost of Instruction Allowance provision were amended (as in Amendment Number 85) to authorize a grant of up to $1000 for each student aided, it could cost nearly $2.3 billion. Therefore, the total cost of proposal is approximately $4.153 billion (if the Cost of Instruction Allowance remains as originally proposed in S. 659); if the amendment were adopted, the proposal would cost more than $5 billion.

The proposal therefore makes a promise that cannot be fulfilled. Initial Educational Opportunity Grants have been funded at a level of less than 40 percent in recent years. There is little likelihood that the funding levels contemplated in S. 659 could be attained. Its primary impact could be to raise expectations which must remain unrealized.

Secretary Richardson has already shared with the Subcommittee the Administration's proposal for cost of education allowances. I can only reiterate my support for this method of assisting institutions of higher education in meeting their pressing needs for additional funds, in preference

to the Cost of Instruction Allowance proposed in S. 659. If the Allowance were $1,200 less tuition imposed on students receiving grants, few if any non-public institutions would benefit, since private colleges charge more than $1,200 tuition, on the average. The proposal is not improved by the change that would be made by Amendment Number 85, which would merely authorize Cost of Instruction Allowances of up to $1,000. This fails to provide any basis on which the Commissioner would decide the amount of an institution's allowance. At the same time, it significantly increases the cost of the proposal, as I noted earlier. I would urge the Subcommittee to adopt the Administration's proposed alternative.

S. 659 adds a new section to Title IV concerning Education Warehouse Loans. This provision does not seem to be an appropriate solution to the problem of increasing the supply of lendable funds under the Guaranteed Student Loan Program. It addresses only one narrow part of the problem: giving lenders access to cash while a student loan is not yet in repayment status. The Administration's proposed National Student Loan Association would be permitted to engage in such transactions, and doubtless would do so. However, NSLA could also provide warehousing at other periods in the life of a loan, and could purchase student loan paper outright. The difference would be that the lender would not at a later time have to reduce his liquidity again by paying off his warehousing loan. This difference would be extremely important in encouraging expanded participation in the program, both by commercial lenders and by institutions of higher education.

In the case of purchase of student loan paper by NSLA, the servicing obligation on the paper would ordinarily remain with the originating lender, so that lender-borrower relationships would be no more disrupted than under a warehousing plan.

Still more important is another difference between the warehousing provisions of S. 659 and the NSLA proposal of the Administration. The liquidity generated by S. 659's warehousing provisions would require Federal budget outlays, and in an equal amount. These outlays would be in the most direct competition with Federal outlays for Educational Opportunity Grants, College Work-Study, and NDEA loans. In other words, some fraction of any money used to warehouse guaranteed student loans would probably represent a loss to other student aid, even now more equitably distributed among students who need it most than are guaranteed loans. The loss would be even less justifiable if the Congress enacts a serious reform of those programs.

S. 659 also rewrites the existing National Defense Student Loan Program and transfers its authority to Title IV of the Higher Education Act. As we have testified in prior appearances, the Administration would strongly prefer the adoption of its proposal for subsidized loans. We have additional difficulties with some of the changes in the program contemplated by S. 659.

For example, new Section 462(b)(2) provides that the Commissioner shall pay to each applicant institution "the amount requested in [its] application." This provision could lead to severe abuses in the program, as institutions of higher education competitively increased their requests, in order to receive Federal funds, without regard to the extent of actual need. Some mechanism is necessary, such as the present regional panel system, to assure that institutional requests are reasonable and reflect actual need. We would strongly oppose the elimination of this mechanism as a basis for intra-State distribution of Federal funds.

S. 659 also alters the rate at which loans are cancelled for teachers in schools enrolling a high percentage of low-income children and for teachers of the handicapped, making the rate vary with the year of service. The Administration has consistently opposed extension of cancellation provisions, since there is no evidence that they serve as an incentive to students to enter the teaching profession. In addition, such provisions deplete the pool of funds from which institutions make new loans to students.

Variable cancellation provisions would cause extreme administrative difficulties. Institutions of higher education would be required not only to keep track of their graduates who were teaching, but would have to ascertain which year of teaching service each was seeking cancellation benefits for. It could also work hardship on the presumed beneficiary of the change--a NDEA loan recipient could undertake a fifth year of teaching in a poverty school, only to discover that it had been taken off the approved list and he was not eligible for cancellation of 30 percent of his loan. We would urge that the Subcommittee not adopt the proposed changes in the rate of NDEA cancellation.

In order to avoid depletion of the loan pool, S. 659 authorizes the Commissioner to pay to each institution an amount equal to the aggregate of the amounts of loans from its student fund which are cancelled. This would add significantly to the cost of the NDEA loan program. For fiscal year 1972, it is projected that $50 million in loans will be cancelled, under current provisions. Under present law, the Commissioner is only required to make up the institutional share of the fund. We would oppose increasing the amount the Federal Government must provide; we would urge instead that cancellation provisions be dropped.

Title V--Education Professions Development: S. 659 extends the authorizations for the Education Professions Development Act for five years, with authorizations of $600 million for each fiscal year. This is slightly less than the current authorization which totals $611 million. However, our greater concern is the earmarking of percentages of the sums appropriated for the various parts of Title V. These new percentage requirements include almost three-quarters of the appropriations and significantly reduce the flexibility of the legislation. EPDA legislation is one of the few pieces of education legislation which permits discretionary funding of programs. As a result, the Office of Education has been able to design programs which are directed toward specific education personnel training needs and has been able to shift emphases as needs and priorities change. For example, the well-publicized surplus of elementary and secondary teachers has permitted the Office to concentrate its funds on increasing the quality of educational personnel already in the educational system. The Office has redirected its EPDA funds to meet new national needs; a strict percentage formula spelled out in legislation would greatly limit this capacity.

In addition, we strongly opposed the earmarking of funds for Parts C and D. If the Office of Education is to fulfill its role in improving the quality of teaching and in meeting the critical shortages of education personnel in the United States, these funds are best left unearmarked. Virtually everything that is possible under Part C can be done under Part D. Yet under Part C only graduate schools can be funded, while under Part D the Office of Education may make grants to colleges and universities, local educational agencies, and State departments of education. Part C programs are basically more expensive to run than those under Part D, since Part D programs may be developed so that a local

district or institution progressively assumes a greater share of the financial responsibility for the program. Under the rigidities of Part C this cannot be done.

It is much more difficult to meet the requirements imposed in the law for equitable geographic distribution under Part C than under Part D, especially if the high quality of programs is to be maintained. This is so because Part C goes only to graduate schools, which are not uniformly distributed throughout the Nation. If earmarking were to occur, program plans would have to be revised in order to attempt geographical distribution.

I strongly urge the Subcommittee not to destroy the flexibility inherent in EPDA by earmarking the bulk of its funds.

Section 152 of S. 659 elevates the Director of the Teacher Corps to a grade 18 and limits his functions. We opposed this change in our testimony of May 25. I would like to reiterate our strong opposition to this provision.

I would also like to express my disappointment that S. 659 does not contain the much-needed amendments to Title V which are proposed in S. 1123, such as those authorizing retraining of existing educational personnel and employment of tutors and instructional assistants, extending the provisions of Part D to undergraduate programs, and including Indian schools. All of these are of high priority to the Office of Education and should be included in legislation reported by the Subcommittee.

Title VI--Instructional Equipment: S. 659 extends the provisions of Title VI for five years, through Fiscal Year 1976. S. 1123 proposes the title's repeal. Rather than maintaining this categorical authority, would would prefer that this title not be extended.

Title VII--Construction of Academic Facilities: S. 659 moves the existing programs of facilities construction currently authorized under the Higher Education Facilities Act of 1963 to Title VII of the Higher Education Act, amends a number of the provisions, and extends the programs for five years. S. 1123, on the other hand, proposes extension of existing programs for only two years. This would allow the Office of Education to examine in detail the entire question of how higher education is financed and to work with the Congress in two years to perfect the legislation.

S. 659 would change the authorization of grants for community college construction from a flat 24 percent to no less than 24 nor more than 33 percent of the sums appropriated. Removal of a separate authorization for junior college construction would prevent its being funded separately, as has been the case for the past several years.

New Section 742 of S. 659 increases the maximum Federal loan to 80 percent, as compared with the present limit of 75 percent. We would have no objection to such a change. Similarly, Section 744(b)(2) makes excess funds in the loan revolving fund available for grants. Again we would have no objection, since such a transfer is the discretion of the Commissioner. However, there is little likelihood that excess funds will be available in the near future.

Sections 74(a)(2) and 745 appear to be an attempt to require grant appropriations. Section 741(a)(2) provides that the Commissioner may make loans to institutions which have submitted approvable grant applications. Section 745 requires an approved grant before an interest subsidy can be approved. These provisions would force either grant appropriations or no HEFA appropriations at all, and we would urge their deletion. On the other hand, S. 659 does not provide the loan insurance program proposed in S. 1123 which we feel necessary to permit

60-433 O - 71 - pt. 5 - 33

private institutions to find adequate private financing.

Section 1202 removes the limitations on amounts available for State commission administration and planning. It also broadens planning from determining construction needs to full comprehensive planning. The first change seems consistent with the "such sums as may be necessary" approach, and we have no objection to the inclusion of either provision. The second provision raises serious questions concerning the appropriateness of giving agencies whose experience has been limited to construction planning broad authority to plan for the future of a States' higher education system.

Title VIII--Networks for Knowledge; Title IX--Education for the Public Service; Title X--Improvement of Graduate Programs; Title XI--Law School Clinical Experience Programs; International Education Act: S. 659 extends these programs for five years and replaces existing titles IX and X with a new Title IX (Graduate Programs) and a new Title X (Graduate Fellowships). S. 1123 repeals these authorities. They have never been funded and their narrow, categorical authority should not be extended.

Vocational Education: S. 659 extends existing programs under the Vocational Education Act for five years, through Fiscal Year 1976. We strongly oppose this extension for several reasons.

The Administration is proposing that the various parts of the Vocational Education Act be repealed, and that the activity be carried on under Education Revenue Sharing. This would allow States to develop vocational education programs responsive to their individual needs, rather than rigidly mandated by Federal formula.

In addition, the Committee has not given sufficient consideration to the strengths and weaknesses of existing vocational education programs to warrant a five-year extension. The field of career education is of high priority in the Office of Education, and we are working to develop new and innovative approaches to the problems of education for the world of work. Extension of existing programs would only continue existing practices; if career education is to be viable, these practices must be changed. We would like to work with the Subcommittee in the future to effect such changes.

National Defense Education Act

Title III--Financial Assistance for Strengthening Instruction in Critical Subjects: S. 659 extends the title for five years; S. 1123 makes no provision for its extension. Title III is also proposed to be included in Education Revenue Sharing, and we urge against its extension at this time.

Title IV--National Defense Fellowships: S. 659 extends the program for one year; S. 1123 repeals it, effective July 1, 1971. However, fellowships awarded before that date would continue to be paid from Title V HEA appropriations. The reason for effecting this consolidation is that there now appears to be an adequate supply of PhD's to meet teaching demands in most disciplines. The unmet need for teaching faculty in higher education which does exist tends to be limited to a few disciplines and to certain types of institutions.

Title VI--Language Development: S. 659 extends the program for one year, merging it into the proposed new Titles IX and X; S. 1123, on the other hand, extends the program for two years. This would allow the Office of Education to review the program and make recommendations for its future.

Study and Report on Rules and Regulations: S. 659 requires the Commissioner to conduct a study of all rules, regulations, guidelines, and other published

interpretations or orders issued by him or the Secretary of HEW in conjunction with any applicable program, to determine their consistency with Congressional intent and statutory authority. This study would appear to be unnecessary. Regulations and other printed instructions are issued by the Office of Education only after close scrutiny of legislative history. They represent our best interpretation of the law and Congressional intent. If we have misunderstood either, the Congress should clarify them for us by appropriate legislation. A reexamination of our own interpretations would be an exhausting task, and would not seem to be especially productive. Existing law already requires citation of specific authority for each substantive provision of our regulations and guidelines; this study would only duplicate existing provisions.

I strongly urge the Subcommittee not to adopt the requirement. If it decides to do so, I would hope that the Commissioner would be given much more time to undertake the study and to report its results. The times specified in the legislation are insufficient for the vastness of the undertaking proposed.

In conclusion, I would like to thank the Subcommittee for the opportunity to present our views in such detail today. I would be happy to answer any questions you might have.

Dr. MARLAND. S. 659 extends most of our existing higher education programs for 5 years, through fiscal year 1976. This is the same length of extension recommended in S. 1123, the administration's bill. However, we did not request the extension of a number of programs which are narrow and categorical in nature and which have never been funded by the Congress.

S. 659 makes a number of technical amendments to existing law. My testimony details which of those the administration supports, and which it feels would seriously impair current program efforts.

Two features of S. 659 deserve more detailed discussion. The first

Dr. MARLAND. S. 659 extends most of our existing higher educa-

is the proposed new program of basic educational opportunity grants. We find a number of serious defects in the program as proposed.

First, reliance on the amount of tax imposed on the student or his parents is not a measure of the family's ability to contribute toward the student's education. Middle and upper income families with some sophistication in dealing with tax matters could easily emancipate their college age children at little tax loss to the family, in comparison with the $1,200 basic grant to which the student would then be entitled. Lower income families, whose children could not afford to go away to school, would be unable to effect such emancipation. The result would be smaller grants for students from low income families.

In addition, a system based on taxes imposed does not take into account the family's assets, which have a direct bearing on the amount a family is able to contribute for higher education. Similarly, the system does not include any unusual but necessary family expenses, unless such expenses can be classified as tax deductions. Such expenses would, however, affect the family's ability to contribute toward college expenses. Under present tax legislation, certain types of income, such as State and local bond interest, are exempt from Federal taxation.

Primarily for economic reasons, capital gains are taxed at 50 percent of the rate imposed on income from wages. Certain fringe benefits are excluded from taxable income. All of these would affect the ability of a family to contribute to their child's higher education, but would not be reflected in the amount of a basic educational opportunity grant. Finally, under existing laws, certain persons with high incomes incur very little or no tax liability. As a result, students from these families would be eligible for Federal support.

The cost of the proposal is staggering. Estimates show the total costs of the basic grant portion alone to amount to $1.7 billion for academic year 1971–72. These projections assume that no basic grants will be made to families with incomes above $10,000, since their taxes generally exceed $1,200. However, if upper income families elect to emancipate their college-age children, the cost of providing $1,200 grants to such students would have to be added to the cost estimates.

Senator PELL. Of course if they do emancipate their children, they then lose their deduction.

Dr. MARLAND. Mr. Chairman, we would see this as a relatively minor sacrifice in families at that income level and the advantage of gaining $1,200 to offset it.

Senator PELL. The level you indicate, the whole $1,200, is not all that significant either but as a general rule if you lose the $600 deduction it is a loss.

Dr. MARLAND. Thas is correct, sir, and we acknowledge that in making this criticism.

Senator PELL. You mentioned reluctance to disclose necessary tax information in order for needy students to obtain the Federal grant, there could be some but I would wonder if that reluctance would not be overcome by the securing of the aid. All life is a question of alternatives and this, too, is a question of alternatives. Nobody is pointing a gun saying you have to seek a basic education opportunity grant.

Dr. MARLAND. In our appearances before the House we have had very serious counsel concerning the invasion of privacy related to higher education eligibility. I think that this has sensitized us somewhat and has lead us to say that the invasion of privacy implicit in anything as delicate as this is to be avoided, if possible.

Senator PELL. All that is needed is a third, fourth or fifth carbon, on the IRS return which shows what the total tax paid is. I don't think most people are terribly reluctant about showing what they pay, particularly poor people. People who are reluctant about it are usually the richer and members of the community who figure out perfectly legally and properly how to pay lower taxes. I cannot imagine a family that is able to take advantage of this that would be ashamed of indicating the fact that it only pays $600 worth of taxes instead of much more.

I can imagine somebody who is living entirely on write-offs or municipals might be a little ashamed of showing this fact. This is all to the good, then they would not get the advantage of the deduction or the advantage of the grant. Really your argument works completely the way I would like it. There are people who are reluctant to let their income tax be known and they are the very ones who darn well should not get any extra break, but I have never yet heard of a factory worker who paid maybe $600 worth of taxes a year who was ashamed to let that fact be known. However, individuals might well be ashamed if they paid none.

Dr. MARLAND. I hear you, sir, and I would still have to argue respectfully that the scrutiny of taxes on the part of government, especially by an agency of government unrelated to the formalities of enforcement, would not be welcomed by many persons. Our evidence would suggest that, in spite of your argument to the contrary, those paying low taxes are extremely leary of the invasion that is implicit in the program.

Senator PELL. This is not a general examination, what is asked for is the amount of the taxes paid. We are not trying to delineate what deductions there were or how the tax was arrived at. We are simply dealing with the amount of taxes paid.

Carry on.

Dr. MARLAND. Very good.

Continuing then, the projections also assume a minimum grant of $200; the legislation provides for no such minimum, unless appropriations are inadequate to fund all grants fully.

In addition, the cost of the basic grants program cannot be looked at in a vacuum, since supplemental grants and cost of instruction allowances hinge on the receipt of a basic grant. The total cost of the proposal is approximately $4.153 billion (if the cost of instruction allowance remains at $1,200 less tuition imposed); if amendment

No. 85 (making the Allowance flexible and up to $1,000) were adopted, the proposal could cost more than $5 billion.

The proposal therefore makes a promise that cannot be fulfilled. Initial educational opportunity grants have been funded at a level of less than 40 percent in recent years. There is little likelihood that the funding levels contemplated in S. 659 could be attained. Its primary impact would be to raise expectations which must remain unrealized.

My second objection is to section 403 of S. 659, which requires the Commissioner to conduct a study of all rules, regulations, guidelines and other published interpretations or orders issued by him or the Secretary of HEW in conjunction with any applicable program, to determine their consistency with congressional intent and statutory authority. I believe this study would be duplicative of regular processes of the program administration now in force.

Regulations and other printed instructions are issued by the Office of Education only after close scrutiny of legislative history. They represent our best interpretation of the law and congressional intent. If we have misunderstood either, the Congress should clarify them for us by appropriate legislation.

Let me insert here in addition to this statement speaking of the recent discussion of two items in which the chairman called attention to what might have been a lack of responsiveness in the Office of Education.

First, the establishment of a top level advisory council relating to excellence in education. I should perhaps include here the comments of Senator Nelson as to the advice of legislation concerning Teacher Corps. I have declared to the chairman, as you will recall, Senator Pell, that I want very much to establish, consistent with the wishes of Congress, the top level advisory council in the Office of Education.

Merely to establish it, however, in the face of what are now some 30 other councils and commissions—established either under Presidential order or direction of Congress—which find themselves at cross purposes, serving a great variety of overlapping functions, funded and staffed at widely variant rates ranging, for example, in funding costs from $7,000 a year for such a commission up to $135,000 a year for such a commission, would accomplish nothing.

There is disorder on the subject, sir, and as soon as we restore order and can bring together what seems a rational setup of advisory commissions, whether under Presidential order or mandated by Congress, I would expect immediately to move to establish an advisory commission made up of delegates from these many parts of functioning commissions and reinforced by additional citizens at large.

If we move precipitously, and I would have to say that in my short time in this office it would have been precipitously, I believe we will end up in more chaos than if you allow me time to follow the more sober actions which I recommend, sir.

Senator PELL. That is good news, but what may seem precipitous to you because of the relatively short time of your being on the job, seems rather languid to us with regard to the date on which we originally passed the bill. I recognize the different viewpoint.

Dr. MARLAND. A reexamination of our own interpretations of the many laws and programs in practice would be a task of great magnitude and would not seem to be especially productive. We would, I

believe, merely reaffirm what is our practice and policy; namely, the conscious pursuit of the intent of Congress in all programs which we administer.

Existing law already requires citation of specific authority for each substantive provision of our regulations and guidelines; this study would only duplicate existing provisions. I strongly urge the subcommittee not to adopt the requirement.

In conclusion, I would like to thank the subcommittee for the opportunity to present our views in such detail today as have been submitted in my earlier piece of testimony numbering quite a number of pages of very technical information.

Dr. MARLAND. That does conclude my testimony and I would be happy to answer questions.

Senator PELL. I would also like to insert in the record apropos the testimony you have given what we consider to be a couple of examples of instances where the citation of specific authority has not been made. We will give you a full opportunity to see what we are putting in the record so that you can put a sentence underneath to make it fair.

The following guidelines, regulations, and notices have been issued after April 13, 1970, the effective date of the General Education Provisions Act, without citations to their statutory authority, as required by section 421 of that act:

(1) State Vocational Education Programs.

(2) Copyright Guidelines.

(3) Research and Training, Exemplary and Curriculum Development Programs in Vocational Education.

(4) Notice of Availability of Supplemental Funds for College Work Study Programs (limits funds to institutions in which more than half the students are from families with annual incomes of less than $7,500).

(5) Financial Assistance for Construction of Academic Facilities (criteria for determining priorities for eligibility.

(6) Federal, State, and Private Programs of Low-Interest Loans to Vocational Students and Students in Insitutions of Higher Education (complete revision).

(7) Contracts and Grants for Planning and Evaluation of Office of Education Programs. (sec. 61.3, criteria for selection, and sec. 61.4, terms and conditions of awards).

(8) Experimental Schools.

(9) Allocation of Student Aid Funds to Institutions by Family-Income Level (Proposed change in method of allocation of funds under College Work-Study Program and Educational Opportunity Grant Program).

(10) College Work-Study Program (allocation of Student And Funds to Institutions).

(11) Educational Opportunity Grant Program (allocation of funds by family income level).

Dr. MARLAND. Thank you, sir.

Senator PELL. I would like to first ask Senator Prouty if he has any questions.

Senator PROUTY. Mr. Chairman, first I would like to pay tribute to Commissioner Marland's competence in reading rapidly.

Senator PELL. So would I.

Senator PROUTY. I was unable to be here when Secretary Richardson made his statement and I will have some questions for him and perhaps a few later for Mr. Marland. Perhaps the Secretary is in a hurry to leave so perhaps we could interrogate him.

Senator PELL. Fine. Please go ahead.

Senator Schweiker.

Senator SCHWEIKER. I have no questions.

Senator PELL. Senator Beall.

Senator BEALL. I have a series of questions but I defer to you, Mr. Chairman.

COMPETITION FOR NEEDY STUDENTS

Senator PELL. I have one basic question addressed to the Secretary and this concerns the new thought you have with regard to institutional aid. I see some improvements in our own concept between your approach and that found in S. 659. It would seem to me that there would be no great problem to arrive at a satisfactory consensus with regard to institutional aid.

One specific question. Should there not be some element in here of competition, to encourage the institutional aid to go to those institutions that seek out the students who need help the most? This is the only element I am not sure of in the three points that you cited in your testimony.

Secretary RICHARDSON. Let me say, Mr. Chairman, first that I think we would wholly agree that this is a desirable criterion and I had thought that we did seek to underscore this notably in my summary remarks at the top of page 16.

Senator PELL. I am looking but I don't see it.

Secretary RICHARDSON. These are prefaced by the point that a cost-of-education allowance should have the following three features. (1) It should be based on a student aid program that equalizes opportunity. Only then will it give an incentive to colleges and universities to expand equal opportunity, and that must be its main justification.

If I understood you, you said that it should create an incentive to competition among institutions to the extent that they do something about creating educational opportunities for students who need student assistance. Is that right?

Senator PELL. Right. What I am driving at, what we have in our approach is that the institutional aid would directly follow the students who are receiving the basic education opportunity grant.

Secretary RICHARDSON. That is what we are proposing also.

Senator PELL. Then we are on the same track.

One other query. As you know, there are two general approaches to this point being discussed in the Congress. In the other body they are discussing a per capita approach. Our approach is a larger amount but to fewer students, which would probably equalize out not too differently in the end.

Do you have a view on either of those two and could you spell out a little more in fiscal terms your own approach, what kind of grant were you thinking of, how much money, could you be a little more specific?

Secretary RICHARDSON. Yes, Mr. Chairman. The last document referred to by Commissioner Marland and one which he asked to have inserted in the record contains a breakdown of funds by categories of institutions depending upon the components of student aid that you take into consideration. For example, it shows as between public and private 4-year institutions and public and private 2-year institutions how it comes out in the assumption of a total amount of money available and depending on whether you count the numbers of students who are receiving work study in EOG grants.

You add to that the number who are receiving national student loans, the National Defense Education Act student loans or NDEA

type loans which are subsidized. You then add to that the number who are receiving nonsubsidized guaranteed loans, further add the students who are receiving GI bill benefits and so on, and these are all spelled out.

There is some variance in the allocations among institutions depending upon what is included. We in our own thinking would be inclined to recommend that the committee in its legislation count only students receiving EOG grants, participating in the work study program or receiving subsidized student loans. These are, of course, the most disadvantaged students and the one, from the families in greatest need. The results are also, as it turns out, somewhat more helpful to the institutions which we think in terms of financial need should have proportionately greater help. It is somewhat more helpful, for example, to 4-year independent colleges, more helpful to black colleges and so on. These figures are shown in the tabulations.

Now as to the total amount of money to be committed to the program, we are not clear at this point that we ought to suggest any specific amount in legislation itself, and what then becomes possible is the function of what we can afford in terms of budgetary allocation. We have already of course urged that the Congress adopt student aid legislation that would increase total Federal outlays for this purpose by some $800 million. We have asked for another $100 million for the National Foundation for Higher Education.

So I don't think that we would be in a position in the short run to propose any very large amounts of money. For example, we have been looking at what could be accomplished if we were to allocate to institutions an amount equivalent to 10 percent of the total financial aid dollars received by students in these three categories—EOG, work study, and NDEA-type loans.

Depending upon the action of Congress on student aid legislation this would produce an amount in the range of $100 million plus but it is nothing like the amounts of money that have been proposed for this purpose. On the other hand, the approach is one that as additional funds became available could be increased. Let me just emphasize once more the point that whatever the percentage used we do feel quite clear on the point that the total amount going to an institution should be a portion of the dollars allocated to them for these three types of student assistance as distinct from an amount measured by the number of individual students receiving such grants since, as we pointed out in my testimony to use the latter approach would simply stimulate an artificial process of spreading the funds as thinly as possible rather than; utilizing the best judgment of financial aid officers in determining what each student should get.

Senator PELL. I realize that in a sense we are charting new courses, but I was wondering if you could be a bit more specific. As I understand what you say, your general thrust is along the lines of the bill the committee is considering which is that the assistance would be geared or related to the number of youngsters in need, but the one difference is that the aid would go directly to the institution and not follow the individual students. Would that be correct?

Secretary RICHARDSON. It would go to the institution. What determined the amount the institution would receive would be the amount of dollars that were paid out through the institution to students attend-

ing that institution in the form of EOG or work study grants or in the form of subsidized NDEA type loans. This would mean, therefore, that a black college, for example, which under our present administrative practice and proposed legislation would receive a relatively higher ratio of EOG and work study money than an institution attended by a higher ratio of students from more advantaged backgrounds, would also receive a higher ratio of our proposed cost of education grant.

Senator PELL. I won't pursue this further. I am very glad to have your view on this because I think it is very similar to the view of the committee. I would hope that the staff, the committee members and the administration would work together in arriving at a certain common philosophy although the figure may be different.

Secretary RICHARDSON. Thank you.

Senator PELL. Senator Prouty.

STANDARD ACCOUNTING FOR INSTITUTIONS

Senator PROUTY. Thank you, Mr. Chairman.

Mr. Secretary, when considering the budget for the various institutions of higher education, are there standard accounting criteria available to compare one institution with another?

Secretary RICHARDSON. No, Senator Prouty, there are not, and this of course is one reason why the determination of relative financial distress is for all practical purposes impossible at the present time. One reason among others is the fact, as I pointed out earlier, that you have to determine what it is they are trying to do before you determine whether or not somebody has enough money to do it.

Generally speaking, institutions of higher education don't have that kind of clear, sharply defined mission, so the short fall at any given institution is a function of what they have proposed they ought to try to do or may in the past have undertaken to do and what their present resources are. We have had the experience in the administration of making funds available for financial distressed medical schools and of struggling with the inadequacy of present accounting and the inconsistencies of accounting approaches. At least in the case of medical schools we do have underway an active effort to achieve a degree of consistency in measuring uses of funds.

In the case of the medical schools we are trying to develop a simpler sort of approach that will phase out our present financial distress grants. The more we have thought about that kind of an approach to higher institutions of higher education, generally the more concerned we have become that to try to get at the problem of financial need on that basis could involve a much greater degree of Federal intrusion than might be helpful.

GENERAL INSTITUTIONAL AID

Senator PROUTY. In your opinion, would a general institutional aid program tend to perpetuate the conditions which lead to the financial "crunch" to which you referred?

Secretary RICHARDSON. Yes, I think it could well have that effect. Put another way, a general institutional aid formula subsidizes the status quo equally across the board.

Senator PROUTY. And if we enact the cost of educational proposal at a certain percentage of student aid, is it not likely that this will be a reversible program with increasing levels of support?

Secretary RICHARDSON. It is likely that the program would be continued indefinitely depending on whether we were able to develop more fine or sophisticated approaches to the general subject of the institutional aid in the meanwhile. This is of course among the reasons why we urge caution in the Federal approach to this subject. The question of the percentage or how much the institution ought to get in proportion to what it provides or what it provided through forms of Federal financial assistance to its students, raises the very significant philosophical issue of the long-term Federal role in support of higher education. Again I think this is a reason for caution.

I urged in the course of my testimony that there be much wider debate on this subject than there has been. Given the scope and responsibility of institutions of higher education in the United States this subject has had surprisingly little hard thought. So what I hoped I could do today, apart from any affirmative suggestions, is to identify issues that we think should get much more consecutive thought than they have to date.

Senator PROUTY. If present student aid programs are not more targeted to need as proposed by the administration would the cost of educational allowance concept meet your first three guidelines for institutional aid fulfilling national purposes and benefiting those institutions which are experiencing the greater distress?

Secretary RICHARDSON. I think not, Senator Prouty. We can justify, or if you will, rationalize, a cost of education allowance to the extent that it is related to student assistance which has the aim of equalizing opportunity. The farther you depart from the cost of educational allowance tied to that specific purpose, the closer it comes to general institutional aid and the harder time we would have in justifying it in terms of a specifically identifiable national interest.

Senator PROUTY. I share your concern about the chairman's institutional proposal, particularly along the lines of your observation that there will be a strong tendency for institutions to recruit students barely meeting the eligibility requirements for students. Would it be correct to assume that under the chairman's proposal, students from the lower middle class, say with family incomes of $8,000 a year, would be the most attractive to a school from the standpoint of student and institutional aid and thus the most sought after?

Secretary RICHARDSON. Yes, I think that would be a valid prediction.

Senator PROUTY. You indicate that there is insufficient evidence indicating that low-income students place an additional financial burden on institutions. What evidence is available to support additional assistance to those schools enrolling low-income students?

Secretary RICHARDSON. We think that in an illustrative and exemplary basis it is possible to establish that many institutions that have made a specific effort to enroll students from disadvantaged backgrounds have also incurred associated costs. But, we could not prove that this was as invariably true, and indeed I am sure it is not invariably true, and yet we think that it is often enough true to be a supporting consideration in favor of the approach we have discussed. It has the additional advantage of providing means whereby an institution

that has not to date sought to provide supplementary or enrichment programs for students with an inadequate high school education might seek to undertake this kind of reinforcement.

Senator PROUTY. Thank you, Mr. Chairman.

Senator PELL. Thank you.

Senator Javits.

INSTITUTIONAL AID JOINED WITH STUDENT ASSISTANCE

Senator JAVITS. Mr. Chairman, I shall be very brief.

First I wish to apologize for my absence as I was on an emergency dealing with narcotics use in the Armed Forces.

I welcome very much the administration's initiative in submitting its own counterplan. I think this was a singular lack in the administration's program. I am very indebted to our chairman for raising the issue so markedly and I believe that naturally his views and his proposal are entitled to our first review, and I think it will be very helpful if the administration has accepted the principle of institutional aid be joined with student assistance. That is the only question I would like to ask, Mr. Secretary, that a cost of educational allowance be joined with the aid to the student in order adequately to meet the needs of American higher education.

Secretary RICHARDSON. This is the principle which we endorse.

Senator JAVITS. Having gotten over that mountain top I have greater confidence that we will get together and I thank you very much.

Senator PELL. I didn't want to put good words in the Secretary's mouth, but as I understand it (and I am delighted) you oppose institutional aid but you are giving a view as to which kind of institutional aid would be the least objectionable, or do you actually support the concept? I think it is important that you make that clear.

Secretary RICHARDSON. I think, Mr. Chairman, what I have done in effect is to try to say that we think that a purely general formula is objectionable but that on the other hand we support an approach that would provide a cost of education allowance tied to students in need and on the basis previously described. In other words, we are talking about a range between objection on the one side and partisan support on the other.

Senator PELL. I am very glad and join you.

Senator JAVITS. Does the chairman now accept my view that this does represent the view of getting over the mountain here and meeting both problems—the student's needs and the institution's needs though the administration proposes to meet the institution's needs in their own way?

Senator PELL. I do, and I am gladly surprised because it is a degree of change from 24 hours ago.

Senator JAVITS. Yes. Sinners are always redeemable.

Secretary RICHARDSON. We work at it very hard.

Senator PELL. Senator Beall.

Senator BEALL. Thank you, Mr. Chairman.

Mr. Secretary, I would like to congratulate you on your usual precise presentation.

Thank you also, Dr. Marland.

I have been concerned in Maryland about the difficulties that we have been experiencing in higher education. Just for the record I

think it is interesting The Baltimore Sun some weeks ago had an article entitled "Maryland's Private Colleges Going In The Red," and I would like to submit this for the record.

Senator PELL. Without objection it will be inserted in the record.

(The newspaper article follows:)

[From the Baltimore, Md., Sunday Sun, Apr. 25, 1971]

MARYLAND'S PRIVATE COLLEGES GOING IN THE RED

(By Frederic Kelly)

The nation's private colleges and universities are deeply in debt, and alarmed educators are scrambling out of their ivory towers with warnings of collapse of our system of private higher education unless significant aid is forthcoming.

Their case may be somewhat overstated, but there is no escaping that a large majority of the more than 700 private, four-year institutions of higher learning closed out fiscal 1970 in the red.

Faced with spiraling costs in virtually every area of college operations, the average institution, according to a recent report issued by the Association of American Colleges, finshed 1970 with a deficit more than five times greater than the previous year's—$103,000 per institution compared to $20,000 in 1968–1969.

Compounding the problem is a decline in enrollment in private colleges and universities. The percentage of total enrollment in private higher education has dropped from more than 50 percent in 1950 to 26 percent in 1971. If the decline continues at its present rate (about 1 percent a year), the American Council on Education warns that enrollment in private higher education will be zero by the year 2000.

Educators concede it is unlikely this will happen. But the unhappy combination of lower enrollment and higher costs has already taken its toll.

The U.S. Department of Health, Education and Welfare directory for 1969–1970, for example, lists 24 institutions, including 17 private institutions, that have merged. As a result of these mergers, 4 of the 17 schools have become public institutions. Moreover, 21 colleges, of which 20 were classified as private, have closed. All 14 colleges listed as closed in the 1968–1969 directory were private.

CRISIS AFFECTS MARYLAND

Maryland has not escaped the crisis. That fact is strikingly evident in an examination of the status of nine of the state's private, four-year liberal arts colleges. Taken together, they form the Association of Independent Colleges in Maryland, Inc., one of 40 such associations in the U.S. established to channel money from corporations, firms, foundations and individuals into private colleges.

(Eight rather than nine might be a more practical working number. Mount St. Agnes College, a classic example of a private college beset by overwhelming financial problems, has merged with Loyola College and will terminate its membership in the association after this year. Since 1968, the college has accumulated a deficit in excess of $300,000. In addition, St. Joseph College of Emmitsburg, with an operating deficit of $115,000 last year, announced just last week it would close in June, 1973.) The other members of the association, Loyola and Notre Dame College, both of Baltimore, Hood College of Frederick, Mount St. Mary's College and St. Joseph College, St. John's College of Annapolis, Washington College of Chestertown and Western Maryland College of Westminster, face an aggregate deficit this year of about half a million dollars on total current fund expenditures or nearly $22 million.

What happened? How did the crisis evolve? How did nine colleges with a collective surplus of $446,000 two years ago suddenly find themselves operating in the red? There seem to be several basic reasons: lower enrollments, higher operating costs, decreased endowment income (reflecting a generally depressed stock market) and a decline in gift-giving.

The typical college in the association (excluding Mount St. Agnes) faces a deficit of between $50,000 and $60,000 this year.

Enrollment, on the average, is down 5 percent. Operating costs have skyrocketed: faculty salaries have increased 20 percent in five years, building costs costs are up an average of 10 percent a year, and average real expenditure per student has risen 65 percent in 10 years.

DECLINE IN GIFTS

In addition, last year, for the first time since 1953, when the Association of Independent Colleges in Maryland, Inc., was formed, gifts to the colleges declined, falling from a peak $196,500 in 1969 to $186,000 in 1970.

Based on the formula for sharing—60 percent divided equally among the member colleges and 40 percent distributed on the basis of enrollment—the average association member's share declined by between $800 and $1,100. It may decline again this year if the campaign goal of $190,000 is not reached.

Hood College, although an all-girls school, is fairly typical of the small liberal arts school caught in the financial pinch. Hood suffered its first serious deficit last year ($131,000) and anticipated a deficit of $262,000 this year.

"But because we were successful in attracting gifts from three foundations," says Randle Elliott, Hood president, "We may be able to pare the deficit to around $55,000 or $60,000."

Similarly, Washington College, which suffered a deficit in excess of $150,000 last year, anticipated a $350,000 deficit this year. Gifts have cut that figure somewhat, but Charles J. Merdinger, the president, still estimates the college will be from $50,000 to $100,000 in the red by the end of the year.

Unlike Hood, Washington College is operating at capacity enrollment (650). Hood was at capacity (750) until three years ago, but enrollment has steadily declined. Today, there are an estimated 200 vacancies.

TUITIONS KEEP RISING

To compensate for the loss in revenue (roughly 80 per cent of a college's operating revenue is derived from tuition), Hood has had to raise its tuition and fees. It now costs $3,150 to attend Hood. Next year it will cost $3,400.

Notre Dame College, under its acting president, Sister Mary Elissa, S.S.N.D., faces an anticipated deficit of $50,000 after a surplus last year of about $235,000. Enrollment is expected to remain steady (about 720 students), but tuition will increase $100, bringing total charges for room, board and tuition to $2,700.

Loyola has suffered a decline in enrollment (from a near-capacity 870 students in 1968–1969 to slightly below 800 students today). Worse still, it has experienced four successive deficits totaling $430,000.

"We anticipate no appreciable deficit this year," says the Rev. Joseph A. Sellinger, S.J., president of Loyola. "Nor," he adds, "will our tuition and charges for room and board ($2,700) increase."

Both Washington College and Western Maryland have announced tuition hikes. Lowell S. Ensor, Western Maryland president, says the college, which is at full enrollment (1,080 students), will raise its tuition to $1,950 next year, an increase of $200. Washington College will boost its rate $250, bringing the total for room, board and tuition to $3,200.

Msgr. Hugh J. Phillips, president of Mount St. Mary's College, estimates next year's freshman class may be down about 5 per cent. Tuition and fees will increase $100, bringing the total cost per student to $2,770 next year.

"We're in the black," says Monsignor Phillips, "but if the work that should be done was done, we'd be deeply in the red. We'll show a small surplus of between $15,000 and $20,000 this year, but to do it we've had to defer essential maintenance."

POLLUTION LAWS WILL COST

Improved classroom and gym facilities at Mount St. Mary's, if undertaken now, would plunge the college $200,000 in debt. In addition, the president estimates, contingencies based on pollution laws alone could add, in the next two to five years, another deficit of $270,000.

Deferring essential maintenance and raising tuition, neither of which can go on indefinitely, are two of the methods used by private colleges to offset deficits. (Others include transferring money from surplus funds, borrowing—both from endowments and other financial sources—and increasing fund raising activities.)

"It's awfully tempting to raise tuition," admits Washington's Dr. Merdinger, "but one of the greatest fears we all live with is the fear that someday we'll go too far and price ourselves completely out of the market."

To compensate for the fact that public institutions are taking about three out of every four students today, private schools have generally taken two courses of action: they have raised tuition to stay in operation and they have increased scholarship aid in an effort to bolster sagging enrollment. Their actions are essentially self-defeating.

Scholarship aid adds to already mounting costs. Association members estimate that about one out of every two students receives some form of financial aid. Moreover, as costs go up and tuition is raised, more and more students are siphoned off to tax-supported institutions.

A comparison of tuition charges alone illustrates why. Mount St. Mary's, for example, charges $1,520 a year for tuition. The tuition charge at Notre Dame College is $1,400 a year. Maryland residents attending the University of Maryland at College Park, on the other hand, pay $539 a year tuition.

(Both Mount St. Mary's and Notre Dame College will increase tuition $100 next year. The University of Maryland plans a modest $50 hike.)

Add to that the changing image of state-supported institutions and their growing ability to attract some of the nation's foremost scholars, and it should not be too difficult to understand the almost irresistible allure public education has for beleaguered parents.

In an effort to compete, private colleges and universities have turned to alumni and business sources. Alumni giving has generally remained stable, if a small part of total operating revenue. Ideally, it should be between 10 and 20 per cent of income. In practice, though, it's probably closer to between 2 and 5 per cent.

Gifts from businesses and corporations, however, have grown steadily. At least up until the last couple of years.

In 1953, for example, the first year of the Maryland association's existance, 20 gifts totaling $8,000 were received. Last year, the association received 360 gifts amounting to $186,000, for an average gift of about $20,000 per institution. (Some of course, got more, others less, depending upon enrollment.)

"It sounds like a lot of money, but it really isn't, not in comparison with what some of the other associations in the country are raising," says Leonard Kraemer, executive director of the association and its only full-time employee (other than Mrs. Ann Dubin, a secretary, who has been with the association for 13 years).

"For example," continues Mr. Kraemer, "Virginia raised over $1 million for 12 of its association schools last year. West Virginia raised $235,000 for seven of its schools, and Pennsylvania, with 47 schools, raised $900,000."

MARYLAND LOW IN GIFT-GIVING

Equally as striking are the differences in the size of individual gifts. Last year, Virginia, for example, received several individual donations of $50,000 or more. The largest single gift the Maryland association received last year was $5,000 (excluding a gift of $9,000 from the U.S. Steel Corp., which annually donates $1,000 a school to the more than 500 schools in the 40 state associations).

"Maryland's average gift of $400 remains one of the lowest in the nation," says Mr. Kraemer, "and one of the reasons it does is that Maryland is a 'branch' state. In other words, few large corporations have their home offices here. Under the circumstances, we don't have the same kind of leverage we would have on an organization born and bred in Maryland."

An even more significant problem, however, is the competition the association is waging with other community-oriented organizations for funds. It boils down to just so many dollars to go around.

"Inflation and the generally depressed state of the economy in the past couple of years have caused many firms to cut down or cut out entirely their gift-giving," says Mr. Kraemer. "But we're also finding that we have to compete for funds with a variety of sources, sources that didn't exist a few years ago.

"Businessmen, for example, are becoming increasingly aware of their obligation to the urban community; more of this money is finding its way into urban programs. Firms also have pollution-control commitments and are diverting part of their profits into this area."

The dip in giving last year (down about $10,000 from $196,500 in 1969) was accompanied by a drop in the total number of gifts (360 as compared to over 400 in 1969). And, despite intensive, year-round campaigning by Mr. Kraemer, by other businessmen involved with the association and by the college presidents themselves, who give a minimum of one day a month to the campaign, the total raised annually still amounts to only about 1 per cent of each college's operating budget.

ARE THEY WORTH SAVING

The crisis, educators believe, is upon us. "Most colleges in the red," points out the Association of American Colleges, "are staying in the red and many of them are getting redder, while colleges in the black are generally growing grayer."

Significant aid is needed—and soon—but before it can be decided how to save the nation's private colleges and universities from going bankrupt, it must first be decided if they are worth saving.

"It is the critical question," agrees Loyola's President Sellinger. "Somehow, before we can convince people to support us, we've got to convince them we're worth supporting. We've got to get our story across."

The story is not a particularly easy one to grasp. It is filled with intangibles. Cited are such reasons as the "necessity to retain a dual system of education (public and private)" in this country; the comparative "freedom of private schools to experiment and innovate," and the "emphasis in private schools to develop the 'whole person.'"

Laudable as these goals may be, facts tell the story best and educators in private colleges and universities who spent the good years in a sublime state of moral rectitude are at last coming forward with facts to support their case.

Nationally, for example, private colleges and universities account for only 17 per cent of the college population. Yet they have produced 31 per cent of all Woodrow Wilson scholars. Forty per cent of all Phi Beta Kappa chapters are found in private institutions. Yet they only comprise about 25 per cent of the nation's colleges and universities.

A recent national survey showed that of 33,500 business executives in the U.S., 80 per cent were college graduates. Of that number, 71 per cent came from small liberal arts colleges. In Maryland over a five-year period (1963–1964 to 1967–1968), 55 per cent of the state's college graduates who chose a career in business were products of private colleges.

"We feel," says Loyola's Father Sellinger, "that business has a stake in helping to keep us alive and healthy. We're supplying them with a major source of their leadership."

The state may also have a stake in the future of private colleges and universities. It would cost Maryland an estimated $100 million to duplicate the association's facilities. Moreover, if the state had to take over the function of educating students now attending association colleges, it would require about $10 million in additional tax money.

WHAT CAN BE DONE

So what can be done?

Aside from the obvious ways to increase income—borrowing and raising tuition—private schools can start by cutting back on their spending.

Several association schools already have. Washington College has frozen faculty salaries. Hood went a step further and cut salaries. Western Maryland has put a moratorium on new construction. Scholarship aid is getting a long, hard look and once-almost-inviolate rules about low student-teacher ratios are being questioned. Washington College, for example, will add 100 more students next year, while maintaining the same number (60) of faculty members.

To cut costs further and to make more efficient use of existing facilities, many association schools have undertaken cooperative ventures. St. Joseph's and Mount St. Mary's are sharing classroom space. So are Notre Dame and Loyola, which will also share new library facilities. Hood has begun a co-operative project with Frederick Community College, which allows full-time students at either school to attend classes at the other school.

Private colleges and universities, in general, are casting covert glances at increased state and federal aid. In Maryland, Governor Mandel's program to share $1.9 million with the state's 24 private colleges and universities has drawn almost universal endorsement. Under the program, the association members will share about $500,000—or enough to practically wipe out the aggregate deficit of eight schools.

Church support is virtually nonexistent. Although several of the association schools are classified as "church related," few, in fact, receive church aid. The

60-433 O—71—pt. 5——34

few that do, describe it as minimal, amounting to, in most cases, less than 2 per cent of their operating budgets.

There are, then, two essential areas that private schools must stress for increased income: state and federal aid and the so-called traditional sources—friends, alumni, foundations and business corporations.

Increased state or federal aid may cause private schools to run the risk of surrendering some of their independence. It is a risk they must be willing to take.

Virtually riskless is an all-out assault on the business community, a traditional source and the source most favored by the private schools. There, however, educators must be prepared to present convincing evidence that there is a need for private higher education. Pleas won't work; neither will blandishments.

They must be prepared to come up with a satisfactory answer to the question: "Is this increase in costs really producing better education?"

MARYLAND EMERGENCY SCHOOL AID PROGRAM

Senator BEALL. I noticed in our own State, for instance, that the Governor recently proposed $500,000 in emergency aid to be provided for private institutions of higher education. I have been concerned over the financial problems of higher education and I have been examining the possibilities of institutional aid. Like most everybody else, the more you look at institutional aid the more questions it raises in your own mind and I have not been able to answer all those questions satisfactorily. I think something should be done in the interim and I have been toying with some legislation myself.

PROPOSAL FOR FEDERAL EMERGENCY AID

I would like to ask you a couple questions and you might prefer that these questions be for the record since they do relate to legislative ideas you many not have explored.

The legislation I am exploring would do this basically. First of all, the bill would provide an emergency assistance to institutions who could demonstrate that they are in need of financial assistance in order to stay open or prevent a curtailment of your academic program to the detriment of the quality of education. The public institutions would first have to submit their request to the appropriate State agency and the appropriate State agency would have to certify to the Commissioner that the need was there. Private institutions could follow that route also or they may come directly to the Commissioner but in any case they would also have to send a copy to the State agency.

Secondly, the institutions seeking emergency assistance would have to agree to conditions requiring disclosures of financial information necessary for a determination of the reasons for the schools problems. This would be a cost analysis study. The institution would have to agree to implement any financial reforms that the examination disclosed were necessary, or give in writing the reasons for not doing so.

Thirdly, because we don't have enough information on this subject, particularly on the subject of institutional aid, the legislation would provide that there be a study made of the financing of higher education. This would include an examination of various pending institutional aid proposals, as well as other viable alternatives. In addition, the study would seek to find out what concerns me and that would be the optimum role of the Federal and State and local responsibility for providing higher education.

Finally, the legislation would make grants to institutions qualifying for emergency assistance to approve their planning and management capabilities. In addition, the Commissioner would be authorized to make other managerial grants to other institutions where applications were deemed to be of national significance.

Now you may not want to comment on this legislation or if you prefer, you may comment at a future date.

Secretary RICHARDSON. Thank you very much, Senator Beall, for the invitation to comment at a later date. I would simply say at this point that the proposal that you have outlined will make a useful contribution to the kind of national dialogue so badly needed on the whole subject of institutional support for higher education.

In HEW we have considered an approach in principle similar to this. We have, it is fair to say, found difficulties with it inherent in the degree to which a Federal entity would be charged with the responsibilities very directly involving the internal administration and management of institutions of higher education which leads to the point I made earlier in response to Senator Prouty's first question. Certainly the proposal is one that deserves very careful consideration and we would be glad to respond to it more fully at a future date.

Senator BEALL. Thank you.

An additional question that you also may prefer to answer later, would it be feasible for the Federal Government to match State aid to different institutions of higher education?

Secretary RICHARDSON. It is certainly possible, Senator Beall. The problems, of course, inherent in matching programs historically have always involved the questions of the criteria under which the Federal Government would recognize the State expenditure as qualifying under federally established conditions. In the case of public welfare, for example, this leads to endless questions of compliance by the State of Federal requirements.

In the case that you propose the questions would arise whether the State was being too loose or insufficiently consistent in its own determination of what is financial distress for purposes of qualifying for State funds and thus automatically obligating Federal funds. Again the approach is one that is worth exploring; it would have the advantage of removing from direct Federal determination the question of who is in financial distress.

I would just add one word of concern and that is in the case of an institution of higher education financial distress is an exceedingly elusive concept which certainly cannot be predicated simply on the fact that the institution is for the time being in the red. The institution may have had eyes bigger than its stomach when it came to capital outlay and have overbuilt in terms of student enrollment that followed in future years.

They may have been overambitious in adding departments of specialized studies in order to compete qualitatively with institutions having broader sources of financial support. They may have numbers of courses which enroll two or three or five students in any given year. These are all components of the difficulty of determining what is financial distress. At any rate, as I said, and I don't want to undercut the basic response I made to you, which is that an approach along the lines you have described belongs among those that get carefully thought

through as we begin to chart a course which will determine perhaps for a decade or more to come what is the role in the relationship of the Federal Government to higher educational institutions generally.

We have traveled for a decade or more on the momentum of the kind of categorical approach laid down by the National Defense Education Act—support of construction student assistance, and so on. We have not had to be as tough-minded about the long-term Federal role as we must be today. And, it is fair to say, that the institutions of higher education as collective groups and organizations tend to unite upon the broadest common denominator rather than to face up to the necessity of thinking this through with a greater degree of rigor.

We look forward to the role of the proposed National Foundation for Higher Education, which would be created by legislation pending before you, in both supporting this analysis and in encouraging the kind of experimentation which would in turn contribute to new answers.

ANALYSIS ACCOUNTING

Senator BEALL. Thank you. Analysis and accounting seems very basic to finding a successful program for aiding higher education. Senator Prouty mentioned this. We have trouble in aiding hospitals in the health program. We have to establish, or at least move in the direction of standardization of accounting principles throughout the whole educational fraternity.

Secretary RICHARDSON. That would be absolutely essential. I would fully agree, Senator Beall, especially for purposes of an approach that sought to respond to financial distress.

EFFORT COMPONENT

Senator BEALL. That is all of my questions, Mr. Chairman.

I have a question that Senator Dominick has requested be asked. I might read that question in the record for the Secretary and Commissioner Marland.

Are you familiar with the work done by Dr. Robert Wallhaus and Dr. Ben Lawrence at WICHE (Western Interstate Commission for Higher Education) on institutional aid formulas? They have developed formulas for general assistance to States and general assistance to institutions, both of which contain strong effort components. Don't you believe that your institutional aid formula should encourage and reward those institutionals which make strong efforts to be financially self-sufficient?

Answer that for the record.

Mr. MUIRHEAD. The work that he is doing will provide additional information to help us understand many of the problems we don't know. I would like to respond also to Senator Beall by saying that the proposal that we have before you today is directed to that part of the higher education problem that we seem to know, and that part of the higher education that we seem to know is that the Federal interests and the Federal commitment toward equal education opportunity over the years that has been so splendidly supported by this committee has indeed contributed to the financial ill-health of higher education.

We have before you now a cost-of-education proposal that addresses itself to that factor of saying that as a result of our efforts of encouraging additional numbers of young people from low income families to attend both public and private institutions that that has contributed to the financial crises and that the next logical step would seem to be to help institutions in dealing with that problem.

Dr. MARLAND. It might be useful, Mr. Chairman, to add that we are pressing our support for the study of WICHE. We are closely affiliated with them and funding some of their activities and are supported by them.

Senator PELL. Thank you very much.

I want to return for a minute to this basic educational opportunity grant. I realize that it is a concept which is very hard to work out in a fair and effective way. I would like to. We are grateful for help from you and from anybody else in improving it. It is my understanding that your objections to our presently written bill are basically threefold: The sophisticated family can take advantage of the basic grant through either the emancipation of the children, new investment and the use of tax shelters; concerns with regard to the invasion of privacy and your very real concern with regard to cost.

Dr. MARLAND. Substantially our points of disagreement, Mr. Chairman.

Senator PELL. Yes. Now as to the question of cost; this is really a question of priorities and we in the Congress think we should determine what cost is justified and what cost is not. This is where honest men can often disagree both within the Congress and between the Congress and executive branch. The question of privacy is again an important matter for us to determine, taking into account the views of the executive branch.

On the question of sophisticated use of the tax laws, your views are very valid indeed and it is up to us to be able to write legislation that meets your objections. There will be occasional instances of abuse just as there are in the tax laws today, but if we can write legislation that covers 99.5 percent of the instances that are involved, I think that we could take the chance of an occasional abuse in those instances when they occur.

With regard to the emancipation provision, I realize it is a problem and again we are going to try to draft legislation to meet this problem. There is another problem, too. The family that has more than one child at college should get extra help, not just equal help, and we are planning to try to draft legislation to cover that. What I have sought to do with this concept was to get discussion moving by first drafting it very simply and then as we define man's complexity and ingenuity you have to make the proposal more complex and ingenuous to cover the situation.

Speaking as one Senator I feel very strongly on this approach. I will however take into consideration your thinking on these matters. The approach is one that to me seems to have great advantages and I would really very much hope to see it tried for a period of time and if it fails we can move on into some other way.

Dr. MARLAND. Mr. Chairman, before closing I would like your permission to invite Mr. Muirhead to add further advice to your committee on your points.

Senator PELL. Thank you.

DETERMINATION OF NEED

Mr. MUIRHEAD. Mr. Chairman, I am delighted this morning that we seem to be coming to many more areas of agreement than disagreement as we move toward associating a cost-of-education allowance with the equal education opportunity objective that we all serve. I would like to share with you, Mr. Chairman, the concepts for determining financial need that have been so carefully and conscientiously built by the colleges and universities themselves over the years so that there has been developed now a very sensitive approach on the part of colleges and universities through their financial aid officers in weighing the contribution of the family toward the cost of education. It would not really be a fair or equitable thing for us to say that the same concepts, that the same criteria that apply to the rules of the Internal Revenue Service are transferable to the concepts that student finance officers and colleges and universities have built in determining what family contribution might be.

In other words, a student financial aid officer drawing upon the experience that he has had for many years is probably in a much better position to determine what that student's real needs are than to draw the information from an Internal Revenue Service blank.

Senator PELL. I think your point is very, very well taken and I agree with you 100 percent. Nobody would be better able to judge the merits of this proposal than the financial aid offices. They came forward as a group and unanimously supported the approach found in S. 659.

Mr. MUIRHEAD. I would think that the student financial aid officer would be very much interested in having you develop additional legislative language that would give them additional flexibility in determining what the financial need is.

Senator PELL. I think this is a wonderful hearing because we are coming together, and your point about bringing in the views of the financial aid officers is very valid. Their endorsement was absolute. They supported it with no reservation at all. I recognize that this may be over enthusiastic but sharing with you a high regard for them, we would take into very serious consideration any language or refining that you might offer. I think the point you are making is really probably unintentional but it is one very much in support of this concept and I am very glad.

Mr. MUIRHEAD. My point certainly is in support of the concept but raising some serious questions about the process. I would like also with all respect of course to the point that the chairman has made that it is of course within your purview to determine what the level of support might be. But judging as all of us do from the past experience of programs of this kind it seems to me to be indeed unfortunate if we were to proclaim that all students in financial need would be able to get this level of support at the level that it is in your bill and that we would ultimately come to a tremendous disappointment on the part of many students. As the Secretary, I think so very eloquently pointed out, we have before the Congress now a very carefully developed student financial aid program that will for the first time assure that all students coming from low income families will get proportionate to their need support for higher education.

I think the very compelling thing about that program is that we also have before the Appropriations Committee a request to make it

becomes a reality. I would hope that the committee would have a solution to this problem and that you would come close to devising a program that will come into reality insofar as helping the number of students we are concerned with.

I think I would like to say for the record, too, that the administration's proposal has in many respects been misunderstood and has been too often characterized as a program that supports but a very limited number of students whereas the obverse is true. The administration's program will provide support for more than 2½ million students which is a very sizable proportion of the students now on our campus. I would like to say that a cost-of-education allowance that would be associated with the program that would be providing support to more than 2½ million students would really have a very significant impact upon resolving the problem that all of us are very sensitive to and that is the need for strengthening the financial help of higher education.

Senator PELL. Right. Incidentally, I appeared before the Appropriations Committee on behalf of our subcommittee recommending the full funding of the programs we had authorized. What we are seeking to do is to provide a floor of assistance, on which could be built the various grants and loans as needed. Your approach, understandable with the budget as tight as it is, is to do it more on a loan basis, if for no other reason than it keeps the debt down and means less of an immediate imposition on the taxpayer.

This is the question that is different in view, but it seems to me that we are coming out with very many very similar ideas. I would only hope that we can finally agree. I know that none of our figures are embedded in concrete, it is the grant principle of a guarantee floor, that we are after.

Commissioner Marland.

Dr. MARLAND. I would like to add to your statement as you have analyzed the administration's position on this that you have restated that which has been misunderstood and perhaps exaggerated in the administration bill; namely, that it seems to lean more toward a lending system as distinct from a work study and economic grant system.

This is not entirely the case, Mr. Chairman. We are in the administration position doubling the resources behind the work study and the EOG programs as well as greatly increasing the opportunities for borrowing, and it should be noted that the doubling of the basic line is important.

Senator PELL. Right. I think I would ask that you send us the figures. I am sure the figures are available for the simplicity of the record.

Dr. MARLAND. Yes.

Senator PELL. If you would put the figures supporting your statement in the record at this point.

Dr. MARLAND. We will be pleased to do that.

(The figures referred to had not been received when this hearing went to press.)

Senator PROUTY. At this point I think it should be pointed out that the grant works study was $328 million and in 1972 the budget authority was $971 million which is an increase of $648 million.

Dr. MARLAND. That is correct. Some of that is forward funding. I didn't want to claim it being three time but two time.

Senator PELL. Thank you very much.

Senator PROUTY. Yes; I have a few questions.

You touched on some of these, Dr. Marland, but I would like to go further. Certainly I share Senator Pell's desire to simplify the student aid mechanism but I wonder how simple his proposal would be if enacted. Has the Office of Education considered the possible administrative impact of this proposal on the Office of Education?

Mr. MUIRHEAD. We have indeed considered the administrative problems with regard to administering the proposal advanced by the chairman and I would be the first to say that administrative problems should not stand in the way of good educational objectives but I must also report that they would put a demand upon the colleges and universities that would be indeed difficult for them to carry out in searching out the information on the internal revenue service practice which they have not carried out before.

Senator PELL. May I interrupt here simply to say that all that is necessary is that when people pay their income tax an added piece of paper could be torn off and presented and that is it, it is not a complex procedure.

Mr. MUIRHEAD. I would have to respond as I did before, Mr. Chairman, that that single piece of information would not be as sensitive to the actual needs of that student as would be the exercise by the student financial aid officer of the viewing of the family assets and income and particular obligations which many times are not reported in income tax forms in order to arrive at an equitable figure as to what family can contribute to the Office of Education.

Senator PROUTY. I might observe that I think most families regardless of income are very hesitant to reveal their income tax figure. I think you find a great deal of resistance to that on the part of an overwhelming majority of the American people.

Now let us assume that upper income families emancipate their children. How could the Office of Education prevent these parents from contributing money to their children during their college years? Is there any way you can bring about surveillance over student allowances?

Mr. MUIRHEAD. We have always taken the position, which I am sure this committee would support, that unless there are very extenuating circumstances prevailing that it is the responsibility of a family to contribute to the support of their children at the undergraduate level, so that if this should become law we would take rather vigorous steps to make it most difficult for a family to escape the obligation which we and you believe is rightly theirs.

Senator PROUTY. What I am referring to is a parent giving students substantial amounts of money while they are in college, in the form of an allowance of some sort. Now obviously the Federal Government cannot survey the amount of money given each individual student by a rather wealthy family.

Mr. MUIRHEAD. You are quite right, Senator Prouty, in pointing that out. It would place an additional burden on the Federal Government and in turn place vigilant intruding into the actions of families if they had emancipated their student and then to continue surveillance as to whether or not they were evading that particular obligation and providing support to the student in return for the $1,200.

Senator PROUTY. Now looking down the road a few years, could not

parents in anticipation of the tax advantage contribute heavily to their children's savings, thus in effect paying the college cost in advance?

Mr. MUIRHEAD. I quite agree with you.

Senator PROUTY. I don't suggest that is going to happen frequently but I think it could.

Mr. MUIRHEAD. I think in summary what I would like to say is that the income tax route for determining family contributions to the support of higher education is not well suited to that particular purpose, that a much better procedure is the procedure that colleges and universities have so carefully built up over the years.

Senator PROUTY. Are there any figures available from the Internal Revenue Service which indicate how many American taxpayers with incomes over $20,000 paid less than $1,200 in Federal income tax in a particular tax year?

Mr. MUIRHEAD. I do not know, Senator, but I would expect there would be.

Senator PELL. Again I would make the point that those families who would want to take adavntage even of the basic educational opportunity grants, even those who come from thrifty New England families with which we are both familiar, would be reluctant—if they had a large income—to publicize the fact that they worked their income in such a way that they pay no taxes and have to take advantage of it.

Senator PROUTY. I have never been faced with that problem.

Senator PELL. All right. Thank you very much.

This is the final open hearing of the subcommittee. As presently planned the record will stay open for 10 days. I would hope very much that my colleagues on both sides of the aisle would bear with us as we move into the mark up session so that we can try and get together and really report out a consensus bill of which we are all proud and which we can agree on and on which we will consult with the administration.

(The following material was subsequently received for the record:)

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

JUN 23 1971

Honorable Claiborne Pell
Chairman, Subcommittee on Education
Committee on Labor and Public Welfare
United States Senate
Washington, D. C. 20510

Dear Mr. Chairman:

In accordance with my testimony of June 9, I am forwarding the enclosed proposed amendments to S. 1123, the Administration's proposed Higher Education Opportunity Act of 1971.

These amendments embody the Administration's proposal on the subject of institutional aid. They would provide for grants in fiscal years 1972 and 1973 to each public and nonprofit private institution of higher education participating in our proposed educational opportunity grant, college work-study, and subsidized loan programs. The amount of the grant for each year would be equal to ten percent of the amount of assistance given under those programs to students of the institution for that year.

We urge your Subcommittee to give favorable consideration to this proposal.

We are advised by the Office of Management and Budget that enactment of S. 1123 with these amendments would be in accord with the program of the President.

Sincerely,

Secretary

Enclosure

AMENDMENTS TO S. 1123, 92d CONG.

I

On page 15, strike lines 5 through 22 inclusive and insert in lieu thereof the following:

"INSTITUTIONAL ALLOWANCES

"Sec. 409. (a) From sums appropriated under section 410(b) for any fiscal year, the Commissioner shall, subject to subsection (b), make a grant to each public or nonprofit private eligible institution in an amount equal to ten per centum of the aggregate of (1) educational opportunity grants and work-study payments under part B of this title, and (2) subsidized loans under part C of this title (including loans under section 406), made for such year to students who are enrolled in such institution.

"(b) The amount of the grant to each eligible institution for any fiscal year under subsection (a) shall be reduced by the percentage by which the sums appropriated under section 410(b) for such grants for such year are less than the aggregate of the sums which would be payable under subsection (a) for such year without regard to this subsection.

II

On page 15, strike line 23 and insert in lieu thereof:

"AUTHORIZATION FOR APPROPRIATIONS

"Sec. 410. (a) There are authorized to be appropriated such

III

On page 16, after line 23, insert the following:

"(b) There are authorized to be appropriated such sums as may be necessary for the fiscal year ending June 30, 1972, and for the following fiscal year, for grants under section 409."

IV

On page 16, strike lines 10 through 14, inclusive, and insert in lieu thereof the following:

TECHNICAL PROVISIONS

Conforming Amendment

Sec. 402. (a) Clause (2) of section 421(b) is amended by inserting "(except with respect to loans made to students eligible therefor under sections 402 and 404)" immediately after "student loans".

Transitional Provision

(b) Notwithstanding any provision of title IV of the Higher Education Act of 1965, as amended by this Act, a student who, on the date of enactment of this Act, is receiving or (if such date of enactment is not during any academic year with respect to such student) who, during the most rece academic year ending prior to such date, received assistance under part A or C of title IV of the Higher Education Act of 1965 or title II of the National Defense Education Act of 1958 (as in effect on the day before the date of enactment of this Act) shall, in accordance with regulations prescribed by the Commissioner for carrying out the purpose of this subsection, be eligible for grant, work-study, or subsidized loan assistance under such part A or C and such title II to the same extent as if this Act had not been enacted.

UNIVERSITY OF MAINE

Office of the Chancellor

228 Deering Avenue
Portland, Maine 04102
207/774-9845

June 8, 1971

IN 10 1971

e Honorable
iborne Pell
ator
ted States Senate
hington, D.C.

r Senator Pell:

As Chancellor of the single, 8-campus, state-wide University Maine, I am writing to urge your continued support for leg- ation initiating Federal grants for general support of colleges universities.

Through testimony before your Subcommittee, you have already rd the unified position of the national educational organiza- ns in support of institutional grants.

In this letter I'd like to stress the particular needs of lic higher education, especially in a relatively poor state e Maine.

Public higher education has a special mission: a commitment nass education. Over the years, we have consistently expanded ollments. The results have been impressive. In the decade to 1970, enrollments in public higher education expanded percent. In Maine, enrollments at the University increased percent in the same period. Nationally, public institutions enroll 70 percent of all students in higher education.

Public higher education has also consistently favored low ion. As a consequence, we have depended primarily on state opriations to expand enrollments.

With few exceptions, public higher education benefited the prosperity of the 1960's. In Maine, for example, in the ten years, State appropriations for higher education increased

396 percent. In the past two years, Maine has increased its appropriations for higher education by 55.5 percent. In every year since 1965, the University of Maine's enrollment has increased by approximately 10 percent. For the last two years, we have accepted an additional 1,200 students each year. This means creating a new Colby College each year of our existence!!!

But still Maine ranks almost last among states in the proportion of high school graduates (34 percent) going on to some form of higher education. Furthermore, while the percentage increased from 31 to 34 from 1963 to 1968 (a 7.7 percent increase), Maine's rank nationally actually declined.

A closer look at the students being served by public higher education in Maine reveals other gaps. Even though the State has a population of about 1,500 Indians within its boundaries, just a couple of years ago the University had only three or four Indians enrolled. Today the total Indian enrollment is not much over 20. We simply are not getting to the disadvantaged and members of the minority groups.

At the present time, 18.2 percent of University of Maine students come from families with incomes under $6,000, and 45.1 percent come from families with incomes under $9,000. Given present tuition levels, the unmet student financial assistance need for the next biennium will approach $5½ million.

These statistics set the background for the crisis in financing higher education we face in Maine today. For the first time in a decade, the State legislature has cut the University's appropriations request to the point that enrollment must remain at the 1970 level of 15,083. With the squeeze of inflation, little is available to provide even cost-of-living increases for faculty and other employees. We are concluding a decade of dramatic expansion in which we taxed our State resources to the limit in order to accommodate the thousands of additional Maine students seeking an education.

In practically every area, Maine is behind the rest of New England and the Nation: in faculty salaries, in library volumes needed, in depth of programs. But the mood of the State and the Nation has changed. Other priorities - the environment, welfare and tax relief for the elderly in Maine - are taking precedence.

Given the dilemma we face - steadily increasing demands for admissions at a time that our resources are over-taxed and State support is going elsewhere - what can we do? To go the route of increasing tuition and putting the cost to the student through loans and pay-back plans would not only violate the things public higher education is all about but would certainly exclude from educational opportunity the very people we are seeking to serve. Even our present students cannot bear the burden of higher prices. If we are to have students pay for their collegiate education in accordance with an ability to pay principle, then why shouldn't we do the same thing for high schools? We don't, because public education has been deemed a public good.

The answer for states like Maine has to be some form of general institutional support from the Federal Government. I would agree that all states are hurting and institutional grants are needed almost everywhere. To a great extent, financing of higher education must be a national responsibility.

Many of our students leave Maine following graduation to seek employment. We're educating manpower not only for Maine but also for Massachusetts, Connecticut, Rhode Island, New York and so forth. The mobility of today's population is well-known. Elimination of regional inequities in the extent and quality of educational opportunity was a principal goal of the Presidents Commission on Higher Education in 1947. It is of no less importance in 1971.

While we must state the case for public higher education, private higher education also is facing financial crisis, but of a different kind. Their's is to maintain quality for a relatively small number of students, while our's is to continue to expand opportunity for masses of Americans. We support institutional grants for private as well as public institutions.

Our case, then, is simply this: we're taxed to the limit as an institution and as a State in our commitment to educating the masses of Americans who seek and deserve expanded educational opportunity. Before we can get on with the job of filling the gaps which still exist, we need a base of support from the Federal Government which only general institutional support can provide.

I would hope that the specific case of Maine could provide some of the ammunition you need to generate support within the Congress for passage of legislation for institutional grants during this session.

Cordially,

Don McNeil

Donald R. McNeil
Chancellor

A Report on Programs Funded Under the Migrant Amendment to Title I of the Elementary and Secondary Education Act

NATIONAL COMMITTEE
ON THE EDUCATION OF MIGRANT CHILDREN
145 East 32nd Street
New York, N.Y. 10016

Summary of Findings

1. The education of migrant children is interstate in nature and national in scope. Solutions to the educational problems of migrant children are not to be found in the hit or miss manner of present patterns of program development by the states and local districts but must become part of an organized national thrust. (Chapter I)
2. The federal funds for migrant education are not equitably allocated because they depend on unreliable estimates of the school-age migrant population and inadequate methods for identifying migrant children. (Chapter II)
3. A combination of late Congressional appropriations and inflexible allocation procedures has severely hindered the effective use of funds. Of $97 million appropriated by Congress during the three fiscal years ending with 1969, $4.4 million were not granted to any state. (Chapter II)
4. At this writing, no audits of migrant education programs have been completed by the Audit Agency of the Department of Health, Education, and Welfare. Because of the absence of federal audits and the varied interpretations of legislative provisions regarding accountability for the use of federal migrant education funds by state education agencies and local school districts, it was difficult to determine to what degree the states and local schools were maintaining support of migrant education. (Chapter III)
5. At all administrative levels—federal, state, and local—officials who are responsible for planning and implementing educational programs are often out of touch with those who make budget decisions and keep track of program expenditures. Site observers found much confusion about the respective fiscal responsibilities of state and local officials. Some local project directors had not participated in preparing budgets for their projects and had no flexibility to adjust budgets to meet actual needs. (Chapter III)
6. Over a three-year period (fiscal 1967, 1968, 1969), a total of $12.6 million in federal migrant education grants to the states was not spent, according to the most recent official state expenditure reports filed with the United States Office of Education. In addition there were $4.4 million in unallocated funds, making a total of $17 million in unspent funds. (Chapter III).
7. An analysis of actual per pupil expenditures from federal migrant education funds by migrant education projects included in our local project sample showed that more federal funds were spent for seven weeks in the summer than for seven months in the regular school year. The average per pupil expenditure from ESEA Title I migrant funds in 1968-69 school-year projects was $177; in 1969 summer projects, $195.

   The range of these federally supported supplementary per pupil

expenditures was extraordinary: from $11 to $1,002 in the school year and from $24 to $1,021 in the summer.

Our analysis shows that the higher per pupil expenditures from federal migrant funds were to some extent correlated with (1) lower local and state support and (2) more ample staffing and food services in summer projects. *However, the clearest correlation was between higher expenditures and separate programs for migrant children.* Beyond these factors, the extreme range in per pupil expenditures seemed largely random and inequitable. (Chapter III)

8. It was impossible to arrive at a figure on the number of migrant children served in educational programs financed through ESEA Title I migrant funds. Neither unduplicated enrollment figures nor average daily attendance records are available for migrant children by school-year and summer session at any administrative level. (Chapter IV)

9. All evidence points to the existence of many migrant children who are not being reached by federally financed educational services. (Chapter IV)

10. Sixty-nine per cent of the migrant children served by school-year projects included in our local questionnaire sample were placed in classes together with non-migrants. In the summer, the situation was almost reversed: 71% were being educated in separate schools or classes.

    Consultants who made site visits did not find that placing migrant children separately or together with non-migrants made a decisive difference in the conditions under which they were educated, or in the reactions of migrant parents to school programs. They noted, however, that some school districts provided more staff and special services to migrant children who attended separate schools. (Chapter IV)

11. In the migrant education projects visited by NCEMC consultants, late funding, teacher shortages, local school district prerogatives, and weak leadership were factors which tended—singly or in combination—to block the development and use of criteria for the selection of staff best suited to meet the educational needs of migrant children. (Chapter V)

12. Local practice exerted a decisive influence on the ethnic group composition of migrant education staff. As indicated by local questionnaire response, only 28% of the 1968–69 school-year programs and 46% of the 1969 summer programs in our sample employed any migrant adults in any capacity. (Chapter V)

13. In the projects visited, consultants found wide variations in the amount and quality of in-service staff training. In most projects, they found little evidence that in-service training programs were having an important impact on day-to-day classroom performance. (Chapter V)

14. In the projects we visited, staffing ratios were at least as favorable for migrant pupils as they were for non-migrants. However, in some school-

year projects, staffing for all children was so sparse that the few positions added by federal migrant education funds could not begin to meet migrant children's needs.

By contrast, in most summer projects we visited, staffing was ample. Most had class sizes of 15 to 20 pupils with two or more adults assigned full-time to each class. (Chapter V)

15. Despite the inexperience of many administrators and teachers in using their services, paraprofessionals, volunteers and students made important contributions to the migrant education projects we visited. They helped to reduce the essential isolation of many migrant education projects from both the migrant and the non-migrant communities.

    Classroom aides sometimes represented the only tangible link between the school and the migrant child's own cultural background. In a few communities, volunteers provided essential services to migrant families and were in closer touch with their needs than were the paid members of the project staff.

    Where migrant high school or college students were employed, there were reciprocal benefits to both the students and the projects. (Chapter V)

16. In many of the migrant education projects we visited, consultants found no real educational plan. They often reported that a listing of educational techniques was being substituted for clearly defined program objectives and components.

    Some project officials seemed to consultants poorly qualified by interest, experience, or attitude to plan and direct an educational program for migrant children.

    Some projects depended heavily on programmed teaching materials, to the exclusion of curricular balance and human interaction. (Chapter VI)

17. In none of the projects we visited did consultants find that there was adequate individualization of instruction. There were, however, some promising approaches and experimental attempts. (Chapter VI)

18. All of our sources of information indicate that only a very small number of migrant students are receiving a high school education.

    Available data from state education agencies shows that less than one-fourth (22%) of the migrant pupils reported for the 1968–69 school year had gone beyond the sixth grade. For the United States school population as a whole, the percentage—44%—was twice as high. (Chapter IV)

    Local questionnaire responses from 120 projects enrolling about 35,000 migrant pupils include reports of only 201 migrant pupils who graduated from high school during the 1968–69 school year. These graduates came from only 28 projects; over three-fourths of the sample projects reported no migrant high school graduates at all. (Chapter VI)

19. In order to determine the factors which had helped this small number of migrant students to graduate from high school, follow-up letters were sent to projects which reported at least five migrant graduates. Their replies showed the comprehensive nature of the effort which was required.

    The factors they listed as having helped migrant pupils to graduate included: part-time jobs; college scholarships; individual help from teachers; individualized curricula and special courses, including language arts, industrial arts, home and family living, and vocational programs; participation in athletics and other extra-curricular activities; intensive counseling of pupils and parents; supportive services for students and families, including clothing, shoes, better housing and health care, and care for young brothers and sisters so that high school students would not have to leave school to baby-sit. (Chapter VI)

20. Of migrant children included in our local questionnaire sample for 1968–69 regular school-year programs, only 13% received breakfast in school and only 39% received free lunches in school.

    For the 1969 summer session, the sample showed a higher percentage of migrant children receiving breakfast (60%) and free lunches (92%) in school.

    While migrant children went hungry, almost a million dollars ($954,986)—or about 31% of the migrant education funds budgeted for food services in fiscal 1969—were not spent.

    Site observations did not show improved nutrition services during fiscal 1970. Few breakfasts were served in projects we visited. Some project directors doubted that the children were hungry. One saw a free breakfast program as the first priority of his school. (Chapter VII)

21. The local questionnaire sample showed that of the migrant children included in both school-year and summer programs during fiscal 1969, less than half received physical or dental examinations or immunizations, and less than one-fifth received medical or dental treatment.

    While this abysmal neglect was allowed to exist, about $686,000 (or 30% of the $2.3 million budgeted by the states for health services in fiscal 1969) were not spent.

    Observers found no single pattern in the 1970 health services to migrant children and families in the projects they visited. The quality and scope of health services ranged from excellent to non-existent. Even the best were reaching only a fraction of the migrant children in their areas. (Chapter VII)

22. In the projects we visited, program coordination to meet the total needs of migrant families was lacking. Only three of the 13 migrant education projects we visited provided all-day programs for migrant children for the full time their parents were working. In others, even where there were nearby day care centers under other auspices, no care was

provided before or after school for young children enrolled in Title I migrant education projects. Children of all ages were left without supervision in migrant camps for several hours in the morning, and for a large part of the afternoon and early evening. (Chapter VII)

23. In all but three of the migrant education projects we visited, consultants found home-school contacts to be the weakest part of the program. Few school personnel visited migrant children's homes, and even fewer migrant parents had any voice in planning, implementing, or evaluating education programs for their children. In the two projects where home visiting was a regular part of the program, all other aspects of the educational program benefited greatly. (Chapter VIII)

24. Almost all of the parents we interviewed hoped that their children would be able to leave the migrant stream. Some parents hoped that they themselves might be able to do so. In addition, many who knew no other way to earn a living were afraid of being forced out by the mechanization of farm labor. (Chapter VIII)

25. Some migrant parents saw education as a key to realizing their aspirations. They saw their children's need for more education, but some felt inadequate to help them. They expressed anxieties and the need for help.

    Many parents wanted a better life for their children but did not understand the relationship between education and their hopes for the future. Some teenagers were also uncertain about the relationship between education and employment opportunities. (Chapter VIII)

26. Parents who were interviewed during the summer expressed appreciation for the food, health, and recreational services which were available to their children in summer schools. However, many families reported that their children could not attend summer schools because they had to work in the fields to earn money for their regular school-year expenses. Parents stated again and again that it is the home base schools which really make a difference because the children are there longer. All expressed concern about the high cost of school lunches and other school expenses in the home base areas, where too little work is available. (Chapter VIII)

Recommendations

The findings of this report indicate that the Migrant Amendment to Title I of the Elementary and Secondary Education Act has succeeded in mobilizing most State Education Agencies to develop services for migrant children. These efforts vary greatly in the degree of their commitment, competence and effectiveness. However, migrant children cannot yet count on finding programs geared to their needs in many communities which they enter. Where such programs do exist there is a wide variation in the kind and quality of services provided. This is caused, in part, by the lack of consistency in funding from state to state and from project to project within a state, attitudes of communities and school leadership, and lack of criteria for staff selection. Other factors are the failure of the United States Office of Education to effectively mandate the establishment of nationwide goals and priorities.

That the Migrant Amendment to Title I as now constituted and administered can meet the demands of migrant children is doubtful. It is clear that immediate changes are required to guarantee that migrant children receive the services which they need.

We recommend that action be taken by the appropriate and/or designated agencies in the following areas:

Legislation and Administration

1. The United States Office of Education must give stronger leadership to the development of national goals and strategies. The Office's Migrant Programs Branch must be more adequately funded and staffed and must more vigorously fulfill its responsibilities for national program planning, technical assistance, monitoring, and evaluation.
2. It is imperative that the Congress appropriate funds in time for states to receive notification of the full amount of their migrant education grant at least one year in advance of the beginning of each fiscal year.
3. The Audit Agency of the federal Department of Health, Education and Welfare should include migrant education programs in its investigations in order to assure accountability within the intent of the law.
4. While we recognize the urgency of meeting the educational needs of all rural poor children—especially those handicapped by years of former migrancy—*regular* Title I funds should be used to serve them. Until all *current* migrant children have been reached by the concentration of educational services they so desperately need, Title I *migrant* funds should not be diverted for other purposes.
5. Present allocation procedures must be changed. Financial support should be provided on the basis of pupil needs, providing higher per-pupil expenditures where needs are greater and less where needs are less. Assistance formulas should consider not only the concentration of pupils

in a project area, but the financial ability of the area to provide for the needs of pupils. The federal allocation procedures must apply not only to state grants, but also to the distribution of funds by the state to local projects.

6. The Commissioner of Education should take steps to see that all appropriated funds are allocated. If a State Education Agency fails to request its maximum allocation then the balance of funds should be made available to another public or private non-profit agency in the state.
7. Federal, state, and local officials must coordinate their program and fiscal planning. National and state program officials must be routinely informed about expenditure reports prepared by their accounting departments. State Education Agencies must clearly define their own and local projects' fiscal responsibilities.
8. Because of the wide variations in per-pupil expenditures by local projects which appeared in our sample we recommend further investigation by the Migrant Programs Branch of the USOE to determine whether they are as random and inequitable as our analysis would indicate.
9. The USOE must develop consistent and comprehensive procedures for collecting and recording data essential to fiscal and program planning. These should include such records as are required to substantiate maintenance of effort and comparability of services. They should provide proof of identification and eligibility of each child for participation in programs and assure the availability of complete enrollment, placement, and attendance data.

STAFFING

1. Congress must eliminate delays in approving appropriations so local projects can be assured of funding in time to employ the best staff. (See recommendation two, under Legislation and Administration.)
2. Clearly stated criteria should be developed by the Migrant Programs Branch of the USOE in cooperation with State Education Agencies for the selection of all migrant education staff, including state project administrators.
3. Open recruitment policies must be instituted which will permit the selection of the best qualified applicants from all sources. Special efforts should be made to find and hire migrant, minority group, and bi-lingual staff.
4. A national program for recruitment of competent teachers and administrators of migrant education programs should be initiated by the USOE in cooperation with appropriate teacher training institutions. A program could include such approaches as internships and Teacher Corps.
5. In-service training programs should give priority to helping staff learn

to diagnose individual interest and needs quickly and to provide immediately relevant learning experiences.

6. More funding and staffing priority should be given to school-year projects. (See recommendation four, Educational Planning.)
7. Use of paraprofessionals, volunteers, and students in migrant education programs should be continued and expanded. Wherever possible, migrants and former migrants should be employed. Preference should also be given to qualified applicants with the same ethnic and language background as the migrant children who are served. Much greater use should be made of paid teen-age migrant aides. Their employment can contribute not only to the education of the younger migrant children, but also to helping them complete their own education.

EDUCATIONAL PLANNING

1. The initiative for educational planning and implementation must be assumed by the Migrant Programs Branch of the United States Office of Education. It must assist the states and local projects to more clearly define program objectives and components which are built on specific assessment of the individual educational needs and interests of the migrant children served, and on consultation with migrant parents about their educational aspirations for their children. (See recommendation two, Home-School-Community Relationships.)
2. Program personnel must participate in preparing budgets and be enabled to adapt them to meet changing program needs. (See recommendation seven, Legislation and Administration.)
3. Programmed teaching materials must not be substituted for a balanced curriculum and good human relationships.
4. The correlation between high per-pupil expenditures and separate migrant schools needs special examination by the Migrant Programs Branch of the USOE and the U.S. Congress. It should not be necessary to place migrant children in separate programs in order to provide for their special needs, therefore, we believe, more funding priority should be given to projects where children are grouped together. While we are not, at this time, recommending that summer schools be discontinued, our analysis of the cost factor would indicate that priority should be given to integrated school-year programs.
5. All segregated school facilities whether on the basis of race or migrant vs. non-migrant must be eliminated except where and as long as temporary separation is required for language or other special instruction.
6. The USOE must take the initiative for planning a comprehensive nationwide effort to enable more migrant students to graduate from high school. The experience of the small number of local projects which are already having some success in this effort should be fully utilized.

Educationally Related Services

1. The Department of Health, Education, and Welfare, in cooperation with the Office of Economic Opportunity, the U.S. Department of Labor and the U.S. Department of Agriculture, should provide leadership for the coordination of the various federal education, health, nutrition, and day care services available to migrant children.

2. All local projects funded under the Migrant Amendment of the Elementary and Secondary Education Act should include funds for the basic health needs of all children enrolled. This should include a) immunizations as needed, b) a school nurse, and c) medical and dental examinations followed by essential treatment. The school health program should be coordinated with any existing community health program for migrants.

3. Every migrant child, regardless of age, should receive a free breakfast and lunch during both the school-year and summer sessions. These meals must be provided to all migrant children without any identification of or humiliation to children or parents. School personnel should visit the parents' homes to let them know that their children are welcome to make use of this service and to answer any questions they may have about it.

4. All programs should include, or have available through a cooperating agency, pre-school, or Head Start facilities with appropriate care before and after school hours for all children.

   The extension of the school into the camp or residential community with after school and/or evening recreation programs, especially for older youth, should be considered.

   Where children are left alone for many hours, the best use of ESEA funds would be the development of expanded child care or day camp type facilities which would give the children not only protective care but an enriched environment over a longer period of time than that now provided by most summer schools.

Home-School-Community Relationships

1. Non-enrollment of migrant children must be the concern of local education agencies. They must assume the responsibility for identifying and enrolling every migrant child who lives in the school district for any part of the year. They must develop greater outreach into less accessible areas and provide for more home contacts. Identification criteria must be clarified and observed. Stricter enforcement of school attendance and child labor laws is required, but such enforcement mandates that the school and community assist migrant families in compensating for the income no longer available when children are removed from the fields. (See recommendation four below.)

2. Home visits by teachers and project directors should be a regular part of every migrant education project both during the school year and summer sessions. These visits should be used to acquaint the parents with the objectives and services of the school as well as to share reports on the progress of the children.
3. Local schools should provide much more guidance to both parents and children. Families should be helped to understand the relationship between education and future work potential. The schools should help them plan for ways to keep their children in school. They should also provide guidance in planning for careers beyond farm labor. Adult education programs, planned after thorough consultation with migrant parents, should be a part of every migrant education project.
4. Schools should also provide the supporting services migrant families need if they are to be able to keep their children in school until high school graduation. Migrant education projects should be a place to which migrant parents can turn for help to secure the services they need from all sources in the community.
5. Each community must work together with other communities throughout the nation to bring about basic changes in the farm labor system which will assure the farm worker of adequate wages and decent working conditions.

* * *

In order to provide for a vehicle through which continuous efforts can be made to bring the resources of public education to bear more effectively on the educational needs of migrant children, we recommend the formation, under private auspices, of a coalition of concerned agencies. This coalition would be expected to use the resources of each member agency to bring about the action needed for the development of legislation and new program goals and techniques. It would also establish and carry out continuous nationwide monitoring of migrant education programs.

145 EAST 32nd STREET • NEW YORK, N.Y. 10016 • (212) 683-4545

Summary and Fact Sheet

WEDNESDAY'S CHILDREN

A Report on Programs Funded
Under Title I of the ESEA

The report was prepared by the National Committee on the Education of Migrant Children, a private non-profit agency, operating as a program Division of the National Child Labor Committee. Miss Cassandra Stockburger is the Director. A Ford Foundation grant supported the study.

Description of Study:

The Report was developed over a 15-month period, beginning Oct. 1, 1969, by the staff of the National Committee on the Education of Migrant Children, assisted by nine part-time interviewer/consultants. Information was secured through 1) interviews with migrant parents and children, 2) questionnaires to state and local education agencies, 3) fiscal data filed with Dept. of HEW, 4) site visits to programs in eight states (Ca., Fla., Ill., N.J., N.Y., Tex., Wa., Wisc.) and 5) interviews with staff of USOE, state and local programs and community leaders.

Migrant Education Under 1966 Amendment to Title I of ESEA:

1. Allocations: State education agencies receive funds on basis of number of migrant children resident in state on full time equivalency basis.

2. Purpose of funds: To provide supplementary services. State and local agencies required to maintain effort.

3 Appropriations: (in millions) FY 1967 - $9.7 FY 1968 - $41.7
FY 1969 - $45.6

4. Administered by: Migrant Programs Branch, Division of Compensatory Education, BESE, USOE, Vidal Rivera, Chief.

5. Eligibility: To qualify for program child must have met migratory definition within last five years. (A migrant child is defined by USOE as a child who has "moved with his family from one school district to another during the past year in order that a parent or other member of his immediate family might secure employment in agriculture or in related food processing."

6. States Participating: All states, except Alaska, Hawaii and Rhode Island, qualified for allocations in 1969. Of these 45 picked up allocation. Not participating were Nevada and New Hampshire.

Conclusions:

As presently conceived and administered, the ESEA program for migrant children is not meeting, and cannot meet, the needs of migrant children. Findings of the study indicate that:

- The inability of the USOE to give leadership to national planning has resulted in a hodge podge of programs of varying degrees of effectiveness.

- There is a shocking lack of correlation between cost of programs and services provided. (p. 21)

  The average per pupil expenditures in 1968-69 school year was $177 for average 7 month term; in 1969 summer term it was $195 for average 7 week term.

  The range of per pupil expenditure in 1968-69 school year was $11 (in Lee Co., Fla. and Las Vegas, New Mex.) to $1,002 (in Kans. City, Kas.); in 1969 summer projects the lowest supplementary expenditure per pupil was $24 (in Albuquerque, N. Mex.) and the highest, $1,021 (in Spartanburg, S.C.).

- Many parents interviewed saw summer school as nice for the kids but not significant in the child's education progress. Work frequently took precedence over school.

- Most classroom teaching observed was dull, traditional, textbook oriented and teacher centered.

- Hungry children were not fed and sick children did not receive medical care even when funds were available. (pp. 77 & 85)

In FY 1969 31% ($954,986) of funds budgeted for food and 30% ($686,000) of that for medical care was returned unspent. In 1968-69 school year, 13% received free breakfast, 39% free lunch.

In 1969 summer school 60% received breakfast and 92% lunch.

In 1968-69 school year 34% received medical examinations, 18% medical treatment. In summer of 1969, 44% were examined and 11% received treatment. During this time only 15% received dental examinations or treatment.

- Poor program planning coupled with late funding resulted in failure to spend $17 million of the $97 million appropriated in fiscal years 1967, '68, '69.

- No accurate census data is available on school-age migrant children. Many children are not receiving supplementary aid because communities are unwilling to operate programs even though funds are available. (pp. 23 - 24)

- No more than 22% of children in sample were enrolled beyond sixth grade, half that for the nation as a whole. (pp. 30 - 31)

  This would indicate that so far these programs have made little impact on migrant children staying in and advancing in school. (Greene found in 1954 that almost 21% of his sample were enrolled beyond 6th grade.)*

- Many migrant children were found to be enrolled in separate, all migrant, classes or schools.

  In the 1968-69 regular term, the figure was 31%. In the summer, 71%.

<u>The Report recommends that</u>:

1. In order to concentrate funds on greatest needs, <u>eligibility</u> should be limited to currently migrant children. <u>Allocations</u> should be based on needs of children and the school district, not on numbers alone. <u>Priority</u> in funding should be given to regular schools, not summer or short term programs.

2. The Migrant Programs Branch of USOE must be adequately funded and staffed so that it can assume a responsible role in development of national goals and strategies, can provide competent technical assistance to states and carry out essential monitoring and evaluation functions. (pp. 6 - 7, 115)

3. Total supportive services and counseling facilities should be provided through the school to enable the migrant family to plan for and give priority to their children's education. (This could mean work-study programs, financial assistance to compensate for loss of income when children do not work, adult education, easy access to other community services, etc.)

4. Comprehensive care for all children during time parents are working to replace the summer schools which usually operate for only a few hours each day.

5. All segregated classrooms and/or campuses, whether by race, or on a migrant - non-migrant basis, should be terminated immediately except where temporarily required for special instruction.

6. A continuing monitoring system to see that schools develop effective programs for all migrant children be developed under private auspices.

*Greene, Shirley., The Education of Migrant Children, National Education Association, 1954.

March 19, 1971

Remarks of Senator Walter F. Mondale (D-Minn.)
upon release of a Report "Wednesday's Children"
on the Migrant Education Program

I am pleased to be here with the new Chairman of the Migratory Labor Subcommittee, Senator Adlai E. Stevenson.

As many of you know, Senator Harrison Williams of New Jersey who is now Chairman of the full Committee on Labor and Public Welfare, was the first Chairman of the Migratory Labor Subcommittee. He served in that capacity for ten years and made significant contributions toward focusing attention on migrant problems.

It was Senator Williams who initiated the migrant education program. The difficulties which beset that program are described in the Report. As Chairman of the Migratory Labor Subcommittee for the last two years, I was similarly frustrated in achieving legislative action, only to find that little was accomplished.

I regret that the Chairmanship of the Subcommittee cannot change hands on a more positive note. But the issuance of the Report on "Wednesday's Children", which so expertly describes the failure of yet another migrant program, sadly reflects that the gavel is changing hands under the same unhappy circumstances.

Only the Chairmen of this Subcommittee can really know the frustrations in trying to find meaningful, enforceable solutions to the migrant farmworker problem.

I know that Senator Stevenson will carry on the struggle to bring meaningful solutions to the plight of the migrant and seasonal farmworkers. I know that he shares a deep and conscientious interest in the problems of the migrant and seasonal farmworkers and in rural poverty generally.

The report released this morning stands as concrete evidence that our response to the plight of the migrant farmworker at the national, state, and local level has been half-hearted at best. In fact, it is clear that the migrant child is a victim of our well-intentioned education program, rather than its benefactor.

I will not repeat the conclusions and recommendations of the Report, as they speak for themselves. They come as no real surprise to those of us who have for so long seen the literal destruction of our children by the institution of migrancy and rural poverty.

There are certain initiatives which I intend to pursue regarding the recommendations of this Report.

First, as a member of the Migratory Labor Subcommittee, I will work closely with Senator Stevenson in sustaining the investigation and oversight functions of the Subcommittee. He will also have my help in implementing a legislative program to correct, wherever possible, the inadequacies which have been reported.

Second, several matters raised in the Report have also been investigated by the Select Committee on Equal Educational Opportunity of which I am Chairman. I will continue to seek solutions to the very important recommendations in the Report through the work of this Committee.

Finally, as Chairman of the newly created Subcommittee on Children and Youth, I intend to pay particular attention to federal programs which have been designed to assist our disadvantaged children, but are sadly failing to do so.

60-433 O - 71 - pt. 5 - 36

March 19, 1971

STATEMENT BY SENATOR ADLAI E. STEVENSON III

Chairman, Subcommittee on Migratory Labor
Senate Committee on Labor and Public Welfare

The publication of this report at the time that I assume the Chairmanship of the Subcommittee on Migratory Labor confirms the need for continuing attention to the problems that are the concern of this Subcommittee. We are indebted to the National Committee on the Education of Migrant Children for this report. I cannot think of anything that might have defined for us more compellingly the shameful plight of our migrant workers and their families.

Before coming to the Senate I was aware of the tireless work of Senator Harrison Williams, who founded this Subcommittee and for ten years served as its Chairman. He helped focus national attention on human problems which can too easily be ignored. His interest in the well-being of children stimulated his efforts in behalf of the legislation that created the program which this report reviews. I know that in his new capacity as Chairman of the Committee on Labor and Public Welfare, and as a member of the Subcommittee on Migratory Labor, Senator Williams will continue to provide effective leadership in this area.

Under the more recent Chairmanship of Senator Mondale, the Subcommittee has maintained a high level of activity in its continuing effort to make the deprivation and degradation of migrant workers a matter of national concern.

I am hopeful that the report that is being released today will help us combat indifference and inaction found in the Executive Branch of the Government and, too often, in private and public agencies at the state and local levels.

The findings of the report are shocking. The initial purpose of the legislation enacted in 1966 was to assure that migrant children would obtain their fair share of compensatory education under the Elementary and Secondary Education Act. That purpose, as this report demonstrates, has been ignored and thwarted. The program appears to have operated in a hit-or-miss manner with little direction and much confusion. The strong national direction necessary in view of the interstate nature and national scope of the problem appears to have been non-existent or ineffectual.

How else can we explain why only 22 per cent of migrant pupils attend school beyond the sixth grade?

How else can we explain why, in a sample of 120 projects serving 35,000 migrant children, only 201 graduated from high school in the 1963-1969 year?

How else can we explain why more than three-fourths of all projects in that sample reported no high school graduates among migrant children?

The Subcommittee on Migratory Labor will give careful consideration to the recommendations made in this report. I will work closely with my colleagues on the Subcommittee, on the Education Subcommittee, and with Senator Williams and the full Committee in drafting corrective amendments to the Elementary and Secondary Education Act if, in our judgment, such action is necessary to assure that this Act serves migrant children as they should and must be served.

I have this morning sent letters to the Secretary of Health, Education and Welfare and the United States Commissioner of Education asking for their comments on the findings of this report. The Migratory Labor Subcommittee, in its legislative oversight function, will give prompt attention to those aspects of the report that relate to the accountability which we must expect in the administration of the program at the federal, state and local levels to insure that the objectives of the Congress will be met.

As the new Chairman of the Subcommittee, I am struck by the fact that education programs are but one example of a number of social and worker benefit programs that are not meeting the needs of migrant and seasonal farmworkers. It is my hope that the Subcommittee will be able to help bring meaningful change to the lives of those in rural areas who are systematically excluded from benefits that most other Americans take for granted.

SUGGESTED LEGISLATIVE CHANGES

Late Funding

Delay by Congress in passing a Federal appropriations bill creates a multitude of problems for States attempting to develop and operate educational programs for a mobile population of migratory children. The allocation to each State for migrant programs cannot be determined until the total amount of Title I funds is known. This has been as late as March and April of the operating fiscal year. In the interim, funding is permitted only on a quarterly basis under a "continuing resolution." By the time many States receive their total allocations, the migrants have come and gone. This present procedure and uncertainty of funding prevents adequate program planning, program expansion, service to children and is a primary factor in States ending the fiscal year with unexpended funds. It is realized that because of the complex and lengthy procedures in Congress required to pass an appropriation bill that this is a difficult problem to solve. However, we recommend that the problems created by late funding be brought to the attention of the proper people with the thought in mind of providing changes that would alleviate the problem.

It should be pointed out that the carry-over provisions of Public Law 91-230 have helped to a small degree with some of the problems caused by late funding. One solution to the problem might well be authorizing funding on a three-year basis.

Teacher Exchange Program

Teachers, especially those in receiving States, in most cases are not trained by teacher training institutions to teach migratory children nor to cope with the problems inherent in this mobile group of children. Their normal classroom performance does not meet the needs of the migrant child. In order to improve teacher performance, we would suggest that consideration be given to include in the legislation authority for an interstate teacher exchange program whereby new teaching techniques, educational methodology and new insights could be provided by teachers from other States.

Discretionary Funds

States look to the Migrant Programs Branch in the U.S. Office of Education to provide leadership to them in areas such as replication of model programs, program criteria, improved testing devices, implementation of interstate programs, curriculum improvement, etc. In order for the Migrant Branch to be able to exercise this leadership, suggest that consideration be given to include in the legislation provision for a specific sum of money for this purpose.

Preschool and Day Care

Many States have indicated to the Migrant Branch that there is a definite need for preschool and day care programs for children of migratory agricultural workers. This need has become especially acute

since the Office of Economic Opportunity has withdrawn funding from many of its previously funded day care centers. If preschool and day care centers are not available in areas of migrant concentration, children who should be in school must stay at home as babysitters so that parents can work in the fields. In order that this situation be prevented, suggest that consideration be given to include in the legislation provisions for preschool and day care services.

Definition

One of the problems in developing programs involving inter-agency cooperation is the wide variation in the definition of migratory agricultural workers as applied by the various Federal agencies. If cooperative programs involving the Departments of Labor, Agriculture, Health, Office of Economic Opportunity, Housing and Urban Development, and Health, Education, and Welfare are to be successful, a common definition suitable to all agencies should be developed and incorporated into the applicable legislation.

Five Year Provision

Public Law 90-247 amended the definition of a migratory child by adding "... with the concurrence of his parents, a migratory child of a migratory agricultural worker shall be deemed to continue to be such a child for a period, not in excess of five years, during which he resides in the area served by the agency carrying on a program or project under Title I." This amendment increased the number of children eligible to be served but did not include any provision for funding these additional children. Suggest that consideration be given to include in the legislation additional funding procedures to accommodate children being served as a result of the amendment.

Senator PELL. Senator Moss has an amendment we have been considering which I order printed in the record along with a letter I received from him.

Honorable Claiborne Pell
Chairman
Subcommittee on Education
Senate Labor and Public Welfare Committee

Dear Clay:

The initial cost of amendment no. 22 to S. 659, which would constitute the College of the Virgin Islands and the University of Guam as Land-Grant Colleges is $3 million for each institution.

In the future, these institutions would, of course, participate annually in the other programs which are authorized for all Land-Grant colleges.

A copy of the amendment to which I refer is attached.

Sincerely,

Ted

Frank E. Moss

92D CONGRESS
1ST SESSION

S. 659

IN THE SENATE OF THE UNITED STATES

MARCH 16, 1971

Referred to the Committee on Labor and Public Welfare and ordered to be printed

AMENDMENT

Intended to be proposed by Mr. MOSS to S. 659, a bill to amend the Higher Education Act of 1965, the Vocational Educational Act of 1963, and related Acts, and for other purposes, viz: At the end of the bill, add the following new title:

TITLE V—CONSTITUTING THE COLLEGE OF THE VIRGIN ISLANDS AND THE UNIVERSITY OF GUAM AS LAND-GRANT COLLEGES

SEC. 501. The College of the Virgin Islands and the University of Guam shall be considered land-grant colleges established for the benefit of agriculture and mechanic arts in accordance with the provisions of the Act of July 2, 1862, as amended (12 Stat. 503; 7 U.S.C. 301–305, 307, 308).

Amdt. No. 22

1 SEC. 502. In lieu of extending to the Virgin Islands
2 and Guam those provisions of the Act of July 2, 1862, as
3 amended, referred to above, relating to donations of public
4 land or land script for the endowment and maintenance of
5 colleges for the benefit of agriculture and the mechanic
6 arts, there is authorized to be appropriated to both the
7 Virgin Islands and Guam the sum of $3,000,000 each.
8 Amounts appropriated under this section shall be held and
9 considered to have been granted to the Virgin Islands and
10 Guam subject to the provisions of that Act applicable to
11 the proceeds from the sale of land or land script.
12 SEC. 503. The Act of August 30, 1890, as amended
13 (26 Stat. 417; 7 U.S.C. 322-326), is further amended—
14 (1) by striking the words "and Territory" wher-
15 ever they appear and substituting in lieu thereof the
16 words ", Puerto Rico, the Virgin Islands, and Guam";
17 (2) by striking the words "and Territories" wher-
18 ever they appear and substituting in lieu thereof the
19 words ", Puerto Rico, the Virgin Islands, and Guam";
20 (3) by striking the words "or Territory" wherever
21 they appear and substituting in lieu thereof the words
22 ", Puerto Rico, the Virgin Islands, or Guam";
23 (4) by striking the words "or Territories" wher-
24 ever they appear and substituting in lieu thereof the

1 words ", Puerto Rico, the Virgin Islands, or Guam";
2 and
3 (5) by striking the words "or Territorial" where
4 they appear.
5 SEC. 504. Section 22 of the Act of June 29, 1935, as
6 amended (49 Stat. 439; 7 U.S.C. 329), is further amended—
7 (1) by striking the words "and Puerto Rico"
8 wherever they appear and substituting in lieu thereof
9 the words ", Puerto Rico, the Virgin Islands, and
10 Guam";
11 (2) by striking the figure "$7,800,000" and sub-
12 stituting in lieu thereof the figure "$8,100,000"; and
13 (3) by striking the figure "$4,320,000" and sub-
14 stituting in lieu thereof the figure "$4,360,000".
15 SEC. 505. The Act of March 4, 1940 (54 Stat. 39; 7
16 U.S.C. 331) is amended—
17 (1) by striking the words "and Territories" wher-
18 ever they appear and substituting in lieu thereof the
19 words ", Puerto Rico, the Virgin Islands, and Guam";
20 (2) by striking the words "or Territories" wher-
21 ever they appear and substituting in lieu thereof the
22 words ", Puerto Rico, the Virgin Islands, or Guam";
23 and
24 (3) by striking the word "State" wherever it

1 appears in the third proviso of that Act and substituting
2 in lieu thereof the words "State, Puerto Rico, the Virgin
3 Islands, or Guam".
4 SEC. 506. Section 207 of the Agricultural Marketing Act
5 of 1946 (60 Stat. 1091; 7 U.S.C. 1626), is amended by
6 striking the period at the end of the section and adding the
7 following words: ", and the term 'State' when used in this
8 chapter shall include the Virgin Islands and Guam."
9 SEC. 507. Section 3 of the Act of May 8, 1914, as
10 amended (38 Stat. 373; 7 U.S.C. 343), is further amended
11 by redesignating subsection (b) as paragraph (1) of sub-
12 section (b) and adding a new paragraph (2) to subsection
13 (b) to read as follows:
14 "(2) There is authorized to be appropriated for the
15 fiscal year ending June 30, 1971, and for each fiscal year
16 thereafter, for payment to the Virgin Islands and Guam,
17 $100,000 each, which sums shall be in addition to the sums
18 appropriated for the several States of the United States and
19 Puerto Rico under the provisions of this section. The amount
20 paid by the Federal Government to the Virgin Islands and
21 Guam pursuant to this paragraph shall not exceed during any
22 fiscal year, except the fiscal years ending June 30, 1971, and
23 June 30, 1972, when such amount may be used to pay the
24 total cost of providing services pursuant to this Act, the

1 amount available and budgeted for expenditure by the Virgin
2 Islands and Guam for the purposes of this Act."
3 SEC. 508. Section 10 of the Act of May 8, 1914, as
4 amended, is amended by striking the words "and Puerto
5 Rico" and inserting in lieu thereof the words ", Puerto Rico,
6 the Virgin Islands, and Guam".
7 SEC. 509. Section 4 of the Act of October 10, 1962 (76
8 Stat. 806; 16 U.S.C. 582a-3), is amended by striking the
9 period at the end of the first sentence thereof and adding the
10 following language: ", except that for the fiscal years ending
11 June 30, 1971, and June 30, 1972, the matching funds re-
12 quirement hereof shall not be applicable to the Virgin Islands
13 and Guam, and sums authorized for such years for the Virgin
14 Islands and Guam may be used to pay the total cost of pro-
15 grams for forestry research."
16 SEC. 510. Section 8 of the Act of October 10, 1962 (76
17 Stat. 807; 16 U.S.C. 582a-7), is amended by striking the
18 period at the end thereof and adding the words ", the Virgin
19 Islands and Guam.".
20 SEC. 511. Section 1 of the Act of August 11, 1955 (7
21 U.S.C. 361a-361i), is amended by striking the period after
22 the second sentence and adding the words, "Guam and
23 Virgin Islands," and deleting "and" between the words
24 "Hawaii and Puerto Rico."

1 SEC. 512. Section 3 of the Act of August 11, 1955 (7
2 U.S.C. 361a–361i), is amended by redesignating subsection
3 (b) as paragraph (1) of subsection (b) and adding a new
4 paragraph (2) to subsection (b) to read as follows:
5 "(2) There is authorized to be appropriated for the
6 fiscal year ending June 30, 1971, and for each fiscal year
7 thereafter, for payment to the Virgin Islands and Guam,
8 $100,000 each, which sums shall be in addition to the sums
9 appropriated for the several States of the United States and
10 Puerto Rico under the provisions of this section. The amount
11 paid by the Federal Government to the Virgin Islands and
12 Guam pursuant to this paragraph shall not exceed during
13 any fiscal year, except the fiscal years ending June 30, 1971,
14 and June 30, 1972, when such amount may be used to pay
15 the total cost of providing services pursuant to this Act, the
16 amount available and budgeted for expenditure by the Virgin
17 Islands and Guam for the purposes of this Act."
18 SEC. 513. With respect to the Virgin Islands and Guam,
19 the enactment of this title shall be deemed to satisfy any
20 requirement of State consent contained in laws or provisions
21 of law referred to in this title.

Senator PELL. We have some material submitted by Senator Randolph which is very pertinent to these hearings. I order it printed at this point in the hearing record.

(The material referred to follows:)

UNITED STATES DEPARTMENT OF THE INTERIOR,
BUREAU OF MINES,
Washington, D.C. June 8, 1971.

Senator JENNINGS RANDOLPH
Labor and Public Welfare Committee,
Senate Office Building, Washington, D.C.

DEAR SENATOR RANDOLPH: The following represents the information which you requested by phone, from the Bureau's Office of University Relations on Friday, June 4, 1971. The sources of this information are: The Engineer's Council for Professional Development, 345 East 47th Street, New York, New York 10017 and the universities themselves. The undergraduate enrollment figures have been collected since January 1, 1971. If you require additional "up-to-date" enrollment or graduate information, a survey of the universities would be necessary.

Universities Offering B.S. in Mining Engineering/Undergraduate Mining Engineering Enrollment (1/1/71):

Colorado School of Mines, Golden, Colo	136
University of Arizona, Tucson, Ariz	77
Pennsylvania State University, University Park, Pa	72
University of Utah, Salt Lake City, Utah	69
University of Missouri at Rolla Rolla, Mo	63
Michigan Technological University, Houghton, Mich	49
Virginia Polytechnic Institute, Blacksburg, Va	45
University of Nevada, Mackey School of Mines, Reno, Nev	34
South Dakota School of Mines and Technology, Rapid City, S. Dak	32
University of Alaska, College Alaska	21
Montana College of Mineral Science and Technology, Butte, Mont	20
University of Idaho, Moscow, Idaho	15
Columbia University, Henry Krumb School of Mines, New York, N.Y	8
University of Wisconsin, Madison, Wis	1
University of West Virginia, Morgantown, W. Va	[1] 78

[1] (Although listed as having a Mining Engineering Program, accurate enrollment figures are not available at this time—we have not had a response to our inquiry.)

We hope we have been of assistance, and please call on us for any additional information you may require.

Sincerely,

JOHN P. CANNON,
Assistant Chief, Office of University Relations.

West Virginia University | MORGANTOWN, WEST VIRGINIA 26506

Office of the President

October 22, 1970

Dear Senator Randolph:

This is to express to you my strong interest in the enactment of legislation that can provide increased support to training and research in the mineral industries fields at this time. Demands for increased sources of energy, requirements for upgrading lower grade sources of mineral raw materials, and the need for the development of technology conducive to better health and safety in mining combine to make new support most urgent. Concurrently, the continued decrease in interest of young people in careers in mining at all levels must be reversed if the industry is to meet its responsibilities to the economy and security of this country.

Some of these concerns are considered in H.R. 19492 as introduced in the United States House of Representatives on September 29, 1970. It is proposed as an amendment to the Higher Education Act of 1965 under a new section entitled, "Improvement of Mineral Conservation Education." It appears, however, that the "regional" aspects of allocation under this bill might make it difficult to provide support for institutions of two neighboring states such as Pennsylvania and West Virginia, both of overall comparable rank in mineral production, and favor one or more of the leading petroleum producing states in which industry, technology and training needs are not as critical. Furthermore, the state matching requirements would tend to favor the states having large populations and tax base -- not those having the best mineral conservation programs, largest mineral production, or manpower and technology needs.

I hope that legislation will be enacted that will provide new support flexible enough to meet the peculiar needs of the institution designated in the states chosen. If matching state funds other than those now providing for the School of Mines are required, the effect would be to cause long delays not in accord with present needs which are of national importance.

West Virginia has shown its commitment in keeping its School of Mines moving forward in the face of national and international trends, which have shown the closing of many such schools.

Furthermore, as you know, West Virginia University has recently concluded a study of its School of Mines in planning for its most effective administration in the university structure and an even more progressive role in service in the future. We are fortunate in having been able to enlist Dr. Jay Hilary Kelley to refine and put these plans into effect as the new Dean of the School. He is already working effectively in the assignment.

It would be a tremendous spur to our efforts at this point if an additional program of substantial flexible support would become available. I hope you will want to use your good office in furtherance of the types of legislation we have outlined, and would appreciate your letting us know of developments in this and other possible related legislation.

Yours very truly,

James G. Harlow

James G. Harlow

Presentation To The Committee On Interior And Insular Affairs At April 28, 1971 Hearings On S. 635, A Bill To Amend The Mining And Minerals Policy Act of 1970

Mr. Chairman: I am John C. Ludlum, Dean of the Graduate School of West Virginia University, Morgantown, West Virginia 26506 and for 25 years Professor of Geology there.

I have studied Senate Bill 635 and consider its enactment and implementation a most urgently needed step in upgrading research technology and training in resource fields vital to our economy and national strength. The President of West Virginia University and the Dean of our School of Mines have considered the Sections of this bill with me and concur in this support; so do industrial leaders of the mineral industries in West Virginia where the annual value of mineral production is now on the order of one billion dollars. One billion dollars a year are also added to West Virginia's economy in production, transportation, and manufacturing connected with the industry, and in wages, services, and purchase of equipment and supplies.

West Virginia is central to an Appalachian region comprised of other important mineral-producing states including Pennsylvania, Illinois, Ohio, Kentucky, and Virginia which together have annual mineral production of between four and five billion dollars in value. All have many problems, some unique, that the enactment and implementation of this bill can go a long way toward correcting.

The provisions of S. 635 wisely provide sufficient flexibility to accommodate the peculiar needs of each state and region and yet include the necessary controls to insure focus on only mineral-related problems. The strong base of mineral production in our state and region is coal and we have the problems associated with

60-433 O - 71 - pt. 5 - 37

coal mining. In states where metallic mineral production is most important, problems of developing the technology to discover and produce low-grade deposits profitably are important because the finds of high-grade ore are now very few. In states of high population and economy based on manufacturing, land use in the production of construction materials and disposal of waste products at the surface and underground will be some of the problems that can be given the corrective attention they need under this bill.

As Director of the Office of Research and Development at West Virginia University in 1963, I was responsible for formation of the Water Research Institute. Support for this institute was later authorized under the Water Resources Research Act of 1964 (P.L. 88-379) and each state has now such an institute. In my judgment, this plan for water research institutes is proving itself in the solution of water supply problems and the training of persons in water research, conservation, and development. I see similar provisions in S. 635 and therefore much of the same promise of fast implementation and sure accomplishments.

I am certain that the two institutes - water and mineral - would be mutually supportive, and they should be. There are few mineral production operations that do not require water and have potential effect on water - surface or underground. Areas of study and research now more or less closed or outside the main concern of the water resource research institutes should expect to be opened up in multidisciplinary approach to problems in cooperation with the proposed mineral research institutes.

I have experienced opportunities for special insight regarding the state of the mineral industries in the last few years, first,

as a result of attending the 8th Commonwealth Mining and Metallurgical Congress in Australia and New Zealand in 1965, then the 9th Congress in Great Britain, Sweden, and Norway in 1969, and then this past year serving as chairman of the West Virginia University School of Mines Committee--planning its future upon the retirement of the dean and searching for a successor. Our committee met over a period of a year with mining and petroleum engineers and geologists, representatives of professional associations, alumni, advisory committees, consultants from other universities and industry, corporation representatives including railroads, utilities, coal, oil and gas companies, the W. Va. Geological Survey, the U. S. Bureau of Mines, and specialists, particularly in mine safety and occupational health of organized labor. Much that I have seen and heard during these assignments leads me to concur in a statement in the recent study by the National Academy of Sciences that "the state of mineral technology in the United States is wretched." It need not be.

Thirteen out of 30 U. S. schools or departments accredited for teaching mining engineers in 1947 have since been discontinued. Fortunately, our school has the stature gained over almost 60 years, and will not only be continued, but be strengthened to meet its increasing responsibilities. But our state has a small population and our state government is too hard pressed to be able fully to finance the progress needed. Schools that have continued to provide quality programs in the face of adverse international trends now merit the support of this Federal partnership.

Since 1913 the West Virginia University School of Mines has had a cumulative enrollment in excess of 130,000 miners, foremen, and other industrial personnel in mining extension classes, and about

500 persons have received degrees in mining engineering. The school is the best there is in this country in training and research in the mining of bituminous coal, but there is a large gap between where it is and where we know it should be to bring technology and training up to meet national energy requirements, with maximum health and safety for personnel, and concern for how we work and live.

The coal industry alone can absorb our present nationwide output of mining engineers for the next five years. I understand that the Soviet Union graduates each year over ten times the number that we do, and in general, is working with mineral deposits of higher grade. Our search for new staff finds the pool of those qualified and available very, very small indeed in the face of increasing demands upon us for research and training in areas of new emphasis.

Today per capita demand for minerals in the U. S. amounts to about $150 per person per year and projections indicate almost a tripling to $420 by the year 2000. Our present production deficit is about 22 percent of production requirements and projections indicate a production deficit of 50 percent by the year 2000. As mines in other countries are nationalized, it is obvious that filling the deficit from imports will be increasingly more difficult and certainly more expensive. We had better plan, train, and develop the technology necessary for the best sufficiency possible in mineral resources for the future, or stand to expect serious disruptions to our economy and living standards. Senate Bill 635 is a logical approach incorporating much of the best in proven models for such a national effort in preparedness. I support it fully.

STATEMENT OF
DR. THOMAS F. BATES
VICE PRESIDENT FOR PLANNING, THE PENNSYLVANIA STATE UNIVERSITY AND
CHAIRMAN, COMMITTEE ON MINERAL RESOURCES
NATIONAL ASSOCIATION OF STATE UNIVERSITIES AND LAND GRANT COLLEGES
BEFORE THE
SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS
MINERALS, MATERIALS, AND FUELS SUBCOMMITTEE HEARINGS
ON
S. 635, APRIL 28, 1971

Mr. Chairman and Members of the Subcommittee:

I am Thomas F. Bates, Vice President for Planning and Professor of Mineralogy of The Pennsylvania State University. I appear before you as Chairman of the Committee on Mineral Resources of the National Association of State Universities and Land-Grant Colleges. I am accompanied by four of the members of this nine-man committee, namely Dr. Earl H. Beistline, Dean, College of Earth Science and Mineral Industries, University of Alaska, Dr. John C. Ludlum, Dean, Graduate School, West Virginia University, Dr. Joseph A. Pask, Assistant Dean, College of Engineering, University of California, and Dr. Theodore J. M. Planje, Dean, School of Mines and Metallurgy, University of Missouri.

Together we represent over one hundred State Universities and Land-Grant Colleges that are the member institutions of the National Association. We are here today in behalf of these institutions to express strong support of Bill S. 635. The panel before you is constituted in a manner designed to represent the great variety of mineral resource problems of our states and some of the subject matter areas most involved in their ultimate solution. Each of us is prepared to present a brief statement and answer any questions you may wish to ask.

All of us who have been closely associated with mineral science and technology have been well aware of trends in the mineral resource field which, should they be allowed to continue, jeopardize the future domestic economy and the international security of our country. Documentation in support of this statement is

effectively presented in the recent report of the National Academy of Sciences on "Mineral Science and Technology : Needs, Challenges, and Opportunities". And, indeed, the very promulgation of Bill S. 635 is eloquent testimony that action at the national level is called for and Federal leadership is required. Our committee commends the Senate Committee on Interior and Insular Affairs for its leadership and supports the recommendation to the effect that the Secretary of the Interior be charged with the administrative responsibilities for which the bill provides.

The major provision of this bill, namely "the establishment of an appropriate research and training center in each state", is considered by our Committee to be the most important, initial step that can be taken in effectively tackling our national mineral resources crisis. Two specific examples of the problems facing us may be used to illustrate the particular suitability of going to the mining schools, state universities or Land-Grant Colleges for all-out support of a national effort. At the present time, the fraction of U.S. metal requirements obtained from abroad is almost always appreciable and often very large. For copper it is about 30 per cent; for lead 33 per cent; for zinc 60 per cent; for iron ore over 33 per cent; for nickel about 90 per cent; for manganese almost 100 per cent; for chromite essentially 100 per cent; for mercury slightly less than 40 per cent; and for platinum over 90 per cent. The purchase of all these metallic raw materials causes a sizeable addition to our unfavorable balance of payments, and our failure to produce them here results in a loss of jobs for American workers. Nevertheless, exploitable deposits of these metals have been known in this country in the past, and, indeed, the nation abounds in examples of

mines that, though far from exhausted, have been shut down because they cannot compete with the products of foreign deposits. Obviously, this has been done because these mines cannot make a profit with the methods in use and the prices paid. Successful research in many instances might put these mines back on a paying basis. Examples include: (1) the hematite mines of the Birmingham, Alabama district; (2) the magnetite mines of the Dover, New Jersey area; (3) most of the fluorite mines of the Southern Illinois-Kentucky fluorspar district; (4) the tungsten mines of Nevada such as Mill City, Oreana, and Silver Dyke and the inactive mines of the Bishop area that lies on both sides of the Nevada-California line; (5) the copper deposits of eastern Vermont; (6) the copper deposits of the Foothills belt of California; (7) the chromite mines of Oregon; (8) the closed primary iron mines of the various districts of the Lake Superior area; (9) the tungsten mines in northern North Carolina; (10) the Gossan Lead of western Virginia; (11) the lead-zinc mines of central Pennsylvania that have not been worked since just after the Civil War; (12) the iron mines of northern New York State; (13) the zinc-lead mines of southwestern Wisconsin and northwestern Illinois; and (14) the anthracite coal mines of Pennsylvania.

Most of the research work to be done on such deposits as these would be in the disciplines of mining and mineral beneficiation, but in numerous others the problems lie in the field of extractive metallurgy. For example, at the Sanford Lake iron-titanium mine in central New York State, huge tonnages of magnetite concentrates that are too high in titanium to be used in the production of pig iron and too low in titanium to be titanium ore are now stockpiled. A method of separating these two elements would release valuable amounts of both.

A second type of mineral resource problem area is illustrated by our Pennsylvania anthracite situation. Here, where we have one of the highest concentrations of some of the best coal in the entire world, up to 50% of it -- in much of the region -- is not recoverable by present mining methods. A similar situation exists in the bituminous region of Pennsylvania, West Virginia and, indeed, most of our coal producing states. Furthermore, our coal reserves are literally an unknown warehouse of other valuable metals, as, for example, tin, germanium, and uranium, all of which are now literally going up in smoke or piling up in fly ash or mine refuse. We will not be making effective use of this tremendously important natural resource until we:

1. can get it out of the ground without the present hazards of underground mining, surface subsidence, and mountains of waste;
2. can recover all the mineral values from it;
3. can develop more effective combustion processes;
4. can eliminate acid mine water in the streams and suiphur dioxide in the air;
5. can do all this in a cost-effective manner.

The specific problems of our mineral industries are endless, but these examples illustrate major characteristics typical of most that make it evident why the research institute approach proposed in S. 635 can be extremely effective in their ultimate solution.

First, the example of our present import situation illustrates the <u>national</u> scope and significance of many of these problems. Our committee is here today representing a <u>national</u> association -- one which has ably demonstrated in the

area of renewable resources, agriculture, how effectively the universities of 50 states can work in concert for the solution of national problems.

Second, the example of unworked mines of differing character in various parts of our nation, points up the necessity of the state by state approach where experts trained in the particular problems of varying ore types, varying geological conditions, and varying environmental conditions imposed by man and nature can apply their particular expertise to local conditions while at the same time contributing to the regional and national pool of knowledge.

Third, as illustrated by the coal example, modern mineral resource problems must be solved using a "systems" approach. No longer can the mining engineer do his "thing" without regard for the problems he may be generating for the metallurgist, mineral economist, pollution expert, or public at large. Our State and Land-Grant Universities are experienced in the interdisciplinary approach. The Mineral Resources Institutes will bring together, from a variety of departments, those experts most capable of interacting on mineral resource problems. They will also be in close touch with and have available the professionals already working in our air environment centers, the water research institutes, the agricultural experiment stations, and numerous other interdisciplinary groups organized to work most effectively on the problems of our society in the true Land-Grant tradition.

Fourth, our mineral resource problems -- and their solution -- are different from those we have faced in the past. Words and phrases like recycling, solid waste, liquid extraction, rapid excavation, cost-benefit ratios, and underground storage, have only relatively recently become part of our "working" vocabulary.

New kinds of problems need new breeds of men. The graduate students that train in these institutes had better be good, for they must be the leaders in facing mineral resource problems of a magnitude and a technical, economic, and sociological complexity that those of us here today can barely appreciate. It is the job of our universities to produce such men. These institutes will provide the vehicle which, with adequate support, will enable us to do so.

In concluding this statement I would reiterate that our Committee strongly favors the provisions made in S. 635. We would also highly recommend that consideration be given to two additional areas of possible support, which, if incorporated in the present bill would, in our opinion, further increase its effectiveness. Recognizing that experts in the Mineral Sciences and Techology are in extremely short supply, we believe it would be very desireable to have a provision that would make contract and grant funds available to eligible professionals at all universities. Furthermore, we would consider most essential an adequate provision of funds to the institutions for use in attracting and properly supporting an increasing cadre of students to be trained in the solution of today's problems in preparation for facing the more complicated ones of tomorrow.

Thank you for the opportunity to appear before you and present this statement.

S.635 - TO AMEND THE MINING AND MINERALS POLICY ACT OF 1970

Prepared by J. Richard Lucas, Head, Department of Mining Engineering, Virginia Polytechnic Institute and State University, before the Senate Committee on Interior and Insular Affairs on Wednesday April 28, 1971.

Mr. Chairman:

I am here to strongly support S.635 - TO AMEND THE MINING AND MINERALS POLICY ACT OF 1970. This bill will strengthen education and research support for the strategic mineral industry of this nation.

I am in agreement with the findings that the Committee on Mineral Science and Technology, National Academy of Sciences, National Academy of Engineering, National Research Council, published in 1969 after an extensive study of this grave problem. My purpose is not to dwell upon the extensive data and recommendations put forth in the report, but to concentrate on my immediate and detailed experience in this area, which could best be described as mining or minerals engineering. I would like to define minerals engineering as including mineral exploration, evaluation, development, production, beneficiation, and economics. Our minerals engineering schools should be viable in each of these fields and should be able to pursue a vigorous teaching and research program for the advance of mineral technology.

In recent years three new challenges that must reach an adequate resolution have tested our mineral technology. These challenges require more talent than presently exists as well as sophisticated trained professionals. The manpower shortage in mineral engineering has aggravated these three major problems which include: (a) Ecology and Environment (b) Mining Health and Safety (c) The Energy Shortage. The Congress has enacted significant legislation in some of these areas and is currently considering far-reaching legislation in others. The Congress has passed landmark legislation in the

"Metallic and Non-metallic Mine Safety Act of 1966" and the "Coal Mine Health and Safety Act of 1969." The latter act has precipitated a continuing national debate on its implementation. It has not been possible to implement this act fully because mining engineering talent is just not available, and it does not exist in the number that is required. The manpower shortage in the mining industry has made it next to impossible to meet the goals set by Congress in its legislative mandate. As a result, standards of qualification for industrial and government employment related to this legislation have been substantially reduced. Thousands of mining men are now required for positions concerned with mining health and safety, rather than the few hundred required in the past.

If this act currently being considered makes no other contribution to the nation than to supply an increasingly growing number of trained professionals in mining and mineral engineering, it will have achieved a major goal. The most valuable resource the mineral industry in this nation has is the body of trained manpower that it can call upon to solve its problems. In pursuit of our national interest, arrangements must be made to provide the trained manpower necessary to implement the far-reaching legislation that has recently been passed.

The mineral industry has much strategic importance since it affects international leadership as well as our nation's economic welfare. It is our minerals industry that is the foundation of our industrial society, and our world leadership potential is built upon this foundation. There are indications that the U. S. has not developed this foundation with the strength that is desired and required at present.

An example of outstanding performance in this area is seen by considering the spectacular development of the Japanese economy, and especially its

minerals industry. With dedication and great future planning, Japan has assured herself of present and future supplies of many basic mineral raw materials that are so necessary to a rapidly developing economy. This nation has accomplished much in what the U. S. should be doing in better planning and protecting its national interest. However, results speak louder than words, and Japan will probably surpass the Soviet Union in steel production, possibly by 1975. Further, steel industry leaders in the U. S. have publicly indicated that Japan will possibly surpass the U. S. in the production of raw steel by the end of this decade.

To protect its domestic and international future, this nation should better support mineral education and research because this important activity has grown weaker and weaker with less and less financial aid being extended to it from both state and national sources.

Most of the mineral education and research centers in the nation are at state-supported institutions. The funds and resources of these universities have many pressing needs, and there are never quite enough to fill the demands. University administrations of these institutions have not supported mineral education and research because no agency with budgetary support capabilities in the federal government appeared interested in the welfare of these programs. Other disciplines have been supported by government agencies that had an interest in their welfare. For example, the AEC has strongly supported the discipline of physics over the years to strengthen and increase the size of the trained manpower pool, and NASA was quite instrumental in strengthening the academic and educational areas that have an impact on its innovative program.

The disciplines involved in mineral education and research have to look largely to the Bureau of Mines for leadership and support on the national level.

In the past, the Bureau of Mines had insufficient resources for supporting its own program, let alone giving budgetary support to strengthen the important academic disciplines that have a major impact on its programs. As a result, mineral education, research, technology have not kept abreast of the demands made upon it and have lagged behind the pace of other disciplines.

When we consider the three materials: animal, vegetable, and mineral, it is readily apparent that minerals should share an overwhelming national priority, but, in fact, they have been exposed to a relentless neglect during the past two decades.

I think that every activity in mineral education and research can be increased from five to ten fold. As an example, recent data indicates that the nation is currently producing somewhat in excess of one hundred (100) graduate mining engineers annually, but current national needs are from five to ten times this number. The Soviet Union, with a population approximately that of the U. S., is graduating five to ten times this number of mining engineers. Further, the number of mining engineers produced each year in the U. S. is not enough even to counter the annual losses due to retirement, death, and resignations.

It is much easier to attract young men to white collar occupations, but much more difficult to attract them to the challenges involved in the underground production of minerals. For example, in my own state the deepest coal mines in the country are located twelve hundred feet (1200') under the valley floor and three thousand feet (3000') under the mountain tops. The coal mined in this area is some of the most valuable in this nation if not the world, and is a strategic raw material both domestically and internationally. Longwall mining systems employed in these operations result in continuous massive failure of roof and overburden, under carefully controlled

conditions in which men must continually function effectively and safely. This environment, while an extreme, is an indication of the great necessity, but yet demonstrates the difficulty, encountered in attracting the talented and the educated individual.

I supported the "Mining and Mineral Policy Act of 1970" and appreciated the opportunity to offer supporting material for this Committee's hearings on this bill. Speaking on behalf of myself and the institution that I represent here today, I am strongly in favor of adoption of S.635 to amend the "Mining and Mineral Policy Act of 1970." This Committee can do much to improve a deplorable condition that has existed far too long by strengthening mineral education and research at appropriate universities in our many deserving states.

(Whereupon, at 12:10 p.m., the subcommittee adjourned.)

June 18, 1971

The Honorable Claiborne Pell
Chairman
Subcommittee on Education
Committee on Labor and Public Welfare
United States Senate
Washington, D.C.

Dear Senator Pell:

At the April 22 hearing of the Subcommittee on Education, Senator Javits and you asked me to convene an informal group of college presidents representing a few of the independent, smaller institutions. The Presidents of the Claremont University Center, Reed College, Clark University, Oberlin College, Morehouse College, and Carleton College agreed to serve. In addition, to insure that size was not the controlling factor, the Presidents of New York University and Vanderbilt University were also included.

During recent weeks, this informal task force has been meeting to discuss the implications of Senate Bill 659 which you, as Chairman of the Subcommittee, introduced. At this time, we would like to submit our conclusions.

As Dr. Clark Kerr stated in the forward to the latest publication of the Carnegie Commission on Higher Education; entitled: "Models and Mavericks, A Profile of Private Liberal Arts Colleges":...."The (private) liberal arts colleges continue to hold a place of considerable influence and even leadership. They provide some of the highest-quality under-

graduate institutions. They are the principal source of diversity and innovation. They set standards for concern with the welfare of the individual student. They serve as models for institutional autonomy. ..... for they are by nature more adaptable to the new concerns of so many students." We feel that the Chairman of the Carnegie Commission on Higher Education has captured the essence of the unique contributions of private institutions of higher education, and we are hopeful that the Federal Government, through significant financial support, will encourage these independent colleges and universities to continue their vital assignments.

There are a number of issues in the present higher education authorization bills about which we might comment; however, based on the focus of Congressional attention concerning the institutional aid potential, we will confine our recommendations to this important new concept.

The task force is pleased that you have introduced Senate Bill 659 which incorporates a cost of instruction allowance and that the Administration has endorsed the institutional aid principle. We are convinced that direct grants to colleges and universities, in addition to adequate categorical and project support, constitute an important ingredient to insure development, as well as survival.

We also recognize the merit of your proposal to relate institutional aid to the present level of Federal support to individual students who receive assistance under work-study and equal opportunity grants. Student-related institutional grants, based on the needs of economically disadvantaged students, respond to an important national priority.

In fact, many independent colleges and universities have stretched scarce internal financial resources in order to provide essential support for qualified applicants. This commitment has been independent of public support for the equal opportunity goal. For many independent colleges and universities, a vital contributing factor in the current financial emergency is related to the allocation of significant private funds to support this national objective.

In acknowledging the importance of a student-related basis for awarding institutional grants, we suggest that this approach does not provide a sufficiently broad rationale. In addition to promoting equal opportunity, we feel that the Federal Government has a stake in preserving the dual system of higher education, in insuring that viable institutions have an opportunity to survive, and in guaranteeing that the increasing number of qualified students who are demanding a college education have both independent and public options. (e.g., educational philosophy, fields of study, curricular approach, and institutional size, per se.)

Many independent colleges and universities, which reflect high qualitative standards and a continuing commitment to essential public purposes, require financial aid which is not directly related to present Federal support for the economically disadvantaged student. (We stress again that many independent colleges and universities are applying their own scarce funds to broaden educational opportunities for the economically disadvantaged. These private efforts would not be recognized adequately under a student-related Federal assistance formula). For this reason, our task force has examined a number of proposed formulae which relate institutional grants to an enrollment, or capitation, approach.

Since we feel that the institutional grant principle should be implemented, we are more concerned with the concept than with the criteria selected to determine institutional grant levels. Without citing any particular capitation formula, we propose that the student-related institutional grant mechanism, reflected in S. 659, should be expanded to incorporate an enrollment factor.

We do not recognize any inherent contradiction in suggesting that Federal institutional grants can serve two related national higher education objectives ---- facilitating equal educational opportunity and insuring the requisite financial stability to meet the general student population explosion.

In the past, Federal categorical aid has been of inestimable value to higher education. This form of financial assistance should be continued, (e.g., work

study and equal opportunity grants). At the same time, Federal institutional grants, funded at a realistic level, can provide higher education leadership with the flexibility to apply financial resources to the unique priorities of a given college or university. To sustain and improve quality, while meeting the twin national objectives of equal opportunity and increased enrollment, and, at the same time, strengthening America's traditional and unique system of public and private higher education, Federal institutional aid will be critical.

We hope that this brief report will assist the Senate Subcommittee on Education in formulating the institutional grant proposal. If we may provide any further assistance to the Subcommittee, we would be happy to comply.

Sincerely yours,

Glenn W. Ferguson

APPENDIX II.—Junior College Material

NORTHAMPTON COUNTY AREA COMMUNITY COLLEGE

SERVICE FOR THE SEVENTIES

STUDENTS

...2365 total enrollment in 1971 from 844 in 1967
...828 evening students in 1971 from 441 in 1967
...nearly 10% of full-time students come from families earning less than $6000
...47% of full-time students receive financial assistance
...540 graduates as of June, 1971
...matriculants from age 17 to 70
...434 military veterans with most financing their education with veterans' benefits
...nearly 7% of full-time students receiving Social Security benefits
...student transfers to over 51 different four year colleges and universities
...work-oriented with over 50% of the full-time students holding part-time or full-time jobs
...47.4% of public high school graduates in Northampton County in 1970 now go on to college as compared with 31.5% in 1966 before we opened. The state average was 35.6% and now is 42%.
...graduates, 96% still reside in Pennsylvania with 92% within the Northampton County area

COMMUNITY INVOLVEMENT

...19 Citizens' Advisory Committees of nearly 300 people
...computer time free to sponsoring school districts and area governments and at cost to area non-profit organizations
...Dental Hygiene Clinic at low cost to area residents
...College Foundation of area citizens to support priority programs
...808 adults enrolled in 17 Continuing Education and Community Service programs in 1970-71 financed by fees and private grants
...Center for Lifetime Learning to offer seven courses tailored for our older citizens

PROGRAMS

...15 career/technical degree programs
...6 college parallel transfer programs
...5 certificate programs
...Citizens' Advisory Committees to plan paraprofessional programs to meet the area's needs
...4 degrees available--Associate in Arts, Associate in Science, Associate in Applied Science, and Associate in General Education

IMMEDIATE AND CONTINUING NEEDS

... support funds to finance scholarships and support new programs
...expanded program of community services
...programs and courses to help the disadvantaged
...programs and courses to assist the area's senior citizens
...new programs to meet the community's changing needs
...expanded facilities to handle an expected 30% increase in enrollment

FLEXIBILITY

...open-door admissions to all high school graduates or anyone over 18 to give everyone a chance to succeed
...classes from 8 a.m. to 10 p.m., twelve months a year
...23 student organizations
...free placement service for students and alumni
...innovative teaching which has received national attention
...low tuition to make education available to all
...intercollegiate and intramural athletics offering competition in nine sports financed by student activity fees
...opportunity to transfer from one program to another if career goals change
...Basic Education curriculum to prepare students who lack communications and math skills for college level work
...$186,107 in financial assistance granted to students in 1970-71
...high school equivalency diploma awarded after successful completion of thirty hours of degree credit

FACILITIES

...an emerging 165 acre campus
...a 20 building temporary campus
...a 10 million dollar Phase II permanent campus under construction including a library, cafeteria and auditorium center; two division centers; an engineering and business technologies center and gym
...Dental Hygiene Clinic

RECOGNITION

...College accredited by Middle Atlantic States Association, April, 1970, in shortest time possible
...Dental Provisional Accreditation by Council on Dental Hygiene Education, May, 1971
...Nursing Program State Board of Nurse Examiners full approval, May, 1971
...Nursing Program reasonable assurance of accreditation from National League For Nursing

NCACC begins its fifth year of operation in 1971. Serving a population of 211,901, we are committed to providing quality education to meet the needs of our sponsoring school districts.

Statement of Dr. Lawrence L. Barrell, Assistant to the President
Rockland Community College, State University New York, Suffern,
New York, 10901.

As a higher education administrator, having served in various senior higher education positions, I realize the need for more specific programs directed toward resolving the critical problems involving the future of higher education in the United States. Therefore, I offer this suggestion, as one of several possibilities.

The specific educational prescription is:

That there be established a National Center for Community Colleges and Colleges and Universities. It would deal with programs of human resources and community development.

Such programs include: Allied Health, Education, Child Care, Mental Health, Rehabilitation, Social Service, Recreation, Public Service, Manpower Programs, Urban Renewal, Tranportation, Housing and Environmental Services.

The "Enhancement" and Assistance" to the role of Colleges and Universities especially the Community College as a social and economic rehabilitator would be the prime consideration of this National Center.

The Center would serve as the national coordinating agency for the national community of colleges of human resources and community development or colleges and universities offering divisions or programs in human resources and community development.

This specific program could especially, in the area of community colleges provide, for example, via the proposed National Foundation for Higher Education, leadership in a most urgent area of need and could via program modelling enhance the element of cost-effectiveness to an emerging concept of the Community College.

This is a conscious effort nationally to emphasize via the Center, the junior college, community college, colleges and universities as a social and economic rehabilitator, directly utilizing the application of youthful altruism to national problems. (To assist the young to think beautiful and big!)

It is essential, in any legislation to avoid creating a division between post secondary occupational education designed to lead directly to a job on one hand and education leading to the Baccalaureate on the other. Young people wish to be allowed to try for the Baccalaureate and above. They do not wish a finite career education. They wish to have the opportunity to try and let their own perceptions settle their goals. All jobs must have an education tie which is not by definition finite or terminal.

The Center utilizing the community college, junior college and colleges and universities as a Social and Economic Rehabilitator further would:

(1) Act to open up new roads to the professions; to break with traditional models in education, social service, child care, mental health, allied health services, rehabilitation, environmental services and public service careers including law enforcement.

(2) Act to develop career ladders and lattices, actual jobs which are non-dead-ended, through a continuous dynamic interrelationship of colleges, students, the community and various agencies in cooperative training programs including field instruction, curricular development and experimentation.

(3) Provide the formalizing and articulating of educational and other credential continuums up from entry level training through the doctoral level by interrelating training agencies---vocational schools, Community Colleges, four year Colleges and Universities.

(4) Develop additional avenues and additional financial assistance to the needy young, young adult, and mature person of the nation.

(5) Establishing 'real jobs' within agencies and institutions and develop systematized ties with the Federal and State apparatuses, health services, housing, urban development and transportation, department of labor, federal, state and local civil service, rural health services, juvenile agencies, day care and geriatric centers.

(6) Develop year round programs including: dormitory facilities in rural areas.

(7) Develop, finance, support and cooperate with regional models (Community Colleges in urban, suburban and rural and rural envionments, including Puerto Rico and Pacific Islands).

(8) Develop regional curriculum concentrations instead of attenuated curriculums. The center would examine and devise programs solutions on a national and state basis.

(9) Develop or expand field instruction and cooperative programs, nationally, including semester turn around, weekly turn around, or the split week program of actual field instruction combined with education emphasizing paid practicums; and

(10) Bring into national educational cooperative effort the many agencies throughout the country as well as interrelating the agencies of Urban Government, County Covernment and other municipalities by means of acting as technical advisors, program advisors, and grant developers for the various political agencies of the local and regional area via the proposed Regional and State models.

This is the mechanism which I recommend to develop, monitor and sponsor the Community College, Junior College, Colleges and Universities as a Social and Economic Rehabilitator within the National Foundation for Higher Education: I entitle, The Center for Colleges of Human Resources and Community Development.

In effect, therefore, The Center will:

1. Serve as the national resource for the national commmunity of colleges, human resources and community development or colleges and universities offering division or programs in human resources and community development.

Programs included are: Allied Health, Education, Recreation, Child Care, Mental Health, Social Service, Rehabilitation, Public Service, Manpower Programs, Urban/Rural, Transportation, Housing and Environmental Services.

And will also:

2. Serve as the National Clearing House for expert knowledge for the development of human resources and community development programs.

3. Conduct feasibility studies concerning the development of human resources and community development programs.

4. Serve as technical assistance resource for the design, development and implementation of human resources and community development programs.

5. Provide consultation from Center with site visitation to community colleges and other institutions contemplating the development of human resources and community development programs.

6. Develop curriculum materials suitable for use in human resources and community development programs.

7. Develop instruments for the evaluation of the effectiveness of human resources and community development programs.

8. Design and provide in-service training programs for faculties and staff of institutions and agencies enganged in or contemplating human resources and community development programs.

9. Promote systematic cooperation between colleges, agencies and students and potential students in the formation and development of human resources and community development programs.

10. Sponsor annual workshops for administrators, faculties of colleges and schools of education and social work, agency board members, executives, supervisors, workers, superintendents and principals of schools, teachers representatives and adults and youth from black, poor and deprived groups on the organization, and instrumentation of human resources and community development programs.

In conclusion, I urge the establishment within the Foundation of a National Center for Community Colleges and other Colleges and Universities with Programs of Human Resources and Community Development.

Mr. Chairman, I ask that there also be included as part of my statement my curriculum vitae attesting to my experiences in the area to which I have testified.

MONTCALM
COMMUNITY COLLEGE

SIDNEY, MICH. 48885
517 328-2111

OFFICE OF THE PRESIDENT

January 19, 1971

The Honorable Robert P. Griffin
United States Senate
Washington, D.C.

Dear Bob:

January, 1971 introduces a new era of decision-making in our Nation's Capital. We who struggle daily to keep community colleges financially viable fervently hope that the new year, a newly-seated Congress, and a White House determination to achieve educational reform will result in new visibility and financial soundness for our institutions.

The recent flurry of correspondence between the Congressional Offices, the White House and community college leaders regarding the vetoed Manpower Training Act illustrates a basic, underlying need for our colleges - one which could be remedied by an obvious change in wording. It is no longer adequate to use such generalized terms as "post-secondary institutions" when the meaning is "community colleges and/or technical institutes."

What we are seeking most urgently is an intentional and forthright identification of community colleges as recipients of aid by name, not implication. Here are some reasons why:

1. Enrollments. Over 2 million of the 7 million students in post-secondary education are now attending community colleges. We most certainly are not receiving 2/7 of the total federal or state financial effort for higher education. The limits of funding may make it very difficult to accept the 4 million students predicted by 1975. At present, ½ of all first-time college enrollments are frequently being funded in a manner akin to a "generous afterthought."

2. Responsiveness. The presence of locally-elected trustees and a philosophy of local involvement is making the community college the most responsive institution in educational history. We are very much involved in local industry, business, as well as education at other levels. Through such movements as Community Services, education has achieved the nearest things to "instant response" ever conceived.

3. Know how. Daily, the two-year institutions are repeatedly demonstrating their know how, particularly in the vocational and technical fields.

4. Creativity. In order to respond quickly to needs, open and maintain liason with local citizens and employers, and remedy cultural and educational gaps, community colleges have had to become creative and innovative.

5. Reform. For a great variety of reasons, community colleges have been actively engaged in reform - in teaching methods, in finance, in developing curriculums, and in meeting educational needs and problems.

I sincerely believe that the two-year institutions have arrived at that point in their development (and the history of American Education) when they merit:

1. Separate identification in the United States Educational Structure as a Bureau, Division, etc.

2. Funding by direct designation in the various legislation affecting all of education.

Thank you for your attention, and please accept my hearty best wishes for a productive year in 1971.

Sincerely yours,

Don

Donald D. Fink
President

RHODE ISLAND JUNIOR COLLEGE
199 PROMENADE STREET PROVIDENCE, RHODE ISLAND 02908

March 11, 1971

MAR 13 1971

Senator Claiborne Pell
United States Senate
Committee on Labor and
Public Welfare
Washington, D. C. 20510

Dear Senator Pell:

Thank you for your answer of March 3 to my inquiries concerning S. 659, "Education Amendments of 1971", and specifically Section 161 and 162, which deals with the extension of authorization of appropriations for the Higher Education Facilities Act of 1963.

I am extremely pleased to find that the bill does extend the program for a five-year period. The Higher Education Facilities Act of 1963 and its amendments have been an extremely important factor in the development of Rhode Island Junior College and the permanent facilities to house the exploding enrollment demands being placed upon us. We at Rhode Island Junior College feel that this portion of the bill is vital in the continued development of the Rhode Island Junior College State System.

I would also like to extend my full support of S. 659 and especially Section 142, which pertains to your new Educational Opportunity Grant Program. I feel that your work towards greater financial assistance to students desiring to enter higher education deserves every acclamation and support. As you no doubt are aware, we at Rhode Island Junior College feel that public higher education should provide an opportunity for open door education at the junior college level. Eliminating the financial barrier is a very important part of this educational plan.

Thank you again for the information regarding the proposed higher education legislation and also for your continued support and goodwill toward Rhode Island Junior College.

Respectfully yours,

R. G. Henderson

Robert G. Henderson
Dean of Administration
and Development Officer

May 18, 1971

The Honorable Claibourne Pell, Chairman
Subcommittee on Education
United States Senate
Washington, D.C. 20510

Dear Senator Pell

When I wrote you April 16 to thank you for placing my statement on higher education contained in my letter March 26, 1971 in the printed hearing record, I overlooked one detail.

I would greatly appreciate my statement being preceded as follows:

"Mr. Chairman and Members of the Subcommittee:

On behalf of the American Association of Junior Colleges which I serve as chairman of its Commission on Legislation, I appreciate the opportunity for testimony which your Subcommittee has provided President William F. Flanagan of Rhode Island Junior College, Chancellor Dana Hamel of the Virginia Community College System, and Chief Executive Officer J. Harry Smith of Essex County College on April 1, 1971, with whose testimony I concur and am pleased to be associated.

I have had further the privilege of representing the American Association of Junior Colleges in a panel statement by higher education associations, March 30, 1971, before the Special Subcommittee on Education in the U.S. House of Representatives and which panel statement represents also the American Association of State Colleges and Universities, American Council on Education, Association of American Colleges, Association of American Universities, Association of Urban Universities, National Association of State Universities and Land Grant Colleges and the National Council of Independent Colleges and Universities. This panel statement was also submitted before your subcommittee on April 1, 1971. Mr. Chairman, it is a privilege to join with the above associations in commending you and your committee for the important support which you give to higher education and vocational education.

It is to some particular problems of underwriting effective and relatively costly programs, especially in colleges where students themselves can pay only a small portion of the cost, that I address myself to in the following statement [my letter to you March 26, 1971]. I believe this statement to be significant for many private colleges and especially private junior colleges who are providing effective and relatively costly programs serving primarily needy students."

I will appreciate insertion of the above at the head of my March 26 letter if the record is still available for this insertion.

Very sincerely yours,

William S. Hayes

Committee on Labor and Public Welfare
United States Senate
New Senate Office Building, Room 4228
Washington, D. C.

Dear Senator Pell:

In accordance with your request, we are pleased to submit the attached statement on Title I, Higher Education Act, and the student assistance program in lieu of oral testimony.

You will note that we strongly endorse S. 659's thrust to amend Title I and we have made additional recommendations in keeping with the changes in S. 659.

We also strongly urge you to consider amending the student assistance provisions of S. 659 to include part-time students who have too long been discriminated against.

We are joined in support of this statement by the American Association of Junior Colleges, the Association for University Evening Colleges and the National School Boards Association.

Our staff will be pleased to work with you or your committee staff on any of the recommendations contained in the statement.

Sincerely yours,

Robert J. Pitchell
Executive Director

May 9-12, 1971—Fifty-sixth Annual Conference—Portland, Oregon

Statement of Robert J. Pitchell

Executive Director, National University Extension Association

before the

Subcommittee on Education

Committee on Labor and Public Welfare

United States Senate

Submitted March 31, 1971

Mr. Chairman and Members of the Committee:

This statement is presented on behalf of the following associations who have a vital interest in Title I of the Higher Education Act as it relates to continuing education and community service programs at institutions of higher education.

American Association of Junior Colleges
Association of University Evening Colleges
National School Boards Association
National University Extension Association

Mr. Chairman, we appreciate very much your courtesy in providing the opportunity to present our views to the committee on extension of this legislation.

The members of this committee are well aware of the need to amend Title I of the Higher Education Act. S. 659 is the first major effort to effectuate important changes in that title. We applaud and support that effort. We would also respectfully suggest other changes which we believe will provide additional thrust to the amendments in S. 659.

In a sense, Title I is at a crossroads. Everyone agrees that the program has suffered from malnutrition and, as a result, impact. Three factors have contributed to this situation. First, not enough institutions have been involved. An average of 627 institutions have participated each year since the program began in 1966 (Appendix Table I), or about 25 percent of a total of approximately 2,500 institutions of higher education in the United States. Not all institutions of higher education in the United States have capabilities to carry out Title I programs, but far more have such capabilities than we had previously thought. For example, comprehensive surveys were made of institutions of higher education in Pennsylvania in 1968 and 1969 (reports attached). These surveys revealed that in 1968, 89 out of a total of 133 reporting institutions (67 percent) carried out continuing education programs in the state on their own. In 1970,

this proportion increased to 79 percent or 115 institutions with such capabilities out of 146 existing institutions. Contrast this with the average of 20 Pennsylvania institutions which participated in Title I programs during these years.

Other data support the Pennsylvania experience. Out of a total of 1,071 community colleges in the country, 852 (or 80 percent) report ongoing continuing education and community service capabilities. Only 108 of these participated in Title I projects last year. Similarly, all 69 campuses of the State University of New York have ongoing continuing education programs, but only two received Title I grants in 1970. The same is true of other major state systems and multi-campus universities.

This underutilization of available institutional resources has reduced the ability of Title I to make the impact expected of it by the Congress. Appropriations committees have often denied adequate funding for the program because it was claimed that the program was not making the expected impact, yet its impact was limited by appropriations at a level which resulted in the serious underutilization of available institutional resources. A way out of this impasse must be found.

A second reason why Title I has not provided a durable system for satisfying community service needs arises from the fact that the current system requires the submission of annual project proposals to designated state agencies. No institution has any assurance of continuity from year to year, nor do the divisions within any institution have such assurance. For example, Institution X may get a grant this year, but not next year; or within Institution X, the political science department may receive a grant this year; next year it may be the sociology department or the extension division. As a result, no substantial impact is made upon building continuing

institution-wide competence and commitment to community service activities.

This lack of administrative and program continuity seriously diminishes both the efficiency and effectiveness of institutional impact upon community problems. Compare this system with the highly successful agricultural extension service which has been able to professionalize its staff and provide unbroken service to meet the needs of agriculture and agribusiness for more than 55 years. A major reason for that record is the unbroken annual funding of the same institutions to plan and carry out programs to meet changing needs.

A third factor in the current situation is the lack of a specific mandate in the statute for the states and participating institutions of higher education to attack community problems of high national priority. The program was designed to assist in the solution of community problems as perceived by local community leaders and institutions of higher education. In most cases, the system, as intended, has identified a series of local problems and solutions which were tailored to individual community needs. Under the current system, therefore, there has been little or no chance that all states would identify and attack the same problems of national concern in a coordinated way. As a result, it has also been extremely difficult to compile meaningful data on accomplishments which reflected Congressional concerns about national problems and program priorities.

Mr. Chairman and members of the committee, we believe something can be done to correct these deficiencies. The associations supporting this statement would like to suggest for your consideration several changes in the structure of the program which will not only make it more reportable, but, more importantly, will also better enable it to come to grips with priority state and national problems

which are of most concern to Congress and the people of the states.

1. Expand the Program to Incorporate Unused Institutional Capabilities

The first step must be to involve more institutions of higher education in the program. This will not only bring more resources to bear on community problem-solving, but will also provide broader geographical coverage by local institutions and their own communities. This cannot be done by thinning out current appropriations among two or three times the number of participating institutions. (The average Title I project grant since 1966 has been only $13,815. Appendix Table I) Nor can it be done through the annual project proposal method Participating institutions must have minimum basic support in predictable amounts each year in order to maintain administrative continuity in an efficient manner. We, therefore, propose that each participating institution be eligible to receive a basic grant of $25,000 annually. This should not be an institutional or block grant to be spent as the institution desires. Rather, the basic grant should have the following conditions and requirements:

a. It should be awarded to institutions which have a commitment to continuing education and community service. That commitment should be measured by a 30 percent matching requirement along with a maintenance of effort criterion.

b. It should be awarded to those institutions which agree to participate in state and national priority programs as identified in the state plan (see below). This requirement would be crucial to the success of the proposed Title I program.

In other words, the basic grant program would assure continuity of funding to participating institutions without the inefficiencies and inadequacies of annual project proposals or the uncertainty of the proposal approval process.

At the same time priority programs as determined by the Congress or the state plan would have institutional resources available

for implementation without additional effort.

2. Identification of State and National Priorities

As a second step, in order for the system to work, the State plan should involve two program elements which have not been specifically required heretofore. Each state plan should have to identify at least one state priority which is sufficiently broad in scope to require institutional involvement throughout the state. The state plan should also have to include national priorities which are determined by Congress, or with its approval, the Office of Education, as administering agency.

If, for example, Congress or the Office of Education would determine that drug abuse and environmental education are priority concerns next year for extension and continuing education at institutions of higher education (as they actually did in separate legislation passed last year), each state would have to incorporate drug and environmental programs in its state plan. And if the State of California were to identify community planning for floods and earthquakes as the top state priority, it too would become part of the California state plan. Each of California's participating institutions' $25,000 basic grant would have to be used to carry out its share of state and national priorities in its state plan. Additional funds would be available through the existing process for institutions having greater outreach or with capabilities for special programs other than state and national priorities.

If these changes are adopted, Title I would be better able to attack previously identified and planned program priorities and be able to attack them on statewide and national bases. Its achievement, or lack thereof, would be reportable in more meaningful ways than heretofore.

The authorization for this basic grant program should either be open-ended or in the neighborhood of $50 million. In the first or

second year we estimate that approximately 1,500 institutions would participate at a cost of $37,500,000. If eventually 80 percent of the 2,500 institutions of higher education in the country were to participate, the annual cost of the basic grant program would be $50 million.

3. Special Planning Funds

The crucial role of the State plan in carrying out Title I priority programs leads to our third recommended change: the need for an additional investment in preparing the plans. In the larger states--in which as many as 100 or more institutions may participate--staff time for the creation of a viable state plan is in the order of man/years rather than man/weeks or man/months under the current system. Plans would probably have to be regionalized in New York, California and other large states, and travel costs would be involved for institutional representatives. For these reasons, we propose that $5,000,000 be allocated annually for State planning (without matching requirements)--the funds to be divided in accordance with the current formula for all program funds, i.e., the larger population states would get proportionally larger planning funds. Appendix Table II provides the breakdown per state for planning funds using a distribution formula similar to the one currently used. States that are able to save planning funds should be authorized to use them for program purposes.

4. National Program Priorities

Our fourth recommendation concerns national program priorities. Congress, with its greater sensitivity to grass-roots needs, is in the best position to determine national program priorities. S. 659 takes two approaches to this. First, it authorizes $5,000,000 for programs in standard metropolitan areas; secondly, it authorizes an allocation of ten percent of all appropriations over $9.5 million to USOE for national and regional problems relating to urbanization, technological

and social changes, and environmental pollution. We applaud this vital change, but are concerned about the uncertainty of the appropriation under the ten percent provision in S. 659. We respectfully suggest that categorical programs be explicitly identified and provided with specific funding authorizations.

In addition to the $5 million authorization for standard metropolitan areas in S. 659, we would recommend that $5 million each be authorized for problems relating to technological and social changes and environmental pollution in lieu of the ten percent authorization.

Other problems are also demanding attention and must also be considered as national priority programs for Title I. We are all aware that the awakening of women's concerns for equality has raised as many questions as it has resolved. We all need further exposure to, and analysis of, these problems through community-based educational programs. A $5 million Title I program would enable institutions in every state to begin this dialogue.

From Chief Justice to police officer, from social worker to warden, from university administrator to political leader, the level of consciousness and concern for inmates of correctional institutions has magnified recently. Many institutions of higher education have conducted correspondence and extension courses for inmates in the past, but much remains to be done. A Title I program funded at the $5 million level would not only involve more local institutions but enable states to cover all correctional institutions in a systematic way.

Finally, one of the greatest concerns of continuing education administrators today is the lack of adequate counseling in educational and occupational objectives for part-time students. Funds simply are not available for this assistance at a time when the part-time student is coming into his own, not only in Washington but at state

and local levels. This committee and the Congress could make a major contribution to the part-time student by authorizing $5 million to initiate this program through Title I.

We believe that these categorical funds should not be subject to matching requirements because it would be an unreasonable burden on Title I institutions. Of the sixteen major continuing education programs newly enacted or extended by the last Congress, only one--the Law Enforcement Program--requires a ten percent match. The Arts and Humanities Program has some Federal matching for private contributions and some matching is urged but not required in their public programs. The Corporation for Public Broadcasting also has Federal matching for some private contributions. But all of the other categorical programs have 100 percent Federal funding.

Distribution of categorical funds should be made in accordance with a separate formula for each category. Mr. Chairman, our staffs would be happy to work with your committee staff to provide suggestions on specific formulas if you desire.

5. Special State and Local Needs

In addition to the programs proposed above, we recommend that a $10 million authorization be maintained for special state and local projects with a 30 percent local matching requirement. This authorization would in effect continue the current program. It would allow the strengths of the current program to be realized while the amendments proposed above are adding new strengths.

6. Student Assistance for Part-time Students

As a final recommendation, we refer to the provisions of S. 659 on Student Assistance. At the present time, student assistance programs apply only to students in full-time attendance. It would almost seem to be unnecessary that we bring to the attention of this committee that the part-time student has been discriminated against long

enough. A large number of them are part-time because of the necessity to earn a living for themselves or their families. We need only apply the same eligibility tests to part-time as we do to full-time students to end this unjustified discrimination.

In conclusion, Mr. Chairman, the members of the committee have an opportunity to create new and significant dimensions for continuing education and community service programs in this country. The changes we have recommended for Title I will enable us to involve public and private, large and small institutions in an attack on our common problems--an attack that will be made not in isolated geographic areas or for limited clientele groups but for the people in each community, county and state where need exists.

APPENDIX TABLE I

PROJECT GRANT SIZE 1966-1970

COMMUNITY SERVICE AND CONTINUING EDUCATION PROGRAM

Title I, Higher Education Act of 1965

	FY 1966	FY 1967	FY 1968	FY 1969	FY 1970

*Formula consists of a basic amount to 50 States and D.C. of $ 50,000 and $12,500 to American Samoa, Guam, Puerto Rico and the Virgin Islands. The balance is distributed on the basis of total population, July 1, 1966.

Statement of the Public Members
Of the National Advisory Council on Extension and Continuing Education

We are pleased to submit this statement in support of Title I of the Higher Education Act. We believe Title I is an effective mechanism for combining local initiative with Federal funds. It is based on the sound realization that many of our severest problems must be attacked at the community level. It rests on the belief that remedies cannot come solely from governmental sources or through governmental channels. It has the singular virtue of great flexibility which permits it to serve a wide variety of program purposes. And it brings about a collaboration between educational institutions and communities which strengthens them both in their capacity to understand and to deal with problems of high relevance and acute importance.

The problems which Title I programs are designed to combat are numerous and important. Among them are the various problems which threaten health and safety, violate our value system, or impair the ability of our society to provide all of its members an improved quality of life. Other approaches toward solving the problems of housing, health, unemployment, crime, drugs, or poverty are patently more massive in terms of the level of funds expended or the numbers of persons involved; but they neither detract from nor substitute for the Title I approach. This approach, with its emphasis on building local and State capacity to cope with issues of local, State and national importance, deserves to be continued, strengthened and refined.

The kinds of problems with which Title I is concerned are neither transient nor ephemeral. We can expect that national concern about them will remain high for many years; indeed, most of these problems are not susceptible to a final solution. As a result, we urge this sub-committee to extend Title I for a period of five years. This will eliminate the drag of uncertainty and will also provide an adequate time perspective against which annual State Plans can be conceived and responsive programs developed.

Title I programs should be strengthened and refined in several ways. Basically, this will require higher funding, better administration and expanded opportunities for more institutions to enter into constructive partnership with communities and with statewide and regional efforts. Large-scale projects of high merit are today automatically excluded by the need to distribute widely the limited funds available; many institutions with the desire and the capacity to participate are similarly excluded because of severe limitations on funds. We are confident that the substantial success of programs funded at small fractions of authorized levels can be converted into successes of major significance through retention of an authorization of at least $60,000,000 and full funding.

Concurrently, the structure established in each State to prepare and to administer State Plans under Title I should be strengthened by channelling through it additional program responsibilities authorized by other statutes. Whenever the existing structure is by-passed, duplicated or subordinated to another level of Federal review and control,

it is prevented from developing further strength and attaining its fullest potential. Studies recently begun under our auspices will highlight this problem in ways which can lead to improved planning, more effective administration and better program results. We expect to place the results of these studies before Congress and the Executive Branch early next year.

In addition, improvements in State planning will provide educational institutions with more definitive objectives against which they can commit their resources and concentrate their efforts. Since the ultimate success of Title I programs depends on the ability of these institutions to participate effectively, continued emphasis should be placed on strengthening institutional and inter-institutional capabilities in ways which will make them increasingly effective instruments of social progress. Of particular importance is the need to give institutions which have demonstrated their competence and concern some stable and minimal advance of funds against which they can develop their programs and organize their efforts.

Finally, Title I program efforts can be strengthened by authorizing the Commissioner of Education to expend up to ten percent of the sum appropriated annually on national and regional demonstration projects. Such projects would be operated by individual institutions or consortia and would be designed to test new programs, new concepts and new approaches. The importance of such demonstration projects is directly due to the complexity of the problems Title I addresses. We need to know more about these problems and to find new approaches and new

remedies; experimentation, innovation and analysis are a necessary prerequisite to obtaining a better understanding and a better range of solutions.

While the thrust of our remarks emphasizes the continuing need to strengthen and improve activities under Title I, we wish to reaffirm that these programs have had important impact on a wide variety of human, social and environmental problems. During Fiscal Year 1970, eighty-two projects in twenty-nine States were concerned with environmental and ecological problems. Over $700,000 in State and local funds were matched with $1,073,000 of Title I support to underwrite these projects. In Idaho, Maine, Minnesota, New Hampshire, North Carolina, Vermont and Washington, emphasis was placed on broadly acquainting citizens with environmental problems. In Vermont, an award winning film, A Thousand Hills, was produced with Title I support. Maine's 1970 program concentrated on air pollution as a sequel to previous citizen education efforts on water pollution which culminated in a $50,000,000 statewide bond issue designed to help solve water pollution problems.

Problems of inner-city decay were the concern of thirty-five projects conducted in forty-five Model Cities areas. In addition to cities previously reached by Title I programs, during Fiscal Year 1970 projects were developed in Perth Amboy, Philadelphia, Little Rock, Fargo, Boise, Richmond, Norfolk, Winston-Salem, San Diego, Indianapolis, Kansas City, St. Louis, Dayton and Syracuse. These projects ranged from employment skills training in Fargo, North Dakota to seminars on race relations in Syracuse.

Every State during Fiscal Year 1970 had one or more Title I projects focusing on problems of disadvantaged persons or groups. The scope and range of these projects include business and leadership training for blacks in the District of Columbia, Kansas, Mississippi, and Connecticut; continuing education workshops for American Indians in Arizona, California and Alaska; special courses for Mexican-Americans in California, Cubans in Florida and Puerto Ricans in New York, Illinois and Connecticut. In addition, projects emphasizing remedial education for disadvantaged youths and dropouts in New Mexico and Florida, special extension courses for convicts in Connecticut, South Carolina and West Virginia and training programs for hard-core unemployed in North Dakota and Oklahoma were conducted during 1970.

Finally, programs bearing on health, drug abuse, alcoholism, crime and delinquency were conducted in many States and localities under Title I sponsorship. Georgia's program trained resource people for community drug abuse programs. In Maryland, a consortium of community colleges conducted a statewide symposium on drug abuse. Hawaii sponsored a seminar of lawyers, teachers and youths on juvenile delinquency. Kentucky developed an in-service training project for juvenile delinquency counselors and Ohio held a seminar on juvenile delinquency for 100 elected local government officials.

Twenty States began forty-five projects designed to improve community and personal health standards. Included among these projects

were programs to train medical technicians, nurse's aides and public health administrators. Educational programs for parents of retarded children and research and educational programs on alcoholism were also initiated under Title I.

Few of these programs were of magnitudes which attract national attention. Many of them were designed to change attitudes, build awareness or impart skills in ways which do not readily lend themselves to quantitative assessments of success. In combination, however, they are a vital addition to the range of techniques, processes and activities necessary for repairing damages to our society and for strengthening it to withstand future stresses and patterns of change.

In recognition of your full agenda and busy schedule, we are submitting this written statement in lieu of oral testimony. Should you wish a more detailed statement, clarification or substantiation of our views, we will be pleased to oblige.

APPENDIX IV.—Title II, Higher Education Act

AMERICAN LIBRARY ASSOCIATION

WASHINGTON OFFICE: 110 MARYLAND AVENUE, N. E. WASHINGTON, D. C. 20002

EXECUTIVE OFFICES: 50 EAST HURON ST. CHICAGO, ILL. 60611

TELEPHONE: AREA CODE 202, LINCOLN 7-4440

June 14, 1971

Hon. Claiborne Pell, Chairman
Subcommittee on Education
of the Senate Labor and Public Welfare Committee
Room 4230 New Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

This is in response to the invitation of the Education Subcommittee to the American Library Association to comment on S. 659, the Education Amendments of 1971, sponsored by you and several of the Subcommittee Members. These remarks should serve to supplement the testimony presented before the Subcommittee on July 22, 1970, on HR 3474 and related measures.

In our opinion, S. 659 is an excellent bill and is giving rise to considerable interest and anticipation among those who are concerned with the operation of programs authorized by the Higher Education Act of 1965 and related higher education activities.

First, I shall comment on some of the provisions amending the existing HEA Title II program - College Library Assistance and Library Training and Research - included under Title I-B of S. 659 (pp. 7-12).

We are very much pleased that the bill authorizes a five-year extension of the Title II programs, which will give participants and those administering it an opportunity to plan ahead with some assurance of continuity. However, I believe that it would strengthen the bill if there were an amendment added on p. 8 under subsection (b) to provide for a 10 percent increase in authorization for each of the five years. This would take into account the current annual increase in the cost of education. In addition, I believe it would further improve the legislation to include under section 201 (b) the specific amounts represented by the 10 percent increase. This would be of substantial assistance in obtaining appropriations since the authorized amounts reflect the opinion of the committee which has considered the purpose, need and justification for the program.

Accordingly, I suggest that the following specific amounts be inserted under section 201 (b) on p. 8, line 3, after "1972":

> "$131,300,000 for the fiscal year ending June 30, 1973; $132,613,000 for the fiscal year ending June 30, 1974; $133,939,130 for the fiscal year ending June 30, 1975; and $135,278,521 for the fiscal year ending June 30, 1976."

Speaking more generally, the American Library Association believes that the higher education bills before the Subcommittee (S. 659 and S. 1123) are important to all of the higher education community, not alone to college and university librarians. The library is the very heart of the campus, as has been so often observed, and as we know from our own scholarly endeavors. The library serves the student and his teacher. It preserves and transmits knowledge and also facilitates the acquisition of new knowledge and insight. The role and value of the library is so well understood that for decades it has been one of the primary measures by which

the strength of an institution of higher education has been judged. It is not the sole assurance of high quality, to be sure, yet it is a key index or gauge by which colleges and universities may be ranked.

For this reason, we do not regard the bills before you as categorical or narrow-purpose legislation. They should be considered, instead, as broadly focused measures that will strengthen every department of a college or university. They come as close to being general assistance to higher education as any other bills before this Committee.

Next, I should like to observe that the needs of college and university libraries for continued and expanded assistance are not quantitative needs alone. It is true that most libraries are deficient in the number of books, periodicals, and other materials on their shelves. One reason is the staggering increase in enrollment. A second is the very rapid rate at which publishing has increased. Another is the rising cost of the materials that must be purchased. A fourth, of course, is the number of new institutions whose libraries must start from scratch, as it were. As you know, community or junior colleges are opening their doors at the rate of one per week.

These quantitative needs aside, however, libraries must keep pace with the changes in the college curricula. There is a renewed interest in ecology, for example, which has been met by issuance of new books and journals. There is a new and long-overdue interest in the history and status of black Americans, which has also been met by the publishers. On many campuses, also, there is greater emphasis on independent study, as in the so-called "honors programs", for example. More young people are returning to college, and more adults are being enrolled. These students, too, depend heavily on the library rather than relying on their instructors for "spoon feeding" through the textbook or formal lecture.

We believe that the bills before the Subcommittee reflect the current trends in higher education. The aid they propose could be used to strengthen the college and university libraries to meet the needs they are presently addressing. Although we are making specific suggestions with respect to certain provisions of these bills, we want to make it clear that their sponsors have our gratitude for their understanding of the importance of the library to the future of higher education and for their appreciation of the very pressing needs of the college and university libraries.

We support the continued authorization of the basic, the supplemental, and the special purpose grants for library resources (Title II, Part A, College Library Resources). We propose retention of the matching and maintenance of effort requirements for eligibility for basic grants, with the Commissioner of Education given authority to waive the maintenance of effort requirement in certain cases. Both these requirements impose a discipline on the recipient institutions that we have found to be salutary. They have been responsible for increased institutional support of libraries that has accompanied the Federal assistance, and we would like to see both continued.

We cannot agree with the contention of the Administration that the basic grants of $5,000 each have had only "a marginal effect." A majority of the 2,200 institutions of higher education are smaller institutions, about half of them being community colleges. Many of the two-year institutions spend $1,000 or less for new library materials. A grant of $5,000 that must be fully matched, dollar for dollar, with no diminution of expenditure elsewhere, can obviously do a great deal to strengthen these libraries. This has, in fact, happened. We sent a questionnaire to some 2,200 institutions of higher education, representing colleges and universities of all sizes and types in all of the 50 States. To an overwhelming degree, the replies indicate continued need for grants and a willingness to match them.

The large institutions require supplemental grants, and the special purpose grants are notably useful to the new institutions and others with unusual needs or opportunities for conducting joint projects, such as cooperative processing centers, information exchange networks and others.

We recommend, therefore, that the legislation provide for basic grants of $5,000 with a matching requirement and assurance that these grants will have first priority in the allocation of the appropriation. We strongly support the provision for $20 for supplemental grants in S.659, with the funds allotted among them on the basis of a simple formula, like enrollments. Special purpose grants should also be provided, but these should be limited to a quarter or less of the total appropriation in our view. Maintenance of effort should be required and the Federal funds should be matched in a ratio of one dollar from the recipient for every two from the Federal appropriation. However, we support the amendments in S. 659 which would permit the Commissioner to waive these requirements in unusual circumstances.

Turning now to the assistance for library training and research (Title II, Part B, Training and Research Programs), that would be authorized by the bills before you I should like to call to your attention the unanimous resolution of the Library Education Division Board of Directors at its meeting in Los Angeles on January 18, 1971. By this motion, the librarians most closely concerned with this program "went on record as urging strongly that a program of professional graduate library education and training be continued under the Higher Education Act, Title II-B, with explicit provision for fellowships, scholarships and continuing education, for adequate support for participants and institutions in all three phases of the program, and for greatly increased funding."

This recommendation, too, is based on experience with this program. I should like to submit for the record, with your permission, an analysis and excerpts from the replies we have received in response to a 1971 questionnaire submitted to the colleges and universities to collect information about the impact of these programs. (See attachment.)

Whatever the authorization adopted by the Committee for Title II-B, we think it extremely important that at least half be reserved explicitly for fellowships. Institutes are significant, and short-term training is very useful, but continuation or expansion of the fellowship program is essential. The accredited graduate library schools have no undergraduate training programs. They require a bachelor's degree for entrance. Hence they compete for talent with other graduate schools. The student with a bachelor's degree in science or another discipline may be offered a teaching fellowship during his graduate studies, but the library school cannot provide this opportunity. It must be in a position to offer fellowships, therefore, if the well-qualified student with a sound preparation in the liberal arts or the natural or social sciences is to be recruited for librarianship.

The graduate library schools should not be placed at a disadvantage by their lack of fellowships. Fully trained and experienced librarians are still in demand. One or more is required for each of the new community colleges, if accreditation is to be secured, no matter how many paraprofessional aides available. The fellowships are vital also because they provide the faculties of the library schools themselves, which in turn train the librarians of the future as they prepare the paraprofessionals and provide in-service training and continuing professional education for other librarians.

For the 1971-72 academic year alone, colleges and universities have 232 librarian positions that are budgeted but unfilled. Of the 47 graduate library schools from which we requested information, 37 replied, indicating that in total they could use

funds for 924 candidates for the Master's degree, 140 post-Master's degree students, and 189 Ph.D. candidates - all qualified individuals in need of financial assistance. This is one measure of the extent of the need, yet under the current legislation and appropriations, little more than one-third of the fellowships for which library schools have applied have been funded.

With the foregoing in mind, I call attention to section 221 of S. 659, on page 10, under "Training and Research Programs", where no stipulation is made concerning the type of training programs. This would leave the decision to the Office of Education as the administering agency, as is the case in the existing law. Prior to this year, the funds have been divided between fellowships, institutes, workshops, etc. This is in accordance with the intent of the law, as made clear by the Senate report on the original Higher Education Act of 1965 (S.Rept. 89-673, p. 27):

> Title II, part B, of the present bill will offer not only an expanded program of summer library institutes but also regular sessions and short-term programs, fellowships and traineeships.

This arrangement has been of great benefit to libraries and the public they serve by not only making it possible for many needy students to secure training but also attracting highly capable students to the profession and enabling outstanding students already out in the field to return to school and undertake doctoral studies.

Now, for FY 1972, the Office of Education has decreed, contrary to the intent of the law and without consulting with your Committee or with people in the field, that all money must be devoted to the institute program and that fellowships must be phased out. Moreover, the institutes will not be devoted to continuing education in librarianship as in the past, but rather to programs for individuals reaching down as far as the high school to acquaint them with library work and possibly to train some for clerical positions in libraries.

Library school educators do not believe institutes are a satisfactory vehicle for training for entrance to the profession - their function is chiefly continuing education - and we particularly object to diverting all of the funds into one specific type of training concerned with Federally stated objectives irrespective of the particular needs and capabilities of the institutions themselves, while at the same time doing away with a fine fellowship program which has proved its worth.

Accordingly, I strongly recommend that the language of Section 221 on page 10 of S. 659 be amended to provide that at least half of the 66 2/3 percent earmarked for training be devoted to fellowships for training in library schools.

We recommend that the legislation continue explicit authority for library research. Frankly, our fear is that this important area will receive insufficient consideration if it is to be supported under the general authority of the US Office of Education to support research. We appreciate the desire to reduce the number of statutes and achieve a superficial symmetry, but we submit that it is much more important to make sure that productive programs are not extinguished by administrators who may be less sensitive to their significance than the Senators who authorized and supported them.

For much the same reason, we cannot support the proposed transfer of the library training programs to the Education Professions Development Act, as proposed in S. 1123. Again, our foreboding is that insufficient consideration will be given to the fellowship program. As yet, the EPDA does not deal with any other graduate training program. Its administrators, although capable, have no experience with programs of this kind. We believe there are valid reasons for keeping administration of the

graduate fellowship programs in the Bureau of Libraries and Educational Technology, and we submit that there are no compelling reasons for following a different and untried course with respect to graduate training of librarians.

Finally, we support continuation of Title II, Part C, of the present law, which authorizes the program of the Library of Congress for the acquisition and cataloging, in behalf of college and university libraries, of valuable materials that are published throughout the world. This invaluable work should, of course, be done centrally as it is beyond the competence of any other library in this country. This is a very important program, not only because of the increasing importance of developments in all parts of the world to our people, but also because of the great increase in publishing throughout the world. In many fields, it has been estimated, the size of the collection must be doubled every decade to keep abreast of the literature. Many of our college and university libraries are equalled but unsurpassed by any others. We must take care that their strength is undiminished, and the Library of Congress program is strong assurance that valuable foreign publications will continue to flow to them.

I wish to express my sincere appreciation for your interest and support of libraries and higher education. We are all indebted to you and I appreciate particularly the opportunity to offer my comments on this very important bill. We will assist in its passage in any way we can.

Sincerely yours,

Germaine Krettek

Excerpts of Replies from Library Schools
on the Significance of HEA Title II-B Training Funds

The Library Schools are still having difficulty in locating faculty members who hold the Ph.D degree. I believe this situation will exist for the next 10-15 years, as a number of those who presently have the degree will be retiring. (University of Southern CALIFORNIA)

We continue to receive inquiries about availability of Title II-B Masters' Level Fellowships, particularly from highly qualified persons. Though institutional support for financial assistance has been steadily increased, these funds do not permit the awarding of both tuition fee grants and stipends of such amounts to attract the applicants who are strongly competed for by other professions. We feel the discontinuance of Master's degree fellowships will have an unfortunate effect on maintaining high quality library school student bodies, necessary for the functioning of education process at the most desirable level. Moreover, we feel, the long-range effect on librarianship of loss of this support will be serious, eventually affecting adversely the quality of library service received by the American public.(Emory University,GEORGIA

We will probably lose all of our fulltime Ph.D. fellows, as it is very hard for students to spend three full years in school (after the Bachelor's degree). As a result it will prolong the period of study for candidates who can attend on a part-time basis only and we will be unable to recruit candidates into this field since salaries later never really repay the financial investment. (University of Southern CALIFORNIA)

The doctoral program will be almost completely destroyed. (University of CALIFORNIA, Berkeley)

Serious curtailment of ability to attract some of the best applicants, because of cost of training. Will especially affect the disadvantaged applicants. (Catholic University, DISTRICT OF COLUMBIA)

This is a predominantly Black library school, and 90% of the Black students who apply can only enroll if they can secure substantial financial assistance. The cutback in HEA Title II-B training funds will stop the flow of high calibre Black students in the Atlanta University School of Library Service. Wtih the present economic conditions in the country, the matter of financial aid for Black students is more acute. (Atlanta University, GEORGIA)

It will seriously reduce our ability to attract outstanding students. (University of ILLINOIS)

In light of rising educational costs, the elimination of the Fellowship Program at the masters level will severely limit our ability to recruit graduate students, particularly those from minority groups, on a competitive basis. At the doctoral level. elimination of the Fellowship Program will vastly diminish both the size and quality of the pool of available talent to fill anticipated teaching vacancies in this School. (Simmons College, MASSACHUSETTS)

Attachment

Very few, if any, doctoral students will be able to attend the University on a full-time basis. Instead of being able to complete the degree in three years, they will require from 5 to 10 years. Those with heavy family responsibilities will not be able even to begin doctoral study. At the Master's level, where out-of-state tuition alone amounts to over $2,500 for the year of residence required, dozens of students from low-income families, especially Blacks, will be unable to attend library school. None of the four Blacks currently receiving Title II-B fellowships (2 Master's and 2 Doctoral) would be enrolled without these fellowships. (University of MICHIGAN)

A new doctoral program, authorized for fall, 1970, can probably not be successfully launched. At the master's level, we will lose highly desirable students to other schools of other subject fields. (North TEXAS State University)

It will keep many worthy young women (some widows with children) from attaining a professional degree and thereby be able to support themselves and family. (TEXAS Woman's University)

The institutes will probably attract those who are interested in the immediate problems of the time and who are more vocational in their orientation, whereas the fellowships attract those who are more professional in their planning and who plan to make a permanent commitment to the profession. (University of Southern CALIFORNIA)

The Institute program which may be required to be highly specialized may not serve adequately to prepare librarians who are entering the profession for positions of leadership in broad areas of librarianship. It may be difficult to recruit new people to highly specialized programs before they are certain of the areas of specialization they wish to pursue. The Institutes are valuable to provide various degrees of specialization after librarians are generally prepared for the profession and have had some experience and know better their interests and capabilities. (Atlanta University, GEORGIA)

The Institutes have afforded us an opportunity to update alumni and practicing librarians in our area on new developments. They do not, however, make as fine a contribution to the profession as do the fellowships. We have recruited outstanding people for fellowship awards. In our recruiting we have been conscious of selecting students who show creativity and adaptability. In many cases they had a particular orientation toward working in library situations which make a contribution to the disadvantaged. (Rosary College, ILLINOIS)

While institutes have served a useful purpose in the area of continuing library education and have on occasion served as a recruitment device, they have not served to attract a substantial amount of new talent to the profession. The present Institute program does not seem to be designed to attract talent to the library profession, but rather to provide library careers for individuals who lack the academic qualifications to attend institutions of higher education. A fellowship program designed in whole or in part to recruit qualified members of minority groups of library schools would be much more worthwhile than the Institute program. (University of MICHIGAN)

UNIVERSITY OF WASHINGTON
SEATTLE, WASHINGTON 98105

School of Librarianship

June 18, 1971

The Honorable Claiborne Pell
Chairman, Senate Subcommittee
on Education
United States Senate
Washington, D. C. 20510

Dear Senator Pell:

For several weeks I have been meaning to write to you concerning the bills to extend the Higher Education Act of 1965. I realize we are "down to the wire" on making the final decisions about the revisions of this legislation, and I want to express my enthusiastic support for your bill S. 659 and my opposition to S. 1123 introduced by Senator Prouty.

Libraries in the Northwest as well as students in the School of Librarianship at the University of Washington have benefited from the Higher Education Act, Title II-B in its present format. As a matter of fact, the description of the kind of institutes and fellowships provided by the appropriations over the past 5 years is indicated in the enclosed report which I have forwarded to members of the Washington Congressional delegation. It would be a grave error, in my judgment, to eliminate or transfer Title II-B in the revisions now being considered in the Higher Education Act. The citizens and libraries of our country will benefit more if the training provision is continued as it was in the 1965 legislation.

Let me stress the importance of the financial support for institutes and fellowships. Great good has come from the several institutes provided for in-service librarinns as well as paraprofessionals in the Pacific Northwest from the programs available in our several institutions of higher education. The hundreds of applications for financial assistance generated under the fellowship program have provided many outstanding candidates for the professional positions to be filled. It is particularly important to note that a different kind of student in terms of motivation and subject background has been recruited. The benefits of this kind of librarian in the future use of information cannot be over-stressed.

I would like to speak to the need for doctoral study in librarianship because the problems of recruitment and retention of faculty for library education is still the most severe library problem in the Pacific Northwest. The Ph.D. syndrome which has created a negative reaction in our legislative bodies at the state and national levels must be regarded differently in the profession of librarianship. I have just been examining a recently compiled directory of faculty in the library schools of the United States and Canada. It seemed to me that the average age of the faculty members listed indicates the necessary retirement of most of the

133 Suzzallo Library / Telephone: (206) 543-1794

personnel listed in the directory during the next 10 years. Where will we find replacements? These must come from the doctoral programs under way now in several of the library schools of the United States. The best people will be recruited for doctoral study only with the inducement of fellowship support. May I endorse the language suggested by the American Library Association witnesses before your Committee that the new legislation contain the statement which recommends that 50% of the appropriations for Title II-B (Library Training Program) be allocated to fellowships.

A carbon copy of this letter is being sent to Senator Jackson and Senator Magnuson of my state. I hope that they will communicate their support now and when the legislation is reported to the floor of the Senate for action.

My congratulations and best wishes for your efforts in behalf of education and libraries.

Sincerely yours,

Irving Lieberman

UNIVERSITY OF MARYLAND
COLLEGE PARK 20742

SCHOOL OF LIBRARY AND INFORMATION SERVICES PHONE: (301) 454-3018

June 18, 1971

The Honorable Claiborne Pell
United States Senate
Washington, D.C. 20510

Dear Mr. Pell:

200 years ago one of the great founders of our country stirred the souls of a disenfranchised people by the immortal words "Give me liberty or give me death." 200 years later there remain certain minority groups in this "land of the free," who, if some among them espouse the same uncompromising ultimatum as did Patrick Henry, are branded as "militant" or "revolutionary" with disdainful rejection and suppression.

A few among the profession of Library and Information Services, committed to the improvement of social condition, have attempted to promote what we consider "a third alternative" to violent revolution. This alternative is "information power." Given the various civil rights legislation and court proclamation affecting open housing, fair employment, school integration, etc., there still remains the missing link toward implementation. That is, the access to usable information that will allow the deprived citizen to pursue the full realization of his legislative and/or adjudicated rights.

The most innovative and freshest aporoach to the problem of library services, to the informationally deprived, in the history of the library profession, has emerged during the past year at the University of Maryland, School of Library and Information Services. This Urban Information Specialist Program (Director James Welbourne, Jr., funded by the United States Office of Education for the past fiscal year) is an experimental project that seeks to train "information interpreters" to become advocates in the communities where they practice in identifying problems and applying relevant and usable information to aid in the solution of those communities or individuals' problems. This project has been hailed by renowned innovators in the library profession as a whole and by virtually all noted Blacks among the profession. Unfortunately, for reasons known only to the Bureau of Libraries and Educational Technology, the Office of Education has decided to darken a bright ray of hope (as has been too often the case with minorities self-help programs funded by the Federal Government) by not funding the program for the coming fiscal year, knowing full well that it is still in its embryonic stages.

The preceding representation is further indicative in that the stated priority of the concerned Office of Education was the training of minorities for entry into the profession and the improvement of library services to

minorities and the disadvantaged.

It has come to the attention of the Black Librarian's Caucus of the American Library Association (ALA) that your subcommittee has been asked (by some individuals from the ALA) to write into Title IIB, Higher Education Legislation (S. 659), a guarantee that "at least 50%" of appropriated funds for the fiscal year 1973 be devoted to direct support of fellowships. The Black Librarian's Caucus is in favor of some equitable division of funds. However, we are concerned that the sense of the priorities for fiscal year 1972, as stated in the above paragraph, not be suspended before there is recognizable progress toward alleviation of past neglect (denying or otherwise) of the informationally disadvantaged. The Caucus believes that about 50% of funds for direct fellowship support might be equitable with the retention of existing priorities over all categories of funding.

Thank you for your thoughtful consideration of such vital concern to Blacks and other minorities as well as to the general well-being of our country.

Yours very truly,

Robert L. Wright

BISMARCK JUNIOR COLLEGE
SCHAFER HEIGHTS
BISMARCK, NORTH DAKOTA

OFFICE OF THE LIBRARIAN

May 25, 1971

RECEIVED
JUN 1 1971
Office of
Senator Burdick

The Honorable Quentin Burdick
United States Senate
Washington, DC 20510

Dear Senator Burdick:

I am enclosing a reprint of a news item from the current Publishers' Weekly which summarizes the status of the current federal library grant program. This is a vital program to the libraries of North Dakota.

As you well know, no library in North Dakota meets library standards. Much improvement has been made under the grant program,however. Our library now just meets basic junior college standards fo r the number of volumes for a thousand students, but since our enrollment is higher, we still have not attained this goal.

Because we are improving in this area, however, we have been putting our federal grant money into audio visual materials where we have been sadly deficient.

Since the federal grant for fiscal 1971 is set up so that only a third of the applying institutions will qualify and these are those with a large student body of disadvantaged, I feel sure we will not qualify for next year.

I strongly urge your consideration of the various bills an hope you will support one of the bills which provides for a basic grant so everyone may receive some assistance.

May I also add that I am very disturbed over the possibili of the Kindred Dam being approved. I oppose this. We have so few truly scenic spots in our state. Surely engineers can arrive at a solution which would alleviate the problem of flooding in a more satisfactory manner.

Thank you for your attention to these matters.

Sincerely,

Lois Enger
(Mrs.) Lois Enger
Librarian

NEWS

Congress Debates Higher Education Act

Against the background of a condemnation of the nation's system of higher education by an Administration-backed task force, Congress must act within the next two months on legislation to extend present programs of federal aid to the nation's colleges and universities, including library assistance.

Hearings on bills to extend the Higher Education Act, which is due to expire June 30, have been going on in both the Senate and the House. While the Democrats and Republicans are at loggerheads on the question of general-purpose grants for colleges and universities as well as student aid, there are also some differences in approach to Title II programs for college library resources, library training and research in the different pending measures.

A task force headed by Frank Newman, associate director of university relations at Stanford University and a one-time Republican Congressional candidate in California, is expected to issue a report on the government's future role in aiding higher education by summer. The nine-member panel, in March, said the nation's system of higher education was becoming a hidebound dinosaur and needed drastic reform. The group's critique could provide ammunition to the Administration in opposing Congressional proposals for general-purpose aid to colleges and universities. The call for sweeping reforms should also help the Administration sell the lawmakers on its proposed National Foundation for Higher Education, which would finance reform studies and projects.

The 11th Hour Approaches

Those are some of the fundamental questions Congress must resolve as the eleventh hour approaches for action on higher education legislation. Little progress was made on them last year because of the controversial atmosphere generated by widespread campus unrest.

The House Special Subcommittee on Education chaired by Rep. Edith Green (D., Ore.) is considering three bills which would extend the Higher Education Act and other related acts. They are H.R. 32, co-sponsored by Rep. Green and Chairman Carl D. Perkins of the parent House Education and Labor Committee and two bills introduced by Rep. Albert Quie (R., Minn.) ranking minority member, on behalf of the Nixon Administration (H.R. 5191 and 5192).

H.R. 5191, the Higher Education Opportunity Act, is the major piece of Administration legislation. It proposes a variety of student financial aid plus extension of HEA Titles II, III, and V with amendments. The second Administration bill, H.R. 5192, proposing the National Foundation for Higher Education Act of 1971, is designed according to Rep. Quie, "to encourage excellence, innovation, and reform in post-secondary education."

Under H.R. 5191, Title II would be extended for only two years. Commissioner of Education Sidney Marland explained in a statement prepared for the subcommittee that this is "because we are reviewing the place of categorical programs such as this." (Other major provisions of the bill would be extended for five years.) Last year, the Administration ran into trouble when it wanted to withhold U.S. Office of Education appropriations voted by the Democratic Congress because of the mandatory nature of most USOE spending under the law.

Under Part A, Title II, which provides for college library resources, 50% instead of the present 25% of the appropriations would be authorized for special purpose grants. Testifying on this proposed revision before the Green subcommittee, Edmon Low, professor of library science at the University of Michigan, who played a key role in drafting the 1965 legislation, said that before it had gone into effect, many junior colleges were spending $1000 per year or less for books and audiovisual materials for their libraries. Describing junior colleges as the "real frontier in higher education," Low, spokesman for the American Library Association, said that with the provision of the program for a basic grant of $5000, which was matched by a like amount of local funds and with a requirement of a maintenance of effort, "libraries were permitted to move ahead as never before." There has been, he said, "a real renaissance movement in a large majority of college libraries in this country."

"These grants now assume a greater influence than ever before because of the increasingly difficult financial plight of institutions of higher education in general," he said. "There is hardly an institution anywhere these days, from the smallest college to the largest university, which is not caught between the hammer of rising costs, increased demand for faculty salaries, and need for additional facilities, and the anvil of stationary or decreasing revenues from State sources or from private donors. In such a squeeze, library materials are often the first casualties. Some mistakenly believe buying books can be postponed for a year with the hope of better provisions in the future, which often never come. The possibility of Federal aid to be matched by local support provides the library with the necessary persuasion, and the president and the administration with good reason to continue a viable library program."

What Is "Marginal Effect"?

In the light of evidence from college and university libraries all over the country, Mr. Low said, "it is hard to understand the Administration's claim that the basic grants have had only 'marginal effect.'"

Regulations issued by USOE in connection with applications for fiscal year 1971 grants indicate that basic grants will not be awarded unless the applicant institution also applies and qualifies for a supplemental grant. Under this scheme, it is estimated that the number of colleges receiving grants would be reduced from 2200 in the last fiscal year (1970) to 750 in the current fiscal year (1971). "We consider this new policy to be a distinct violation of the intent of the Congressional enactment, which provides that three-fourths of the appropriation for Title II-A be used for basic grants," Mr. Low continued. He urged that.

Basic grants of $5000 be provided with requirement for matching with a like amount of local support, and that such grants have first priority on money appropriated under this title.

Supplemental grants be provided for larger libraries with an allotment of money by some simple mathematical formula such as enrollment.

Money for special purpose grants be provided, not to exceed 25% of the total appropriated. Maintenance of effort and one-third matching be required.

The Green-Perkins bill would extend

HEA for five years with increased funding levels for Title II. It would provide increased authorizations for Part A of $100,000,000 for the fiscal year 1972 beginning July 1, $110,000,000 for fiscal year 1973; $120,000,000 for fiscal year 1974; $135,000,000 for fiscal year 1975; and $150,000,000 for fiscal year 1976.

That bill, H.R. 13 would also permit the Commissioner of Education to waive the maintenance-of-effort requirement under Sec. 202, in cases where an institution may have made an unusual one-time expenditure for library purposes (other than construction) during the two-year period preceding application for a grant. This provision would relieve new colleges from the burden of having to maintain high expenditures required for establishment of a new library.

Also, H.R. 32 would amend Sec. 204 so that nonacademic libraries "which provide library and information service to institutions of higher education on a formal, cooperative basis" could receive special purpose grants under the library resources program.

In the Senate, Sen. Claiborne Pell (D., R.I.), chairman of the Senate Education Subcommittee, has been holding hearings on S.659, a bill he introduced with nine co-sponsors. HEA Title II would be extended through fiscal 1976 with a combined authorization of $130,000,000 each year for Parts A and B, which provide for library training. Seventy per cent would be reserved for grants for library resources under Part A, and 30% of the funds would go for training and research under Part B. Under Part A, not more than 25% of the funds are to be reserved for special purpose grants, which is the present limitation. A waiver of the maintenance of effort requirement would also be allowed if the commissioner makes a determination of "special and unusual circumstances" such as a one-time large expenditure by a new institution.

The ALA, speaking through Mr. Low, has also endorsed support and continuation of Part C of Title II of the existing law in a somewhat different form. It authorizes the program of the Library of Congress for acquisition and cataloging in behalf of college and research libraries, of valuable library materials currently published throughout the world.

USOE has funded this program since fiscal 1965. But in December, 1970, the Office of Management and Budget directed that the program be removed from the Health Education and Welfare budget and be funded directly as part of the Library of Congress appropriations. The Librarian of Congress subsequently included this item in the library's appropriations requests for fiscal year 1972. Mr. Low supported this action.

USOE Names New Right-to-Read Boss

The U.S. Office of Education has nominated Dr. Ruth Love Holloway, chief of the compensatory education program in the California State Department of Education since 1965, as the new director of USOE's right-to-read program. Dr. Holloway will succeed Louis G. Mendez, Jr., who has been named an assistant to Charles Saunders, USOE deputy commissioner for external affairs.

Announcing Dr. Holloway's nomination, U.S. Commissioner of Education Sidney P. Marland, Jr., said that the right-to-read program "has a top priority in the Office of Education." He called it a program to "ensure that 99% of the people of the United States 16 years of age and 90% of those over 16 will be functionally literate by the start of the next decade."

New Company Formed, Specializes in Reprints

The formation of a library book-jobbing service, Reprint Distribution Service, Inc., has been announced by Robert G. Davis, president. The new service will specialize and deal exclusively in reprints of all publishers, domestic and foreign.

The management staff of RDS will include Mr. Davis as president, John Elder as vice-president of sales, and Kenneth A. Davidson as operations manager. Mr. Davis and Mr. Elder were formerly with Irish University Press as vice-president of sales and operations and Midwest sales manager respectively. Mr. Davidson was formerly associated with Garrett Press as customer service manager.

Reprint Distribution Service, according to Mr. Davis, will emphasize service in reporting on reprint availability and sales incentives in the form of postage-free shipments on all purchases and a cash discount policy.

Book Travelers Hold Annual Field Day

The Brotherhood of Book Travelers will hold its 87th annual field day on May 14, 1971, at the Battleground Country Club in Freehold, New Jersey. Tickets are $20 for members or guests and reservations are being handled by Michael Romano, Viking Press.

At the winter meeting of the Book Travelers, the following officers were installed: President, William P. Adams, Cowles; vice-president, Thomas Consolino, Houghton Mifflin; treasurer, Michael R. Romano, Viking Press; secretary, Mac S. Alber

APPENDIX V.—Title III, National Defense Education Act

Robert Heinich, President
Howard Hitchens, Jr., Executive Director

Association for Educational Communications & Technology
Formerly DAVI
1201 Sixteenth Street, N.W., Washington, D.C.20036 • (202) 833-4180

April 30, 1971

Senator Clairborne Pell, Chairman
Senate Education Subcommittee
New Senate Office Building
Washington, D.C. 20510

Dear Senator Pell:

Enclosed please find fifty copies of the testimony presented by Dr. Howard Hitchens, the Executive Director of the Association for Educational Communications and Technology.

I sincerely appreciate this opportunity to submit a written statement for the record in favor of S. 659, the Amendments to the Higher Education and Vocational Education Acts, and related Acts. If you need more copies or information, please do not hesitate to call me at 833-4180.

I look forward to hearing the subcommittee's recommendations on this bill.

Sincerely,

Elise Anne Lewis

TESTIMONY PRESENTED BY

DR. HOWARD HITCHENS, JR.
EXECUTIVE DIRECTOR
ASSOCIATION FOR
EDUCATIONAL COMMUNICATIONS AND TECHNOLOGY

to the
Senate Subcommittee on Education
on S. 659
"A Bill to amend the Higher Education Act
of 1965, the Vocational Education Act of 1963,
and related Acts, and for other purposes."

My name is Howard Hitchens, and I am the Executive Director of the Association for Educational Communications and Technology (AECT), an affiliate of the National Education Association.

I hold my B.A. from the University of Delaware, an M.A. from Teachers College, Columbia University, and a Ph.D in Instructional Communications from Syracuse University. During more than 26 years of service in the United States Air Force, I served as an instructor at Mather Air Force Base, California for four years and at the Air Force Academy in 1957 as chief of the Film and Television Division of Audiovisual Services, and later as Associate Professor and Director of its media program from 1959 until 1969 (except for two years spent at Syracuse University completing my doctorate.) I am a member of Phi Delta Kappa, American Educational Research Association, National Society for Programmed Instruction, National Society for Study of Communications, National Association of Educational Broadcasters, and have served on the Board of Directors of AECT (formerly Department of Audio Visual Instruction) before assuming my present position.

AECT is the professional association of some 10,000 educators whose aim is to improve the educational environment available to learners at all levels through the application of audio-visual devices and techniques to instruction.

We are, above all, educators; but educators who have specialized. Just as Members of the Congress must specialize in particular subject areas, so has the education community come into an era of specialization. Of particular concern to AECT, and I might add, to all of education because no program exists in a vacuum, are three education programs authorized by the Congress: Title III of the National Defense Education Act; Title VI of the Higher Education Act; and parts C and D of the Education Professions Development Act. I note with particular dismay that the Administration, in its recommendations before this Committee, has failed to call for the extension of authorization of either NDEA III or HEA VI.

The thrust and purpose of Tit'e III of the National Defense Education Act is set forth most clearly in a report entitled "NDEA Title III, Fiscal Years 1959-67, A Management View," published in May, 1969 by the U.S. Department of Health, Education and Welfare:

> Initially, Title III had two primary objectives: (1) to support the purchase of laboratory and other special equipment and materials as well as the cost of minor remodeling of facilities to accommodate equipment for elementary and secondary school instruction in science, mathematics, and modern foreign language; and (2) to strengthen State leadership capacity for improving instruction in these areas. The Federal Government contributed up to 50 percent of the costs of State education agency staff improvement and the costs of equipment, materials and minor remodeling; State and local education agencies provided the remaining funds.
>
> Through NDEA Title III support for equipment and minor remodeling, Congress intended the improvement of instruction to take place in a number of ways, including:
>
> (1) Increasing enrollments in sciences, mathematics, modern foreign language;
>
> (2) Increasing the number of advanced courses in the three subjects;
>
> (3) Increasing the number of laboratory sciences and modern foreign language;

(4) Changing the methods of teaching foreign language to improve skill in speaking;

(5) Emphasizing laboratory practice in teaching science.

Through Title III support, Congress encouraged states to hire additional specialists in the three subject areas so that state agencies would be able to provide leadership to local education agencies for:

(1) Developing up-to-date curriculums

(2) Planning appropriate course sequences for elementary grades through high school

(3) Assisting in the selection of high-quality equipment and materials and enabling local education agencies to finance their purchases

(4) Providing demonstrations of new equipment and materials

(5) Conducting workshops and conferences to train teachers and other school personnel in new methodology, equipment, and materials

(6) Preparing publications and other materials to keep teachers and other school personnel informed of developments in the fields of sciences, mathematics, and foreign language.

Congress authorized the use of Title III to support SEA, State Education Agency, staff development because in 1958, the status of supervisory services was found to be inadequate, as noted in the Report of the House Committee on Education and Labor:

> Although adequate state leadership and supervisory services are widely recognized as vital to the development, maintenance, and improvement of sound classroom instruction, only two states have full-time supervisors in mathematics and science; and only two states have supervisors in foreign language instruction.

Soon after Title III was put into operation, the improvement of equipment, materials, and state supervisory services began to make a constructive impact on instruction in the three subjects. Educators and Members of Congress then recognized that other subjects in the curriculum needed similar attention. Reading and writing skills, for example, were not believed to be meeting acceptable standards. Similarly, Congress was concerned that students were insufficiently familiar with historical events, with the American form of government, and with characteristics of the earth. As a result, in 1964 Congress amended the NDEA and extended support -- under Title III (P.L. 88-665) -- to five additional subjects: history, civics, geography, English, and reading. In 1965, as a part of the Higher Education Act (P.L. 89-329), Congress extended assistance to instruction in economics. A tenth subject, industrial arts, was added as a part of the Higher Education Amendments of 1966 (P.L. 89-752). Under the Higher Education Amendments of 1968 (P.L. 90-575), Title III of NDEA was amended further. It now authorized

> assistance for "the special educational needs of educationally deprived children in school attendance areas having a high concentration of children from low-income families." By providing support for the seven additional subjects and for the special needs of educationally deprived children, Congress showed that its intent is broader than was indicated in NDEA as originally enacted--although funds to implement this 1968 amendment have not been appropriated.

Under the Elementary and Secondary Education Amendments of 1970 (P.L. 91-230), Title III of NDEA was consolidated with Section 12 of the National Foundation for the Arts and Humanities Act of 1965 by removing all reference to subject matter specialities in NDEA III and replacing them with the phrase "academic subjects", and by repealing Section 12 of the National Foundation for the Arts and Humanities Act of 1965 and increasing the authorization for NDEA III by $500,000. Title III of NDEA has been successful and is important, as a Department of Health, Education and Welfare report itself indicates. It states:

> "...certain conclusions can be drawn from the annual financial, statistical, and narrative reports submitted by the states to the U.S. Office of Education. A review of these reports indicates that Title III has been a significant factor in bringing about changes leading to improvement in instruction in each of the academic subjects covered by the program."

The HEW report prepared by the Bureau of Elementary and Secondary Education of the U.S. Office of Education at the request of the Senate Committee on Labor and Public Welfare was based in part on a study conducted under contract with Southern Illinois University (SIU) in eighteen selected states based on the then

nine HEW regions:

Region I	Connecticut and Massachusetts
Region II	New Jersey and New York
Region III	Kentucky and North Carolina
Region IV	Florida and Georgia
Region V	Illinois and Wisconsin
Region VI	Kansas and Nebraska
Region VII	Arkansas and Texas
Region VIII	Colorado and Idaho
Region IX	California and Oregon

Although the investigators were critical of projects at the local education agency level for a general lack of evaluation (and I would concur that this is one of the most important things that we in the educational field need to do to improve the quality of education generally) their overall reaction was most favorable. The concluding comments excerpted from the report so indicate:

> It was the almost unanimous opinion of all coordinators and supervisors interviewed that NDEA Title III was a significant factor in the improvement of instruction in their states. Although all states did not make 100% utilization of matching funds for personnel services, those funds used had resulted in curricular improvements and, in many cases, enrollment increases in the critical subject fields. Enrollment increases in the critical subject fields, other than those due to the population increase, were indicated by almost all supervisors. Unfortunately, figures to document these increases were not generally

available. From the figures available, modern foreign languages showed the greatest increases, due in part to its initial low enrollments in 1958. The increases recorded in this area are truly phenomenal, exceeding 5 J% in one state. In the critical subject field where substantial enrollments already existed, the provision of new equipment and materials both for the previous and expanded number of students, due to the population increases, were considered to have made a major contribution to the improvement of instruction through content and teaching methodology change.

From the foregoing materials, it is apparent that NDEA Title III management in the eighteen selected states can be improved in several areas, most notably in evaluation and the use of advisory committees. However, the evidence of effective NDEA Title III management in the administration of funds, organization of staff, services provided, curricular improvements and enrollment increases far outweigh the deficiencies noted. Hence, the SIU survey team concludes that NDEA Title III is well managed in the eighteen selected states studied. It is hoped this report will provide an impetus for future improvement in state NDEA Title III management functions.

One of the very important side effects of NDEA Title III is its effectiveness n attracting competent and qualified teachers to a school. Such was the xperience of the Franklin County Schools in Franklin County, Mississippi. In 962, a science project was approved for the district which covered equipment

facilities for two high school attendance centers in the county. This project is noteworthy because of its impact on the quality of the science program and the consequent effect on the improvement of the science program in the junior high and elementary schools.

Before the installation of the new equipment, the laboratory in one of the schools consisted of a small, dingy room with one table for experimentation; the science classroom contained little, if anything, related to the teaching of modern scientific concepts. Today, each of the high schools contains a fully-equipped biology-general science room and a well-designed chemistry-physics room. Improved facilities have provided the incentive to good teachers to remain in the district, to restructure the science curriculum, and to participate in the selection of additional materials. More students are now enrolled in science courses and many more have selected scientific fields of endeavor upon entering college.

The influence of the science department has reached far beyond the four walls of the laboratory. A former classroom in the junior high of the district has been remodeled to provide student work stations and storage space; an increased interest in science in the elementary division resulted in a series of conferences for elementary teachers conducted by a consultant and the State Supervisor of Science; and the regional workshops and conferences held in the new facilities have stimulated similar efforts in other districts of the area.

In Des Moines, Iowa, a mathematics laboratory for low achievers was the focus of NDEA Title III funds. Here, a project to improve the general mathematics program for low achievers, particularly at the 9th grade level, was initiated in the 1964-65 school year. The acquisition of mathematics laboratory equipment such as desk calculators, geometric models, and mathematical games gave the teachers the tools with which to attack the problems of interest and aptitude. In-service activities conducted by supervisory personnel from the Iowa Department of Public Instruction encouraged the development of supplementary materials and techniques

designed to provide a more concrete approach to the study of mathematical abstractions. School authorities indicated that the project has been instrumental in dropout prevention, and that the skills developed in the use of equipment have assisted students in securing jobs.

In Duval County, Florida, the days when the basic equipment for the teaching of social studies consisted of an outdated textbook and a wall map are gone forever. Today, tapes of speeches by influential leaders are analyzed in civics classes; classes in world cultures are enriched by recordings of music and dances from all parts of the world; geographic concepts take on new meaning as the students work with models, graphs, and charts; the overhead projector has become a "must" in each classroom; films, filmstrips, and slides, many made by the students themselves, offer a variety of approaches to the development of critical thinking in a social context. Participation by teachers in in-service workshops and institutes and the availability of new, multi-media educational materials and equipment have led to the adoption of an "inquiry process" approach to the teaching of social studies which is stimulating students in these schools to think independently and creatively about man and society, both past and present.

The point is, that although I am a media specialist, representing an organization of specialists, what we're really talking about is helping children to learn and helping teachers to teach; we are teachers--educators--first, and specialists second. And although Title III provides a focus--a concentration of federal dollars on a particular approach to education--it is not a frill, or a layer of frosting on top of the educational cake; rather, the instruction successes of Title III have become interwoven as part of the entire scheme of education. So, although Title III can be easily categorized and distinguished as one element of instruction, that ease of identification should not provide the Administration with a license to eliminate it.

No one advocates that the Federal programs should be oriented primarily to the purchase of equipment and materials. But the facts are that teachers and students need modern educational tools, and that the supply of these tools is far from adequate.

It should be noted that less than 20 percent of the schools in the United States meet the recommended standards for school media and library programs. These standards, established in 1969 by educators on the basis of study experience, provide for the minimum of equipment and materials which are needed to do an acceptable job--and less than a fifth of the schools in the United States, and virtually no schools in the less affluent areas, have the equipment, materials, or budgets to meet these standards.

The media-centered school is generally regarded as one of the most important new developments in education. This is a school whose instructional programs center around an educational media center, providing modern materials and equipment to all teachers and students. These centers provide an opportunity for individualized study and are oriented to both print and non-print media. In this environment, the student is able to follow individually prescribed courses at his own pace, to meet his own goals.

If I say to you, members of the Committee, or to almost anyone, "Picture a classroom", in your mind's eye will be a room with seats and a teacher's desk and behind the teacher's desk is a blackboard. People of our generation do not think of a classroom without thinking of a blackboard. Today---in 1971---the kinds of equipment and materials which NDEA Title III can help to provide have become just as much an assumption and integral part of the classroom, and of the learning environment as is the blackboard.

I'm talking about harnessing technology to be used as an extension of the teacher, not viewed as a replacement of him. Viewed in this context, we're talking about continuing a federal investment which makes a teacher's time all

the more valuable, because not only does it supplement the teacher's ability to communicate, but it helps to free the teacher's time for the all important, in fact most important, responsibility of working with students individually.

In order to determine the states' needs for funds under Title III of NDEA, Robert Shute, Acting Chief of the Bureau of National Defense Education Act Administration of the California State Department of Education last October queried the NDEA Title III Directors in the several states as to how much money their states would require under NDEA Title for fiscal years 1972, 1973, and 1974.

Some of the comments received by Dr. Shute, in addition to the dollar amounts provided by the state officials, give a further indication of the effectiveness and importance of this program. Some excerpts follow:

Indiana:

"Receiving about 1/2 of what is needed."

Alabama:

"In 1960, I came to the Alabama State Department of Education as an NDEA Title III science consultant and in December, 1967 became State Coordinator of NDEA Title III. It seems to me that NDEA Title III began having difficulty concerning funding and its mere existence during the Fall of 1967. Since that time, I have noticed with concern that the U.S. Office of Education does not seem to be active in its support of NDEA Title III. I have heard that USOE is concerned primarily with "people" programs and would like to dump programs such as ours that deal with equipment and materials. I have also been aware of the fact that during my three years of service as State Coordinator there has been no gathering of NDEA Title III personnel regionally or nationally to my knowledge. The recent Belmont Report reflects the lack of interest and concern in NDEA Title III as compared with the engulfing ESEA programs. It seems that those who developed this reporting instrument were not even aware of the purpose and regulations of NDEA Title III. All of this tends to

indicate a possible lack of concern on the part of the U.S. Office of Education for the continuation of NDEA Title III..."

Arizona:

"NDEA Title III funds have been of great value to our district. We have been encouraged to maintain a good local effort through the NDEA Title III program. Some of the Federal Programs are considered by some people as "free" money from Washington. NDEA Title III requires initiative on the local level and for this reason, I feel it has been very effective in upgrading the quality of education in our school district."

North Dakota:

"Thank you for taking the initiative in assembling data on the needs under Title III, NDEA. With the annual effort to dry up this program, which is the favorite of school administrators, school boards, and teachers, it is not as easy to predict participation as it was when there was rather firm assurance that funds would be available. At that time it was a firm part of the budget with ample provision for matching funds.

From the attached report you can see that except for the first year before the districts had the programs organized, the annual reimbursements have varied from $188,000 to $453,000. The average has been about $300,000. With the uncertainty of funding last year, we had applications for reimbursements totaling $222,962 even though the districts were aware of the reduction in our allocation from $329,954 to $146,026..."

Utah:

"We have been extremely frustrated in the past few years by the indefensible delays in appropriating the funds for NDEA Title III. These delays have created serious problems for local educational agencies in making best use of the funds. Often the items on which delivery could be obtained and which required the least paper work have not been acquired because time between allot-

ment and expiration was too short. Threatened phasing out of the program and threatened or real curtailment of funds have made long range planning and realistic budgeting very difficult.

We are hopeful that the program can be continued and stabilized for a few years. It has been one of the most productive and popular of the federal programs in our state. There are still vast unmet needs.

It is not realistic to assume that equipment needs have been met or that local agencies are financially able to cover with only their own resources. While gains have been made each year, there still remain serious inadequacies for several reasons:

1. Increased enrollments have necessitated equipping new buildings and expanding facilities in existing buildings.
2. Improved program offerings demand modern resources and technology.
3. Increased use of audiovisual equipment by teachers and students makes it necessary to have many items available in classrooms at all times rather than on a loan basis as was the case early in the program.
4. Technological improvements in equipment have made available more and better quality items. (Example: Contrast cassette recorders with the heavy cumbersome tape devices of the early sixties.)
5. New emphasis on individualized instruction requires availability of greater variety and quantity of equipment and materials.
6. Many equipment and materials items purchased in the early years of the program are wearing or are worn out and must be replaced.
7. Because of the accounting and record keeping required, there has

been some tendency to acquire larger or more costly items. There remain serious inadequacies in smaller items for individual pupil use."

Copies of the forms and correspondence are on file at the AECT office and will be made available on request of the committee.

Title VI provides Federal matching funds for the purchase of laboratory and audiovisual equipment, closed-circuit television equipment, and classroom materials for the improvement of instruction at the undergraduate level. Since 1965, more than $58 million in Federal matching money has been provided nationally for the purchase of new teaching equipment and up-to-date materials for colleges and universities under Title VI-A of the Higher Education Act of 1965. The need for assistance is even greater now than then, as we try to provide a meaningful experience for students in higher education institutions. These students arrive on our campuses more sophisticated in their experiences with communications media than ever before. They are, and have been, barraged with films, television and radio. Most of these students are the products of schools which have improved their resources and their quality of instruction through NDEA Title III funds. Colleges and universities are caught in an instructional maelstrom not unrelated to the causes of student unrest. The institutions are trying to function as a forum for the open exchange of an awesome amount of knowledge and at the same time lack the financial resources necessary for handling the numbers and kinds of educational needs.

Title VI has been an extremely effective program over the years, and has been capably administered at both the state and federal levels. The boom in higher education has spread materials and equipment so thin that the quality of teaching has suffered in many instances. And it is interesting to note that this "quality gap" is taking place at a time when significant progress is being made in developing new educational techniques.

Although high schools and elementary schools have been benefiting from new

teaching methods, modern facilities and up-to-date materials since 1958, when the National Defense Education Act was passed, many of today's college freshmen are forced to work in antiquated laboratories and with out-dated equipment. Teachers are being trained for jobs in modernized high schools through the use of instructional techniques that were obsolete in 1958, much less in 1971.

Whereas the disparity between resources available at high schools and colleges may not be noticeable in some of the affluent state universities and heavily endowed private colleges, it is readily apparent in most of the smaller, widely scattered institutions that simply do not have the funds to purchase materials, equip laboratories or provide teachers with the essential tools they need to keep up with expanded subject matter. It is these institutions--the liberal arts colleges, the teachers' colleges, and the community colleges--that are training over 60% of the nation's beginning teachers. The Senate Committee on Labor and Public Welfare noted that "the question of quality and excellence in college teaching techniques and the adequacy of college materials and equipment to permit such quality instruction have been left unattended." It was pointed out that this problem was particularly serious in small schools with inadequate budgets, and with this in mind, Title VI was aimed at those institutions which were trying to improve themselves, "...but which, because lack of financial resources, are unable to participate in the educational revolution which is being brought about through the use of new techniques for learning."

This situation is still true today. There has been a continued advance in the effectiveness of materials and equipment designed for modern teaching, and the financial strain on small colleges, if they are to have these materials in their classrooms, is as great, if not greater, than it was in 1965.

The fact that this program is a popular one is clearly shown by figures prepared by the Office of Education covering fiscal year 1969. In this period, a total of 1,545 project applications were received by State commissions.

Of these, 927 were funded, and the dollar amounts of the grants alloted--$14,478,085--was only about one-tenth of one percent less than the appropriation. On the average, over the past three years. matching funds have equalled about 50 percent of grants.

It is also significant that 618 applications could not be funded because of lack of money. The dollar amount by which grant requests exceeded individual state allotments totaled $12,381,117, or 80 percent of the amount actually executed.

Section 603(2) of the current Act provides that state plans should contain "objective"standards and methods on the basis of which the relative priorities of eligible projects are to be determined. It is our understanding that it was the intent of Congress in including the word "objective" to rule out as much as possible the opportunities for awarding Title VI grants to proposals which were not meritorious as judged on the basis of criteria upon which reasonable men could agree. It turns out, however, that the Office of General Counsel at the Department of Health, Education and Welfare has construed the word "objective " to limit state commissions to ranking projects almost wholly on the basis of statistical factors, -- things like per pupil expenditure, number of feet of film, and so on. While such standards are valuable indices to the quality of a program when taken as part of an evaluative system, they are not a substitute for a total evaluative system. In short, there is now a need for more flexibility in determining priorities for eligible projects. Such flexibility should include uniform professional judgements concerning the applicant's explanation of the educational problem to be met and how the purchase of the proposed equipment and materials would contribute to the solution of the stated problem.

Although removal of the word "objective" from Section 603(2) might accomplish the ends indicated in our testimony, there is always the possibility that the removal of such a word would be interpreted as an invitation to replace "professional" objective judgement with totally subjective judgement, a result which neither we nor

(we suspect) the Congress would wish. Therefore, to make the awarding of priorities more flexible and realistic and, in fact, more responsive to the true intent of Congress (as indicated in Section 601 (a)): "The purpose of this part is to improve the quality of classroom instruction in selected subject areas in institutions of higher education." We would urge the Committee to include in its report accompanying the extension of Title VI of the Higher Education Act, language which clearly indicates that it is not the intent of Congress that the word "objective" be construed in an entirely mechanistic fashion. Should the Committee agree with this suggestion in principle, the staff of AECT would be most happy to work with the staff of the Subcommittee and, if it is deemed proper, representatives of the Office of Education, to work out language which will better serve to accomplish the underlying aims of Title VI.

Another recommendation has to do with the present limitation in Section 603(2)(a) which provides that state plans set forth "standards and methods for determining the relative priorities of eligible projects for the acquisition of laboratory and other special equipment...suitable for use in providing education...at the undergraduate level in institutions of higher education...". The word of limitation is "undergraduate".

The growing trend in higher education today is to open many courses to both graduate and undergraduate students. The result is a mix in the class composition, both at the graduate and the undergraduate level. Strict enforcement of the "undergraduate" limitation results in an arbitrary and capricious limitation on the improvement of the instructional process at the university. To the degree that the university conforms with the requirement of the law it must restrict the eligibility requirements of various courses receiving assistance under Title VI.

More importantly, I would suggest that the quality of a graduate program of instruction has far reaching effects on the quality of the undergraduate program of instruction. A good portion of the undergraduate teaching load is borne by graduate

assistants and teaching fellows. If the graduate assistants and teaching fellows are given the benefit of instruction through the application of technology to education, it seems inevitable that this will result in a greater interest on their part in using the same sophisticated and improved methods in conducting their own classes before the undergraduates.

Too often we limit our thinking about the application of media to education to teacher education itself. But there is (and should be more) wide use of media in the field of continuing education - in courses such as pharmacy, business administration, nursing, and ocean sciences.

I therefore suggest that the law be brought into conformance with the reality of higher education today and that the phrase "at the undergraduate level" be deleted from Section 603 (2)(a).

As we have the very worthy programs which make it possible for our schools and colleges to make their media centers and facilities more conducive to student learning, so also we must have the trained personnel who can direct these centers and provide the staff, both professional and para-professional, which are essential to the functioning of these centers. All the equipment in the world will not make an effective curriculum without the people element. For example, the acquisition of complex equipment for the performance of a heart transplant will not make it possible to transplant the heart, unless the trained surgeon is a part of this system.

In fact, the system of people, processes and devices working together to achieve the learning goals is what we really mean by the term "instructional technology." Therefore, the training of personnel under parts C and D of the Education Professions Development Act form the necessary "other side of the coin," the"Federal coin", if you will.

Training for educational media personnel has been carried on since Title XI of the National Defense Education Act first authorized institutes in the summer of 1965. In the six years during which these institutes have been conducted,

approximately 7,500 media specialists have been retrained for our elementary and secondary schools, at a cost of slightly over ten million dollars. These institutes have been continued since 1968 under the provisions of the Education Professions Development Act.

In addition, fellowships were authorized by the Higher Education Act of 1965 for both experienced and inexperienced teachers to continue their studies in specified fields, one of which was educational media. The Education Professions Development Act later supplanted the Higher Education Act and authorized similar programs.

An exhaustive evaluation of these EPDA programs has been underway during the past two years; and its results have been made available. Nearly all reports from participants in these programs to date, including the program directors, indicate clearly that they are having a constructive impact on the schools across the country.

In our technological society, it is essential that we provide the qualified media specialists to work with teacher aides, teachers, principals, superintendents and other school personnel in the process of curriculum development, implementation, and evaluation. Media specialists who are able to perform these functions are not readily available to the school system that wishes to build an innovative educational program. In addition, the media field changes so rapidly that there is a tremendous need for trained personnel to update their skills periodically in order to keep abreast of the new techniques and new materials. Thus, the increase both in new instructional equipment and in new methods developed through research must go hand-in-glove with increased opportunities for personnel who administer the media centers in our schools and train the teachers in our universities.

In the face of the President's call for a National Institute of Education, and the inclusion in the bill before the Committee of a plan to create such an institution as well as the recommendations of the Report of the President's Commission on Instructional Technology, we are reaching a critical point in our thinking about instructional technology. It is essential that we maintain the kinds of support which will

insure the continued improvement of the existing educational system (kindergarten through college) while at the same time the emerging educational technology, which demands a systematic approach to the educational process is allowed to prosper.

Finally, I would quote from the Study of Instructional Technology entitled "To Improve Learning", as follows:

> "The problems confronting American schools and colleges demand a cohesive, concerted attack. It is not the parts of the educational system that must be improved; it is the system in its totality. The key remedy is not computer-assisted instruction or team-teaching or non-graded classes or educational parks or instructional television; it is innovations like these wisely integrated with each other and with teachers and the more traditional resources of education that may make the difference."

HUBERT WHEELER
COMMISSIONER

NDEA, TITLE III
(NATIONAL DEFENSE EDUCATION)

STATE DEPARTMENT OF EDUCATION
DIVISION OF PUBLIC SCHOOLS
P. O. BOX 480
JEFFERSON BUILDING
JEFFERSON CITY, MISSOURI 65101

June 10, 1971

The Honorable Claiborne Pell
United States Senate
Washington, D. C. 20510

Dear Senator Pell:

Thank you very much for your recent letter concerning NDEA, Title III in which you indicated same is now under study by the Subcommittee on Education. It was also extremely thoughtful of you to enclose a copy of S. 659, Education Amendments of 1971.

It is noted that this Bill was introduced by you and you were joined by Senators Williams, Randolph, Kennedy, Nelson, Mondale, Eagleton, Cranston, Hughes, and Stevenson, in this proposed legislation. You may well know that it is exceedingly pleasing to me that there is an inclusion for a five-year extension of NDEA, Title III.

Let me say again how deeply appreciative I am for your consistent and continuing outstanding leadership and support for NDEA, Title III and other meaningful educational programs.

Cordially yours,

Carleton B. Fulbright
State Director of NDEA, Title III

CBF:df

STATEMENT PRESENTED BY

JAMES PARTON, PRESIDENT,
ENCYCLOPAEDIA BRITANNICA
EDUCATIONAL CORPORATION,
ON BEHALF OF THE
ENCYCLOPAEDIA BRITANNICA COMPANIES

to the
Senate Committee on Labor and Public Welfare
Subcommittee on Education
on S. 659
"A Bill to amend the
Higher Education Act of 1965,
the Vocational Educational Act
of 1963, and related Acts,
and for other purposes."

May 18, 1971

My name is James Parton. I am President of the Encyclopaedia Britannica Educational Corporation. I am also a member of the Board of Directors of Encyclopaedia Britannica, Inc., the founder and former president of American Heritage Publishing Co., a member of the Board of Trustees of Loomis Institute, Mills College, the Harvard Alumni Bulletin, and the Institute of International Education. I am particularly grateful for the opportunity to comment on behalf of Encyclopaedia Britannica Educational Corporation, and the other Encyclopaedia Britannica companies; my theme is the vital need for continued effective Federal support for education in several highly specific legislative areas.

Encyclopaedia Britannica Educational Corporation has the specific purpose of producing innovative educational materials such as films, slides, and other audio-visual instructional aids in the "soft-ware" category which are being increasingly used in schools both here and abroad. Other of the Encyclopaedia Britannica companies produce basic reference works, including encyclopaedias, dictionaries and atlases, which appear in virtually every school and library and are found in the homes of millions of families.

However, I do not speak today as one with a narrow concern with a market for proprietary products, but as an American concerned with continuation of the highest quality education in this Country and the Federal Government's role in supporting education of that level for every citizen.

Congress has recognized that the impact of poor education transcends state boundaries, and with enlightened leadership it has supported local educational programs on a broad scale. There can be no doubt that this support has had a major beneficial impact on American education, and that it has produced the invaluable national asset of a better educated and trained population.

The question of continuation of some of the most important educational programs is now before Congress for review. One of them, Title III of the National Defense Education Act, is of particular concern to us. The basic authorization for NDEA Title III expires June 30, 1971 (P.L. 90-575; 20 U.S.C. § 441). It is, however, extended through Fiscal 1972 under the general provisions of the Education Amendments of 1969 (P.L. 91-230). Without favorable Congressional action, therefore, this immensely

valuable program would terminate on June 30, 1972. Encyclopaedia Britannica Educational Corporation believes that this would be a severe set-back for American education.

Title III of the National Defense Education Act has been an integral part of national educational policy since it was first enacted with broad bipartisan support during the Eisenhower administration. This program was instituted to meet critical educational needs, and its aims have been consistently endorsed and expanded by Congress in the intervening years. Today, NDEA Title III support is available for all academic subjects.

We believe that the need for continuation of the NDEA Title III program is as great today as was the need that brought that program into existence originally. We are entering an era when it will be increasingly necessary to utilize innovative educational tools to teach our children effectively. Laboratories, filmstrips, instructional packages, records, graphs, and maps have become a necessary part of a modern classroom. Students today are visually oriented. They use audio-visual materials in the same manner that the older generation used books, paper and pencils.

Education is in the midst of a technological revolution with all sorts of innovative methods that permit teachers to abandon the traditional lecture method and direct their instruction to each individual student so as to make the learning process more interesting and effective. We are convinced that this new technology will result in further significant improvement of education in this Country. Moreover, we believe that since many local school systems have now acquired the basic hardware systems, a much greater proportion of the NDEA Title III dollar will be spent for audio-visual materials which have a direct educational impact upon the child. This is of particular significance since, as the President's Commission on School Finance recently indicated in its Progress Report (submitted to the President under date of March 22, 1971), there exists a particular need for "... subsidising the development of excellent instructional software across the entire curriculum, across all the grade levels from kindergarten through twelfth grade." (p. 48).

We are in constant contact with school systems throughout the country. Local expenditures on education

have risen dramatically during the last decade. Overall, local taxpayers are making real sacrifices to provide superior education in their districts. However, at the same time, the operating costs of the local school have increased dramatically. Inflation has hit the local school system particularly hard. Capital expenditures, operating costs, salary expense and a host of other cost items necessary merely to keep the schools open are taking a larger and larger proportionate share of the local educational dollar. Thus, there continues to be a critical need for programs such as Title III which improve the quality and quantity of materials upon which a child depends for his education after he has been provided the physical facilities and personnel necessary to teach.

Local schools have eagerly matched available federal funds under NDEA Title III even though they are hard pressed financially to do so. In fact, local NDEA coordinators indicated during a recent survey that they could use wisely twice as much money as was appropriated for FY 1971. We might add that the requirement of matching funds is another virtue of this program that is of major value. As the Subcommittee knows, school systems have a

very strong incentive to spend federal funds wisely if they are required to match them.

In addition to being one of the most valuable educational programs, we believe the Members of the Subcommittee will be pleased to know that NDEA Title III is one of the most popular programs at the local level. Typical comments commend the program because its philosophy is sound, and its administration is concise and uncomplicated resulting in the ability to make local choices without red tape and bureaucratic restriction. Thus, the greatest tangible results are produced for each dollar committed while losing little in "overhead" costs. The fact that the NDEA program benefits every child has strong appeal in most communities. Indeed, the only criticisms of the NDEA Title III program we hear frequently are that there is not enough money to be matched at the local level and that the funding level and continuation of the program are at times uncertain. This indicates a remarkable record for an excellent concept.

Many educators who feel they might not be able to come to Washington to express their views about the need for the NDEA Title III program have recorded some of their

comments. Examples of these first-hand reactions of key educators who have actually implemented this program through the years are attached to this statement. More are available should the Subcommittee desire them. We would also be pleased, if the Subcommittee or individual Members so desire, to offer any of these presentations for viewing and listening.

Under NDEA Title III, thousands of local schools have acquired much needed educational equipment and materials over the past decade. Today, many biology teachers have an extensive array of teaching tools rather than an old textbook. Foreign language instruction has been improved because of the use of language laboratories and programmed lessons on film and tape. Audio-visual materials teach children to read much more quickly than before.

Specific examples will serve to illustrate this point. One of Encyclopaedia Britannica Educational Corporation's most recent educational films is "Heartbeat of a Volcano". This film was produced in collaboration with Howard Powers, Ph.D., and Staff Members, U. S. Geological Survey, Hawaii Volcanoes Observatory, Hawaii.

It is a unique film, made at substantial personal danger to the photographer, showing a close-up view of the recent second greatest eruption of Mt. Kilauea in Hawaii. It is a dramatic filming of one of the earth's most powerful land building processes showing the two-week buildup and awesome nine-hour eruption of that volcano. It has rare views of "degassing" and the cessation of the eruption. Volcanic action is one of the most important geological forces in the history of the world and an important focus of scientific interest. Imagine the impact and the heightened student interest that result from the gripping, close-up view of elemental forces in action. Imagine how much more motivated the student is to do further reading and research ... to extend his learning on his own.

Similarly, our company offers an outstanding film series on "Our Living Bill of Rights" and "American Government and Society", both of which are intended to illustrate graphically and immediately the workings of American society and aid the local schools in instilling the respect for our democratic institutions which should always be an important part of American education. We have prepared films in the area of science ranging from

a demonstration of the basic physical laws embodied in Archimedes' principle to such exotic subjects as the polarization of light.

Again, imagine how much more effective the teaching of science is when the text and lecture is supplemented by a visual demonstration of the scientific principles involved. There is also another great benefit from these supplementary educational materials. Student interest lags at virtually every level from time to time. This is recognized as a fundamental problem in education. Being lectured to about volcanos may not be very exciting at times, but the excitement of hearing, seeing and being inside an erupting volcano will bring interest to a high level again.

Other companies produce similar educational materials of the highest quality. These are all necessary ingredients of a superior educational program. They are available principally as a result of the enlightened support of Congress for programs such as Title III, NDEA.

In summary, because of the proven success of NDEA Title III and the continued need for funds for local schools to purchase innovative materials, we urge Congress to extend the authorization for this important program.

ATTACHMENT I

STATEMENT BY JOHN CHEEK,
AUDIOVISUAL COORDINATOR,
EDUCATION SERVICE CENTER,
RUSSELLVILLE, ARKANSAS

Improved instruction only comes with improved methods on the part of the teacher. The key to the success of any educational program is the willingness and ability of the classroom teacher to excite, provoke, and encourage individual students into wanting to learn.

NDEA matching money has provided much needed financial help in bringing about improved changes in the teaching learning process. Teachers now have access to new and exciting materials and equipment that were never before available. Because of this, teachers today are able to break from the traditional lecture method and expand into new and more interesting ways of presenting content material.

Materials and equipment, that once were only for the teachers, are now made available for individual students. Students today make use of materials and equipment very similar to the way we made use of pencil, paper, and books.

The new materials and equipment have provided the opportunity for students to operate individually and to

learn at their own rate. This has provided the teacher with time to work with other students on individual learning difficulties.

New and additional equipment has provided the teacher with tools for evaluation of her own teaching effectiveness. By means of audio or videotape playback the teacher can apply some type of self-appraisal to her teaching techniques.

NDEA has also provided money for in-service institutes. As a result of these institutes, many teachers have learned new techniques and new methods that they have been able to adapt to their teaching situation.

NDEA funds have improved instruction because teachers and students alike have materials and equipment to make the learning process easier and more exciting.

ATTACHMENT II

STATEMENT BY GEROLD ROGERS,
DIRECTOR OF MEDIA AND TECHNOLOGY,
EDUCATIONAL SERVICE CENTER,
REGION XVII, LUBBOCK, TEXAS

Funds from Title II ESEA and Title III NDEA have been a tremendous boon to the public schools in the 20-county Education Service Center Region XVII area around Lubbock, Texas.

As an example, the library collections in all of the schools in the Lubbock Independent School District have been expanded and upgraded through the use of Title II of ESEA funds. In addition to the materials purchased through the regular budget, 46,490 books and 13,193 pieces of audiovisual materials such as filmstrip records, pictures, transparencies, and so forth, have been added to their library collections.

The addition of these materials has helped to provide a greater variety of reference materials, more materials to meet individual needs of students and enrichment materials for the curriculum.

Under Title III, a demonstration learning center was established that met the American Library Standards for libraries. This center, called "Project Impact",

aroused the interest of principals, teachers, parents, and students for similar library resources. Also, the added materials and services that could be offered necessitated abolishing classroom collections and centralizing and cataloging the materials. This brought about a need for expanded facilities in their elementary schools.

In the last six years, 33 elementary libraries have been expanded and refurnished. The interest created by the Title III "Project Impact" promoted the summer reading program. Elementary libraries in Lubbock are open an average of two days per week for eight weeks to provide recreational reading for the students. During the 1970 summer program, 82,701 books were circulated from 29 libraries.

Without funds from Title II ESEA and Title III NDEA, this tremendous amount of growth and progress could not have been possible.

WILSON RILES
Superintendent of Public Instruction
and Director of Education

STATE OF CALIFORNIA
DEPARTMENT OF EDUCATION
STATE EDUCATION BUILDING, 721 CAPITOL MALL, SACRAMENTO 95814

March 9, 1971

The Honorable Claiborne Pell, Chairman
Subcommittee on Education
United States Senate
Rm. 4230, New State Office Building
Washington, D. C. 20510

Dear Mr. Pell:

I appreciate your request of a written statement from me regarding the National Defense Education Act program.

This statement reviews the importance of the continuance of NDEA in California and includes a survey of all State Educational Agencies. The survey indicates NDEA needs for the next three fiscal years.

Sincerely yours,

Robert S. Shute

Robert S. Shute, Acting Chief
Bureau of National Defense
Education Act Administration
(916) 445-6311

RSS:fw
Encl.

:TATEMENT OF MR. ROBERT S. SHUTE, ACTING CHIEF
BUREAU OF NATIONAL DEFENSE
EDUCATION ACT ADMINISTRATION

My name is Robert Shute, and I am Acting Chief, ;ureau of National Defense Education Act Administration .n the California State Department of Education.

I hold my B.A. from Whittier College and my laster of Science in Education from the University ›f Southern California. My post Master's work has ›een at the University of California at Berkeley.

I have been a teacher, an administrator, : consultant in education, an administrative .ducation consultant, Assistant Chief, Bureau ›f National Defense Education Act Administration, ınd Acting Bureau Chief. I have been in the :alifornia State Department of Education for .en years and with the NDEA program administratively :ince 1965.

Forecasters of educational trends for the 1970's, project and predict that educators will embrace and promote concepts such as staff involvement in educational planning, multi-media useage, compensatory education, instructional technology, instructional materials centers or individualized instruction. Recent California research on innovation in California points out that most change in the 1969-70 school year was to enhance individualized instruction. It would seem shortsighted to curtail funds which directly support those things that are going to be given high priority by educators in this decade. To truly meet the needs of individual children and youth, a teacher needs materials and equipment and adequate space. NDEA can provide funds to encourage individualized instruction in the classroom. In addition to the classroom, Instructional Materials Centers have grown and increased in number to assist in meeting the needs of each learner.

Innovation, then, is clearly a facet of modern educational practice. Programs such as NDEA provide the funds to local educational agencies which are needed to support program ideas presented by staff members.

NDEA supports the national priority of reading. However, it also gives encouragement to those who teach the social sciences, industrial arts, foreign languages and other subjects which do not rank in importance with reading.

The application of technology to teaching has been clearly established as an aid to learning. Learning theorists provide the research which would indicate a child uses all of his senses in learning a task. Equipment and material to provide video, audio, and/or manipulative experiences are then basic to good educational programs. NDEA can provide to all children the resources for these kinds of experiences.

Compensatory education is certainly a high national priority; the need for which has been established more clearly than for any educational need previously identified. Milestone research such as the Coleman Report has been extensively

supported in the literature. Compensatory education programs such as Title I limit the amount of materials and equipment which can be purchased. California Title I projects are limited to ten percent of the project funds for capital outlay equipment. Because of this, NDEA, through multiple funding of individual projects, provides support of the badly needed compensatory education program.

A case can also be built for NDEA in the supplement of programs for the advantaged as well as the disadvantaged. An area which is not eligible for compensatory education funding has few, if any, programs which can be used to support their ailing budgets and in turn their students.

The Parkway Junior High School in the South San Francisco Unified School District has recently completed a science laboratory with a grant from NDEA. The teacher was so enthusiastic and appreciative of this new facility that weekends, without monetary remuneration, were spent in painting it. The dollar stretch is almost incredible. Long-range plans call for a second laboratory in this school when other district priorities are satisfied. Unless NDEA is continued, another teacher in the Parkway Science Department is without hope.

From the Fountain Valley School District:

"The project provided an additional:

26 quality films

17 magnetic tapes

40 filmstrips

74 records

"The students in the Fountain Valley School District demonstrated a steady and rather dramatic improvement in the median reading scores, which the NDEA project influenced by providing the children with increased and broadened experiences in reading through additional multi-media materials."

A mathematics specialist, Mr. Arthur Freier in the Los Angeles City Unified School District, writes regarding the national priority of mathematics:

"The new technology has much to offer the classroom teacher who is striving to teach more mathematics and to do a more effective job than ever before. A piece of chalk and a textbook are no longer adequate tools. Computers and computing devices of every kind, for example, are no longer "something for the future" but vital resources needed in the classroom today. Another significant development is the use of the laboratory approach in the teaching of mathematics, a technique that is gaining popularity throughout the nation. The trend has been accelerated through the efforts of the Madison Project in Syracuse and the Nuffield Project in England. Therefore, laboratory equipment and manipulative aids, with which pupils may develop mathematical concepts from the physical world, are much in demand.

"These and other resources will continue to be needed for a decade or more. For this reason, funds with which to purchase equipment and materials for classrooms at all levels -- from Kindergarten to Grade 12 -- are of crucial importance."

In the Citrus Junior College technical equipment cannot be purchased solely with local resources and NDEA makes their own dollars do double duty.

"Since the inception of the NDEA program for aiding education, the Citrus Junior College District has applied for and received funds for the purchase of much needed equipment. We are one of the poorest junior college districts in California - in terms of assessed valuation behind each student - and thus do not have our own resource for purchasing technical equipment.

"Our enrollment has more than doubled since 1961. Through a local bond issue and State and Federal grants, we have constructed twelve new buildings. Much of the equipment in these buildings is new and of current vintage only because of the fact that NDEA funds made our own dollars do double duty."

Many more local districts have expressed their need for NDEA assistance and their concern for the continuance of this program. A few of these statements follow.

The Benicia Unified School District:

"Small school districts, and those less relatively wealthy, have based many programs on Federal assistance. In fact, much that we have today which is good and innovative and creative in education has come with Federal assistance and encouragement. It is almost tragic that such programs, after getting under way and developed to the point of being highly valuable to children will have to be diminished or curtailed completely because of uncertain financing."

San Lorenzo Unified School District:

"Specifically, N.D.E.A. funds made it possible for this impoverished district to purchase enough basic science items so that teacher demonstrations could be drastically reduced, and students could work individually and in small groups with increased independence.

"Because of the necessity to maintain items purchased with N.D.E.A. help, for the first time we allocated funds for science to each school on an Average Daily Attendance basis. Also, these funds permitted purchase of required items not on the approved N.D.E.A. list, such as glassware and expendable items. These funds are now a regular part of our budget.

"Increased support of the science program has been dramatically stimulating to teachers. All N.D.E.A. applications resulted from cooperative research by teachers, administrators and the Coordinator of Science. The mere act of searching through catalogues by teachers has been important to them."

Stockton Unified School District:

"We have depended very heavily on NDEA for installation of language laboratories, upgrading science equipment, and for expansion of audio-visual equipment in other subject areas. NDEA is our sole source of

assistance for schools such as Stagg, Webster, Stockton, and some twenty-eight elementary schools that are not included in the ESEA program. We have also used NDEA assistance in our other secondary schools since ESEA funds have been applied primarily to those classes in which economically disadvantaged students have been enrolled."

Richmond Unified School District:

"The entire curriculum is stronger today as a result of NDEA. Many of the teaching techniques perfected under its provisions have been applied in other subject fields."

Few, if any programs, encourage the type of productive planning to the extent made possible by NDEA. In the process there is a partnership arrangement whereby Federal, State and local resources are mobilized and focused on helping students learn.

Teachers, curriculum specialists and administrators plan together. They assess needs, establish goals, determine objectives, provide inservice programs and evaluate the outcomes of programs that affect the learning experiences of children and youth. According to a study conducted in California the effort is sizeable. In an analysis of reading and English projects, the value of teacher and administrator time devoted to planning and inservice training was twenty times the federal funds reimbursed for equipment and material. A small federal resource generates a larger contribution of State and local funds and mobilizes human resources. This is over and above the effort of local districts to overmatch federal funds for equipment, material and minor remodeling. A survey of 19 counties in California reveals that 54% of the local districts in fiscal year 1970 more than matched the Federal funds allocated to them.

From appropriation to reimbursement to application is stimulation, planning, change, improvement of instruction and increase in learning. The entire process contributes to helping children and youth learn.

State and local agencies appreciate the simplicity of the program administration; the uncomplicated application procedures; the clear guidelines and regulations; the fast and fair method of allocating funds to the benefit of the learner; the wise selection and prudent purchasing, since the local educational agency is furnishing half the cost.

Effectively applying technology to the nation's schools calls for adequate provision for the planning and training phases. Under present regulations funds for supervisory and related services for NDEA are to be granted under Title V of ESEA. However, in actual practice, due to competition for these funds, few resources are available to do the important job of training teachers concerning new curricula, the new technology and the resultant new teaching practices.

The Bureau of National Defense Education Act Administration has recently surveyed all State Educational Agencies regarding anticipated funding needs for the next three fiscal years. States report a need of $98,352,000 in fiscal year 1972, $110,101,000 in fiscal year 1973, and $120,464,000 in fiscal year 1974.

Interesting and pertinent comments from the State agencies administering NDEA were:

> Based on previous experience, it is my opinion that the $79 million funding level is adequate, but the condition may exist where due to lack of funding at this level for the past two years school systems may have a backlog of needed equipment and materials.
>
> We have been encouraged to maintain a good local effort through the NDEA Title III program. Some of the Federal Programs are considered by some people as "free" money from Washington. NDEA III requires initiative on the local level and for this reason, I feel it has been very effective in upgrading the quality of education.
>
> We heartily recommend its continuance.
>
> Receiving about one-half of what is needed.
>
> The program is the favorite of school administrators, school boards, and teachers.
>
> In most instances, the district expenditures have exceeded the reimbursements received.

The reports of the Science and Mathematics Consultant, the Critical Subjects Consultant, the Director of Elementary and Secondary Education, and others who have occasion to visit schools indicate that there is still a pronounced need for equipment at the elementary level to provide meaningful learning experiences.

During the past year, and this summer, a series of workshops and institutes have been held in several areas of the State. A common complaint, on the part of the teacher participating in these course updating experiences, is that little has been done in most school districts to provide equipment and materials which will make possible the individualized learning experiences essential to good understanding.

Increased enrollments have necessitated equipping new buildings and expanding facilities in existing buildings.

Improved program offerings demand modern resources and technology.

Increased use of audiovisual equipment by teachers and students makes it necessary to have many items available in classrooms at all times rather than on a loan basis as was the case early in the program.

Technological improvements in equipment have made available more and better quality items. (Example: Contrast casette recorders with the heavy cumbersome tape devices of the early sixties.)

New emphasis on individualized instruction requires availability of greater variety and quantity of equipment and materials.

Many equipment and materials items purchased in the early years of the program are wearing or are worn out and must be replaced.

Because of the accounting and record keeping required, there has been some tendency to acquire larger or more costly items. There remain serious inadequacies in smaller items for individual pupil use.

The responsible leaders of LEAs in California deeply appreciate the efforts of the U. S. Congress to provide them with the tools that have permitted them to move forward and provide the best educational programs possible. We hear it often said that NDEA is the finest and best administered federal program available. It makes sense to me that this fine program should continue. I hope you agree.

STATE	FISCAL YEARS 1972	1973	1974
Alabama	2,030,000	2,030,000	2,030,000

Black Colleges Produce Over 70 Percent of the Black College Graduates in America

STATEMENT UPDATING PREVIOUS TESTIMONY BEFORE
THE SENATE SUBCOMMITTEE ON EDUCATION OF THE
COMMITTEE ON LABOR AND PUBLIC WELFARE

May 18, 1971

Herman R. Branson, President
Lincoln University
Lincoln University, Pennsylvania

President of the National Association For Equal Opportunity In Higher Education
on behalf of
The National Association For Equal Opportunity In Higher Education

The National Association for Equal Opportunity in Higher Education has as members 85 of the 111 predominantly Negro colleges of America. These 111 colleges enroll some 180,000 students.

We are most grateful, Mr. Chairman, for the opportunity to place before your Committee some of the expressed concerns of our institutions. In doing that we have arranged our material in the following manner:

1. The financial plight of Black students now in college.

2. The insuring that Federal aid will go to the colleges enrolling students from low income families.

3. Insuring that students from low income families can continue into graduate and professional schools.

4. Suggestions for an institutional aid formula to aid the colleges enrolling large numbers of students from low income families.

5. Urging the Committee to pay expressed attention to bhe unique difficulties of our schools.

6. The presentation of seven appendices going into more detail on some of the questions raised.

Items will be treated in the order as listed.

1. The financial plight of Black students now in college.

Attached is a table on American Council on Education study of 1969,190 college freshmen in the fall of 1969 in 270 institutions. These data show that approximately 20% of the Negro students were from families with incomes less than $4,000 per year. The only group near that were the students in nonsectarian coeducational colleges where the number was 6.2% - Thus percentage-wise there were three times as many poor blacks as the poorest of any other group. It is clear that there are many other unfortunate conclusions in this table.

The next table, Table 2 shows that poor families truly sacrifice to aid that child in college. This table was given to members of the Committee on Student Economics of the College Entrance Examination Board earlier this month. Please see that a family with income less than $5,000 per year scrapped together on the average $811 to aid that child in college. Even more amazing is the fact that a family with four children with one in college found $750 in family aid for that child.

Thus we are lead inexorably to our next item.

2. We urge that whatever legislation is adopted that the guidelines be so drawn that the funds will go to the neediest students. To insure this we urge that the Commissioner give priority to those schools enrolling the largest percentage of students from low income families in the allocation of student aid funds. The guidelines above all should be clear and unequivocal.

But even with sufficient aid, we must concern ourselves with the type of aid. The National Association For Equal Opportunity In Higher Education was so concerned about the danger of loans that it adopted a policy statement bearing on this. This is our Item 3.

3. A Statement Approved by the National Association for Equal Opportunity In Higher Education at its Chicago meeting on March 16, 1971.

The National Association for Equal Opportunity In Higher Education recognizes the need to have specific legislation with concrete provisions to insure that equality of opportunity in higher education is extended to young people from low income

families. We, therefore, understand and endorse in general the legislation proposed by the President. And most especially, we applaud the principal enunciated in his education message to Congress. We believe, however, that a modification, albeit slight, in the specific provisions would be of inestimable aid in meeting certain recognized national needs.

The modification we propose rests upon two factors. In the first instance, the graduates of the predominantly Black colleges and universities have expected life-time incomes considerably less than graduates of other schools. Hence, we must be cautious about how much debt we impose upon them in their gaining the skills needed by our society. Our graduates enter those critical professions requiring college training but paying the lowest salaries. Yet, the most important factor is the second, which is the recognized need to encourage significantly more of these young people to continue in professional and graduate school after graduation from college. We believe that the greatest single deterrent to more of these young people continuing would be a large debt looming over them incurred in college. An able young person with six to ten thousand dollars of debt acquired in college will not be enthusiastic about acquiring an additional ten to twenty thousand dollars worth of debt for law school or medical school. And a young couple with eight to twenty thousand dollars' worth of collective debt will be even less prone to plunge deeper to achieve a remote goal.

The specific recommendation of the Association (NAFEO) is, then, that the first category of Federal aid - Equal Opportunity Grants/Work-Study - be increased from a maximum of $1,000 to $2,000 for at least 10% of the students enrolled in the predominantly Black colleges and universities. Accepting a figure of 200,000 net students, our recommendation requests in essence an addition of $20,000,000 to this category for these schools. We urge, further, that the amount be the focus, for we want to insure that <u>at least</u> this number of students will be aided.

With this number, we hope that at least 5,000 able students would graduate from these schools with little or no debt. We say able students since in addition to family income, the school would have qualitative criteria to make certain that students receiving this additional support would have a high likelihood of continuing into graduate or professional school.

Inasmuch as expense in the public colleges in general are less than those in the private, we estimate that these good students would graduate from the public colleges with no debt. We think that no more money should be granted than that necessary to meet the charges for tuition, fees, room and board as assessed and collected by the colleges. By the same arithmetic, the students in certain of the private predominantly Black Colleges who have no family or personal resources would acquire some debt. We estimate that it should be less than $3,000 for the student with most of the debt in the subsidized 3% interest category. We think that such a debt would not be onerous.

These funds ($20,000,000) would be allocated to these approximately 111 schools following their presentation of data on family income, expected number of students with such family income who have the other prerequisite qualities, and other data deemed appropriate.

The specific amount of $20,000,000 has been derived by multiplying the number 20,000 (which is 10% of the total) by $1,000. We submit that this amount represents a reasonable miximum, but we urge that it be considered as the sum averaged over all students accoding to our suggested table. To be consistent, we submit that the Aid Eligibility Table be revised in such a manner as follows, in order to preserve the commendable intent of the legislation:

AID ELIGIBILITY

Adjusted Family Income	Family Contribution	EOG/Work-Study	
0 - 3,500	0	2,000	
4,500	220	1,780	
5,500	430	1,570	
6,500	640	1,360	
7,500	850	1,150	
8,500	1,050	950	Work
9,500	1,250	750	Study
10,000 and above		600	Only

It is clear, moreover, that even with adequate aid for students some type of institutional aid is essential for our schools. Thus out Item 4 is institutional aid:

4. We find it difficult to argue, however, that all colleges and universities have the same financial problems. At least they are not of the same intensity or urgency. We respectfully urge, therefore, that in any general support formula that additional institutional aid be granted those schools enrolling large numbers of students from low income families beginning with those where 10% of the student body are from families with less than $4,000 and progressing according to a table such as follows:

10%	of the student body from families less than $4,000 -	$500	per such student
20%	"	$750	"
40%	"	$1,000	"

5. In all legal provisions we find that we must ask that they be examined carefully to see that seemingly harmless provisions do not injure us. We earnestly solicit your Committee's paying especial attention to the plight of these colleges. We hope that you will incorporate in your legislature answers to the problems which have been emphasized in two recent newspaper articles on our schools. We should like to make these articles part of our presentation. They are the New York Times article of April 18, 1971 and the Christian Science Monitor article of March 29, 1971.

6. We have prepared seven appendices on some of the other questions which have been raised on the educational legislation. We should like to pass them on to you and your staff.

Thank you for the opportunity to update our previous testimony.

APPENDIX I

NATIONAL ASSOCIATION FOR EQUAL OPPORTUNITY IN HIGHER EDUCATION

Statement on: Context for Higher Education Legislation

Context for Higher Education Legislation

There is a financial crises in Higher Education in general and in black colleges in particular. The cost of every conceivable type of service is jumping dramatically. The Labor Department has been reporting uninterrupted rises in the cost of services every month since September, 1962. One must take a holistic approach if adequate solutions are to be provided for the various problems. Therefore, consideration of several key factors in the proposed higher education legislation is in order.

There are many factors contributing to the present state of affairs. Enrollments are increasing and are anticipated to increase even more in the next few years. To accomodate these enrollments adequate facilities, along with additional personnel - administrative, instructive, and supportive, program support and institutional support will be needed.

What is to be written in this bill will determine the principle of hope that might be fulfilled by future minorities in this society. This principle of hope will be realized in the inclusion of dollar figures in the structure of the legislation. Without money earmarked and designated to specifics the extent of hope will be diminished.

The interfacing of all areas of the Higher Education situation is necessary if there is the desire to work through the present crises in our society as reflected in our institutions.

While in American society there is at work a move to "downplay" the degreed form of credentialization, this cannot be the same for the minorities in this country. Equal access to Blacks and other minorities will only be possible through the obtaining of academic degrees for on this rest the mobility that will allow them to enter and participate in the mainstream of American life.

If there are to be leaders to help our people there must be institutions that see that they are able to obtain the necessary credentials otherwise by 1980 we will be a group of followers with no leadership. This would indeed be catastrophic.

Who teaches the students will determine what they are taught. Witness the displaced teachers, principals, and other administrators in the south. Witness the possibility of no NDEA Graduate fellowship, no graduate work-study, and limited financial support to environments that have been friendly to such populations.

The principal avenue of entry to the opportunity system in this country and to community leadership and service as well, has been that of higher education.

The historically predominantly black colleges represent an existing mechanism that can be improved and used to intensify the positive efforts to equalize opportunity. Operational programs for these colleges today are for all of higher education and our society on tomorrow. These colleges have been and still are the major force for the mobility of

black youth into all levels of American Society and should be maintained and improved in order to continue their unparalled record of achievement.

Great care should be taken not to identify junior colleges as the major approach to "post-secondary" education of black youth under the career education concept. Disproportionate numbers of black youth should not enroll in junior colleges versus four year colleges. The record of articulation to the four year colleges from junior colleges is not very good for these students. The same proportion of black youth should be enrolling in four year degree granting institutions as white youth.

As we wrestle with the economic trends, we are admonished: "Let this not be a 'pyrrhic'cutback" whereby we save for the present and lose the future through a denial of the options to our contemporary society.

Issues to be addressed are: Institutional support, Student support, Title III of the Higher Education Act dealing with developing institutions, academic facilities, the National Foundation, and other proposals. It is hoped that these issues will address fully the impact of the crises existing in higher education.

APPENDIX II

NATIONAL ASSOCIATION FOR EQUAL OPPORTUNITY IN HIGHER EDUCATION

Statement on: Institutional Support

Institutional Support

Institutional support is a necessary factor in the continued efforts of these institutions. Direct federal aid should be given to these institutions based on need. This support should be unrestricted and used where needed by the institutions. The amount should be adequate to meet the need and cope with the impending crises at these institutions.

The general institution support proposal is one of the more encouraging proposals. Missing, however, is a formula which takes into account the greater needs of institutions enrolling and graduating a majority of minority group or low-income students.

Institutional support would aid the financial plight of these schools, reduce the attrition, increase graduates through providing a special effort, expand the curriculum offerings and foster the movement toward equal educational access, attainment, and future opportunities.

The educating of large numbers of low-income youth is a more difficult educational job. The teachers need smaller classes to reach the students and better salaries to retain the teachers. Counseling services in these situations must be very good as academic pressures, personal pressures, and financial pressures are great on such a population of students. Adequate support therefore is necessary for these students to channel their motivation and aspiration toward success producing goals. Though graduated from accredited secondary schools many students have been underexposed to the quality of life that enables one to get the maximum rewards from the educational experience. Programs have to be structured to meet these pressing needs if sizeable numbers of these students are going to enter the mainstream.

Students should not be penalized for institutional failures. To say that students who graduated from accredited high schools in good standing are not "qualified" for college is to make access to equal educational opportunity a hollow slogan. These colleges have performed such a job for over a century. American and its black community would be woefully lacking if such institutions had not existed.

Any formula for institutional support should be based on differences in cost of various levels of education and the variety of functions provided by institutions of higher education. The formula should be based in part on institutional efforts with minority and disadvantaged groups. If there is a committment to equalizing opportunity and attainment, then that committment ought to extend directly into any institutions which are making a major effort in producing large numbers of college graduates out of this population.

This formula will in part insure that colleges that carry a heavy part of the burden will be able to continue their job of producing graduates. Someone may say that this is not fair to the large degree granting institutions, but the research capabilities of these schools with the generous overhead cost will more than offset such an arrangement. The idea should be to help the schools that actually need help rather than to make the rich get richer. In some instances this would encourage the states to do more at that level for their own.

APPENDIX III

NATIONAL ASSOCIATION FOR EQUAL OPPORTUNITY IN HIGHER EDUCATION

Statement on: Student Support

Student Support

Student support is necessary if access to higher education is to provide for all students in America. The Presidents plea is that no qualified student who wants to go to college should be barred by lack of money. We are in agreement with the principle that: federal funds go first, and in the largest amounts, to the neediest students in order to place them on an equal footing with students from higher income families.

It must be remembered that students from low-income families, on the whole, have very limited access to other sources of financial aid than other groups within our society. This group is therefore greatly dependant on Federal financial assistance. Guaranteed and other loans are less likely to be obtained because they have less if any collateral and their families often do not have accounts with local banks.

Institutions of higher learning serving predominantly disadvantaged populations tend to have smaller endowments and scholarship resources and thus are unable to provide their own students with significant support. Those schools located in small communities have difficulty in finding students off-campus employment.

Though working one's way through college is a part of the American tradition, scholastic demands coming out of the current knowledge explosion make it impossible for a poorly prepared freshman to work part-time and then meet and keep academic standards. Parental support can not be counted on in many cases. It is possible that the current pattern of

financial aids dependance on work-study is a contributing factor to poor academic performance in disadvantaged populations as opposed to helping them maintain themselves in college.

In priorities we would favor the mix of financial support as consisting of opportunity grants, work-study and National Defense Student Loans in that order with emphasis on grants to curtail the necessity of incurring large debts as students launch their earning careers. With this in mind, we are concerned that E.O.G. and Work-Study funds be given prior consideration to these students and N.D.S.L. be used to offset the difference beyond these base sums of support.

National guidelines should have certain standardized elements with specifications for discretionary options. This would guarantee that equality of access to opportunity will be preserved in principle as well as in fact in the respective situations.

All funds in the respective programs should be increased to accomodate the expanded enrollments at these institutions over the next five years so that no student will be turned away and turned off because of a lack of the availability of financial options for the educational experience.

The shift to subsidized loans as the basic support mechanism for low-income youth may in the process of equalizing opportunity to enter college, result in unequal indebtedness upon leaving college. Poor youth will avoid expensive schools, though qualified, in order to avoid a large debt. Even in a school of equal cost the poorer student is liable to

incur greater indebtedness even with grants and work study available.

Institutional matching requirements should be eliminated in EOG, Work-study, and NDSL Programs. This matching money would be available for other areas of need within the institution.

We would favor extending all student aid programs to part-time students both undergraduate and graduate.

There are many persons who would avail themselves of higher education but who lack the resources to make a full-time committment to such pursuits. This support would be available to them since as taxpayers they provide access for others and yet through circumstances they do not enjoy such options for themselves because of lack of assistance for part-time students.

At the graduate level there are those who live in areas where they can take advantage of educational opportunities but need help in order to realize such opportunities. Having to pay the high cost per point and maintain other obligations negates the desire of many persons to pursue part-time graduate study. If the cost of living continues to increase the time may come when more and more graduate students will go to school this way for they cannot afford to restrict themselves and their families to the limited and inadequate resources available to full-time graduate students. With the cut back in graduate support this will allow a continuation in some cases to those students who did not receive enough support to go full-time and to those who would like to go part-time.

A cut back in graduate work-study and N.D.E.A. fellowships would hurt the chances of large numbers of blacks pursuing and securing the doctorate degree. The elimination of work-study grants for graduate students will be extremely destructive in those graduate schools which enroll large numbers of low-income and minority group youth. The traditionally Negro graduate schools would find it impossible to continue to salvage substantial numbers of talented black youth for graduate work. There is a shortage of Blacks with Doctorate degrees, contrary to the oversupply of doctorates as voiced in academia.

The National Defense Student Loan would be the best type, if any, loan program for the Black College Students. Institutional administration would be a guarantee that these students would be availed the opportunity of such a loan. There is no indication that such a guarantee would be provided otherwise.

Forgiveness of loans has its merit in accelerating movement into the mainstream. Disproportionate earning potential of minorities should be recognized and this should be a way of nationally helping to rectify this inequity. Targeting of forgiveness should be based on economic background, areas of services, i.e. rural, ghetto, and deprived-where salaries are not commensurate with those paid in more prosperous areas.

APPENDIX IV

NATIONAL ASSOCIATION FOR EQUAL OPPORTUNITY IN HIGHER EDUCATION

Statement on: Higher Education Title III

Higher Education Title III

Title III of the Higher Education Act of 1965 is the program most responsive to the needs of the predominantly black colleges. In its present state the original authorization was 91 million dollars. The present pending appropriation is 38.5 million dollars.

Though the Carnegie report on problems of the Colleges founded for Negroes is entitled "From Isolation to Mainstream" there are still institutions struggling for survival and are in instances isolated from the main currents of academic life.

We propose that in the reassesment of this Title that the authorization and full appropriation of the following sums of money be done as a principle of hope for these colleges.

1972	1973	1974	1975	1976
120 million	140 million	160 million	180 million	200 million

According [illegible] reports more than 100,000,000 dollars worth of proposals were submitted to this program for the past funding cycle. If appropriated to its full authorization this would be a major step toward moral accountability as we celebrate the 200th anniversary of the founding of this nation in 1976.

The definition of developing institutions should be sharpened. Those schools educating a majority of group youth and producing graduates from among them should be viewed as primary target schools within the Developing Institutions Program. Among the Junior Colleges those schools which enroll and transfer a majority of poor and minority students to the four year colleges for degrees should be the target.

Other factors for consideration are:

Maintenance of the 23 percent stipulation for other than degree granting colleges.

Removal of the Professor Emeriti restriction (other than developing institutions).

Make the cooperative arrangement optional and grant the institutions discretionary power in seeking expertise as needed.

APPENDIX V

NATIONAL ASSOCIATION FOR EQUAL OPPORTUNITY IN HIGHER EDUCATION

Statement on: Academic Facilities

Academic Facilities

The construction of academic facilities is very vital to the expansion of student enrollments at these institutions. Specialized facilities will be needed for the new demands of changing instructional methods, laboratories, experimentation, research, and expanding fields of societal interest. In other instances there is the need to rehabilitate and convert obsolete and substandard facilities in many institutions. Therefore two parts should be considered in the area of academic facilities: new facilities and rehabilitation of present facilities.

We support the continuation of Federal grants and direct loans for the construction of academic facilities, as well as the program of interest subsidies on loans obtained in the private market. There are serious needs in terms of expansion and improvement of current facilities that are best met within the context of a grant program.

We feel the Commissioner should be allowed to waiver the matching requirement for institutions serving large percentages of students from low socio-economic backgrounds.

Non-revenue producing facilities built with Federal Funds should be supplemented with a maintenance fund to insure that the government investment be protected and maintained.

Statement on: National Foundation

National Foundation

The National Foundation would be helpful in providing grants to institutions that have always had to be innovative and creative in providing services to the nation on a shoestring.

The Foundation should undertake a study of equality of opportunity in higher education with the emphasis on identifying mechanisms showing promise for the movement of the poor through higher education to a degree commensurate with their numbers in the population.

Thus, a fundamental principle would be that of promoting equality of opportunity in higher education with proper focus upon adolescents and minority group populations.

The structure of the Foundation should insure:

> That the composition of the board would be representative of higher education in general but further represented in terms of the population served by the institutions of higher education.
>
> That the association have in the selection process the opportunity to make recommendations of those felt to express points of view representative and inclusive of their interest.
>
> That the Board of the National Foundation elect its own chairman from within the Board.
>
> That there should be compatibility between the executive function of the Director and the position of the board.

Additional input in keeping with our proposals from last year might see a mix within the Foundation that includes the following:

> That institutions with long term accomplishments predating the current emphasis on the disadvantaged be rewarded through inclusion where they have done the job.

That the leadership in terms of educational reform be diversified and not maintained in a narrow range of institutions of prestige and status recognizing that these institutions to date have not been productive of equal access to educational opportunity in the society or within the institution themselves.

That increased effectiveness will be developed and encouraged in institutions already producing large numbers of graduates from our poor and minority group students.

APPENDIX VII

NATIONAL ASSOCIATION FOR EQUAL OPPORTUNITY IN HIGHER EDUCATION

Statement on: Other Proposals

Other Proposals

There are additional proposals that should be listed as representing the concerns of this group of institutions.

NDEA Fellowship Program

This program should be continued as any phasing out of these fellowships will encourage an irreversible gap between the availability of minority doctorates and non-minority doctorates. Contrary to the present emphasis on an oversupply of doctorates, there is no oversupply of black doctorates. If this trend is carried out there will be no approximation of parity in holders of the doctorate degree within the forseeable future. This would indeed undercut the ambition of young doctoral hopefuls who would seek to pursue the terminal degree.

With unwritten quota systems, how will these students survive in an arena where the resources are very limited and the number of persons who hold doctorates now in no ways approximates a certain kind of parity.

The pipeline must be enlarged to include more candidates, otherwise the future academic leadership will be deprived of a mix which will be necessary in our forseeable continued culturally pluralistic society.

We would encourage a continuation of this program and an earmarking a percentage of these fellowships to Black Doctoral Candidates, and a continuation of other programs that train students in mid-level graduate offerings between the bachelors and the doctorate degrees.

A greater proportion of the black college graduates can be encouraged to go to graduate and professional schools with the proper fellowships. However, many are already in debt from loans for their undergraduate education and want to enter the labor force immediately.

College Library Resources

Continuation of Title II with the aim to upgrade the available offerings at colleges serving large numbers of low-income students where there is a deficit of books and materials coupled with inflated cost that make such additions restrictive and in some instances prohibitive.

Instructional Equipment

Adequate funding of Title VI which provides funds for the use of new educational technology.

Community Services and Continuing Education

Continuation of Title I with a waiving of matching requirements for institutions serving large numbers of low-income students and or in communities which serve such a low-income population.

THE NEW YORK TIMES, SUNDAY, APRIL 18, 1971

Negro Colleges Suffering Under U.S. Aid Policy

WASHINGTON, April 17 (AP)—Public Negro colleges in several Southern states are finding it virtually impossible to expand or to integrate as Federal funds are poured into competing predominantly white institutions.

A Federal judge ordered Southern educators three years ago "to dismantle the dual system of higher education," yet an official in the Department of Health, Education and Welfare said recently: "Present Federal policy is helping perpetuate the dual system."

An Associated Press study found that newer, mostly white colleges in such cities as Nashville, Montgomery and Huntsville, Ala., were growing despite direct competition with long-established, publicly supported black schools in the same cities.

The study also found that of $72.3-million in Federal land grant funds given to Alabama, Louisiana, Florida and Tennessee last year, $71.8 million went to four predominantly white schools and $497,955 to an equal number of black institutions.

Inequality in Funds

The white schools have a 6-to-1 enrollment edge, but they had more than a 140-to-1 edge in Federal land grant funds.

Nixon Administration officials say steps are being taken to channel more Federal funds into predominantly black schools.

Some black educators fear that if black schools merge with their white counterparts, scores of black administrators and teachers will lose their jobs. But they also believe that black schools will never achieve balanced black-white enrollments so long as competing white schools remain open.

Dr. Henry Ponder, vice president of academic affairs at Alabama A. & M. in Huntville, Ala., who is black, said: "As long as white parents have a choice, they are going to send their children to a white school. If they had only one school, parents would send them there."

Opponents of the dual system have gone to court in unsuccessful efforts to stop the building of new predommantly white campuses in Nashville and Montgomery.

Situation in Nashville

In 1958, Federal District Judge Frank Gray Jr. refused to halt construction of a $5-million downtown branch of the University of Tennessee in Nashville, started 11 years ago as an evening school across town from Tennessee State University, which has 70 whites among its 4,400 students.

The Tennessee legislature recently approved campus status for the new Nashville campus, making it a degree-granting university but limiting it to evening classes. The legislature scrapped an amendment that would have prevented it from expanding its new facilities.

An example of the duplication of programs by the two schools was cited by George E. Barrett, an attorney for opponents of the University of Tennessee Nashville campus. When three Nashville hospitals began to phase out nurse training, Mr. Barrett said, they asked Tennessee Nashville to step in although Tennessee State had had a nursing program for years.

Between 1967 and 1970, Tennessee State's enrollment declined from 4,793 to 4,404 and the other school's increased from 1,743 to 1,079.

Dr. Andrew P. Torrence, president of Tennessee State, said his school had been getting a fair share of the state tax dollar. But he added: "It doesn't mean much." He said Tennessee State must operate almost all its programs on state money while the University of Tennessee received substantial Federal funds, $16.7-million in 1969 compared with $214,753 in Federal funds received by Tennessee State.

Major Competition

Farther south, Alabama A. & M., a Black school with 2,700 students that was founded in 1875, has major competition developing about five miles away at the University of Alabama-Huntsville, which opened 18 years ago as a small graduate school.

Similar situations involve Auburn University and Alabama State in Montgomery, Florida State University and predominantly black Florida A. & M. in Tallahassee and Louisiana State University and all-black Southern University, both of which have campuses in New Orleans, Baton Rouge and Shreveport.

Mrs. Willa B. Player of the Department of Health, Education and Welfare called it "a dismal situation."

"Black schools have been terrorized and pauperized, but the President wants the land grant laws changed," she said.

Dr. Player said that her department had been given $43-million to help developing schools and that she had been instructed to channel 70 per cent to the predominantly black institutions.

Referring to states where established black schools were facing competition from predominantly white institutions, Dr. Player said: "They die hard. It is the last gasp of a dying system."

THE CHRISTIAN SCIENCE MONITOR

Second Section

Monday, March 29, 1971

A 3 percent drop in the bucket

$5.00 billion for higher education, but only $132 million for black colleges and univer

Wanted: green power for black campuses

Representing 10 percent of the U.S. population, blacks have only a 5 percent enrollment slice of higher education. To double that figure will require more government funds — and the survival of black colleges and universities. The following article, based on interviews with black educators, examines the prospects.

By Kenneth G. Gehret

Education editor of The Christian Science Monitor

MORE BLACKS ARE GETTING INTO college than ever before. They now make up at least 5 percent of the total college student body in the United States. That's nearly double the number of blacks on campus five years ago.

This is progress, but not enough for Dr. Herman B. Branson, president of Lincoln University, a traditionally black institution near Oxford, Pa.

"If there are 8 million in higher education, then 800,000 ought to be blacks since blacks comprise 10 percent of the population," he contends. "But only 400,000 are. So we need to double the number of blacks in college [to have them properly represented as a segment of society]."

Dr. Branson predicts that this goal of 10 percent of the total enrollment could be achieved by 1975—meaning 1 million blacks among an overall campus population of 10 million.

Whether blacks do this well depends on at least two vital factors: increased government funding and the survival of colleges and universities founded for blacks.

The two are closely related. Although some private money is available to black institutions, these funds are insufficient to make more than a dent in their tremendous financial needs.

Rescue demanded

Only state and federal resources are adequate to rescue these colleges. And their rescue is essential, their administrators argue, since predominantly white campuses cannot accommodate the great numbers of blacks that need and want to be educated.

So great is the demand placed on traditionally black academic centers that their enrollment is expected to double at least by the end of the century, possibly as early as 1980, according to a report issued last month by the Carnegie Commission on Higher Education.

This study ("From Isolation to Mainstream: Problems of the Colleges Founded for Negroes") recommends a tripling of federal support for black colleges.

A 200 percent increase in funds would, of course, be significant. In fiscal 1969, none allocated to traditionally black colleges by all federal agencies totaled $132 million.

This, however, came to about 3 percent of the $5.00 billion total in federal funds received by colleges and universities. Dr. Branson and other black education leaders hasten to point out. They don't consider this a fair share. The situation, they warn, is too desperate, both in terms of students' needs and the institutions' plight.

"We have 5,000 applying for admission to Lincoln," says Dr. Branson, "and all need some financial help. Of present students, 65 percent require some sort of aid. We have right now 30 to 40 empty beds, despite a waiting list, because we ran out of financial aid."

Hundreds dropped out

Before arriving at Lincoln last December, Dr. Branson headed Central State University at Wilberforce, Ohio. To illustrate the shortage of funds among black students, he tells how "200 students who were in good standing [at Central State] left for the Christmas holidays in 1968 and did not return for the winter quarter.

"Our registrar sent a questionnaire to them and received about a 40 percent response. Nearly 70 percent of the students stated that they had to drop out for financial reasons."

Dr. Branson concludes that the income level of the families of most black students and prospective students is so low that any program aimed at increasing significantly the number of blacks in college must plan to meet their costs without funds from the students' families.

The money, he says, must come from state, federal, and private sources, with only a nominal contribution by the students from summer earnings and limited work during the school year.

In addition to his university duties, Dr. Branson devotes considerable energies to his position as president of the National Association for Equal Opportunity in Higher Education, an organization of some 60 black colleges, both public and private.

He and his organization are looking primarily to the federal government for assistance. This should take two forms, he urges: aid to the student and grants to the institution directly. But he is willing to have the emphasis placed on student aid.

"I am more concerned about salvaging human beings," he comments.

On this basis, Dr. Branson supports the Nixon administration's new bill, the "Higher Education Opportunity Act of 1971." Hearings are currently being held in both the House and Senate.

In proposing this legislation, President Nixon said to the Congress: "I repeat the commitment which I made in my message of last year: that no qualified student who wants to go to college should be barred by lack of money.

"The program which I am again submitting this year would benefit approximately 1 million more students than are currently receiving aid. It would assure that federal funds go first, and in the largest amounts, to the neediest students, in order to place them on an equal footing with students from higher-income families."

To do this, the bill would make a "package" of funds available to students, varying in amount according to family size and income. For children in the poorest families, this could mean as much as $2,900 a year under the proposal in its present form.

The "package" would consist of three ingredients: (1) an outright grant plus work-study funds (maximum of $1,600), (2) a subsidized loan for students who further qualify ($600), and (3) a "cost of education" loan (up to $1,500 annually).

In addition, the legislation would create a national student loan association, a private corporation that would make loans to any student at whatever income level.

Dr. Bir...son wants something more from the federal government: funds for the black institutions themselves.

"If 10 percent of its students are from families with income under $3,000 a year, the college should get $1,000 a student from Washington," the university president asserts.

Why? "Because the institution's costs far exceed its charges to students. At Lincoln, tuition and room and board come to $2,500. But our costs per student run about $3,000. So every time we accept more students, our costs go up. Student loans and grants are fine, but they don't help the college."

Too, most black colleges need to update their plants, expand libraries and laboratories, increase faculty salaries, and generally improve facilities and curricula. It all takes money, and few black colleges have large endowments, reserve funds, or private sources of steady income to help substantially with these needs.

While looking primarily to federal aid to remedy the situation, Dr. Branson does not exclude state and nongovernmental assistance as unimportant. But as the head of a private institution, he cannot realistically expect large grants from the state, and private funds have fallen off.

In some regions, on the other hand, state funds are a significant factor. Dr. Herman B. Smith Jr. of the private Office for Advancement of Public Negro Colleges is acutely aware of the role Southern states play in supporting the black colleges represented by his Atlanta-based organization.

'They're underfinanced'

"Like all institutions of higher education today, these [publicly supported black] colleges are underfinanced," Dr. Smith told Monitor correspondent Louis Lindsay. "Where they are hard-pressed to compete in the area of obtaining extra funds, or nonstate funds, to finance legitimate services and programs."

In practical terms, this means, for instance, they don't have money to supplement the state-provided salaries for top faculty members. Some of these professors are even lured away by other public (i.e., white) institutions within the state, because these colleges have private sources from which to pay faculty supplements.

Asked whether state legislatures are fair in appropriating funds for black colleges, Dr. Smith replied:

"The typical state purports to use a common formula for all state institutions of higher learning. That's fine as far as it goes. But it ignores the historic deficits at black institutions. For instance, quality of instruction, physical plant, and libraries."

He speaks of the need for "catch-up funds of various types" for black colleges, a need simply not recognized by most state legislatures, in her opinion.

What about funds from private sources, particularly corporations?

"Some now are having fairly decent success at this. Corporations that haven't spent any money at black colleges in the past now are beginning to do so," Dr. Smith responds.

Consider Eastman Kodak

He cites as an example Eastman Kodak, which formerly spent "almost nothing" on public black colleges despite a multimillion-dollar college-aid program. Dr. Smith's office approached this firm and others, arguing that if they wanted more educated blacks they would have to look to the colleges where the bulk of blacks are enrolled.

Now, Eastman Kodak has contributed about $75,000 in grants to black colleges. General Electric Foundation, for another, has increased its aid, making a series of grants to black institutions in engineering.

"By no means am I saying that what has been done is adequate," Dr. Smith comments. "At this point we place a lot of emphasis on trends. We [this office] are in business to get the faucet dripping. It's up to the institutions to increase the flow."

One very helpful instrument is the National Alliance of Businessmen cluster group. A number of black campuses now have the benefit of NAB.

The organization is not primarily for fund raising. Corporation representatives go to the campuses to talk about present and prospective programs and development potential and to see how their firms can be of assistance.

Lending a $50,000-a-year executive to the college for a semester could mean more, for example, than a $20,000 grant from same company.

Can black colleges get the money need?

Dr. Smith is not optimistic. "It's to be difficult," he says, "because c tition [for funds] is increasing fr sources."

But Dr. Smith, Dr. Branson, and the leagues are not giving up. They belie predominantly black colleges have role to play in the education of a larg ment of American youth and in sub social mobility of a race.

Eighty-nine of these 111 institution four-year programs. From these 89 the bulk of black degree-winners (70 p of all blacks graduated), and these i from poor families.

According to Dr. Branson, the o income among families of black-graduates is $5,000 a year. He con that the majority of these students never get their sheepskins except t the black institutions.

The Carnegie Commission on High ucation agrees on the need for pres and expanding black academic conte

"The Negro colleges are a great n asset," asserts Dr. Clark Kerr, former dent of the University of California a keley and commission chairman. "The colleges are the best places for t ding the black experience in American

In recommending a tripling of f funds for black colleges, the Carnegie mission called upon these institutions tend their role by:

- Assuming leadership in off-c programs and consultation to the community.
- Developing expanded education, occupational retraining for black adu
- Accepting leadership in dev techniques for overcoming the handi the educationally disadvantaged.
- Stimulating the interest of black in higher education.
- Serving as archives and as centers the study of black people's problems.

APPENDIX VI.—Title III, Higher Education Act

BROWN UNIVERSITY Providence, Rhode Island • 02912

DEPARTMENT OF
SOCIOLOGY AND ANTHROPOLOGY

June 11, 1971

The Honorable Claiborne Pell
United States Senate
Senate Office Building
Washington, D. C.

Dear Sir:

I am writing, first, to thank you for your continuing interest and good efforts in support of higher education and, second, to provide you with what I hope are some useful suggestions and ammunition to use in alleviating the plight of the predominantly black colleges, especially the small, privately endowed schools. I feel strongly that the federal government not only ought to do more (because of the saliency of our country's race problem in general and the special significance of the one hundred-odd predominantly black schools for the educational resources of our country) but that it can do more (precisely because of the scale of the problem--the majority of the schools are small colleges, not large universities). I cannot think of a greater opportunity to achieve a larger output for a smaller input of funds! As you may recall, I was the first director of the Tougaloo-Brown Cooperative program, and I still serve the program as a member of the executive committee at Brown under the chairmanship of my colleague Charles Baldwin.

You may be sure I applaud your request of an increase of from thirty to one hundred million dollars for the so-called developing institutions in your bill S-659. The original impetus for Title III, of course, was the need to provide aid to predominantly black colleges, and a disproportionate share of the funds has properly gone to such institutions. Despite their relatively small size, Title III grants admittedly have had a positive impact far out of proportion to the sums allocated--yet the essential catalytic function of the funds has, in the long run, brought many of these institutions to the brink of financial disaster. Briefly, Title III funds have had an "innovative-additive" thrust: they have meant new programs, new services, and new educational facilities for

students; new opportunities for training and study for faculty and administrators; and expansion in enrollments; further, they have played a major role in helping the schools "go places" instead of merely being "kept going." At the same time, the dramatically increased cost of doing business that stemmed from these benefactions has meant an even greater annual gap between expenditures and income. For the same reasons that these black institutions have been isolated and unsupported in the past, they have continued to be unable to increase their basic resources (such as endowments and alumni contributions) to a point commensurate with their new fiscal demands.

A case in point is Tougaloo College (Tougaloo, Mississippi). As can be seen from the data below, the increases that have taken place there during the last nine years are of a magnitude that suggests a number of negative consequences despite the short-run benefits:

	1961-62 (actual)	1971-72 (projected)	Percentage of Increase
Number of students	480	800	67
Total annual expenditure	$800,000.	$3,300,000.	313
Tuition	$440.	$1,000.	127
Board and room	$455.	800.	75

The number of students has increased by two-thirds (but is still too small a student body for economic viability), total expenditures have increased threefold, and the cost of going to school has more than doubled.

The alarming fact is that whereas in 1962-63 only about 10 per cent (or less than $100,000.) of the funds for annual operating expenses had to be sought from unidentified new sources of support, in the coming year almost half of the annual budget must come from federal and as-yet-unidentified sources. This does not include projected income of approximately a half million dollars from identified private sources.

Tougaloo's current deficit obligations are approximately one million dollars (in accounts payable to local suppliers, loans, advances, taxes, pension contributions, and current payrolls). In the face of this crisis, Tougaloo-Brown has moved to obtain an initial guarantee of one half million dollars from a

private donor with the proviso that other private sources contribute funds sufficient to guarantee economic stability in the short run, that is, for the next four or five years. This, unfortunately, will only provide breathing space.

In my view, achieving financial viability for colleges such as Tougaloo is not only a necessary political and educational goal, but one that is economically feasible. In the long run, it will be thriftier to assure the continuity of these already-existing institutions than to let them wither on the vine. We are not talking here of medical schools in 1910 (which were failing to do their job) but of a national higher education resource that is regionally concentrated and more experienced than any other to take on the task of providing higher education for young black Americans. These colleges in the past have provided higher education to blacks when no alternatives existed; today their virtue lies precisely in their traditional institutional patience to work with young people who have great ambition and great potential but are the wreckage of a heritage of discrimination and prejudice that has, in the past, fostered self-hate and sapped self-confidence.

Because these institutions are small in scale, a national government investment of between five hundred thousand and one million dollars a year for the next five or ten years for each of a selected number of predominantly black colleges would provide a sound enough base to achieve the scale of operations that would assure continuance. I emphasize that recent federal funding has been just enough to get these institutions into real financial trouble and not enough to provide them with the assurance of viability.

Correlatively, I submit that there is a gap in the current federal planning for support of these institutions. There is a need to supplement the original Title III of the Higher Education Act of 1965 (which involved primarily funds for so-called cooperative programs to strengthen developing institutions) with a Part that would provide funds directly to such institutions to maintain the new levels of academic operation they have achieved. Such funds might be awarded to selected colleges that participated in the cooperative programs in the past and were judged to have done so successfully.

Given your proposal to fund Part C of S-659 at the level of one hundred million dollars, it seems to make sense to keep the funds for the "cooperative" programs at the current amount of thirty million dollars and earmark the additional seventy million dollars for institutions that have been making progress under the program. If OMB can determine policy for the

Division of College Support by insisting on a minimum grant of one hundred thousand dollars (without primary regard for need), it would certainly be appropriate to establish higher minimums for grants under the new Part that I have suggested for assuring institutional viability.

Despite the competence of the administrators and the director of the Division of College Support, the lack of quality guidelines for defining "developing" institutions has resulted in such a geographically wide and small-grant distribution of funds that the long-range impact of Title III has been minimal. In my view, the Congress deserves (as it probably had in mind) a report at the end of a decade of operation that could point to positive results: that is, the creation and consolidation of a number of quality colleges in the place of previously marginal institutions. Such a goal is of special salience in the case of the predominantly black colleges.

In 1965 Earl McGrath published his monograph Colleges and Universities in Transition that documented the defects of these institutions. Just a year ago, under the auspices of the United States Office of Education, the presidents of thirty-one black colleges met together only to denounce the federal government for its lack of understanding of the problems that their schools faced. And half a month ago (May 22), black educators under the leadership of Dr. Herman Branson, president of Lincoln University, scored the government for its lack of support and noted that only 3 per cent of government grants came to the predominantly black institutions.

Thus, when I read the title "From Isolation to Mainstream" of the recent Carnegie Commission on Higher Education Report on the problems of the colleges founded for Negroes, I felt much like Ken Clark and his reaction to the Kerner report: "It is a kind of Alice in Wonderland--with the same moving picture re-shown over and over again, the same analysis, the same recommendations, and the same inaction." This is what we were talking about almost a decade ago when Brown and Tougaloo began their working relationship! While such a theme made sense in those days, it is hardly appropriate as a major theme at this hour.

I am concerned that the more we view the predominantly black colleges from the perspective of the mainstream of higher education, the more we may damage them and the less successful we shall be in our efforts to achieve a mainstream! Just as federal programs for urban renewal assumed that blacks competed in the same housing market with whites and set general standards for vacancy rates--with the result that housing

opportunities for blacks decreased and segregation increased--so the assumption that the predominantly black colleges can be helped by programs that are aimed at all colleges and that fail to take account of the special history, the special mission, and the special location of predominantly Negro institutions will inevitably fail of its purpose. For example, the matching provision in the case of work-study funds puts a greater hardship on the small, black colleges than on any other type of institution of higher learning. The disproportionate division of funds in the case of the Equal Opportunity Grants between first-year and advanced students surely causes almost insurmountable recruiting problems in the case of poor black students. The employment of such traditional guidelines for the distribution of funds as geographic representation is another instance of the unanticipated negative consequences of an implicit institutional racism, since practically all of the predominantly black schools are located in a single region of the country.

To be sure, the hour is late, but I can only recall the subtitle of Myrdal's classic An American Dilemma published a generation ago: "The Negro Problem and Modern Democracy." I add merely that black youth are the bellweather of the future of all Americans, regardless of color. Unless we assure their education, especially in the South--the region of our country whose future is also "our" future--our chances of realizing the American dream are in great danger.

Sincerely,

Harold W. Pfautz
Professor

HWP:mt

APPENDIX VII.—Title IV, Higher Education Act

UNITED BUSINESS SCHOOLS ASSOCIATION

1730 M STREET, N.W. • WASHINGTON, D. C. 20036 • (AREA CODE 202) 659-2460

OFFICE OF THE EXECUTIVE DIRECTOR

June 4, 1971

The Honorable Claiborne Pell
United States Senate
Washington, D. C. 20515

Dear Senator Pell:

At the suggestion of Education Subcommittee Counsel, Stephen Wexler, I am writing to you requesting consideration of the narrow issue of providing access to the Educational Opportunity Grants (EOG) program for students in accredited proprietary schools through an amendment to the Higher Education Act.

A similar amendment in 1968 opened access for such students to the NDEA Loan and College Work-Study programs. We feel that Section 461(b) of the Higher Education Act defining a "proprietary institution of higher education" has now stood the test of time with NDSL and CWS and is ready to be utilized for access to EOG.

Except for the Pell bill, S.659, all the major proposals for amending the Higher Education Act include an amendment to provide access to EOG for students in accredited proprietary schools. This would include S.1122 of Senator Prouty, as well as H.R.5191 (Quie), H.R.32 (Perkins), and H.R.7248 (Green) in the House. Senator Mondale's measure, while attempting a new dimension, fully includes students in accredited proprietary schools.

The Statement of the Higher Education Associations, presented to the Education Subcommittee of the Senate on March 31, 1971, through Joseph P. Cosand of the American Council on Education *et al*, favorably recommended including students in accredited proprietary schools "in all Federal programs" when it said:

> *We also think the time has come to support, through the various Federal programs, students in proprietary schools which are providing quality training. Many such schools offer the only rational programs available to many students. If the Congress sees fit to include students attending these schools in all Federal programs, we hope it will write the eligibility and accreditation requirements tightly and demand an annual report from the Office of Education on the ways in which it determines eligibility and ineligibility.*

Similar sentiments have been made by such witnesses as Dr. Clark Kerr of the Carnegie Commission on Higher Education. The testimony of this Association on this subject is in the record of hearings of your Subcommittee for prior years.

The 1968 Amendments opening NDSL and CWS provide a sound basis to take the final step in equality of access for student financial aid. The definition of Section 461(b) and the guidelines of NDEA Section 103(b) have been proved successful in practice. They illustrate that Congress can and does "write the eligibility and accreditation requirements tightly" as suggested by the American Council on Education.

Your decision on this issue is of vital concern to the more than 125,000 students enrolled in the nearly 400* accredited proprietary business schools.

Respectfully,

Dick Fulton

R. A. Fulton
Executive Director
and General Counsel

LE MOYNE COLLEGE
LE MOYNE HEIGHTS
SYRACUSE, NEW YORK 13214

OFFICE OF FINANCIAL AID

May 5, 1971

Senator Clairborne Pell, Chairman
Senate Subcommittee on Education
United States Senate
Washington, D.C. 20510

Dear Senator Pell:

Once again I find it necessary to write to you on behalf of the federal student aid programs which I am currently administering to my students here at Le Moyne College in Syracuse, New York. It recently came to my attention through Senator Javits' Office that the last letter I sent to your attention was used on an informational basis last summer during hearings before your Subcommittee on Education.

On behalf of the 400+ Le Moyne College students who presently hold one or more forms of federal student aid totaling $327,906.00, I wish to express Le Moyne's most sincere thanks for all the efforts you and your committee have put forth to make this possible.

The concern which these many students share with the numerous prospective students is that some of the legislation currently being considered in Congress may further cut-back the already severely curtailed aid without which they will not be able to continue their education. If the regulations recently published in the Federal Register hold true, a grevious injustice will have been enacted upon hundreds of students here at Le Moyne next year. My understanding of the regulations would indicate that over-all allocations for College Work-Study and Educational Opportunity Grants will be based upon the number of students which we reported on last Fall's application would fall under the income guidelines of 0 - $2,999, then $3,000 - $5,999, and so forth until the funds were distributed. Colleges estimating higher percentages of students from the lowest incomes would receive priority in allocations.

I am sure you must be aware of the rather dubious manner in which these figures regarding income were requested by the Office of Education last Fall. The inconsistent information as to the use of such data, the lack of adequate time for which to gather such data, and the absolute necessity of completing this information — these problems as well as others were all rather confusing and misleading to say the least. Because of these problems, much of the information supplied necessarily was hardly more than mere guess work. It should be pointed out that at no time during the application process was any mention made to the effect that these facts would be used as part of any allocation formula - in fact, upon direct questioning upon more than one occasion, many financial aid officers were told directly by Office of Education representatives that this would definitely <u>not</u> be the manner in which these estimates would be used.

If these figures are used in the manner in which the Federal Register stated they would be, a large number of students attending Le Moyne College as well as many thousands of others in institutions of higher education across the country will have been served with an irreparably terrible blow, so severe that they will be cut off from further pursuit of a college education.

May I respectfully point out to the Honorable Chairman that an Educational Opportunity Grant or College Work-Study student whose family income is $5,999 and can afford no contribution toward a child's education is just as needy as another whose family income is $2,999 and can afford no contribution. Both students can plan on no financial help from their families; both students will require equal consideration for financial aid. The same comparison could be made with even higher parental income levels whose contribution is necessarily -0- because of family size, both parents working, or other such important factors.

Much more can be said regarding the un-fairness of the proposed manner of distributing these funds. Please be assured that the net effect would be that many students will be forced to withdraw from college because of their inability to find the necessary resources. It is indeed unfortunate that even the excellent College Work-Study Program of self-help would not be available to the many needy and willing students now receiving such aid.

I am hopeful that you and your committee will seriously consider the many consequences such proposed methods of allocation funds will have upon college students here at Le Moyne and colleges across the country. If further information regarding the specifics of our particular situation would be helpful, I would be most happy and anxious to supply them to you either in person or by further correspondence.

Thank you again for your past support.

Sincerely yours,

Joseph A. Russo

Hon. Claiborne Pell
Senate Office Building
Washington, D. C. 20515

Dear Senator Pell:

I am deeply concerned that, as you may have noted from the Carnegie Commission, the small colleges (under 2,000) which produce so many of our outstanding citizens are on the verge of major financial catastrophe.

It would be wonderful for the nation, the students, and the faculties if someone would devise an emergency plan whereby the Federal Government would do financially for the small, private, nonsectarian teaching colleges what it did through research funds for the larger universities.

An excellent first step would be to enlarge substantially the student Economic Opportunity Grants and loan funds available. A combination of these work out well for serious students who are willing to incur partial future obligations in order to earn an education.

Another possibility would be a small payment per equivalent full-time students registered, as a few states do.

Sincerely,

Homer Grant

Honorable Jack Miller
United States Senator
4313 New Senate Office Building
Washington, D.C. 20510

Dear Senator Miller:

I was delighted to have an opportunity to visit with you again during your visit to Simpson College. Your convocation address was excellent, and I heard many excellent comments afterward from students. President John reported that you really had a day-long workout, and that you left the campus about 6 p.m.! Needless to say, we all deeply appreciate your interest in higher education.

Because of your interest, you are undoubtedly aware that a number of proposals are being made which are designed to help colleges and universities meet the financial crisis which particularly threatens the existence of the private sector of higher education.

One such proposal has been offered by Senator Pell. The essence of this plan is that students would be eligible for tuition aid equal to a maximum of $1200 minus the amount of federal income tax paid by his parents. A college could receive direct assistance under this plan amounting to $1000 per student minus the amount charged annually for tuition. I presume the awards to students and to institutions are contemplated on an annual basis.

While I do not doubt the good intentions behind this plan, and while I also applaud Senator Pell's concern and hope that his concern spreads, I must, in all candidness, tell you that this plan would not be of much assistance to private higher education. In fact, it is my personal opinion that it would be quite detrimental. It would channel both students and direct assistance funds to the public institutions and away from private higher education. Let me explain why.

Tuitions at the private colleges and universities in Iowa currently are averaging around $1500 per year. This does <u>not</u> include room and board or incidentals. If a plan were instituted which provided direct assistance on a formula of $1000 per student, minus yearly tuition,

IAR CLIFF BUENA VISTA CENTRAL CLARKE COE CORNELL DORDT DRAKE GRACELAND GRAND VIEW GRINNELL IOWA WESLEYAN LORAS LUTHER MARYCREST MORNINGSIDE
HUNT MERCY MOUNT SAINT CLARE NORTHWESTERN OTTUMWA HEIGHTS PARSONS SAINT AMBROSE SIMPSON DUBUQUE UPPER IOWA WALDORF WARTBURG WESTMAR WILLIAM PENN

only three colleges in this Association of 29 institutions would be eligible for anything at all! On the other hand, the state universities in Iowa, with an average tuition of $610 per year would receive an average of $390 for each student. This would simply extend the financial advantage they now enjoy as a result of being subsidized by tax money.

Students would receive some assistance under this proposal, but in many instances they would receive just enough to enable them to pay tuition at a state institution. For instance, according to an AP release, a family with an income from $6,000 to $7,500 pays an average tax of $570. A child from this family would be eligible for a grant of $630, almost exactly the tuition at a state university in Iowa. I think I know where that youngster would go to college; it would not likely be one of our private institutions.

Many people have said kind things about America's private colleges and universities, and I truly believe that most Americans would not wish to see the plural system of higher education in this country lost. The time has come, however, when kind words are not enough. Private institutions of higher education have been hit very hard by the current era of inflation-recession. While our costs steadily mount, formerly willing donors are feeling the pinch of economic uncertainty. We need help and we need it soon. I fear that unless our plight is recognized and accepted as real, our institutions will be in grave financial danger.

In my opinion, the concept of institutional grants suggested by Congressman Albert Quie of Minnesota offers the greatest hope for private higher education. This plan projects institutional grants based on the number of students an institution graduates each year; it is based on the institution's input into America's resource of highly educated personnel.

There are many valuable ideas which have potential, particularly in the area of student assistance. However, I know of no other plan which would better provide the <u>institutional</u> assistance which is needed <u>now.</u> Iowa's private colleges and universities are important to Iowa - culturally and economically. This decade will be one of grave peril for them unless more assistance becomes available than is currently provided. I plead with you to press for the realization of Congressman Quie's proposal.

Sincerely yours,

Lloyd

ANTIOCH COLLEGE YELLOW SPRINGS, OHIO, 45387 · (513) 767-7331

March 25, 1971

The Honorable Claiborne Pell
Senate Office Building
First and Constitution Avenue, N.E.
Washington, D.C. 20510

Dear Senator Pell:

At this time in our nation's struggle to provide equality of opportunity in higher education, there is a need for particular concern with the means by which the Federal government attempts to afford greater access to colleges and universities. A recent article which appeared in Antioch Notes (copy enclosed) speaks forcefully for the reassessment of the Federal program for financial aid to low- and middle-income students. The article, by Elizabeth B. Russell, an Antioch graduate and specialist in the area of financial aid, pinpoints some of the consequences for individuals and for student populations of the suggested changes in the Federal financial aid program. The analysis is of the legislation proposed by President Nixon last year; however, the comments are equally applicable to the legislation introduced this year on March 1.

Although in attempting to respond to criticism of last year's proposal Mr. Nixon has raised the grant plus work-study maximum to $1,000, this is still less than is presently available. For the past fifteen years colleges and universities have fairly successfully determined an equitable parents' contribution by applying the need analysis designed and repeatedly revised by the College Scholarship Service. The figures for parents' contribution in the proposed legislation seem to have ignored these years of experience. Also, rather than reducing the degree of subsidization of loans, the government should increase it. Students ought not be deterred from the institution best suited to fill their particular needs because of the intimidation of a large loan debt after graduation.

We feel very strongly that the proposed legislation is inadequate, particularly for the needs of middle-income students, for low-income students who want to attend an institution costing more than $1,400, and for private institutions. Instead, we urge that present legislation be broadened and extended so that greater student access to both public and private institutions can be realized.

I think this is a timely and urgent statement. Your questions or comments would be welcome.

Sincerely yours,

James P. Dixon
President

ANTIOCH NOTES

Federal Aid Blows Cold

In June 1971 the present legislation setting federal policy for financial aid to college students will expire, and something will take its place. President Nixon, in his message to Congress on higher education last March, proposed changes intended to direct more federal resources toward low-income students. He hoped to bring the country closer to the goal of equal educational opportunity.

However, in considering the ramifications of the proposed financial aid policies, I cannot see how they would expand educational opportunities for low-income students, increase cultural pluralism in education, or enhance a college's ability to respond to student needs. Individuals would not have greater

2922

access to the kind of education best suited to their abilities and vocational aims.

If enacted, the new legislation, I am convinced, would compound the lack of educational diversity available to low-income students and further entrench the present social and economic stratification of higher education.

This conclusion rests on certain frequently made assumptions about education: that education can benefit almost anyone and should be equally available to all people; that private liberal arts colleges, where there remains a great deal of individual attention to students, can still be productive; and that we — our government, our colleges and universities — do not wish to promote the continuation of an elitist society.

There are now four kinds of federal financial aid for college students: Educational Opportunity Grants (with no repayments), College Work-Study

Funds (for part-time jobs), National Defense Student Loans (low-interest loans from government funds), and Federally Guaranteed Student Loans (insured commercial loans with subsidized interest). In combination these offer, to a total-need student whose family adjusted income is less than $6000 a year, at most an annual grant of $1000, a subsidized loan of $1500, and, if the student works about fifteen hours a week while studying, $500 in work-study funds. Together these amounts come to $3000 a year; after four years he will be in debt $6000.

The Proposed Legislation

Mr. Nixon told Congress, "With the passage of this legislation, every low-income student entering an accredited college would be eligible for a combination of federal grants and subsidized loans sufficient to give him the same ability to pay as a student from a family earning $10,000."

The changes that Mr. Nixon proposed would provide a student whose family adjusted income (FAI) was $3000 with a maximum annual scholarship grant of $700 (instead of $1,000) and a subsidized loan of $600 (instead of $1500). To obtain funds for

expenses beyond this $1300, the student would have to use loans whose only advantage would be deferred interest payments. Thus, the student who now accumulates a $6000 debt would, under the new system, owe $8376 when he began repaying his loans a year after graduation.

Students with an FAI of up to $15,000 are now eligible for loans that have the government interest subsidy; students with an FAI of up to $10,000 are eligible for work-study funds. Under the proposed changes, students with an FAI of over $10,000 would be eligible only for deferred-interest payments on loans. Aid to middle-income students would be virtually discontinued.

Implications

The object of these changes is to make more money available to very low-income students and to allow more students the opportunity to get a college education. It is true that the changes would increase the total dollars available to such students. Mr. Nixon told Congress, "Under our proposal, all eligible students from families of $4500 annual income would be guaranteed a total of $1300 each in grants and

subsidized loans." Low-income students may also borrow beyond the maximum subsidized amount if they are sufficiently informed of the terms and advantages and are not intimidated by the prospect of a large debt after graduation. It is unlikely, however, that they will be willing to borrow large sums to go on to higher priced colleges that provide the specific education that they seek.

What Mr. Nixon seems to be saying to students who are making the effort to get to college is that all the federal aid they can have is enough to send them to a community or technical college. For anything more they will have to borrow money for their education and repay it for the next twenty years. But tell that to a bright young person from the ghetto who doesn't know the differences between colleges and see which college he chooses.

As I see it, the proposed changes would further extend the already severe lack of diversity existing in the student populations of our colleges. The differences between colleges would be based even more on income and economic background. Students from families who could afford the most expensive colleges would continue to attend high-priced pri-

vate colleges and universities, which are probably still of better quality. Middle-income students would go to moderately priced public universities. Low-income students would continue to enroll almost exclusively in community and technical colleges. Whether the education they get there would be excellent or poor, once more we would be limiting and stratifying by family income. This is what would determine "students' needs."

Plea for Pluralism

There is no ready solution to these problems, but clearly it is not to reduce the amount of aid available to individuals. The argument is made that with limited resources, the funds should be completely restricted to those who need them most. I would question whether the need of a student whose father makes $3000 and cannot contribute toward his education is any greater than the need of a student whose father earns $7500 a year and cannot contribute to his education. Even a student whose FAI is $10,000 annually and whose only source of funds for his education is his father, is severely restricted in his choice of college he can afford.

In his Congressional message Mr. Nixon said, "Individual student aid should be given in ways that fulfill each person's capacity to choose the kind of quality education most suited to him, thereby making institutions more responsive to students' needs. . . . Diversity must be encouraged, both between institutions and within each institution."

What he has proposed will not achieve these aims. The changes, if enacted, will eliminate entirely all subsidized aid to middle-income students; they will drastically cut the amount available to each low-income individual. If the legislation is enacted, stratification of educational institutions by students' family income will be encouraged, and we will have lost ground in the struggle to increase student pluralism on our campuses, a struggle that has for five years been significantly aided by federal aid to low-income students. The legislation will push us back toward a more elitist educational system than we have had for the last fifteen years.

March 17, 1971

Senator Claiborne Pell, Chairman
Senate Committee on Labor & Public Welfare
Room 325
Old Senate Office Building
Washington, D. C.

Dear Senator Pell:

After carefully reviewing the Administration's proposed legislation for student financial aid, I would like to express my opposition. Should this legislation be passed, it appears to me many students from middle income families would not be able to attend private institutions unless they were willing to accept, assuming they were available which is not always the case, high cost unsubsidized commercial loans.

Experience at Temple Buell College, a private college for women, indicates many of our students are reluctant to accept high cost loans from private lenders as a satisfactory method of financing their college expenses.

The National Defense Student Loan, which has a low interest rate and favorable repayment terms, has proved over the past twelve years to be the most satisfactory loan available to students. If this loan is no longer available to middle income students, many will choose to attend a lower cost public institution rather than seeking a high cost loan to attend a private institution. The result will be an even more unfavorable enrollment trend for private higher education.

The National Defense Student Loan, Educational Opportunity Grant, and Work Study programs have, in my opinion, been successful. They have worked very well at Temple Buell College in meeting the financial needs of low income as well as middle income students. Insufficient funds, however, have prevented us from assisting many qualified students.

I would like to encourage you and your committee to work for the extension of the student financial aid programs which expire June 30, 1971. Hopefully, new legislation will be passed soon as it is extremely difficult to make aid awards when the availability of funds is unknown.

Sincerely,

Carl E. Martin

Subcommittee on Education
Room 325
Old Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

On March 17, 1971, I wrote to you expressing my opposition to the Administration's proposed student financial aid legislation. Please feel free to include my letter in this year's record on higher education.

I am extremely pleased your bill would provide for a five year extension of the Work Study, Educational Opportunity Grant, and National Defense Student Loan programs. In my opinion these programs have proven to be very successful in meeting students' financial needs. Adequate funding of these programs would make it possible for interested students to obtain a college education. Loans, however, should not be adopted as the major Federal method of financing higher education.

In principle, I am in agreement with your bill which would provide "Cost of instruction allowance" to institutions awarding Educational Opportunity Grants. However, it is unclear to me how a higher cost institution would benefit. If a college's tuition exceeds $1,200, would the institution be eligible for a "cost of instruction allowance?"

I certainly appreciate your response to my letter of March 17.

Sincerely,

Carl E. Martin

April 8, 1971

The Honorable Claiborne Pell, Chairman
Education Subcommittee
Education and Labor Committee
United States Senate
Washington, D. C. 20515

Sir:

I am writing to you on behalf of all the students at Marymount Manhattan College regarding Aid to Higher Education.

Ninety per cent of our students receive some form of financial aid. In addition, many hold jobs, either through the College Placement Service, their own research or through the College Work Study Program. College Work Study has been of immeasurable help to all students involved in that program, but it has been particularly helpful to minority students and incoming Freshmen who are traditionally "last in and first out" of the job market. Eligible Work Study applicants have been beating a path to my office for weeks. We have informed them that the employment they so desperately need depends on action by Congress and have asked them to write to you.

While there may be legitimate reasons to make some adjustments in the Federal Student Financial Aid programs, we cannot see a period of economic depression as the most auspicious time to change existing programs that have been so helpful to students. The concept of grant, work and loan seems to us to be a very valid form of aid with emphasis on student self-help which gives a sense of satisfaction and control over one's goals.

We urge you to continue the programs presently on the books so that our students may continue their undergraduate work.

We are counting on your support.

Sincerely,

Rita M. Bodie

March 31, 1971

Senator Charborne Pell
Senate Office Building
Washington, D.C.

Dear Senator Pell:

The enclosed copies are self explanatory. (My letter to Mr. Nixon and Mrs. Green.) I believe Mr. Valien is laboring under a complete lack of first hand awareness of financial aid realities.

The administration bill will destroy the effectiveness of the Federal Work/Study Program as financial aid and as a useful instrument for introducing low income students to the calibre of work available to them through local governments via the numerous Urban Corps.

Although the first purpose of Federal financial aid should be getting money to students, there is no reason to ignore the very strong impact the development of off-campus work has on these same students in terms of added incentive to succeed in their studies etc.

Even allowing Mr. Valien's explanation that the Work/Study award will be net dollars after taxes and excluding the contribution of the employer (none of which was made clear in the original explanation of the proposal) there will be little opportunity for a student to work at a meaningful type of employment.

In addition the ceiling on aid of $1,400.oo is discriminatory and capricious in view of the cost of even a public institution.

I understand you are proposing an alternative to the Administration program. I would like to have a copy of your proposal.

I also hope my concern for the total value of the Federal College Work/Study program is shared by enough of the legislative to rescue it from oblivion.

Thank you.

Sincerely,

Richard McKenzie

RM:kk

Enclosures

Box 1214

March 2, 1971

Honorable Walter Powell
U.S. Representative from Ohio
House Office Building
Washington, D.C.

Dear Mr. Powell:

After several years of very constructive development the self-help financial aid program known as Federal College Work/Study is in jeopardy. This is a program in which Federal funds are added to smaller amounts provided by the employers (who must be non-profit, non-sectarian organizations or local, state or federal agencies) to enable students to work for experience as well as for income for college expenses. It is the type of approach which Mr. Nixon has advocated for it involves the student in working for his own support and gives needed assistance to worthy enterprises.

The current proposals coming from H.E.W. under the alleged influence of Mr. Nixon would make it virtually impossible for students now in the program to retain their eligibility. The guidelines are unrealistic in view of current college enrollments.

In addition, the total sum available from grants, loans and work study for the student with great need is to be reduced to the point that he would be foolish to accept any Work/Study money for it would simply be deducted from the total amount of direct grant he would receive. Few students will be interested in passing up gift money in order to accept job income in the same amount. An examination of the figures in the circled column shows that the amount a student can receive in a year from a combination of E.O.G. and Work/Study is so little in most cases that the effort to have students employed in meaningful off-campus experiences would be thwarted. In addition, the door will be opened to decreasing gift aid in the form of E.O.G's possibly leading to the elimination of this program. This would be cruel to the neediest students who frequently need the maximum aid and for whom working while in school impairs classroom achievement.

A side effect of this will be the destruction of the Urban Corps program which has been so highly praised in the past. This worthwhile program enabled city governments to employ disadvantaged youth in city jobs to give them exposure to the problems and opportunities of the "establishment." It is dependent on Federal Work/Study being available to students in amounts sufficient to cover a full term of work experience, usually at least $800. of Federal money. This will be nearly impossible under the new proposal.

I don't believe the men responsible for these recommendations have researched the destructive impact of their proposal. I would also hope that Mr. Nixon is not aware of the damage which would result to a program he seems to advocate.

We in college work who see the value of the present program would like to see more careful analysis before any such changes are made. If anything these programs need to be opened up to more students - not further restricted. The irony here is that the proposal for Federal Work/Study calls for a doubling of funds while at the same time making it impractical to qualify for the program and even down right impossible for many students now in the program.

This just doesn't make sense unless the desire is to force the program into an impossible box and then to announce that its being abolished because no one is using it. This would be a pathetic mistake. I would be happy to discuss this further with anyone interested in our analysis of this situation.

Our request to you as legislator for this district is to resist changes in Federal aid to students which will add to the difficulties which run away inflation and lack of employment are already causing.

Thank you.

Sincerely,

Richard McKenzie
Director of Co-curricular
Programs

RM:kk

March 2, 1971

Representative Edith Green
House Office Building
Washington, D. C.

Dear Mrs. Green:

Some time ago you were kind enough to encourage Wilmington College's new co-operative education program and wish us well. We have prepared and I feel now offer an excellent variety of opportunity for liberal arts students to work in their fields.

However, many of our programs are connected with the Federal College Work/Study Program and this fine program now seems to be in jeopardy along with the whole concept of federal aid to students in higher education.

The enclosed copy of a letter I sent to Rep. Powell of Ohio spells out my concern. I hope through your committee on education and labor you can help to prevent the implementation of the very destructive administration proposal which would destroy Work/Study under the guise of expanding it. My suspicious nature leads me to believe that the intent is to reduce the amount of money spent on E.O.G's and to force students into Work/Study but this would be harmful to the students and to the image of the Federal Work/Study Program.

Thank you for your consideration.

Sincerely,

Richard McKenzie

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON, D.C. 20202

18 MAR 1971

BUREAU OF HIGHER EDUCATION

Mr. Richard McKenzie
Director of Co-curricular Programs
Wilmington College
Wilmington, Ohio 45177

Dear Mr. McKenzie:

President Nixon has asked that I reply to your letter of March 2 concerning your analysis of the Administration's proposed Higher Education Opportunity Act of 1971.

It is true, as you imply, that the "Grant Contribution Limit" which would be established under the provisions of the bill would set the ceiling on the total amount of grant/work-study funds the student would receive. However, the substitution of work funds for grant funds is not on a direct dollar-for-dollar basis, as you state, but on the basis of a "net" Federal dollar of work for a Federal dollar of grant. Since each Federal dollar expended in the work program would typically be "matched" by a quarter of non-Federal money, the student who worked would typically receive a slightly larger amount of non-repayable aid than the student who did not. Additionally, the bill provides that the Federal work dollar substituted for a Federal grant dollar should be on a "net" basis, which presumably means net of all taxes. Therefore there would always be an economic incentive for the student to work.

To date, the only Grant Contribution Limit officially given as an example by the Administration is $1,000. From this limit would be deducted the amount of the expected family contribution, which would be determined by the institution under guidelines to be promulgated by the Secretary of Health, Education, and Welfare. It is conceivable that a Grant Contribution Limit in the neighborhood of $1,000 could result in the cut-back of summer Urban Corps programs, as you speculate, since it is likely that many institutions would prefer to have the student use his entitlement to Federal work-study funds during the academic year. However, we feel that such programs would still be continued because of their obvious benefits for students, even at a reduced level of earnings.

Your contention that the changes contemplated for the work-study program would decrease the numbers of students using it is interesting. However, the Administration's analysis of the pertinent statistics has led it to the opposite conclusion. A great many students are currently denied the opportunity to work under the College Work-Study Program because of funding limitations. The Administration estimates that the three subsidized programs which would be established under its bill would benefit nearly 1,000,000 more students in fiscal year 1972 than were benefitted is fiscal 1971 under the three comparable existing programs—College Work-Study, Educational Opportunity Grant, and National Defense Student Loans.

Although your obviously well-meant concern for the future of the College Work-Study Program has led you to conclusions which we feel are contradicted by the facts, such expressions of support for the purpose of the Federal programs of student financial aid are always welcome.

Sincerely yours,

Preston Valien

The Honorable Claiborne Pell
Chairman, Education Subcommittee
Education and Labor Committee
Senate of the United States
Washington, D. C. 20510

Dear Sir:

The money made available by the Federal government for the work-study program in the colleges, and the Urban Corps program for off-campus work has been much appreciated by the Staten Island Institute of Arts and Sciences.

Were it not for the Urban Corps program administered jointly by the City of New York and the contractual colleges, a very large percentage of our collections and special programs would not exist. We have benefited not only from work done by these interns but also from our supervision and contact with them. We have participated mutually in an important educational function: student interns from colleges newer than this institution with its 90-year-old history and 300-year-old community begin to have a different sense of relationship to the institutional idea as they work with us.

I understand that legislation is pending which might jeopardize the work-study program with the result of impairing or possibly destroying the Urban Corps. Such legislation would in effect destroy a quarter of the Institute's usefulness to the local community since it would sever at least 25% of our work force from us. Programs which have been building over the past five years would come to a halt. Small institutions like this one are particularly hard-pressed for program funding (City support concentrates on building maintenance and administration) since all programming, exhibitions, care of collections, etc. must be funded by interest from Institute endowment funds--which are very limited.

Therefore I urge that you do everything in your power to insure the continuance of funds for the Work-Study Program for College Students, as we know it today.

Sincerely yours,

Gail K. Schneider

(Mrs.) Gail K. Schneider
Coordinator for Urban Corps Students
S. I. I. A. S.

COMMONWEALTH OF PENNSYLVANIA
HIGHER EDUCATION ASSISTANCE AGENCY
TOWNE HOUSE
HARRISBURG, PENNSYLVANIA 17102

KENNETH R. REEHER
EXECUTIVE DIRECTOR

1971 April 22

The Honorable Claiborne Pell, U.S.S.
Senate Office Building
Washington, D. C. 20510

Dear Senator Pell:

The intent of this letter is to acquaint you with the procedures of this Agency in the prevention, pursuit, and collection of defaulted student loans guaranteed under the Higher Education Act by this Agency on behalf of the Commwealth of Pennsylvania.

At the present time, our default and collection department is made up of one staff member and five clerical personnel. Of course, this does not include the supervisory staff, the incoming and outgoing mail areas, data processing equipment or personnel, the work of personnel in our ten regional offices, or the service areas of the Agency. We currently have $2,259,964.57 in student loans which we have purchased from lending institutions because 1,935 students failed to honor the terms of their student loan agreements. It should be noted that 248 of the loans we have purchased from lenders were purchased because of the death or total disability of the student borrowers. The reasons for default of all loans are as follows:

Reasons	Number	$ Value
1. Did not pay interest	184	$ 200,914.68
2. Did not pay monthly payments	737	775,114.63
3. Did not establish repayment schedule	752	952,289.58
4. Death	244	307,806.12
5. Totally and permanently disabled	4	5,260.00
6. Other	14	18,579.57
Totals	1,935	$2,259,964.57

One of the main thrusts of this state agency in the area of defaults has always been the prevention of defaults. This is accomplished by working with students and lenders to see that the student loan account does not reach the point where it can be claimed as a default by the lender. Over the past twelve months our default section received delinquency notices from lenders concerning 5,000 student loans. We were able to prevent 80% of these delinquents from becoming defaulted loans. I think this diligent collection effort at no cost to the federal government is one of the greatest services state agencies can offer.

60-433 O - 71 - pt. 5 - 48

Briefly, our procedure of delinquency rapport and default prevention is as follows:

1. In the case of a student who does not set up a loan repayment schedule within nine months of the date he ceased to be enrolled at an approved school:

   (a) Lender notifies PHEAA when a student is 60 days past due in setting up a repayment schedule.

   (b) PHEAA immediately notifies the student borrower by mail to contact the lender at once and set up a schedule of repayments. We follow up on this 10 days later by telephone to insure that the student makes proper repayment arrangements.

2. In the case of students on a monthly repayment schedule who fail to make two consecutive payments the same procedure previously outlined is followed.

   When a student fails to respond to our collection efforts by not heeding our mail and telephone notices and his loan account remains delinquent for an additional 30 days, his lender submits a default claim.

Upon purchase of a defaulted loan by this Agency, we immediately initiate further mail and telephone contacts as well as a personal visitation by our regional office staff to the home of the borrower. The objective being to either have the borrower set up an appropriate repayment schedule or pay the loan in full. If letters, telephonic contact, and personal contact fail to produce the desired results, we turn the loan over to a private collection agency. The private agency begins its own procedures which may include litigation in cases where this is meaningful. Whether litigation is the proper route depends upon the individual case because of many factors including the law in the defaulted borrower's area of residence. For example, in the County of Philadelphia a lien cannot be filed against a wage earner unless the income exceeds $10,000 annually.

We understand that there is some legislative consideration of a requirement that lenders file judgment against delinquent student borrowers before allowing guaranty agencies to honor their insurance of the lender loan. We understand and share the Congressional desire to protect the interest of state agencies and the federal government where student loans have defaulted. We would, however, like to recommend that the state agency be required to enter judgment or other legal action against a student borrower rather than require this of the lender. This requirement should in no way be permitted to impede the reinsurance procedure. This would surely lead to additional state programs being forced into the direct federal program. Defaults must first be charged 100% against the state reserve fund and then be filed with the federal government for reinsurance. We must realize that a "slow down" in reinsurance will break the state funds where a 2% cash reserve is used to guarantee loans under the state/federal reinsurance program.

Of course, when the state reserve fund is bankrupt the direct federal program is implemented. In the direct federal guaranty program defaults are a 100% loss rather than a 80% loss to the federal government and the federal default ratio is running about double the default ratio of the state guaranteed program.

In order to insure the efficient servicing and collection of these defaulted federal loans, I would recommend that loans which have defaulted in the direct federal program be assigned by the Office of Education to the state agency of the borrower's present residence. The state agencies should be given the responsibility for collections including litigation. As a means of reimbursing the Agency for its efforts and to strengthen state programs in general, I would further recommend that 25% of the money recovered on defaults be retained by the state guaranty agency and be used to finance its collection efforts or to strengthen the state reserve fund. This is a charge somewhat less than the standard fees for such services of private collection agencies. At present, our collection efforts in the state agencies are hampered by restrictions imposed by the present law and/or interpretation of this law by the U. S. Office of Education. In Pennsylvania we pursue strong collection efforts, and when this fails to produce the desired results, we assign our accounts to an outside collection agency. This collection agency charges a 25% fee on any amount which it collects. The U. S. Office of Education requires that 80% of all collections, prior to the deduction of collection costs, shall be forwarded to the U. S. Office to cover their losses under reinsurance. I would like to illustrate how this requirement works to weaken the position of the state agency and to illustrate how none of the costs of collection may be passed on to the federal government. The federal government does not share any of the collection costs even though the federal government benefits directly from the efforts of the state agency assigned collector.

Example

PHEAA paid lender	$800
Reinsurance paid PHEAA	640
PHEAA cost of default	$160

The above account was assigned to our collection agency, and the student borrower paid in one lump sum $896.06 which included principal plus interest paid the lender and interest due PHEAA from the date of purchase of the default through the date the borrower paid off the loan. In accordance with our reinsurance agreement, we are required to forward to the U. S. Office of Education $716.85 which represents 80% of the amount paid by the defaulted student borrower. Since our collection agency charges a 25% fee, the net proceeds to PHEAA from his collection amounts to only $672.32. This means that this Agency had to remove $44.53 from our reserve fund in order to make the required payment to the U. S. Office of Education. The net result is that this Agency is now out $214.53 as opposed to only $160 prior to referral of this default to a collection agency. On the other hand, the federal government's position has been enriched from a loss of $640 through reinsurance to a gain of $76.85 through interest charges assessed and collected by the state agency. Inasmuch as we are supposed to be on an 80/20 loss agreement with the federal government, why does PHEAA end up as the only loser? We do not believe that it was the intent of Congress to have the guaranty agency share a disproportionate amount of collection expenses or to remove monies and weaken the state guaranty reserve fund because of default pursuit.

An amendment to correct this situation and to make clear the Congressional intent should be made to Section 428 (b) (2) D. If it was not the intent of Congress to have reinsurance work in a manner described above, then it would indicate to us that the Commissioner of Education has incorrectly interpreted this section of the law. He is requiring what we believe to be more than his "equitable share" of the payments that are made on the reinsured loans by students who have defaulted. It is of the utmost importance that these procedures that reduce our reserve funds be ended immediately and that provisions be made to insure that the federal government share equitably in the expenses of the default collection of loans which carry a federal/state guaranty.

I would also suggest review of the provisions which require that payments made on defaulted loans covered by reinsurance be first applied to principal and then to interest. This is contrary to all current practices of the banking community. This also gives the defaulted borrower a monetary advantage because the accelerated reduction of principal results in lower total interest costs than those paid by the students who maintain the terms of their loan and do not allow their loans to go into default. In addition, the position of the guaranty agency, which represents both the federal and state government in default pursuit as previously outlined, is weakened when the state agency attempts to make collection of amounts that represent only interest charges. Consider this situation where a student repays the $5,000 principal owed and our crediting procedure under the federal law allows to remain $800 in unpaid interest charges. If the student refuses to pay these interest charges, it is very doubtful that the interest could be collected through litigation.

It is only through the continued goodwill of our participating lending institutions that a continuing supply of funds is made available to aid students in achieving their educational objectives under the guaranteed loan program. Since the inception of federal involvement in November, 1965, there have been a number of changes that tend to make the work of the lender more complicated and burdensome, this is not to say that some of the changes have not been beneficial to the program. However, the subsidy of interest during the repayment period is the greatest objection raised by our lenders. This forces lenders into complicated accounting systems that are costly to administer and confusing to the student borrower. Now that students are going into repayment with loans set at various interest rates, lenders are faced with serious problems in the establishment of repayment schedules and the retention of student borrower rapport. We have had to advise lenders that notes cannot be consolidated into one interest rate during repayment, and we are now involved with lenders supplying student borrowers with separate coupon books for each loan that bears a different interest rate or for each loan which may or may not be eligible for interest subsidy during repayment. It is confusing to both the lender and the unsophisticated student borrower who must monthly tear a coupon from three or four books and draw a check for the total amount payable to his lender.

I have tried to cite a few of the major problems confronting the student loan program; there are many more. As increasing numbers of students are required to begin repayment, these problems will grow unless measures are taken now to correct the situation which exists in administrating the student loan program. I hope you will find this information useful in your legislative review of the guaranty loan program. Please let me know if there are further questions.

I have taken the liberty to forward a copy of this correspondence to Senator Richard Schweiker of Pennsylvania who serves on your committee.

Sincerely yours,

Ken Reeher

Re: Secondary Market--Student Loans

Dear Senator Pell:

As a means of insuring continued support of the Pennsylvania student loan guaranty program, we have developed a Secondary Market for student loans guaranteed by this Agency. The concept of the Secondary Market which we have developed will provide liquidity to participating lending institutions by permitting lenders to sell a portion of their student loan portfolios through "participation certificates and thereby obtain funds which can be used to make additional student loans. We have worked for more than a year to establish liquidity in the Pennsylvania program The purpose of this letter is to provide some detail on the program developed for Pennsylvania lenders, their response to the innovation and our evaluation of the situation.

The actual mechanics of our secondary market are as follows:

1. PHEAA borrows $5,000,000 from the Pennsylvania Public School Employees' Retirement Board and $3,000,000 from the Pennsylvania State Employees' Re cement Board.

2. PHEAA purchases 50 percent "participations" in $16,000,000 of student loan notes now held by lending institutions and which are eligible for both the 7% interest subsidy and the special allowance.

3. The lender continuing to hold 50% ownership in the loans, agrees to service the loans and to bill the Office of Education for interest subsidy and special allowance. The income received by the lender on the portion purchased by PHEAA is sent to the Agency after the lender deducts 1/2 of 1 percent for servicing the loans.

4. PHEAA upon receipt of this income from the lender forwards it to the Pension Funds.

5. We would hope to get secondary market money from the trust funds of unions and colleges as well as insurance companies if we need further monies.

I have enclosed a copy of the Participation Certificate that was sent to lending institutions in February, 1971. At that time we advised 267 lenders of their secondary market eligibility and of the portion of their student loans that they could sell for cash through the Secondary Market. The lender participation eligibility was related to their participation in our volume of student loan guaranties. We asked that the lenders notify us as to their desire to sell loans through the Pennsylvania Secondary Market plan.

Of the 267 lenders contacted, only 13 indicated that they were interested. Of the $8,000,000 to be advanced by loans from the Pension Funds, we were only able to place a total of $1,500,000. When the idea was conceived more than a year ago lenders indicated a keen interest in a Secondary Market to improve liquidity in the student loan program. The changed money market conditions since we first began to develop our proposal in February, 1970 are probably the basic cause of poor reception to the proposal by our lenders. In addition our commercial banks have experienced growth in their deposits in recent months. This has forced them to reduce the prime rate on commercial loans. The nation's lagging economy coupled with a revised money policy by the Federal Reserve Board has produced an abundance of funds available to borrowers at commercial banks. There has not been a corresponding increase in the demand for these funds. Lenders have, therefore, been put in a position where it is currently difficult for them to sell student loans to the secondary market and purchase new loans on a profitable basis. The result is that our student loans are showing an increasingly more appealing yield to lenders now than they were during 1970.

I believe that the proper approach to encouraging lenders to participate in the loan guaranty program is to insure that student loans produce a good yield as compared to other loans of similar maturity and size. I believe that the special allowance provisions of the Emergency Student Loan Act of 1969 have not been used to their fullest extent to improve lender participation. Since this law was enacted, the highest rate paid was 2 1/4 percent. I believe that if rates of up to 3 percent as called for in the law had been paid, lenders would have been more inclined to make additional student loans and to discontinue certain of their policies such as requiring account relationships. The long term nature of the student loan requires a yield that will keep the revenue to the lender competitive. In light of our experience, I believe that the creation of a Secondary Market will not encourage commercial lenders to make student loans at their current yield. It is unrealistic to expect commercial lenders to assume the heavy front loaded administrative costs of disbursing student loans and then discount them to the Secondary Market for the sole purpose of providing additional student loans.

I firmly believe that the establishment of a Secondary Market administered on the national level will greatly increase the rate of default. Our experience has shown that the best collection effort is made by lenders working with the borrower on the local level. Nothing replaces that experience at the "window" of the lender. Distance between the lender and the borrower results in a "gap" in collections. As the distance between the lender and the borrower increases so does the rate of default. This is true whether the gap consists of a time gap between graduation and scheduled repayment or the geographical location of the borrower's residence and the location of the collection agent.

I think our "participation" concept as an approach to liquidity is excellent because it provides for maintenance of the loan at the lender level. With so many loan maturities ahead of us in this program the prevention of delinquencies and defaults will be a job for the professional--and I know of no place other than the lender where professionals are employed in sufficient numbers to do the job.

I would suggest that implementation of any secondary market concept be coupled with maintenance of the special allowance until such time as the effectiveness of the secondary market is established.

If you have further questions on our program or philosophy please let me know. With kindest personal regards, I remain

Sincerely,

Kenneth R. Reeher

PARTICIPATION CERTIFICATE

Date: _____, 197 ___ $ _____

_____

hereby certifies that the Pennsylvania Higher Education Assistance Agency (hereinafter referred to as PHEAA) has contributed _____($)

Dollars toward student loans totalling _____($)

Dollars made by the undersigned to student borrowers who have executed promissory notes reflecting such loans in the amount of _____($)

Dollars on PHEAA Form 500R, which notes are guaranteed by PHEAA and covered under a reinsurance agreement by the United States Commissioner of Education pursuant to the Higher Education Act of 1965, as amended.

The promissory notes evidencing the said student loans together with any additions or substitutions therein are held by the undersigned and will be enforced and disposed of in accordance with the *PHEAA Guaranty Loan Agreement,* at the sole discretion of the undersigned, for the benefit of the owners of the loans each of whom is entitled respectively to his, its or their share, pro rata, of any and all payments or distributions of collateral made on account of the principal or interest of said loans less a proportionate share of costs, if any, including counsel fees, incurred in the enforcement thereof and each holder hereof agrees to reimburse the undersigned in like proportion for all such costs incurred to the extent that same may be in excess of the funds in the hands of the undersigned available to pay the same.

It is understood and agreed that the undersigned is authorized for a period of five years from the date hereof to make substitution of other notes of like nature and, in the aggregate, of equal value without notice to PHEAA. After five years from the date hereof the undersigned is authorized to make substitution of other notes of like nature and, in the aggregate, of equal value with prior written approval of PHEAA.

In the exercise of its discretion the undersigned shall be without liability to PHEAA for any action taken or omitted to be taken, except only for its own willful misconduct or gross neglect.

The undersigned agrees to remit to PHEAA its pro rata share of interest earned and collected on said promissory notes at the rate of seven (7) per centum per annum, plus any special allowance paid by the United States Commissioner of Education as provided under the Emergency Student Loan Act of 1969, less one-half of one (1/2%) per centum per annum service charge to be retained by the undersigned. Remittances of principal, interest and special allowance shall be made within ten (10) days of the receipt of the payments from or on behalf of the student borrowers.

The transfer of this certificate is subject to limitations set forth in existing banking laws and regulations. Transfer of this certificate can be effected only on the books of the undersigned, upon a surrender of this certificate, transferable in a like manner to the transferee, subject, however, to the right of PHEAA to assign or pledge this certificate, upon written notice to the undersigned, as collateral security for a loan lawfully obtained by it. In the event of such assignment or pledge, however, the undersigned shall have the right, in its discretion, to continue to remit all payments called for hereunder direct to PHEAA.

The Honorable Claybourne Pell
The United States Senate
Washington, D. C. 20510

Dear Senator Pell:

I am writing you with great concern regarding future legislation for students having financial need to attend colleges and universities in America. In May of 1970, I testified before your subcommittee regarding the need of both College Work-Study and National Defense Student Loans for proprietary school students.

Since that time I have seen numerous cases of students from welfare families and other low income families graduate and enter the labor market successfully. In several situations young people received Federal Capital Contributions of less than $800, and in a matter of 9 - 12 months left the welfare rolls for salaries from $4,000 to $5,500 per year.

It is my feeling after working with the College Work-Study Program for nearly two years now that it has been a great success in the proprietary school system. It has not only been successful in aiding students to gain future education, but it has also been a success with the non-profit business community willing to employ these students.

I have made a recent survey of students applying for financial aid to Sullivan Business College for 1971 and have enclosed a breakdown of their numbers and income levels. I feel this information is pertinent to the continuation of College Work-Study, National Defense Student Loans, and Guaranteed Student Loans in the proprietary school field.

I certainly hope that you will continue your efforts on behalf of America's youth. If I may at any time provide information regarding the success of Student Financial Aid Programs in proprietary schools, please feel free to call upon me.

Sincerely,

Harry V. Weber

Harry V. Weber
Vice President for Student Affairs

MRS. RAY POLHILL

A Position Statement of the

NATIONAL ASSOCIATION OF STATE SCHOLARSHIP PROGRAMS

to

Create a Federal/State Partnership in Providing Opportunity Grants for Financially Needy Students

* * *

HEREAS:

1 - The Education Commission of the States, through its 1970 task force report on Student Assistance, has accurately stated the need for an institution/federal/state partnership to provide an equal educational opportunity in all the states;

2 - Our association of twenty-one (21) state programs, administering 580,000 monetary awards totaling $229 million to needy students in 1970-71, has indicated the same need for federal/state partnership and also has observed the desired impact of its member states' efforts in providing financial aid;

3 - New federalism and/or revenue sharing is a vital issue of our times to provide relevant responses to difficult problems;

4 - The insured educational loan programs to students demonstrate that federal/state partnership is plausible;

5 - There is an inequity of available dollars for many needy students because of their residence;

6 - The continued existence of many outstanding nonpublic institutions of higher learning is seriously threatened by fiscal problems and the preservation of strong public and nonpublic institutions is deemed to be an economic necessity and is a desired educational goal;

7 - The involvement of federal funds can serve as an incentive for all states to initiate, retain or even increase their commitment of student aid funds;

8 - Any plan to assist students with college costs through excessive borrowing is deemed unwise and not an acceptable answer to extend higher education opportunities to students from low and moderate income families;

9 - Existing comprehensive state scholarship programs have demonstrated a professional competence in administering financial aid programs based upon an objective assessment of eligibility; and

0 - No qualified student who wants to seek post-secondary education should be barred for lack of money.

HEREFORE, BE IT RESOLVED THAT:

ederal legislation be developed or current legislation amended to provide a share f the appropriation for Educational Opportunity Grants and/or newly appropriated unds for gift assistance to the states to add to their commitment of state funds in he assisting of financially needy students. Such legislation should provide for

the attainment of two important goals:

1 - The establishment of programs of state financial aid in all states for its residents with financial need to attend either public or nonpublic colleges, other post-secondary institutions, and

2 - Recognition of effort on the part of states with existing programs for the needy applicant to attend either a public or nonpublic post-secondary institution of higher learning.

Specific Means to Reach the Above Goals

PART I

Those states with new and emerging comprehensive state scholarship or grant programs available to financially needy students to attend either public or nonpublic post-secondary institutions would qualify for matching student aid funds (a form of "seed or incentive dollars) from the Federal Government, up to $1 million per year, for a period of time not to extend more than three successive years, and

PART II

All states with programs (new, emerging, and established) would claim 50% of their investment of state funds when used to match or supplement federal E.O.G. recipients or eligibles as a partnership expense to be paid from the federal treasury.

Desired Characteristics of the Proposal

RE PART I

States without comprehensive student aid programs or with emerging programs are to be motivated to provide new or greater benefits than presently available to their residents, thus minimizing the current inequity now existing among all states.

RE PART II

This proposal involves an institution/federal/state partnership.

- The institution makes the E.O.G. award following federal guidelines.
- The Federal Government provides the E.O.G. funds directly to the institution.
- The State Government provides the supplementary gift aid from its funds and receives a federal subsidy for its efforts to such students.

Part II can serve to keep the maximum value of a federal E.O.G. award at a lower or standard level as college costs increase and it will further assure that more students with severe financial need will be benefiting from both federal and state efforts without the necessity of excessive borrowing to meet the costs to attend the college of their choice.

BE IT FURTHER RESOLVED THAT:

1 - The members of the National Association of State Scholarship Programs (because of the magnitude and significance of their state-funded aid programs) firmly

believe that they should have representation from their organization actively involved in creation of, review of, and implementation of guidelines for any federal legislation dealing with student grant and/or loan financial aid for post-secondary study including the above proposal.

2 - Recognition be given to the fact that the twenty-one (21) states administering comprehensive financial aid programs for college and other post-secondary study are able to obtain some desired characteristics of administration which are not always possible in many institutionally administered student aid programs. These differences are: Greater standardization, objectivity and equity in eligibility and financial need assessment; the preservation of freedom of college choice and the transferability of an award; a state-wide network of communicating opportunity, and a smaller per unit cost of administration. Without the intent of eliminating institution administered federal Educational Opportunity Grants, designated state agencies can and should assume an important role as another vehicle to award federal dollars to its residents and make the application of these federal dollars serve as a partnership expense through a matching or supplemental program from state revenues.

APPENDIX VIII.—Title VI, Higher Education Act

UNIVERSITY OF HAWAII • HONOLULU, HAWAII 96822

THE PRESIDENT

May 18, 1971

The Honorable Claiborne Pell
Special Subcommittee on Education
United States Senate
325 Old Senate Office Building
Washington, D.C. 20510

Dear Claiborne:

On behalf of the University of Hawaii, and in line I think with the sentiment in universities throughout the nation, I would like to urge you and the members of your Subcommittee on Education to consider favorably the extension of NDEA Title VI programs beyond their expiration date of 1972.

The programs designed under this Title have provided a very significant contribution to developing and training language and area specialists. The expertise of these specialists is not only transmitted through their roles as teachers, but also becomes an irreplaceable resource for our government and businesses in better understanding the people of other nations. Because these specialists are still so few in numbers, and our need for their expertise continues to grow, an extension of Federal support is imperative.

Sincerely,

Harlan

March 25, 1971

Senator Claiborne Pell
Senate Office Building
Washington, D. C.

Dear Senator Pell:

I have just seen a copy of S.659 of which you are the chief sponsor. I find this to be an excellent bill. As the president a year ago, and currently as the volunteer Program Coordinator of this Association, I have devoted a good deal of time to the question of manpower planning for the public service and the kinds of education required to meet the critical needs of federal, state, and local governments.

Three years ago the Congress enacted Title IX, Education for the Public Service, but the Executive Branch has prevented its implementation. Appropriations were not requested first on the grounds that no new educational programs should be initiated, and second, that the proposed national foundation for higher education would be a suitable vehicle to carry out the purposes of Title IX. Both assumptions are completely invalid.

Education for the Public Service is not another educational specialty, but is concerned with the strategy of the government in how to develop greater competence in the wide range of positions concerned with the administration of federal, state, and local programs. The transfer of a program such as Title IX when it is not even in operation to an education foundation where it would be subject to the contending claims of traditional academic groups, would be fatal.

Originally, Education for the Public Service and the Intergovernmental Personnel Act were combined. HEW insisted on separating it because it wished Education for the Public Service to be administered by the Office of Education. Now it is engaged in killing its own child.

For these reasons, your bill is especially timely.

What is needed now, and which your bill would help support, is action by the committees on appropriations to fund Title IX for FY 72.

Last summer I submitted to George Shultz a statement describing why the activation of Title IX and the Intergovernmental Personnel Act was vital to the operation of the government. I thought you would be interested in seeing a copy of it, which is attached. Those of us who have been working with states and cities as well as the federal government, feel that any program of special revenue sharing and block grants would suffer greatly unless far more professionally trained persons of higher caliber are channeled into these services.

If we can do anything to help you with your efforts, please let me know.

Sincerely yours,

Donald C. Stone

July 27, 1970

Mr. George P. Shultz
Director
Office of Management and Budget
Executive Office of the President
Washington, D. C. 20503

Dear Mr. Shultz:

This Association, comprising some 70 schools and centers, has great interest in the expanded role of the Office of Management and Budget. As the Association's recent president and interim program coordinator, I have been requested by the Executive Council to lay before you several recommendations which we feel most urgent in improving federal organization and management, and especially programs involving state, county, and municipal collaboration.

The Problem. Effective planning and implementation of government programs requires the development and utilization of relevant educational and research resources. The enormous achievement which derives when both manpower and knowledge are mustered for difficult objectives is dramatically illustrated in such fields as space exploration, agriculture, atomic energy, medicine, and weapons systems. The government, through the National Science Foundation, the National Defense Educational Act, and other measures has greatly strengthened university capabilities to contribute to these purposes. In addition, individual agencies like NASA, AEC, Defense, and Agriculture have induced universities through grants and contracts to prepare personnel for new and complex tasks and to engage in research and services crucial to the fulfillment of their purposes.

In contrast, in most other fields of government, notably in those concerned with urban and environmental conditions, social welfare, poverty, race relations, housing, public works, and other functions, almost no educational and research underpinning of either a general or specific character has been provided. Many noteworthy policies and programs launched in these fields have not achieved their potential, and some have floundered. We see three main reasons:

a. Lack of professionally adequate policy and administrative planning complemented by organized and sustained measures (with adequate consultation by all agencies affected) to guide implementation.

b. Managerial deficiencies of city, county, and state governments in carrying forward their part of implementation.

c. The assumption that qualified persons to staff such programs will spring from somewhere.

It would almost appear that well-intentioned policies and programs are deemed to be self-implementing and that administrative knowledge is intuitive.

A new opportunity. During the past few months we have discussed this problem with Messrs. Roger Jones, Dwight Ink, Robert Hampton, Pat Moynihan, and others, and formally presented the problem to Mr. Mayo. The Budget Bureau's response stressed the President's proposals for a National Foundation on Higher Education and the inclusion of "public administration" among its suggested fields.

Our Executive Council believed that reliance upon a general aid to education act (which appears to have no prospect of enactment) to achieve hard-cutting and precise program objectives to be unrealistic. I was, therefore, commissioned by our Executive Council to make a new presentation to the Bureau. The purpose was to express our concern — even our dismay — over the lack of governmental initiative and coordinated effort in establishing professional education, training, and research resources to assure the success of governmental programs. Our member institutions do not believe that the federal system, and Presidential plans in relation thereto, can cope with either present or new initiatives in the absence of positive measures to create and utilize manpower development and research capabilities. Such measures need to focus on public policy, program formulation and implementation, institution building, and executive management in the full range of domestic and foreign operations. A very different kind of process and competence is required under a local-state-federal partnership system than in traditional governmental practices.

While refining our views, the effectuation of Reorganization Plan #2 became assured, and you were appointed director of the Office of Management and Budget. We are pleased that the OMB not only has a mandate to improve program management, but that it also has policy responsibilities for executive manpower. Obviously these new functions entail development and utilization of educational and research resources as a major element in program planning and execution.

Accordingly, the following proposals, formulated by the Association's Executive Council, have been recast to fit your new mandate. It is our hope that they will be helpful.

Findings and Recommendations

1. A question of government performance. The heart of the problem, and what we feel the federal government should be more concerned about, is the critical need for capable executive manpower (with access to functionally operative knowledge) to develop and administer public policies, plans, programs, and projects. Many imaginative legislative acts and executive initiatives fail because R & D is inadequate and qualified persons are not trained to carry out the programs.

As a member of our Executive Council commented in reviewing the draft of this letter:

> "The current Administration has publicly stated that it is more interested in making programs work than it is in creating false hopes on the part of the public. The proliferation of federal programs with laudable objectives but no concrete effects, this Administration has implied, is due to unrealistic assumptions built in the programs in the first place. Yet, this Administration has not shown a willingness to undertake the hard work of uncovering better assumptions and designing optimum solutions. That requires, ultimately, a research and development commitment in the social and management sciences, geared to public sector activities, that is now lacking. In fact, just the opposite has occurred. Research funds are even on the decline".

The hard fact is that many thousands of graduate professionals are needed in public policy analysis, executive management, program planning and budgeting, finance, and personnel administration as well as in more specialized administrative fields such as urban planning and development, renewal, housing, model cities, community action, race relations, economic development, environmental control, public works, etc. The complex of social welfare, social security, health, medicaid, and medicare has suffered for lack of policy planning and managerial talent. The numbers of such persons required by municipal, county, and state governments is staggering because of enormous growth at those levels. At the federal level the same kinds of persons oriented to intergovernmental consultation and action are equally critical.

The annual yield of graduate programs serving these vast needs is miniscule. The total enrollment in master's programs in schools and centers of public affairs and administration, including city planning, urban studies, international affairs, public policy, and

public administration, is estimated at about 5000.

Such schools as law, business, engineering, social work, and the social sciences feed persons into these public service fields. This is desirable, and could be greatly advantaged if their students had more opportunities to take course work in schools of public affairs and administration. However, what we are stressing here is sustained graduate study, some of it of a joint character, which interrelates policy planning and administration with function, substantive technology, and environment to produce both public administration generalists and program managers in major functional fields.

2. Goals and strategy. We believe this situation requires priority action. We are convinced that programs cannot be well implemented without better planning and management, and that proposals for decentralization, tax-sharing, and building an effective partnership of federal, state, and local governments will misfire without a massive infusion of able, solidly trained talent.

To this end we propose the following action program:

a. Specific assignment to the Office of Management and Budget of the responsibility for the development of goals, policy, and program, and for coordination of departmental efforts in executive management (including public policy) education and research. The OMB (with the cooperation of the Civil Service Commission and participation by the agencies)is surely the appropriate Presidential instrument to see that this purpose is served and monitored at regular intervals.

b. Creation of a corresponding or supporting unit within each department to deal with this problem in its special fields.

c. Establishment of effective working relations with the universities, training institutions, and research agencies that serve or should serve these public affairs fields.

d. Appropriation of funds for Title IX (Education for the Public Service) of the Higher Education Act. This is a good piece of legislation. The needed categories of persons will not be produced unless legislation recognizes the direct link between education for public affairs/administration and the practical problems of policy, program development, and executive management. That is why we feel Title IX is greatly preferable to HR 16621 as discussed below.

e. Enactment of HR 5546, the Intergovernmental Personnel Act. This Act which has passed the Senate as S. 11 is neatly complementary to Title IX. This kind of program is imperative to upgrade present state and local personnel. The New Federalism requires this kind of legislation if it is to be successful.

f. Continuation and funding of Title I (Community Service Training and Development), but provide for better administration at federal and state levels.

g. Initiation of doctoral programs to prepare instructors and advanced scholars to staff the professional education and research programs covered by the foregoing. There is not now a national program geared to produce Ph.D.'s equipped for graduate teaching of practitioners and for research in public affairs/administration fields.

h. Incorporation in every new major program or revision of present programs of an adequate component of research and education to assure that the program will become viable. NASA provides an ideal model; Public Health has excellent experience; and the Urban Mass Transportation Administration is off to a good start. HUD's authorized education and research function needs better funding; NASA's doctoral fellowship and research allocations to universities in the administration of large-scale technological and scientific enterprise should be reinstated.

3. The Proposed National Foundation for Higher Education. We find HR 16621, the Higher Educational Act of 1970, to have much merit for its broad objective of making grants to encourage excellence, reform, and innovation in private and public institutions. While it is the declared intention to include public administration within its terms, we doubt that the proposed educational foundation with its coverage of the whole range of traditional fields of universities would be oriented to or capable of focusing on and developing Executive Branch strategy and programs in respect to public service personnel and educational requirements. Moreover, an effective strategy requires complementary attention to research, a function which the Foundation could not be expected to perform. We wonder whether the government has yet distinguished between general assistance to higher education for purposes the universities choose and assistance to encourage programs are designed to supply governments with needed professional leadership.

If HR 16621 were capable of covering all public affairs fields should it not also encompass agriculture, health and medicine, aerospace, and science? Presumably these are recognized as discrete national concerns, not as general assistance to higher education. They are supplied by pinpointed programs under specific agency management. Public Affairs education and research (the two go hand-in-hand) call for the same kind of focused attention by that part of the Executive Branch which is concerned with overall planning, organizing, staffing, coordination, and management of the program of the President.

Not many universities are seriously committed to professional education, research, and services in public policy and administration, either generally or in specialized fields, so that a quite different relationship between government and universities is required to develop these service fields than under a general assistance program for higher education.

Overcoming this inadequacy of universities could not be accomplished very well by that appealing purpose of HR 16621 reflected in that part of the President's message which states that "the time has come for the federal government to help academic communities to pursue excellence and reform in fields of their own choosing. . . and by means of their own choice. . . Educational excellence includes . . . the university turning towards new programs in. . . public administration."

The power structure within most universities would inevitably prevent much of significance to federal program planning and management from happening. Faculty power is in the hands of professors of science, the arts, the humanities, and specialized social sciences. Few have the necessary understanding of and enthusiasm for public administration, especially in its broad ramifications. The inevitable view would be that any funds requested for public affairs/administration would mean so much less for their fields. Experience shows that those who exercise academic power do not have much interest in establishing professional programs in urban planning and development, city management, environmental planning and control, economic development, community action, development administration, public works administration, and other special and general public policy and administration areas.

Only where a major graduate school or center exists, is there enough university strength to mobilize the many kinds of academic inputs required in teaching and research in these newer public policy fields.

4. Capitalizing on Title IX. Since HR 16621 would not fulfill urgent strategic needs, and seems unlikely of enactment in the foreseeable future, we are convinced that the best strategy would be to get

the ball rolling in funding Title IX (Education for the Public Service) of the Higher Education Act. Title IX has many advantages:

a. It is a first-rate piece of legislation developed cooperatively among government agencies, professional societies, the universities, and the Congress.

b. It focuses on the urgent task of strengthening and creating university capabilities in critical public service fields.

c. Title IX is on the statute books and might still be funded, at least for planning purposes, for FY 71.

d. It provides the Office of Management and Budget with an instrument made to order to start buttressing faulty operation of programs.

e. The Office of Education has prepared initial guidelines for its implementation which could be quickly reviewed by OMB and CSC to stress priority purposes.

f. HR 16098, introduced by Mrs. Edith Green, would extend Title IX's authorization for three years after June 1971.

It is our understanding that the Administration did not recommend an appropriation for Title IX in the 1970 or '71 budgets on the grounds that funding of new aids to education should be postponed and that the proposed educational foundation would cover public administration. The problem with Title IX (also Title I) is that these have been treated as aids to education and placed in the hands of public school people rather than viewed as instruments for improving public service and placed in an executive management agency. We urge you to use the leverage of the OMB to change that view.

5. Continued Funding of Title I. No funds were requested for Title I—Community Service Training and Development, but we are pleased to note that an appropriation is being made. In report No. 91-996, dated April 9, 1970, the House Appropriation Committee states: "The Committee does not believe that the existing program should be summarily dispatched before the new one is born and has restored $9,500,000, the amount appropriated for 1970, to continue it for another year".

This Title has been badly administered, both in Washington and in many states. In many cases, administration was channeled through state departments of education which ordinarily have little competence or concern for community service training and development. We are encouraged by recent reassignment of responsibility within the Office of Education. Here again Title I, like Title IX, should become an

element in the OMB's and CSC's program for improving government operations down to the grass roots level.

6. Enactment of the Intergovernmental Personnel Act. This bill (HR 5546), already adopted by the Senate as S. 11, authorizes grants to the state and local governments to modernize personnel services and to encourage education and training of professional, administrative, and technical personnel. It further provides for fellowships for state and local personnel for up to two years of graduate-level study. The member institutions of the Association consider this a very important measure which should be enacted and fully funded.

7. Teachers of Practitioners. Universities face an acute shortage of teachers who combine suitable academic preparation with the government experience needed to make them effective instructors in graduate professional programs in public affairs/administration. Thus doctoral programs need to be fostered and strengthened to produce persons qualified to teach both young and mid-career personnel in practitioner-oriented curricula. There is no federal support for teaching or fellowships of this kind. As a result many public service programs initiated by universities lack competent instructors or researchers.

We suggest that consideration be given to amending Title IX, the Education for the Public Service Act, to authorize appropriations to be used for curriculum development, teaching and related expense, and fellowships to prepare teachers, researchers, and advanced scholars to staff greatly expanded university programs.

8. International Education Act. The purposes of the International Education Act are quite different from Titles I or IX. That Act covers the international academic waterfront, and is much less public service and operationally oriented. Whatever is done about that Act should not preclude the financing of graduate professional education in international development, policy planning, and administration of international programs under Title IX. These are part of public administration.

9. Agency programs. In developing an Executive Branch strategy for public service education and research a blend is needed between support of general curriculum development, teaching, fellowships, etc. in public affairs/urban affairs/international affairs/policy and administration and the more specific concerns which individual departments and agencies have for producing the requisite personnel and knowledge to carry out particular functions. This means there must be very specific and extensive initiatives within individual departments like HUD, HEW, Interior, Commerce, NASA, OEO, DOT, etc.

The Office of Education has both a legislative mandate and extensive appropriations for the preparation of school teachers and school administrators, and for research to improve the nation's educational system. This is also true for public health, mental health, medicine, and transportation. What is needed now is a similar focus on all major public policy and public service sectors. Studies of OEO, Medicare, Medicaid, Urban Renewal, Neighborhood Centers, Model Cities, and other government programs of crucial importance to the American people show the waste and futility of launching programs which are not planned, organized, and implemented by qualified personnel and which lack the research required to produce knowledge essential for both planning and implementation.

10. The Case of NASA. NASA has been notably successful in developing and utilizing university resources. It provided a good prototype in public administration, until the Bureau of the Budget reportedly foreclosed its cooperation with universities to produce administrators for scientific and technological endeavors. This program, thwarted at the very moment it began to meet in a significant way some of the crucial needs of the government, should be continued. We strongly request the Office of Management and Budget to examine its merit and to let it go forward.

11. Government-University Cooperation. Progress along these lines requires close working relations between government and the schools and centers responsible for education and research. Cooperation in identifying and planning of educational and research goals and programs is essential. Universities must be evaluated both as to capability and performance. Government must develop workable policies and procedures by persons knowledgeable about both the function and university administration.

Neither the government nor the universities have been adequately staffed in the past for these purposes. The result has been a vacuum. It is for this reason that we recommend a unit and full-time staff related closely to the executive management function in the Office of Management and Budget. Every department having serious concern for program development, implementation, and evaluation needs a similar unit. State governments and the large cities also require such an office.

At the federal level NASA illustrates how an agency can organize to mobilize educational and research competences for program purposes. New York City has appointed an assistant city administrator to serve as director of university relations for this same purpose.

Concluding Note

Surely the time has come to move forthrightly to upgrade professional competences of executive personnel at all levels of government. This would assure more successful management of both old and new programs, and make more feasible proposals for block grants and tax sharing. When compared with other expenditures for higher education, the cost of putting these measures into effect is miniscule. Their potential in better performance is enormous.

The National Association of Schools of Public Affairs and Administration has as a major purpose the development of university capabilities along these lines and of working responsively with the federal government, and with state and local governments. We wish to see develop a national network of institutions, including universities and colleges at metropolitan and community levels, which will produce the kinds of trained manpower needed in today's world.

We are ready to meet with you or whomever you designate to pursue these matters.

Sincerely yours,

Donald C. Stone

Donald C. Stone
Program Coordinator

APPENDIX X.—Title XI, Higher Education Act

White House
Conference
on Youth

P.O. Box 19, Washington, D.C. 20044

June 9, 1971

Honorable Claiborn Pell
Chairman, Subcommittee on Education
Committee on Labor and Public Welfare
U. S. Senate
Washington, D.C. 20510

Dear Senator Pell:

As you know, the White House Conference on Youth was held recently at Estes Park, Colorado. Each of the 1500 adult and youth delegates attending the Conference was assigned to one of ten task forces dealing with issues determined to be of greatest concern to young people today. The Task Force on Legal Rights and Justice consisted of 150 adults and young people, including federal, state, and local judges, business leaders, Members of Congress, state legislators, and a broadly representative group of American youth.

As co-chairmen of the Task Force on Legal Rights and Justice, we wish to bring to your attention a recommendation on clinical legal education adopted at the Conference by our task force delegates. The recommendation urges the continuation of authorization for Federal assistance to clinical legal education programs now reflected in Title XI of the Higher Education Act of 1965, as amended, and the implementation of such authority through adequate appropriations. There is a great need for the law schools in the United States to enhance the legal education experience by the establishment and expansion of extra curricula and co-curricula programs to give law students relevant experience in the practice of law. Equally, there is an unfilled need in today's society for adequate and readily available legal services for the lower-income citizen. Law school clinical programs are uniquely appropriate to meet these needs, and such programs, to be successful, require new sources of financial support. Accordingly, we believe that funding of Title XI is essential to these important goals.

The 1971 White House Conference on Youth has provided an opportunity for a meaningful dialogue between our nation's leaders and its young people. In view of the current consideration of higher education authorization and appropriations legislation by the Congress, we hope you will give our views on Title XI serious attention.

Sincerely,

Michael A. Dively
Michael A. Dively

May 25, 1971

Honorable Walter F. Mondale
United States Senate
Washington, D.C. 20510

Dear Senator Mondale:

When representatives of legal education appeared before the Subcommittee on Education on March 31st to testify in connection with hearings on higher education legislation, you requested that we submit for the record some information concerning the program of the Council on Legal Education Opportunity. You were particularly interested in the number of students who were part of this program, how many have graduated and schools attended.

We think the best way to answer your questions is to enclose with this letter a copy of a draft of a report which was recently prepared by the CLEO staff detailing the operation of this program, which was begun in 1968. Of course, the CLEO students are only a small part of the total enrollment of the minority and disadvantaged students in law schools around the country. Unfortunately, enrollment statistics for the current academic year are not yet available, but we are under the impression that there has been a significant increase in the number of these students from that which we reported for the 1969-70 academic year in our prepared statement submitted for the record last year when the Subcommittee on Education was considering higher education legislation. This appeared in Part 1 of the printed hearings on S.3474 and related bills (91st Cong., 2nd Sess.), the "Higher Education Amendments of 1970", at pages 858-894. The information specifically about enrollments appears at page 866.

One of our principal concerns, as you know, is that federal financial support for the continuation of the CLEO program be assurred by the granting of appropriate statutory authority to the proper federal agency or department to insure this result. In the prepared statement which we submitted to the Subcommittee on March 31st, we briefly reviewed the history of funding arrangemen

for this program from private sources and through the research and development funds of the Office of Economic Opportunity. We further indicated that, in our view, support for a program along the lines of the CLEO program seemed to us to now be a proper responsibility of the Department of Health, Education and Welfare, in the absence of any other existing appropriate federal agency. Thus, we noted our concern that the Department be given the appropriate statutory authority to provide stipend assistance to disadvantaged students in schools of law. In this connection, you will note that we commented on the proposed new Section 461 in the Administration bill (H.R. 5191; S.1123) which would grant authority to the Commissioner of Education to provide stipend assistance to such students. We support this provision in principle, but we feel that the limitation of $30.00 per month, or any comparably small amount, is patently inadequate for disadvantaged students in law and other graduate studies. Perhaps the proviso that exceptions may be made in "exceptional cases as determined by the Commissioner" will alleviate this problem, especially if it is understood that this language would encompass all of the students covered by a program of the CLEO type.

Very respectfully yours,

Peter L. Wolff

Peter L. Wolff
Assistant to the
Executive Director

Enclosure

cc: Honorable Claiborne Pell

CLEO

GENERAL DESCRIPTION

CLEO (Council on Legal Education Opportunity) is a federally funded program, begun in 1968, seeking to enable the "minority" or "economically disadvantaged" student, with "marginal" or less conventional admissions credentials, to have an opportunity to attend law school. To this end, CLEO inspires and cosponsors recruiting programs to inform and encourage students, particularly minority students, to choose law as a career; operates six-week summer institutes, with the cooperation of many law schools, so as to provide the selected students with a vehicle to identify their capability to succeed as law students and to become acclimatized to the process of law study; and provides an annual living stipend to those summer students who continue on in law school. CLEO is sponsored jointly by the American Bar Association, the Association of American Law Schools, the National Bar Foundation and the Law School Admission Test Council.

For the 1971-72 program year CLEO will be funded by both O.E.O. and H.E.W. Approximately 85 per cent of the total federal funds will come from O.E.O.'s Legal Services Division and the balance will come from H.E.W.'s Office of Education. These funds will provide for the operation of seven regional institutes this summer, accommodating 200 students. These 200 students will then receive $1,000.00 per year to help defray their living expenses while in law school. The conditions on this grant are: (1) the student must enter law school in September, 1971; (2) he must continue on in good standing for the three consecutive years; and (3) the law school in which he enrolls must provide for the student's tuition in the form of a grant, loan or combination of the two.

Most summer institutes are operated by a consortium of law schools, with the host school assuming primary responsibility for administration. This year's host schools for summer institutes are:

1) Howard University

2) University of Florida

3) Tulane University

4) St. Louis University

5) Texas Technological University

6) University of Denver

7) University of California - Davis

All of the institutes will conduct six weeks of course study. They will provide students with exposure to three substantive law school courses and a legal writing course. The courses will be taught by experienced law faculty. In addition, the institutes will be staffed by student assistants. These student assistants are minority students already attending law school.

CLEO enrolled its first class in 1968. Of the 93 students who began law school in September, 1968, six graduated mid-year of this academic year, and the bulk of the 65 remaining will graduate this June. These students receive an annual living stipend of $1500.00, provided by a grant from the Ford Foundation. The class of 1969 was considerably larger than that of 1968 and the funds for stipends has been a patchwork of various private sources. For those of the 399 students of the class of 1969 who entered law school in September, 1969, and continue in good standing, the level of support is fixed at $800.00. The 1970 class is the first to receive its stipends from federal funds. Beginning that year O.E.O. Legal Services not only provided for the costs of administering CLEO but granted funds for a class of 200 sufficient to provide stipends in an average annual amount of $1,000.00.

PROGRAM DATA

During the past three summers, 1968, 1969, 1970, CLEO has sponsored a total of twenty-two Regional Summer Institutes enrolling a total of 817 students. Established and operated very largely on an experimental basis, the purpose of these institutes has been varied: some were primarily compensatory or remedial, some were primarily screening devices to identify students who showed promise of success in law schools and others aimed primarily at orientation and conditioning students for the law school. All had mixed purposes.

Although the target groups for CLEO were originally designated as "Negroes, Spanish-Americans and American Indians," applications have appeared from a very wide spread of ethnic, geographic groups. On the face of it, it is very clear that CLEO's existence and its activity in pursuing its goals--particularly through summer institutes and recruitment conferences which it has also co-sponsored--has stirred enormous interest on the part of minority and disadvantaged group members in the law as a profession. Likewise, great interest and support on the part of laws schools of the Bar has been stimulated.

The Summer Regional Institutes and Law School Admissions:

Seven of these Regional Summer Institutes, lasting six weeks, were held in 1970 at Miami, Florida, Washington, D.C., Philadelphia, Detroit, Seattle, Tempe, and Houston. A total of 211 students were

registered in these institutes, of whom 195 were certified for final admission to law school. Detailed statistics on the performance of all three classes of CLEO students are shown in the following table:

Total number of students all CLEO Institutes, 1968-70----------817
Total number of CLEO students entered Law Schools 1968-70----------677
Total number CLEO students enrolled in Law School Sept., 1970------584
Total number CLEO students receiving Financial Aid Sept., 1970-----577
Total number Law Schools Enrolling CLEO students, all classes------105

1968 Class -- Total number post-senior CLEO students 122

No. of Students Entering Law School	Year	No. of Law Schools Enrolling
93	1968	33
2	1969	31
6	1970	28
101	1968-1970	33

77 at present (September 30, 1970) enrolled in law school;
8 of original enrollees failed;

The others either resigned from the program or left it temporarily while in good standing for good cause such as military service. Contingency eligibility is possible under the terms of the funding grant only for the 1968 class. Hence, of those who left temporarily in good standing, six have returned to law school this year. Six more of those who have deferred entrance for military service have indicated that they will enter law school in 1971.

1969 Class -- Total number post-senior CLEO students 444

No. of Students Entering Law School	Year	No. of Law Schools Enrolling
399 *	1969	91

* Includes 16 post-juniors from 1968 class

322 at present (September 30, 1970) enrolled in 80 law schools
44 failed
24 did not enroll because of military service or other good cause
9 status unknown

322 at present (September 30, 1970) enrolled in 80 law schools and receiving financial assistance. Of original enrollees, 44 failed; 24 withdrew or did not re-enroll because of military or other good cause; 9 status unknown. Of the 61 students in this class who did not enter in 1969, approximately 25 entered first year in law school in September, 1970, or returned after having withdrawn during the previous year.

Since the grant of financial assistance for all who did not register, or who failed or withdrew during the year 1969-70 was vacated, it has not been possible to ascertain precisely how many of this group are presently in Law School. Apparently, therefore, there is a total of approximately 340 CLEO students of the 1969 class and juniors of the 1968 class at present in law school.

1970 Class - Total number post-senior students 211

No. of Students Entering Law School	Year	No. of Law Schools Enrolling
187	1970	70

3 failed to enroll in law school for reasons unknown
5 status unknown
16 failed at the Institute

The first CLEO graduate is expected to finish law school in December, 1970. The main portion of the class, numbering 68, should complete law school in June, 1971.

Financial Assistance to CLEO Students:

Financial assistance at varying levels has been provided all CLEO students who successfully completed the Institutes. It cannot be argued that the amount of assistance available for any class has been as large as hopefully it would be. Consequently, within the limitations of funds received, and the terms of the grant, the members of the 1968 class have received $1,500 for living expenses only for each of their three years in law school, while the law schools provided tuition and fees. The members of the 1970 class will receive an overall average of $1,000 per year for living expenses for each of their three years in law school.

For both the 1969 and 1970 classes, the law schools provide tuition and fees by grant, loan or a combination of the two in accord with the policy of the law school applicable to all other students. Unfortunately, it has only been possible to guarantee the 1969 class $800 per year one year at a time. Furthermore, it has been necessary to reject all contingency eligibility for this class because of lack of funds. In fact, for each of the classes the careful husbanding of funds available has been necessary in order to meet the demands made upon them.

Financial Assistance to CLEO Students in Law School:

Financial assistance while in law school to the 1968 class was provided from a three-year grant of $450,000 made in 1968 by the Ford Foundation. By its terms, the grant was to provide $1,500 per year to each of 100 successful members of this class for living expenses only, and the law schools were to provide for tuition fees. Assistance to the 1969 class has been provided grants in 1969 and 1970 totalling $689,400. Two of these grants, from the Ford Foundation for $250,000 and Rockefeller Brothers Fund for $225,000 were three-year grants. The remainder is provided from annual grants totalling $194,400 by the American Bar Endowment and $20,000 from the International Business Machines Corporation. Nevertheless, the funds raised for support of the 1969 class fell far short of our expectations. Consequently, since more than three times as many students were to be supported in this class than in the 1968 class, it has been possible only with greatest of care to provide these students with assistance at the level of only $800 for 1969-70 and 1970-71. At the present time, it is not possible to guarantee even that figure for their third year in law school (1971-72).

For the class of 1970, a more encouraging situation exists. The terminal renewal of our grant by the Office of Legal Services of OEO included an item for the in-law support of the 1970 class of 200 students for three years at an overall level of $1,000 per year, totalling $466,000. One of the conditions of this grant, however, presupposes an annual attrition of 30%, at the end of the first year and 10% at the end of the second. This may actually be too high for the second and almost certainly for the third. Because of the more rigid screening of the 1970 class, the second year re-enrollment may well be larger than the anticipated 140 and the third year larger than the anticipated 126.

The following is a summary of funds received for financial assistance:

	1968	1969	1970	Totals
Ford Foundation	$450,000	$250,000	----	$700,000
Rockefeller Brothers Fund	----	225,000	----	225,000
International Business Machine Corp.	-----	20,000	----	20,000
American Bar Endowment	----	194,400	----	194,400
Office of Legal Services, OEO	----	-----	$466,000	466,000
	$450,000	$689,400	$466,000	$1,605,400

A note should be made of the very substantial contributions of law schools in form of tuitions and fees, and funds raised by the state and local bar associations, and some individuals for the support of minority and disadvantaged law students. Some of these efforts have been independent of CLEO and some have been in cooperation with, or as consequence of CLEO's efforts. Unfortunately, it has not been possible to list all of these efforts or to give the total amount of the funds thus raised. Finally, the Ford Foundation has provided one additional source of financial assistance to minority students by establishing a guaranteed loan fund through the United Student Aid Funds, Inc. of New York.

Recruitment of Minority and Disadvantaged Students for Law Schools:

During the winter of 1968-1969, CLEO co-sponsored with certain law schools and local bar associations and the LSAT Council two Recruitment Conferences. In the winter 1969-1970, the number was increased to ten, held at Boston, Cleveland, Washington, Atlanta, Chicago, Santa Fe, El Paso, Tempe, Denver, and St. Louis. In addition, a special circuit-riding type of recruitment conference was staged jointly by the four Louisiana law schools, CLEO and the LSAT Council. With the exception of the Louisiana effort, these were one-day affairs, and were deemed highly successful. Six one-day conferences were held in the winter of 1970-1971, as well as a group of conferences geared especially to the Southwest and the special conditions of that area.

The Information Clearinghouse and the Toledo Review Symposium:

There has been established at the University of Kentucy Law Library an Information Clearinghouse, containing a collection of reports, published articles and other materials relating to the problem of the minority group lawyers, and legal education and minority group members. This material has been catalogued and prepared for lending on an inter-library loan basis. A catalog or index of materials included in the collection will be available shortly.

There also was publication in November of a special issue of the Toledo Law Review, devoted entirely to a symposium on "Disadvantaged Students and Legal Education--Programs for Affirmative Action." It is a double issue, containing 31 articles. CLEO has participated in the organization, editing and support of the symposium in this issue of the Review. Some copies are available for distribution by CLEO and others will be placed in the Information Clearinghouse Collection at the University of Kentucky Law Library.

CLEO Funding, 1971

At the time the last grant authorization for the support of CLEO was made, OEO arrived at two important conclusions. First, it concluded

that CLEO was an extremely valuable and productive endeavor. Secondly, it concluded that given the limited financial resources available to OEO and the apparent aura of uncertainty surrounding that agency's future funding, it was in the best interests of both OEO and CLEO that CLEO seek out permanent funding from some other source.

Various meetings have been conducted with OEO and HEW officials; and CLEO has analyzed HEW legislation, and prepared various documents on the existing legislative authority pertaining to its program design. It is clear that present legislation severely limits the power of CLEO to serve the community.

Honorable Claiborne Pell
United States Senate
Washington, D.C. 20510

Dear Senator Pell:

In accordance with a request received from the staff of your Subcommittee on Education, we are writing this letter for th erecord to clarify a matter relevant to the Subcommittee's consideration of continuation of the Law School Clinical Experience Program, currently Title XI of the Higher Education Act of 1965, as amended.

We refer to the matter of authorization for appropriations. As you know, the present Title XI authorized appropriation of $7,500,000 for each fiscal year of the life of that Title, with no law school to receive more than $75,000 in any fiscal year. The question has been raised whether these amounts would be adequate under present inflationary circumstances.

As we believe your Subcommittee has heard from numerous witnesses representing higher education, inflation over the last few years has had a significant impact. We think that it would not be unreasonable to consider the possibility of increasing these amounts by about 10 percent, assuming an intention by the Subcommittee to adhere to roughly the same level of aid set out in Title XI. Thus, this would suggest an authorized appropriation for each fiscal year of the life of the new section in an amount of $82,500,000, with each law school limited to an amount in any fiscal year not to exceed $82,500.

In arriving at a rough figure of ten percent as indicative of the realities of inflation, we consulted with a number of persons in legal education and also with those who have had for the last several years particular experience with the funding of the programs administered through the Council on Legal Education for Professional Responsibility, Inc. It has been pointed out that the major cost of operating clinical legal education programs is the cost of faculty salaries and fringe benefits. Experience seems to indicate that salaries and fringe benefits have increased by about ten percent because of the inflation to which we have referred.

We hope that this letter will be helpful to you.

Sincerely,

Michael H. Cardozo

Dear Senator Pell:

I have read of your bill S659. It is a very practical approach.

Those of us interested in educating young people in Public Administration feel that it is essential to fund Title XI of the Higher Education Act. The Congress has enacted so much legislation in recent years that has extended governmental functions at the federal, state and local levels. Programs will not be organized and managed well, however unless some attention is given to educating people for public management. I do hope you and your colleagues will keep this in mind. To attract people to such programs as I am directing here fellowships are an absolute necessity.

Sincerely yours,

John A. Perkins
Professor of Public Management and
Director of Studies in the Administration of Public Affairs

AUTHORIZING RETRAINING OF TEACHERS
UNDER PART B-2 OF THE
EDUCATION PROFESSIONS DEVELOPMENT ACT

Testimony before the
Senate Subcommittee on Education
Committee on Labor and Public Welfare 1/

Mr. Chairman and Members of the Subcommittee:

This statement is submitted in support of a proposed amendment to Sub Part 2 of Part B of the Education Professions Development Act which would permit funds appropriated under that authorization to be used to provide necessary training to teachers to enable them to teach other grades or other subjects in which such agencies have a teacher shortage. The Council of Chief State School Officers appreciates the opportunity to express the views of its members to this Subcommittee on this proposed amendment.

It is our understanding that this change has been recommended in the Administration's proposed amendments to the Higher Education Act of 1965, S. 1123. It also is included in the Comprehensive Bill, H.R. 7248, submitted by the Chairman of the Subcommittee in the House considering the Higher Education Act amendments, and in H.R. 32, submitted by the Chairman of the House Committee on Education and Labor. As stated above, this specific amendment to which this statement is addressed is the addition of a clause to Section 518 (a) of the Education Professions Development Act which would permit the use of state grant funds appropriated under Part B-2 to be used to provide necessary training to teachers to enable them to teach other grades and subjects in which such agencies have a teacher shortage.

This modest program authorized by Part B-2 for which only $15.0 M was appropriated in 1971, has been in operation only two years but it has already proved of great value to the states by permitting them to use it in priority areas as identified by the various districts and by state educational agencies. It is acknowledged that a teacher surplus does exist in some areas. However, there is no surplus and, in fact, there still are shortages of teaching personnel for such areas as the disadvantaged, bilingual education and the handicapped. It also is true that many teachers in subjects where there is said to be an over supply need reorientation and updating of skills to be most effective under the circumstances that now exist in our schools. This amendment would permit the retraining of teachers for areas where there are shortages and is a means of bringing the teacher supply and demand into better balance.

A few excerpts from letters that have come to the Council office will give this Subcommittee a picture of the way the state educational agencies value this Part B-2 of EPDA and the need for this proposed amendment. The excerpts appear below. The first is from Superintendent Parnell in the state of Oregon:

1/ By B. Alden Lillywhite, Federal Liaison Assistant, Council of Chief State School Officers, April 27, 1971.

"The B-2 program has become an even more important one for the 1971-72 year since it has evolved into a statewide project which will be used as a vehicle for establishing model teaching complexes. With the impetus of B-2 funds, local districts will be developing cooperative training programs involving those local, state, and federal programs they may currently have operating as individual and separate programs. The impact of this program would be greatly expanded by the liberalizing amendments and by an increase rather than the decrease in funds for EPDA B-2 proposed in the BEPD budget."

Dr. Busbee, State Superintendent from South Carolina, described the situation in his state as follows:

"Modest though the EPDA B-2 Program has been, school districts in South Carolina have been able, during two years of operation, to recruit, train and employ 234 new teachers in areas of critical shortages. The State Grants Program has made it possible for these school districts to identify and justify their areas of critical shortages and to take effective steps toward alleviating them. A modification of the guidelines which would permit the retraining of teachers already employed would provide another valuable means of assistance for school districts in South Carolina to improve the quality of their teaching staffs. Although the existing limitation on funds to be used for training teacher aides (one-third) has not yet seriously affected South Carolina, the increasing emphasis on aide programs may well place them at a high level of priority in the immediate future.

In view of the facts noted above, we would like to go on record as urging support of the necessary Congressional actions to continue the funding of the State Grants Program (EPDA B-2) at a level at least equal to or in excess of the Fiscal Year 1971 funding and to liberalize the EPDA B-2 guidelines. We feel that the State Grants Program has made a real impact in South Carolina and that it shows promise of continuing success in this state."

The final excerpt is from the State Superintendent in Florida, Floyd Christian, who is President of the Council of Chief State School Officers. He describes the need for this amendment as a way of bringing the teacher supply and demand into better balance and describes the grants under Part B-2 as "seed money" which should be allowed to grow to fruition. His statement follows:

"There exists a considerable shortage of instructional personnel in Florida as well as the entire nation in the crucial areas of exceptional child education, occupational specialists, and professional trained volunteer teacher aides. To remedy this critical situation, Congress needs to pass the Javits amendment that has been before the Congress since last summer. The passage of this amendment would liberalize the guidelines for the expenditure of EPDA B-2 money, thereby enabling each state to retrain the teachers who are unemployable due to their certification in the oversupplied subject areas such as language arts, social studies, and guidance.

To meet these crucial shortages for the next two to three years certainly does not indicate the proposed fiscal budget reduction under Part B-2 of the act. The 1971 level of funding should at least be maintained if Florida is to rectify its supply and demand situation with the passage of the Javits amendment. The EPDA B-2 seed money that has been planted in Florida during the past three years should be given the opportunity to grow to fruition. I am certain that this is the case in many of the other states in our nation."

The above excerpts and statements in other letters received in the Council office give ample proof of the value this training program, authorized by Part B-2, has been in the past and they give solid justification for the proposed amendment to permit retraining of teachers. The Council recalls the work of the Members of this Subcommittee and of the full Committee on Labor and Public Welfare in developing and helping to obtain passage of the Education Professions Development Act. We wish to express our commendation for the foresighted action enacting this legislation and in particular, Part B, to which this statement is addressed. We believe that the addition of the amendment discussed above is in keeping with the overall concept of Part B-2 and will provide an important additional resource for training educational personnel to function effectively in present day elementary and secondary schools.

Mr. Chairman, insofar as this Office has been able to find out, there is no opposition to this proposed amendment on the part of the states, the major educational organizations or the Department of Health, Education and Welfare. As you know, it also has been recommended by the Administration and by important congressional leaders of both parties. Thus, there would seem to be little need to press the point further, except to say that the Council of Chief State School Officers joins with the others in urging that this Subcommittee and the full Committee recommend the passage of this amendment and work for its acceptance by the Congress. We suggest that consideration be given to broadening the amendment to Section 518 (a) to permit retraining of principals, supervisors and other administrative personnel as well as retraining teachers. This broader language would be particularly helpful in cases where schools are closed or there are abrupt changes due to desegregation or other actions.

Before concluding this statement I want to mention two other points. First, we note that the Administration bill has another amendment to Part B-2 which would increase the amount for state administration from the present 3% to 5% or $20,000 whichever is greater. While we have not given testimony on this point, we note that it also comes in the so-called non-controversial category and the Council strongly supports this amendment. Second, the Council intends to work with the appropriation committees for an increase in the budget item for Part B-2 from the $7.0 M recommended for Fiscal Year 1972 to the $15.0 M which was the amount appropriated for Fiscal Year 1971. It would seem that this increase of $8.0 M in the appropriation for this item is entirely appropriate to implement the new amendment.

Washington, D. C. 20515

Dear Representative Perkins:

The Grand Forks School District and the State of North Dakota have benefited from the functioning of EPDA, Part B-2. With these funds we have been able to initiate programs to train professionals and paraprofessionals for service in roles which were unknown only a few years ago.

In my estimation, differentiated staffing is, for example, a most promising educational innovation. EPDA, Part B-2 has enabled us to gain experience with this and other practices.

I urge you to continue efforts to fund the provisions of this legislation which, as I comprehend it, are House Bill No. 32, specifically Part C, Sections 321 through 324.

Thank you for your attention to this request.

Sincerely yours,

Harold Bergquist
Assistant Superintendent

April 1, 1971

Honorable Quentin N. Burdick
United States Senator for North Dakota
Senate Office Building
Washington, D. C. 20202

Dear Senator Burdick:

The Directors and Coordinators of the Education Professions Development Act, Part B-2, for several states in this area have just completed a two-day conference devoted to an examination of the practices and applications of this Act as it applies to the training of teacher aides and the preparation of persons unemployed or otherwise employed to fill the critical needs in the classrooms. As the persons in the state departments of education assigned this responsibility, a prime concern is the utilization of these funds to best meet the needs of the schools in our states.

It has been the expression of many that some of the stipulations in the Act; namely, limiting the expenditure of the state allocation for the training of aides to one-third of the amount and excluding teachers currently teaching who are in need of retraining from participating in the benefits of the program, has reduced to a considerable degree the effectiveness and utility of the program.

In addressing the assembled State Directors, Coordinators, and the members of the U. S. Office of Education at our annual convention in the fall of 1969, Representative Edith Green emphasized the need for the retraining and "retreading" of teachers to meet critical needs and new staffing patterns. Amendments to this effect were introduced during the 91st Congress. Due to the press of other legislative action, time did not permit final action.

We are pleased that Congressman Carl Perkins has seen fit to include in the proposed amendments to the Higher Education Act of 1965 revisions to Sec. 518 (b), 518 (a), 520 (a), as contained in Sec. 321, 322, 323, and 324 of H.R. 32.

The attached resolution reflects fully the support of the State Directors and Coordinators for Representative Perkins' amendments.

Since part of the responsibility I have as Director of State and Federal Relations is the administration of Title III, NDEA, I also urge your support of Sec. 501 of H. R. 32 which amends Sec. 301 of the National Defense Education Act of 1958 extending the program to July 1, 1976, and Sec. 311 providing for the authorization of $160,000,000 per year.

We are pleased that the appropriations committee has seen fit to reinstate an appropriation in the amount of $20 million for the program, an item not included in the President's Budget Message. While we are grateful for this action, we would be remiss in our responsibility if we did not inform you that the $50 million provided to North Dakota $196,253.00, and only partially met the needs of the schools in providing equipment and materials to strengthen programs of instruction for all of the children. While the $76,500 the lower appropriation will provide certainly is better than no funds, it will fall far short of our being able to meet the needs. I firmly believe that a careful examination of priorities is in order. The funds provided for less essential programs in education and in other areas could more appropriately be devoted to the one program that has for the past twelve years proven to be one of the most effective and most desired Federal assistance program.

In closing, I wish to again thank you for your interest, cooperation, and firm support of the various programs it has been my privilege to supervise or administer.

Sincerely,

DEPARTMENT OF PUBLIC INSTRUCTION

Kiaran

KIARAN L. DOOLEY
Director of State and Federal Relations

Enclosure

60-433 O - 71 - pt. 5 - 51

92D CONGRESS
1ST SESSION

H. R. 32

A BILL

To amend and extend the Higher Education Act of 1965 and other Acts dealing with higher education.

By Mr. PERKINS

JANUARY 22, 1971
Referred to the Committee on Education and Labor

PART C—AMENDMENTS TO SUBPART 2 OF PART B

ATTRACTING AND QUALIFYING TEACHERS TO ALLEVIATE TEACHER SHORTAGES

SEC. 321. Section 518 (b) of the Higher Education Act of 1965 is amended by striking out "1971" and inserting "1976".

VOLUNTEER SERVICE PROGRAMS

SEC. 322. Section 518 (a) of such Act is amended by striking out "and" before "(2)" and by adding the following before the period: ", (3) encourage volunteers (including high school and college students) for service as part-time tutors or full-time instructional assistants for educationally disadvantaged children, (4) compensate such tutors and instructional assistants at such rates as the Commissioner may determine to be consistent with prevailing practices under comparable federally supported work-study programs, and (5) provide necessary training to teachers to enable them to teach other grades or other subjects in which such agencies have a teacher shortage".

INCREASE IN AMOUNT AVAILABLE FOR ADMINISTRATION

SEC. 323. Section 520 (a) (2) of such Act is amended (1) by striking out "and (C)" and inserting in lieu thereof the following: "(C) programs of such to provide necessary

1 training to teachers to enable them to teach other grades or
2 other subjects in which such agencies have a teacher short-
3 age, and (D)", (2) by striking out "3" and inserting in
4 lieu thereof "5", and (3) by inserting before the semicolon:
5 ", or $20,000, whichever is greater".

6 ELIMINATING CEILING ON AMOUNT FOR AIDES

7 SEC. 324. Section 520(a) of such Act is further
8 amended by striking out paragraph (5) and redesignating
9 paragraphs (6), (7), (8), and (9) as paragraphs (5),
10 (6), (7), and (8) and paragraph (5) thereof (as so re-
11 designated) is amended by inserting after "because he" the
12 following: "is teaching or".

13 PART D—AMENDMENT TO PART C

14 EXTENSION OF FELLOWSHIP PROGRAM

15 SEC. 331. Section 528 of the Higher Education Act of
16 1965 is amended by striking out "1971" each time it ap-
17 pears and inserting "1976".

18 PART E—AMENDMENTS TO PART D IMPROVING TRAIN-
19 ING OPPORTUNITIES FOR NON-HIGHER EDUCATION
20 PERSONNEL

21 SEC. 341. Section 532 of the Higher Education Act of
22 1965 is amended by striking out "and" after "1969," and
23 inserting before the period at the end thereof the following:

clude the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Canal Zone, and the Trust Territory of the Pacific Islands.

(b) The amount of any State's allotment under subsection (a) for any fiscal year which the Commissioner determines will not be required for such fiscal year shall be available for reallotment from time to time, on such dates during such year as the Commissioner may fix, to other States in proportion to the original allotments to such States under subsection (a) for that year but with such proportionate amount for any of such other States being reduced to the extent it exceeds the sum the Commissioner estimates such State needs and will be able to use for such year; and the total of such reductions shall be similarly reallotted among the States whose proportionate amounts were not so reduced. Any amounts reallotted to a State under this subsection during a year from funds appropriated pursuant to section 519 shall be deemed part of its allotment under subsection (a) for such year.

(20 U.S.C. 1109) Enacted June 29, 1967, P.L. 90-35, sec. 4, 81 Stat. 88; amended Oct. 16, 1968, P.L. 90-575, Title I, sec. 234, 82 Stat. 1039.

STATE PLANS

SEC. 520. (a) Any State which desires to receive grants under this subpart shall submit to the Commissioner, through its State educational agency, a State plan, in such detail as the Commissioner deems necessary, which—

(1) designates the State educational agency as the sole State agency for administration of the State plan;

(2) sets forth a program under which funds paid to the State from its allotment under section 519 will be expended solely for (A) programs of local educational agencies or of the State educational agency, or both, to attract to teaching, persons in the community who have been otherwise engaged and to provide short-term intensive training and subsequent in-service training to qualify such persons for teaching, (B) programs of such agencies to obtain the services of teacher aides and to provide them with the preservice or in-service training they need to perform their duties as teacher aides, and (C) administration of the State plan, except that the amount used for administration of the State plan for any fiscal year shall not exceed an amount equal to 3 per centum of the amount paid to the State under this subpart for that year;

(3) with respect to so much of the State program as is to be carried out by local educational agencies, (A) provides assurance that every local educational agency whose application for funds under the plan is denied will be given an opportunity for a fair hearing before the State educational agency and (B) sets forth the policies and procedures to be followed in allocating Federal funds to local educational agencies in the State, which policies and procedures shall insure that such funds will be allocated to local educational agencies having the most urgent need for teachers and teacher aides;

(4) provides that training under a program described in paragraph (2)(A) will be provided only to persons who will, upon

completion of their short-term training, have the qualifications for teaching in elementary or secondary schools in the community, and that training under a program described in paragraph (2) (B) will be provided only to persons who show promise of being able with appropriate training to serve competently as a teacher aide;

(5) provides assurances that not more than one-third of the sums expended under this Act will be used to support programs described in paragraph (2) (B);

(6) provides assurance that no person will be denied admission to training programs carried on under this subpart because he is preparing to teach or serve as a teacher aide in a private school;

(7) sets forth policies and procedures designed to assure that Federal funds made available under this subpart for any fiscal year will be so used as to supplement, and not supplant, funds which are available from State or local sources for purposes for which grants may be made under this subpart;

(8) sets forth such fiscal control and fund accounting procedures as may be necessary to assure proper disbursement of, and accounting for, Federal funds paid to the State (including any such funds paid by the State to any other public agency) under this subpart; and

(9) provides for making such reports, in such form and containing such information, as the Commissioner may reasonably require to carry out his functions under this subpart, and for keeping such records and for affording such access thereto as the Commissioner may find necessary to assure the correctness and verification of such reports.

(b) The Commissioner shall approve any State plan and any modification thereof which complies with the provisions of subsection (a).

(20 U.S.C. 1110) Enacted June 29, 1967, P.L. 90-35, sec. 4, 81 Stat. 88; amended Oct. 16, 1968, P.L. 90-575, Title II, sec. 233, 82 Stat. 1039.

PAYMENTS TO STATES

SEC. 520A. From the amounts allotted to each State under section 519 the Commissioner shall pay to that State an amount equal to the amount expended by the State in carrying out its State plan. Such payments may be made in installments, and in advance or by way of reimbursement, with necessary adjustments on account of overpayments or underpayments.

(20 U.S.C. 1110a) Enacted June 29, 1967, P.L. 90-35, sec. 4, 81 Stat. 89.

ADMINISTRATION OF STATE PLANS

SEC. 520B. (a) The Commissioner shall not finally disapprove any State plan submitted under this subpart or any modification thereof, without first affording the State educational agency reasonable notice and opportunity for a hearing.

(b) Whenever the Commissioner, after reasonable notice and opportunity for hearing to such State agency, finds—

(1) that the State plan has been so changed that it no longer complies with the provisions of section 520(a), or

2181 Rayburn House Office Building
Washington, D. C. 20515

Dear Representative Perkins:

Thank you for your letter of February 26 and the copy of H.R. 32. The attached correspondence and resolution to the members of the North Dakota congressional delegation and to selected members of the education committee indicates our support for the H.R. 32 amendments which pertain to the specific programs which are a part of the Department of Public Instruction's responsibility.

As in the past, we appreciate the leadership and depth of understanding evident in your continued efforts to provide assistance to the states in their responsibility in providing more germane education at all levels.

Thank you for your interest and cooperation.

Sincerely,

DEPARTMENT OF PUBLIC INSTRUCTION

KIARAN L. DOOLEY
Director of State and Federal Relations

RESOLUTION

IN SUPPORT OF AMENDMENTS
TO EDUCATION PROFESSIONS DEVELOPMENT ACT, SUBPART 2 OF PART B

Whereas there is a need to provide necessary training to teachers to enable them to teach other grades or other subjects in which there is a specific shortage;

Whereas there is a continuing need to train teachers and teacher aides to satisfy the needs for innovative staffing patterns to increase the quality of instruction;

Whereas there is a need to increase the effort of teacher training institutions to change patterns of teacher preparation;

Whereas there is a need to provide adequate administrative and consultative leadership in education professions development at the state department of education level;

Be it resolved that the Education Professions Development Act B-2 coordinators and project directors from North Dakota, South Dakota, Montana, Utah, Wyoming, Colorado, and Minnesota strongly support the passage of House of Representatives Bill No. 32, specifically Part C, sections 321 through 324, as introduced by the Honorable Carl Perkins, United States Representative from Kentucky.

APPENDIX XII.—Miscellaneous

THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE
WASHINGTON, D. C. 20201

MAY 24 1971

Honorable Claiborne Pell
Chairman, Subcommittee on Education
Committee on Labor and Public Welfare
United States Senate
Washington, D. C. 20510

Dear Senator Pell:

Thank you for your letter of May 4 requesting clarification of HEW's proposal to finance 1971 increased pay costs through transfers from the "Higher Education Facilities Loan Fund" and "Community Education." It is true that the authorizing legislation for these accounts does not allow DHEW to make these transfers unilaterally. That is why we requested Congressional authorization for them in the Second Supplemental.

It has always been our policy to absorb the costs of increased pay to the fullest extent possible. By this I mean we identify those funds for which no expenditures are planned and then request transfer authority from Congress--rather than additional appropriations. This has been a government-wide policy for many years.

We proposed to finance a large portion of the increased pay costs through a transfer of unobligated balances in the Higher Education Facilities Loan Fund--a direct loan program. Since 1969, when Congress authorized a program of subsidized loans for higher education, direct loans have been made to help only those schools that could not get a subsidized loan on the private money market. This is the only activity Congress has authorized for the "Higher Education Facilities Loan Fund." As a result, there now exists an unobligated balance of $125 million in this account, much more than we need for making direct loans to schools unable to get subsidized loans. In view of this, we requested that $39,524,000 of this balance be utilized to finance increased pay costs.

The House, in acting on the Second Supplemental Bill (H.R. 8190) on May 11, disallowed the request for authority to transfer any portion of

this balance for increased pay costs. Instead, the House provided additional appropriations. On May 13, the Senate Committee on Appropriations concurred with this action.

The Department also proposed to finance an additional $15 million in pay costs through transfers of unobligated balances from other appropriations, including the $5.4 million from "Community Education" which you mentioned in your letter. The House approved these transfers, and the Senate Committee on Appropriations has concurred in this action.

With best regards,

Sincerely,

Elliot L. Richardson

Sincerely yours,

Clinton P. Anderson

CPA:wlm

Enclosure

1000 No. Third St.
Raton, New Mexico, 87740
30 March 1971

Honorable Clinton P. Anderson
United States Senate
Washington, D.C., 20510

Dear Senator Anderson:

Current news topics and discussions by several officials prompts me to write you concerning my feelings toward Assistance to College Students.

While Assistance to College Students is of paramount importance, it seems to me that sucha proposal is only a temporary expedient. The problem is that the schools are unable to operate without the money received from tuitions. They say they must have increases in money to remain open. I disagree!

I feel a complete overhaul is needed in the educational system throughout the country, and in every level of schooling through the university. Schooling needs the same sort of reorganization the Postal Department is undergoing. Classes are too large, good teachers are needed, time is too short, pressures are too great.

Then, let's change the system and put it on a paying/profit basis. It shouldn't be necessary for a school to close down for the full summer, why not continue classes with only one or two week's break. Classes then could be graduated a year earlier. Classes should be run on the same hourly basis as industry.

In addition, why not academize industries; that is, allow students to work in fields of necessity with the added return of college credits.

Finally, I have searched all over the country, to no avail, to find a recognized degree, offered by any recognized university, that could be obtained by correspondence study. The release of overcrowding at universities would be tremendous. And the impact on overall population education possibilities for those who had to leave school and now can't afford to return, would be beneficial to the whole country. The Government has the bases for accredition now, with Extension Course Institute, Air University, Maxwell AFB, Ala. (I have taken over 645 hours of courses from ECI, to date, but none is recognized credit, according to university standards.)

To distinguish from those students receiving their degrees in residence, perhaps some other distinguishing nomenclature could be attached. But, there should be recognition and on completion of at least the bachelor's work, provision should be made to permit entrance into graduate work, if the student desires. Why penalize any person if he has the ambition to work, but doesn't have the M O N E Y!

In addition to my proposal above, I would like to add that it seems unnecessary and extravegant that the lower grade schools, and others, are all so incompatible. If one's child attends fifth grade in New York State, then, because of necessity to relocate to, say, Illinois, he may be summarily put back a full year's work, because the school he moved from, was a full year behind. This can happen even in a single small town where there may be several schools. The child is wrongly penalized, not the school system. Effectively, the state and school system is wasting money by non-standardizing. Conversely, the student that is "ahead" and moves to an area requiring less effort, may be bored and lose all interest. Result: the student must be put back to the same grade to repeat the courses he already knew, but, where there was no incentive for learning more. At least a standardized course might have some provision for levels of learning and allow a more accurate evaluation which could provide recognition, where merited.

Your consideration of this matter would be of great interest to me. This has long been a subject I would be happy to see considerable discussion about.

Sincerely,

Richard L. Scott

Richard L. Scott.

STATEMENT BY ERNEST L. BOYER

CHANCELLOR, STATE UNIVERSITY OF NEW YORK

BEFORE THE SUBCOMMITTEE ON EDUCATION

OF THE COMMITTEE ON LABOR AND PUBLIC WELFARE

U. S. SENATE, 92ND CONGRESS

ON S. 659 AND RELATED BILLS

It is an honor to present my views as Chancellor of the State University of New York to the Subcommittee on Education of the Senate Labor and Public Welfare Committee.

I also welcome this opportunity to express my views on the legislation currently pending before the Subcommittee in order to pay tribute to the work of the senior Senator from New York, Jacob K. Javits. Senator Javits' interest in, and support of, the State University of New York during its formative periods, and his continuing concern has been a source of encouragement and inspiration for those of us at the University.

The State University of New York, with a total enrollment in excess of 300,000 students on 70 campuses geographically ranging from Suffolk on Long Island to Fredonia in the western part of the State, is an institution both unique and diverse. The State University system includes not only the large university centers at Buffalo, Stony Brook, Binghamton and Albany, but also thirteen four-year colleges of arts and sciences throughout the State, two major medical centers, specialized colleges of Forestry and Maritime, six two-year agricultural and technical institutes, 38 locally-sponsored two-year community colleges, and five specialized schools operated through contracts with Cornell and Alfred Universities.

Our principal mission is the growth of quality higher education in New York State, but the thrust of my testimony at this time is to suggest the need for a program of federal institutional aid so that the growth of quality education will continue untrammeled through the decade of the 1970's.

I am therefore pleased to endorse the views presented to this Subcommittee on March 31, 1971 by Dr. Joseph P. Cosand, Chairman of the Board of the American Council on Education in behalf of the major higher education associations. It is my earnest feeling that S.659, the bill introduced by the distinguished Chairman of this Subcommittee, Senator Pell, contains many features which would strengthen American higher education and promote its future development.

It is also my view that several bills introduced by Senator Javits to change the existing student aid programs would be of assistance to the higher education institutions.

It is my fervent hope that this Committee will seriously consider a comprehensive general institutional aid bill in this session of Congress. Though I recognize that S.659 would provide a cost of instruction allowance to each institution enrolling a student who received a supplementary educational opportunity grant, it seems to me that this allowance would permit our institutions to deal with the additional costs of compensatory education, rather than providing them with funds that could be used where the needs are the greatest. The financial crisis in higher education is very much with us at the present time. To enact legislation in the 92nd Congress without providing for

institutional aid would, I believe, seriously jeopardize the future of American higher education, both public and private.

I would like to comment upon the basic elements that should be included in any higher education bill enacted in this Congress. I strongly believe that any federal legislation should contain support for students, support for construction, and support for institutions in the form of operating grants; to support one of these elements without the other only would be to ignore the basic interrelationships among all three and further aggravate the current crisis situation. Commenting on legislation in the other body, for example, I have endorsed the legislation introduced by Rep. Edith Green (H.R. 7248), and strongly believe this Subcommittee should consider amending existing legislation, or developing new legislation, similar to H.R. 7248, to meet the emergency state that encapsulates the higher education community. This condition has been dramatically articulated in the recent Carnegie Commission on Higher Education report, "The New Depression in Higher Education." "It is clear," the Carnegie Commission observed, "that institutions of higher education will not be in a position to meet their responsibilities in the 1970's and subsequent decades if their financial status continues to deteriorate."

While a state university is cushioned against some of the on-going difficulties of the private institutions, the crisis nonetheless affects us deeply. Our applications for 1971-72 are at an all-time high. More than 123,000 prospective students, an increase of 14,660 over the previous year, have applied for next September at 49 of our campuses that participate in our uniform admissions program. Because of cuts in the New York State budget, our planned enrollment growth of 10,000 additional students for the fall of 1971 will, of necessity, be decreased to 8,000. Meanwhile, our state fiscal crisis is such that we have had to terminate key positions while our request for important additional faculty has been denied.

Historically, the states have had the primary responsibility for the development of higher education in this country, and I agree with the Carnegie Commission on Higher Education's observation in "The Capitol and the Campus" that the states should continue to carry the primary governmental responsibility for higher education. States must make a vigorous effort to carry their share of the national burden to accommodate increasing enrollment. According to the criteria employed by the Carnegie Commission in "Capitol and Campus," New York State has carried its share of the national burden, but it is clear that we may be reaching a point where we can no longer expect the state to increase its expenditures for higher education as a matter of course.

The State University of New York feels this Subcommittee should enact a comprehensive federal program of general assistance grants that will enable our institutions to use the money

where the need is the greatest for a particular institution. For example, students at the State University of New York this September will bear a larger portion of the burden of this education; we have been forced to increase our tuition at the very time when reductions in New York's scholarship and direct aid program are being considered.

It is clear, also, that we cannot solely rely on federal categorical programs. The uncertainty and the timing difficulties inherent in the appropriations process can create serious problems of planning, to say nothing of the hopes that are shattered when programs are not adequately funded.

A combination of increasing costs, increasing enrollments, and declining state revenue has created a dramatic turning point for many public universities. Confronted by these developments, we are exploring innovative programs that will save money for the State University of New York. Currently we are in the process of planning an experimental college, based on non-residential instruction; teaching at the proposed Empire State College will take place by television, correspondence courses, and other media. This type of education has great promise for educating large numbers of students with limited state resources. The cost per student, including instruction, development of materials, and administration is estimated to be $1,275. This compares to the 1971-72 estimated per student cost of $2,000 for education and general expenses at our University's four-year colleges. We are also exploring the possibility of a 3-year baccalaureate degree program. While these measures will obviously lead to significant savings in operating and capital expenses, they will never completely solve our fiscal problems. I share Dr. Cosand's opinion before this Subcommittee that "the urgency of obtaining additional funds for operating expenses is so great that the details (of a specific formula) are secondary. Many good formulas already have been worked out." One such formula, based on baccalaureate degrees awarded by each institution has been introduced by Rep. Quie (H.R. 5193); last year a companion bill was introduced by Senator Dominick as S.3817. Another such formula, based upon full-time enrollment and recognizing the differences in costs of various levels of education, is part of H.R. 7248. I prefer this type of formula because it takes into account the very real differences in costs of various levels of education and thus permits greater flexibility in administration.

New York State is currently the only state with an existing institutional aid program for non-public colleges. The State formula employed provides a specific amount for each degree conferred, but the experiences of this program suggest that variables other than the number of degrees awarded should also be considered at the federal level. The experience in New York State has also provided us with some idea of the scope of an institutional aid formula. A grant in the range of 4.5 to 5% of the institution's general educational expenses would provide significant assistance according to the Interim Report on the Financial Problems of Private Colleges ~~and~~

and Universities of New York State. A total expenditure of $491.3 million is recommended for the State University programs in 1971-72; assuming a grant of 5% of the State University's general educational expenses is a reasonable minimum level, this would mean that the State University should receive $24.56 million in 1971-72. How does this figure compare to what State University of New York would receive according to the formula in H.R. 5193 and H.R. 7248? The formula in the Quie bill would provide the State University with $460,000 for this same period. However, if the formula in H.R. 7248 ~~was~~ were applied to fall 1970 enrollment figures, the State University of New York would receive $29.3 million for this current fiscal year. For subsequent years, the amount of money received would depend upon changes in the University's total enrollment. Thus it is clear that a formula similar to the one employed in H.R. 7248 would be more in line with the minimum level found to be acceptable by the New York State experience.

On the question of student aid, we feel student aid programs have been successful; the faults that have developed have not been caused by the structure of the programs, but rather by inadequate appropriations. If these programs--Educational Opportunity Grants, College Work Study, and National Defense Student Loans--were funded nearer their authorization levels, I feel certain that we would be making significant progress in reaching the goal of extending educational opportunity to all students regardless of their economic situation. President Nixon has performed a valuable service by calling attention to the plight of the economically disadvantaged students, but I am concerned with the proposals that would generally require many students, regardless of program or level of study, to borrow money in the private marketplace. As I suggested in testimony to the other body, we should avoid any program which requires students to mortgage excessively their futures as a means of financing their college education.

I would like to commend the efforts of Senator Javits in recognizing some additional modifications that should be made in the existing student aid programs. S.1074 would encourage states to expand their present programs of grant assistance to students. Since states would receive

6 133 O - 71 - pt. 5 - 52

funds only when they expand their present efforts, the moneys appropriated as a result of S.1074 would supplement, not supplant, existing programs. In New York State, two out of every three New York State residents who are full-time students at colleges or universities within the State are now receiving some kind of State assistance. In 1970-71 scholarship and scholar incentive grants will total $70.4 million, a ten-fold increase over the past decade. By providing federal dollars for each student aided by the State, New York's student assistance program would be able to increase not only the number of students aided but also ~~increase~~ the amount of each grant. Based upon the authorization level in S.1074, New York State would receive $4.2 million in additional student aid funds; out of this amount, students at our four-year colleges and our agricultural and technical institutes would receive an additional $900,000, when the bill became law. These additional sums would help to alleviate the recent pressures that we have felt as a result of increased enrollments and rising costs.

Similarly, I endorse Senator Javits' proposal which would establish educational opportunity centers in areas with major concentrations of low-income population. This would help develop, on a nation-wide scale, programs similar to the State University's Urban Centers. The Urban Centers in New York are designed to give disadvantaged individuals an opportunity to develop and upgrade their occupational skills and to continue their education. They are tuition free with most of the students representing minority groups. More than 18,500 students have been enrolled in the Centers from their beginning in 1966 until 1970. Of this number, more than 11,500 graduated, with approximately 8,500 finding higher paying jobs and 2,500 going on to further higher education. The record of the Urban Centers has been clear evidence of the possibilities that exist for aiding educationally and economically disadvantaged individuals, and I feel certain that S.1074 would accomplish similar results on a national level.

The provisions of S.1453 that would extend to part-time students the benefits of the Educational Opportunity Grant Program, since they are often the ones that are most in need of such assistance, are most admirable and worthwhile. The current program that makes EOG's available to only full-time students works to the disadvantage of the community colleges. Currently one-half of the students at the community colleges within the State University of New York attend part-time, while 20% of the students at our four-year colleges are part-timers. No doubt many of these students chose to attend school part-time because of financial conditions. However, I would voice one reservation about the proposal to make part-time students eligible for EOG's. Though it is not within the realm of this Committee's jurisdiction, I am sure that you are aware of the serious under-funding that exists within the EOG program. If the program ~~was~~ were not expanded substantially in terms of the money appropriated, I fear that S.1453 would merely result in a redistribution of

money within the various units of the State University. The net effect may very well be that one type of institution would receive a greater proportion of the EOG money and deplete the funds available to other students. I would prefer a program more equitable in nature that awards students on the basis of need and not because they attend one kind of an institution rather than another.

In conclusion, I would like to say how grateful I am to be able to present my views to this distinguished Subcommittee which has done so much to provide a forum for a wide variety of opinions. I wish the Subcommittee success in its most important deliberations. Thank you for this opportunity on behalf of the State University of New York.

March 11, 1971

Mr. Stephen J. Wexler
Senate Committee on
Labor and Public Welfare
Senate Office Building
Washington, D.C. 20510

Dear Mr. Wexler:

Per our telephone conversation of yesterday, I am enclosing a Question and Answer Summary of a new financial system, designed to assist colleges and universities, which I call the Education Endowment Exchange. A review of this summary will give you an excellent grasp of the capabilities of this system.

As I mentioned on the telephone, it is the Education Endowment Exchange that Rep. Green asked me to describe and explain to her House Subcommittee on Higher Education.

My purpose in asking to appear before this subcommittee is not only to inform its members of the presence of such a system but to request specific legislative action that would permit federal and state chartered banks and/or securities dealers to market the subscriptions (please refer to the enclosed summary for a complete definition) of the colleges which have chosen to participate in this system.

Subsequent to my correspondence with Mrs. Green, I was advised through Mr. Kevin McKenna, an aide to Senator Pell, that you might be able to assist me in drafting an amendment to S. 659 that would explicitly grant to banks and/or securities dealers permission to market the subscriptions mentioned above. Such permission is an integral part of this financial system.

For purposes of further, in depth, discussion of the above, I will call you on Thursday, March 18th in the afternoon.

Thanking you in advance for your attention to this matter, I remain,

Sincerely yours,

William T. Conaghan

Chicago, Illinois 60611
Telephone (312) 944-1725

A Question and Answer Summary

of the

Education Endowment Exchange

Q. Why the Education Endowment Exchange?

A. America's colleges and universities, both public and private, are in serious financial trouble.

Q. What is the Education Endowment Exchange?

A. It is a financial system designed to provide funds to our colleges and universities.

Q. What is the source of funds for the Education Endowment Exchange?

A. All funds to be employed by the E.E.E. will be provided by the private sector.

Q. How will the private sector provide these funds?

A. The private sector will provide these funds to the colleges and universities through the purchase of their subscriptions.

Q. What is a subscription?

A. It is a right, purchased from a specific school, setting forth the obligation of this school to provide a certain amount of class time at no additional cost.

Q. Will these subscriptions be good at all schools or just one particular school?

A. Each subscription will be for one particular school, for a specific amount of time and good only during a particular period of time.

Q. How much does a subscription cost?

A. The cost of each individual subscription will be determined by the respective participating school.

Q. When can these subscriptions or rights be used?

A. They can be used no earlier than 10 years from the date of purchase.

Q. What liability does the school incur be selling these rights or subscriptions?

A. The school is only liable to the purchaser to provide, at no additional cost, the amount of schooling indicated on the subscription.

Q. If a purchaser of these rights can not use them, does the school have to buy them back?

A. No, the school will not buy them back, but the holder of the subscriptions will be free to sell them through the Exchange.

Q. What or who will determine the resale price of these subscriptions?

A. Resale prices will be determined by the forces of supply and demand acting in the marketplace.

Q. What does the E.E.E. do?

A. The E.E.E.acts as the marketing agent for the participating schools by selling subscriptions for tuition (where schools own housing, room and board could be included).

Q. Who will resell these subscriptions?

A. The E.E.E. will be the only marketplace for resale. It will assist in pairing the buyers and sellers and re-registering the subscriptions.

Q. If I buy a series of subscriptions for Northwestern and then change my mind, what can I do?

A. You can either sell the Northwestern and buy another school or trade with a holder of a desired school.

Q. How will the E.E.E. make money?

A. By charging an add-on commission on the original sale and also on any subsequent resale.

Q. When can these subscriptions be sold?

A. Anytime after purchase and prior to their expiration.

Q. Just what are the profit capabilities of the E.E.E.?

A. A conservative projection of Profits, before taxes and depreciation, exceed $30 million in the third year.

Q. What is the major financial benefit to the schools participating in the E.E.E.?

A. Increased annual income on which they are not obligated to pay interest.

Q. Wouldn't the sale of future tuition, at any price, hamper a school's budgeting?

A. No, not if the E.E.E. guidelines, of offering only 25% of a school's present freshman class, are followed.
If this 25% guideline is followed, the participating school would still have the ability to raise the tuition of 75% of any incoming class.

Q. Who will decide how the money each school will receive will be spent?

A. The Board of Trustees, the Board of Governors, or their counterpart at each school.

Q. Would the implementation of the E.E.E. Financial System increase the demand on present or future school facilities?

A. No, it would place no pressure on the school to increase its enrollment now or in the future - so there would be no necessity to expand its facilities.

Q. What would be the allover effect of the E.E.E. Financial System on individual colleges?

A. It would grant them greatly increased budgetary flexibility that could possibly obviate any subsequent tuition or fee increases.

Q. Exactly what services does the E.E.E. provide?

A. The E.E.E. acts as the marketing agent for all participating schools, It also maintains records of all the purchasers of the subscriptions.

Q. Who will pay the advertising costs of each participating school?

A. Each school will be responsible for its own advertising. The E.E.E. wil advertise itself and all of the participating schools on a group basis.

Q. What is the benefit to be derived by parents tryin to plan for the education of their children?

A. They will be able to plan the major portion of colleges expenses years in advance.

Q. What about the average family that can't afford to pay for 1-4 years of college in a lump sum?

A. They could participate by buying it in increments of quarters, tri-mesters or semesters.

Q. Could an individual of limited means participate in the E.E.E. program with borrowed funds?

A. There would be no reason why he couldn't. Bank loans for the purpose of paying for higher education are quite common.

Q. Could someone besides parents, or others directly interested in education, participate in the E.E.E. System?

A. Anybody can particpate. It is even possible that an E.E.E. subscription might assume the proportions of an investment vehicle.

Q. Will the ownership of subscription carry preferred admission status?

A. No, ownership of a subscription should not effect the treatment of an application at all.

Q. Would an enterprise of such a scope necessitate a large amount of office space and a large clerical staff?

A. No, it wouldn't. By profiting from the experiences of the insurance and securities industries, both the space and office force could be minimized.

Q. Wouldn't many of the funds generated just duplicate government spending?

A. No, the funds would not duplicate, but would augment government spending. These funds would be quite different, however, as they would be unrestricted.

Q. Generally, how would these subscriptions be marketed to the public?

A. Ideally, they would be marketed through a bank, or a group of banks, and their correspondents across the country.

Q. How much money will the E.E.E. provide?

A. With the majority of our colleges and universities participating, funds in excess of $12 billic annually can be generated.

Q. Could the present structure of the E.E.E. be altered?

A. Owing to the extreme flexibility of the E.E.E. System, many aspects could be changed without impairing the underlying principles.

The Education Endowment Exchange is a financial system born of manifold needs.

On one hand are the hundreds of thousands of parents and their children with a great desire for higher education but burdened with the prospect of having to raise the thousands of dollars necessary to attain it. This funding problem is further compounded by the fact that the payments must often be concentrated over a few years and by the seemingly unending rising spiral in which the charges for tuition, room and board have been traveling.

On the other hand are the thousands of colleges and universities that are currently being plagued with ever increasing costs of buildings, salaries and ancillary equipment. Their financial problems include both a shortage of funds over the short as well as the long term.

To date students, their parents and families, have approached the problem of college financing by trying to pay for it out of current income, paying for it out of savings, by modified endowment type insurance policies and/or loans and scholarships.

The respective educational institutions, with a limited number of accesses to funds, are fairly well restricted to raising the various fees charged to the students and ever increasing reliance on the various levels of government for an ever increasing amount of assistance. While gifts from individuals, corporations and foundations, together with improved management of their respective investment portfolios are acknowledged, they have not and probably will not provide these schools with the funds necessary to offset their spiraling costs and preclude the sizable increases of the cost of education that is passed on to the student.

In order to alleviate the problems mentioned above, the installation of the Education Endowment Exchange financial system would enable parents, relatives of prospective students and interested private institutions, to purchase from any participating school, a series of prepaid 4 year subscriptions that would guarentee to the purchaser, that upon being accepted for admission to this institution, his tuition (and in some instances his room and board) would be provided him at no additional charge for the indicated academic years. These subscriptions may at any time be redivided into individual quarters, trimesters or semesters.

These subscriptions will only be good for tuition (and room and board in some instances) at the named institution during the indicated period of time.

No holder of any subscription will be entitled to any preferred status or treatment of his application. Acceptance at the institution as a student is a precondition to the use of the subscription.

The price asked on any subsequent resale will be determined by the owner(s) of record of that subscription and its sale must be concluded through the Education Endowment Exchange to insure proper re-registration of the new subscription owner.

In order that all of the participating schools be able to accurately plan their future financial courses, no subscription will be offered for sale prior to 15 years nor subsequent to 10 years prior to the period during which they may be exercised.

To facilitate the operation of this financial system, the Education Endowment Exchange will maintain records that w will at all times reflect the current ownership of each paid subscription.

The pertinent records of ownership of these subscriptions will be available for inspection by the participating institutions or the individual subscriber.

In order that all of the participating colleges and universities maintain a high degree of flexibility as to their fee schedules and budgets, subscriptions for no more than 25% of the projected size of each freshman class will be offered for sale during any one year.

The services of the Education Endowment Exchange will be made available to all interested colleges and universities There will be no charge whatsoever to any of the participating schools.

The promotion and sale of all subscriptions will at all times be in concert with the ethics and dictates of good taste of the individual institution.

Should the configuration of colleges and universities, as we know them today, be altered in terms the length of the academic year, degree requirements, etc., the above discribed financial system could be adapted accordingly.

Some of the various benefits that would accrue to the respective educational institutions would be as follows:

1. There would be no interest payment due on the money received from the sale of the subscriptions.

2. There would be no obligations whatsoever on the money realized through the sales of subscriptions for a minimum of 10 years.

3. There would be no automatic increase in the demand on facilities resulting from the school's participation in the Exchange.

4. The participating institutions would have greatly increased financial leverage.

5. There would be decreased dependance on government aid.

6. There could be higher concentration by upper level administrators in areas other than fund raising.

7. There would be increased budgetary flexibility available to the institutions.

Parents of prospective students, their families, private organizations, corporations and other interested individuals would benefit from the Education Endowment Exchange financial system in the following ways:

1. The bulk of the cost of higher education would be known years in advance.

2. Purchase of a subscription for use in 10 or more years would serve as a hedge against inflation.

3. The subscriptions would provide a planned and/or forced savings plan to provide for advanced education at the school or schools of your choice.

4. These subscriptions would have a salable quality up to the date of their expiration.

5. There is the possibility of capital gains through the exchange or sale of subscriptions.

6. The cost of the operation the growth of of our colleges and universities would be borne more by those who desire to attend them.

The Education Endowment Exchange financial system would expand the economic freedom of choice of approximately 75% of our nation's families and all of our colleges and universities.

A Statement by the CENTRAL YMCA COMMUNITY COLLEGE
on the
STUDENT FINANCIAL AID AND INSTITUTIONAL SUPPORT PROVISIONS
OF THE HIGHER EDUCATION BILLS
Now Before the Congress

We begin with the premise that education should enable each student to reach his full potential, and not only should this be an opportunity for every student, it is in the general welfare interests of the American society and productive economy that this right shall include all citizens. The Green bill in the House and the Williams bill in the Senate would guarantee that the very neediest persons in America will have the opportunity to participate in higher education for their own lives' enhancement and the improved well being of our society.

The Central YMCA Community College in Chicago has ten years of experience with 55% of its 4,200 students being from minority groups and/or the very poor from the inner city. The record is clear - this is an untapped source of man and brain power that in sheer justice as well as national survival we can not ignore in national policy. The record of this College is clear in proving the success potential of these students, given the opportunity in schools prepared to receive them and to up-grade their performance. Graduates from this Junior College enter the world of work for which they were previously unprepared, or they transfer to the upper divisions of four year colleges to which they were originally inadmissable by reasons of under preparation or inadequate credentials.

The sociology is known, but painful to admit, and hence often ignored. A milieu of poverty invariably includes minority group persons frequently residing in ghettos, includes the life situations that provide limited private sector employment opportunities adaptable to school attendance requirements, includes little possibility of any parental family support of the student (in fact, frequently the students necessarily contribute to family support) and includes few legitimate opportunities for upward mobility except via the self-improvement of education. These would-be college students represent perhaps 10 to 20% of America's families and in cities such as Chicago, for example, they may represent 25 to30% of the city's families. These human fiscal facts are obvious. We can no longer afford to ignore them.

The College Work-Study program as a necessary means of earning at least a very minimum livelihood and the Educational Opportunity Grants program as partial support toward educational direct costs, are essential companion pieces. The Green bill very properly provides for these programs to be administered by the colleges on a basis of individual need rather than on an arbitrary formula basis. The Green bill is very much in the spirit of the American ethic of the respectability of self-supporting work limited only by reasonable wage rates and the capacity and hours for work - and not limited by across the board arbitrary formulae.

Less than ten percent of the colleges and universities in the country have deliberately set about to include the very poor in any more than miniscule numbers. Only a few of these ten percent have instituted the necessary compensatory programs to up-grade these frequently under-prepared products of inferior schools - and most of these colleges are the Community Colleges. The Williams bill very wisely relates Federal institutional support to those colleges that go to the extra expense and effort of making education accessible to the poor and under prepared who have potential for personal achievement. In no other way are we likely to attack this problem.

Student loans, for the very poor, are not the answer. Heavy indebtedness for the very poor is at best impractical. It may be necessary as a last resort for the final stretch, but certainly not as a general and pre-planned method for those already denying themselves a decent diet, medical attention or clothes adequate for the change of seasons. Conceivably, a young couple, married after college, moving out of a vicious cycle of poverty by necessarily borrowing the maximum for four years of college, would start life with a $20,000 indebtedness and a burden of interest in addition. As many of the disadvantaged and under-prepared are, understandably, late to acquire the motivation to seek the opportunity for college and frequently are in their 20's or even 30's when they first enter college, they will still be saddled with their own educational debts when called upon to assist their children in college. In any case, a big debt is a poor substitute for the willingness to be employed to sustain a pay-as-you-go study program.

The President is right in stating that a youth from a $15,000 a year income family is more than five times as likely to attend college as a youth from a $3,000 a year income family. What is not recognized, however, is that the $3,000 a year family is supporting state or local higher educational systems via sales and other taxes of similiar effect and real estate taxes (via rents) to a vastly greater proportion of its income than is the $15,000 a year family. The Green bill and the Williams bill work to redress the injustice of that inequity and make the college opportunity at least somewhat more likely for youth from poverty level families.

These are not the sentiments of bleeding heart liberals. These are hard fact conclusions borne out by experience with thousands of poor who strive to work, earn, and pay a good part of their own way out of otherwise self perpetuating poverty and frustration.

We commend the authors and sponsors of the Green and Williams bill for recognizing the hard and sometimes unpleasant facts of life. We urge the adoption of a higher education bill embodying these principles so cogently contained in these two bills. Support of such a measure would, we are sincerely convinced, be an act of statesmanship.

Tuition Postponement Option

as applied to

Tuition and Fees for 1971–72

in

YALE COLLEGE

February 6, 1971

All American universities are in deeper financial trouble than they have been for generations. If we keep on as we are, something must give. Even if we reduce costs and become more efficient, unless income can keep pace with inflation we must lower our quality.

The universities which are not state-supported must charge their students. Increasingly even the state-supported universities are finding it necessary to charge substantial tuition. But if we raise charges to keep up with costs we will drive away students whose families cannot afford to pay the increased tuition and fees.

Up to now Yale has handled this problem by offering enough gift scholarships, jobs, and loans so that we could admit students without regard to their family circumstance. The University has met financial need as a separate matter, after and apart from the admissions decision. No one was turned away because of his inability to pay. No one admitted was denied aid if he qualified by the general standard of need.

Now, if we raise scholarships to keep up with a traditional tuition increase, we will not have enough income to keep the University's deficit within tolerable bounds. And even a so-called "traditional" tuition increase is much harder for parents and students to take this year than in any year since the war. This year individual incomes just have not kept pace with increased educational costs.

Every university faces this problem. We are, therefore, at a crossroads in higher education. Unless something is done either we lower our quality or we close our doors to those who cannot pay the increased cost of quality. Neither is acceptable—to the institution, to the students, or to the country.

It is our view that we must use some ingenuity and take some risks to find a way out. With this in mind we have been discussing ways to make it possible for students to postpone the obligation to pay part of their tuition, including the entire amount of the increase. They would be obligated to pay it later, not as a fixed debt, but in proportion to their own earnings. In order to meet its current needs the University would then borrow the amount of postponed tuition

3023

from private lenders while it waited for the flow of delayed student payments.

This is not a new idea. It was first proposed at Yale in 1961 and has been proposed by others elsewhere both before and since that time. This year's awakening to the long run financial plight of all universities has moved us to develop in detail how such a plan might be worked out.

Initially we had hoped that the Ford Foundation might share the financial risks of such an experiment. It now appears that they wish to wait until other institutions are ready to participate. However, they have encouraged us to go ahead, in the belief that what we learn and what we demonstrate will be helpful to others who are considering comparable possibilities.

Thanks to the financial commitment of three friends of Yale and a grant for planning and administration from the Sloan Foundation, it is possible for Yale to undertake this experiment in 1971-72.

We do not for a moment believe that asking students to invest a small charge against their future income will or should allow us to raise charges anywhere near to the full cost of education. It will not even close the budgetary gap we face immediately. However, it will, if it works, offer some light at the end of an otherwise totally dismal financial tunnel without reverting to a policy of admitting students according to their parents' ability to pay.

It can be tried out without reliance upon Government. If it works it might eventually be developed into a Federally backed program for the benefit of a wide variety of institutions and their students. This could be done in a form which would not require the government to deal directly either with the student or with the institution. Like the FHA mortgage guarantees in housing, the government's role might be limited to the guaranty of private lenders.

Such a scheme is certainly no panacea nor cure-all for university deficits nor could it ever be a substitute for other government programs. It should allow charges to rise with costs, however, and still not drive students away just because their families are not wealthy.

We hope our demonstration will make it easier for the Ford Foundation and others to sponsor comparable experiments in a variety of institutions a year from now. If a group plan is brought into being which is compatible with our program we would hope to join it. We also would be eager to participate in any ultimate Federally backed program. In the meantime we hope that our experiment will be helpful to other institutions, foundations, and public groups which have encouraged us to go ahead.

* * *

The rate of tuition and room and board in Yale College for 1971-72 will be forty-four hundred (4400) dollars. This is five hundred (500) dollars above the present rates. Three hundred fifty of this can be attributed to tuition. It is our best information that this will put Yale College charges about at the level of our competitors.

Earlier forms of financial aid will remain available on the same terms and by the same standards of eligibility and limits as now exist. Although room and board may have to rise in response to actual increases in the costs of food, maintenance, and services for those already enrolled, the tuition increase in any of the subsequent three years is not expected to be more than three hundred (300) dollars per year. Any such tuition and room and board increases would also be eligible for postponement.

NEXT YEAR ANY STUDENT MAY ELECT TO POSTPONE UP TO EIGHT HUNDRED (800) DOLLARS OF HIS TUITION IF HE PREFERS TO OBLIGATE HIMSELF TO PAY YALE FOUR TENTHS OF ONE PERCENT OF HIS ADJUSTED GROSS INCOME FOR EACH THOUSAND DOLLARS OF TUITION POSTPONED, FOR NOT MORE THAN THIRTY-FIVE YEARS. A MINIMUM PAYMENT OF $29.00 PER YEAR FOR EACH THOUSAND DOLLARS POSTPONED WILL BE REQUIRED, REGARDLESS OF INCOME. THE OBLIGATION WOULD BEGIN AFTER THE LAST YEAR OF ENROLLMENT FOR FULL-TIME STUDY.

Thus next year he may postpone the payment of the five hundred (500) dollar increase above this year's total fee level, plus up to three hundred (300) dollars of charges which he currently pays.

For example, a student receiving partial financial aid now might be in the following position:

Needs:		
Tuition, room and board	$3900	
Estimated cost of books, etc.	600	$4500
Sources of payment:		
Family	$1600	
Loan	300	
Job	600	
Gift scholarship	1500	
Savings from summer employment	500	$4500

For next year the same student would face the following financial needs:

Tuition, room and board	$4400	
Estimated cost of books, etc.	600	$5000

If he did not elect to defer any of his tuition obligation his family would presumably bear the full burden of the increase of five hundred (500) dollars. The financial aid component would be the same next year as it is this year.

So the sources of payment would be:

Family	$2100	
Loan	300	
Job	600	
Gift scholarship	1500	
Summer employment	500	$5000

If, on the other hand, he wished to postpone the obligation to pay the increase, while his charges and book and personal costs would still be five thousand (5000) dollars, his family would not have to contribute any more than they do this year.

Further, if next year he wished to postpone the obligation to pay three hundred (300) dollars of the amount of tuition which he is paying this year, he might decide not to take a three hundred (300) dollar loan.

In such a case his sources of payment for next year would be:

Family	$1600	
Job	600	
Gift scholarship	1500	
Summer employment	500	
Postponed obligation	800	$5000

• • •

In making the decision whether or not to postpone the tuition payment, it is important to understand what the postponed obligation would be and how Yale has computed it.

The charge against future income is designed to produce an average return to Yale which will cover the cost to Yale of postponing part of its tuition income. This charge would allow Yale to meet the expenses of administering the program and permit Yale to borrow at interest while it waits for the students' postponed payments.

To cover these costs of administration and of borrowing against future payments, we calculate that Yale would have to receive the payment of the principal amount of tuitions postponed plus a **finance charge** equal to interest compounded annually on the unpaid balance at a rate one percent above the interest Yale must pay a lender while it waits for student payments.

While the interest rate paid by Yale can be expected to vary, it is likely to be somewhat in excess of the prevailing prime rate. If Yale is to break even, then, this must be the *average* return from the group which elects tuition postponement.

This average can be achieved only if those who earn relatively more pay more than those who earn relatively less. Although each student is obligated to pay the same charge against his income for each dollar of tuition postponed, the postponed dollar payments to Yale will vary widely among students depending upon their actual earnings. For any individual student the cumulative **finance charge** will be the total amount he pays over the deferment period less the amount of his deferred tuition.

Based on a survey of both national college graduates' and Yale alumni incomes, we have decided that a charge of **four tenths of one percent of a graduate's adjusted gross income per year for each thousand dollars deferred**, for up to thirty-five years will allow Yale to realize the benefit of increased tuition income over the lifetime of a generation. The obligation would begin the first year after the completion of full-time study. If a student wants to cancel his postponed obligation, he may do so at any time up to six months before he graduates, if he is willing to pay the

principal amount and the cumulative interest based on Yale's own administrative and borrowing costs.

Our projections are conservative. The obligation for all those who had begun their postponed payments in a given year would come to an end whenever that group, taken together, had repaid the amount postponed plus Yale's borrowing cost plus one percent. This would probably be achieved earlier than thirty-five years. If the actual cost to Yale of both borrowing and administration proves to be less than expected, the obligation of the group would be terminated earlier.

Also, even after his obligation has begun a student may terminate his own obligation to pay a continuing charge when he has paid one and one-half times the tuition he postponed plus cumulative interest. That ceiling sets an upper limit on his finance charge.

The postponed obligation of a student who marries will be computed on the basis of his or her separate income or one-half of the joint income, whichever is higher. So, for example, a housewife with no separate earnings will compute her obligation on the basis of one-half of the joint income; while her husband, if he has a postponed tuition obligation, would compute his obligation on the basis of his own income.

Because of the importance to the group that each student in it pay his share as agreed, substantial charges will be imposed in the event of default.

* * *

The great virtue of this option from the student's point of view is that the obligation is stretched over such a long time that its burden in proportion to income will not be very heavy in any given year. Legal advisers say that all payments in excess of the principal amount deferred should be treated as payments of interest, hence deductible from gross income for tax purposes A ruling is being sought from the Internal Revenue Service on this point. On this assumption the effective burden of all but the minimum repayment of twenty-nine dollars a year would be greatly reduced. The reduction of the effective cost of repayment would be somewhere between twenty and thirty-five percent of the amount being paid by the average graduate.

The second feature of the plan is that the obligation rises and falls with income, so that it need not distort career choices. The disadvantage of the scheme for those who become high earners is that the cumulative repayment will be disproportionately large when compared to normal borrowing costs. The graduates in the higher income brackets will in effect be carrying their less affluent classmates, just as those families with high incomes who now pay the full tuition do in effect help to carry those whose sons and daughters receive gift scholarships.

TUITION POSTPONEMENT OPTION
TABLE OF ANNUAL PAYMENTS

Annual Income	Postponed Amounts									
	$1,000	*$2,000*	*$3,000*	*$4,000*	*$5,000*	*$6,000*	*$7,000*	*$8,000*	*$9,000*	*$10,000*
$ 7,250 and under	$ 29	$ 58	$ 87	$ 116	$ 145	$ 174	$ 203	$ 232	$ 261	$ 290
10,000	40	80	120	160	200	240	280	320	360	400
15,000	60	120	180	240	300	360	420	480	540	600
20,000	80	160	240	320	400	480	560	640	720	800
25,000	100	200	300	400	500	600	700	800	900	1,000
30,000	120	240	360	480	600	720	840	960	1,080	1,200
40,000	160	320	480	640	800	960	1,120	1,280	1,440	1,600
50,000	200	400	600	800	1,000	1,200	1,400	1,600	1,800	2,000
75,000	300	600	800	1,200	1,500	1,800	2,100	2,400	2,700	3,000
100,000	400	800	1,200	1,600	2,000	2,400	2,800	3,200	3,600	4,000

Note: Annual Payment = .4% (four-tenths of one percent) x Annual Income x Postponed Amount (in one thousand dollar units or percentage thereof)

YALE UNIVERSITY

Background Detail for Release Morning Papers

February 6, 1971

YALE TUITION POSTPONEMENT OPTION

Yale University intends to adopt a Tuition Postponement Option under which a student would be permitted to defer a substantial part of the charge for his education and pay this cost during his earning years in proportion to his income. The purposes of the Plan are (1) to enable students to defer part of the expense of education, (2) to enable students to contribute to the support of the University in approximate proportion to their ability to do so and to the economic benefit they have derived from their Yale education, and (3) to help meet Yale's immediate need for increased funds to defray sharply rising costs.

The Tuition Postponement Option has four principal elements. First, the University will continue to increase its charges in the College and several of the graduate and professional schools as it has during the recent past. Second, with respect to these increases and with respect to a fraction of existing charges, Yale will permit any student who wishes to do so to enter into a Deferment and Repayment Contract, deferring charges while he is a student and repaying in later years

in proportion to his income. Third, Yale will cover its costs during the deferment period by borrowing from conventional lenders. Fourth, Yale will seek pledges and grants to share the financial risks of the plan.

A. Increased University Charges

Yale plans to increase charges in the College, the Graduate School of Arts and Sciences, the Law School, the Medical School, the Divinity School, and the Schools of Music, Art, Architecture, Drama, Forestry and Nursing.

The present combined charge for tuition, room and board in the College is $3,900. Yale will increase this charge by $500 in 1971-72 and expects a further $300 increase in each of the four subsequent academic years. Of the initial $500 increase, $350 would be attributed to tuition and $150 would be attributed to room and board.

Each of the other schools and departments charges separately for tuition and for room and board. In these schools and departments, Yale plans to increase tuition by $350 in the academic year 1971-72, and by an additional $300 in each of the four academic years thereafter.

B. Deferment and Repayment Contracts

Any student who wishes to pay the full University charges after the projected increases will be entitled to do so. For students requesting assistance, however, the following

rules will be in effect. First, traditional forms of financial aid will continue to be available, on the same basis as at present, to help students to meet University charges up to the amount of University charges for the academic year 1970-71. Second, Yale will not make available any form of traditional financial aid to cover the increases in University charges. Third, a student will be permitted to enter a Deferment and Repayment Contract with respect to (1) any fraction of the increases ("Additional Amounts") he chooses (provided that the amount chosen is at least $300) and (2) an additional $300 per year.

Yale would enter into a separate Deferment and Repayment Contract with each electing student. The Contract would be drawn in such a way that a single Contract will cover all deferments by a particular student.

A student entering into a Deferment and Repayment Contract will be excused from paying any fraction of the Additional Amounts he chooses (provided that the amount chosen is at least $300). If he elects to defer all of the Additional Amounts, he may also elect to have Yale credit his account with an additional $300 per year. A student entering the College in the Fall of 1971 and electing to defer all of the Additional Amounts incurred in his College years would defer a total of $3,800; a student electing to defer an additional $300 per year would defer a total of $5,000.

Deferment and Repayment Contracts will have the following terms:

(1) Eligibility

The Plan will be available to all full time candidates for degrees in the schools and departments covered except (a) students presently receiving government or other financial aid under the terms of a contract which does not permit tuition charges to them to exceed the amount of such aid, and (b) students who are not citizens of the United States and have not been admitted to the United States as permanent immigrants. As to these foreign students Yale has concluded that problems of collection preclude application of the Plan to students who are very likely to reside abroad after graduation.

A student will be permitted to defer payment of University charges for each of eight years of study. This will enable most students to obtain the advantages of deferral both for college and for graduate studies. In the case of a student coming to Yale after studying at another institution, years spent at the other institution will be subtracted from the student's eight years of eligibility at Yale.

(2) Payments Required

In each year, each participant will be required to make one of the following two payments, whichever is greater:

(a) Minimum Payments

Each student who enters into a Deferment and Repayment Contract will be required to pay,

in each calendar year of his Payment Term (as defined below), a Minimum Payment of $29 for each $1,000 deferred. Yale will in its discretion waive the Minimum Payment due in any year for a student who demonstrates to Yale's satisfaction that such payment would impose an extraordinary hardship.

(b) Percentage Payments

Each Participant will be required to make a Percentage Payment, in each year of his Payment Term, equal to 4/10 of 1% of his Repayment Base (as defined below), for that year for each $1,000 deferred.

(3) Payment Term

Each Participant's Payment Term will begin with the calendar year following the year in which he ceases to be a full-time candidate for a degree at any institution of higher learning. For this purpose, a student at Yale College who elects to interrupt his studies for a period of one academic year or less and who declares his expectation to return will be considered a full-time candidate for a degree during that academic year.

Except as provided in paragraphs (a), (b), (c) and (d) below, each Participant's Payment Term will continue for a period of 35 calendar years from and including the first year of his Payment Term.

(a) Interruptions

A Participant's Payment Term will not

include any year during at least eight months of which he

(i) is a full-time candidate for a degree at any institution of higher learning; or

(ii) is, in the opinion of a licensed physician, totally disabled as that term is defined for purposes of any program of disability benefits then provided by the United States Government.

(b) Death or Retirement

A participant's Payment Term will terminate at the end of the calendar year of his death, or at the end of the calendar year during which he has both (i) attained the age of 65 and (ii) ceased to pursue full-time gainful employment.

(c) Individual Termination

Each Participant may elect to terminate his Payment Term whenever the sum of his Minimum Payments and Percentage Payments equals the sum of (i) 150% of the principal amount he deferred plus (ii) interest, compounded annually to the date of his last payment, at the Contract Interest Rate (as defined below), on 150% of the amount he deferred. The Participant's annual payments will be credited against the balance in his Individual Termination account. A student may elect to terminate his obligation at any time by making a payment that brings his total payments to the amount required.

(d) A Participant may terminate his obligation at any time prior to six months before graduation from any school whose tuition he has elected to postpone by payment to the University by 100% of the amount deferred by the student plus interest thereon compounded annually at the contract interest rate.

(e) Group Termination

Every Participant will be part of a Deferment and Repayment Group. Each Group will consist of all Participants, in all departments of the University, whose Payment Terms begin in the same calendar year. The obligation of each member of a Group to make annual payments will terminate with the calendar year in which the total payments by all members of the Group (including repayments of principal not yet made) equal the sum of the amount deferred by all members of the Group Termination, at the Contract Interest Rate (as defined below), on the amount deferred by all members of the Group.

(4) Repayment Base

Each Participant's Repayment Base for a particular calendar year will be computed on the basis of (i) his or her Adjusted Gross Income, or (ii) if he is married, on the basis of his or her separate income, or one-half of the [redacted] j
income, whichever is higher. An individual's Adjusted Gross Income shall be the amount reported as Adjusted Gross Income on his Federal Income Tax Return for the year. The Deferment and Repayment Contract will, however, make

provision for altering the Participant's obligation in the event that the definition of Adjusted Gross Income in the Internal Revenue Code is significantly modified in the future.

(5) Contract Interest Rate

A Contract Interest Rate will be based on Yale's actual costs. The Contract Interest Rate will be at a level calculated to cover (a) the average rate of interest to be paid or accrued by Yale on all funds borrowed externally in accordance with the external borrowing provisions of the Tuition Postponement Option, plus (b) one percent to cover Yale's cost of administering the Plan. When Yale's actual costs of borrowing and allowance for administration for any Group has been recovered, Yale will terminate the Group obligation at an earlier date than thirty-five years.

(6) Insurance

The Plan will include insurance against the death or disability of individual students. The Contract Interest Rate would include the cost of insurance premiums. The insurance would pay benefits to Yale on the death or total disability of an individual student. The amount of the benefits would be credited to the deceased student's Repayment Group.

Such insurance will serve two purposes. First, it will protect the Group against a delay in Group Termination resulting from the death of some of its members. Second, insurance would protect Yale against an inadequate flow of repayments

resulting from a catastrophe and will therefore insure at least against deaths or disabilities caused by a catastrophe, and against those resulting from other causes as well.

(7) Reporting and Payment Procedure

Each Participant will be required to report his Repayment Base semiannually to Yale. The first report will be due on October 30 of the year for which the report is made. The second report will be due on April 30 of the following year. Each Participant would be required by contract personally to certify his adjusted gross income (or other repayment base) annually to Yale, to report any significant redetermination of his adjusted gross income resulting from amendment of his return on Internal Revenue Service audit, and, upon request from Yale, obtain from the Internal Revenue Service and supply to Yale copies of his Individual Federal Income Tax returns as filed and reports of any adjustments thereof. Failure to comply with such a request will be a default pursuant to paragraph (8) below.

With his first semiannual report for the year, the student will be required to pay to Yale one-half of his estimated obligation for the year. With his second report, the student will be required to pay the balance of his obligation for the year.

Each Participant will be liable for the accurate calculation of his Repayment Base. To save administrative expense, it is anticipated that calculations of the reported Repayment Base will be investigated and verified only in cases where probable cause exists to suspect a significant error or misrepresentation. Should it later

appear that his Repayment Base was incorrectly reported, the Participant will be liable for the amount of any underpayment to Yale, plus interest thereon at the Contract Interest Rate from time to time. Any overpayment properly established by a student will be credited against his later obligations.

(8) Defaults

Any Participant will be permitted, upon his written request making a reasonable showing of hardship, to postpone any semiannual payment for any period deemed by the University to be reasonable. The Participant will, however, be required to report the amount due in the usual manner, and any postponed payment will accrue interest at the Contract Interest Rate.

In the event any Participant fails to make a semiannual payment when due, or pays less than the amount of his obligation, the underpayment will accrue interest at the Contract Rate. Yale will send written notice to the Participant requesting payment in full. Ninety days after the date such notice is sent, Yale will have the right to sue the Participant, in the courts of the State of Connecticut or any other court of competent jurisdiction, for the amount of the underpayment.

In the event any unexcused payment has remained wholly or partially unpaid for six months after written notice has been sent to the Participant, commission of an act of bankruptcy, the filing of a bankruptcy petition, or a refusal or failure to supply tax information

requested by Yale pursuant to paragraph B (7) above, Yale shall have the right to declare a default. Upon any such declaration of default, the Participant shall be liable to pay to Yale an amount equal to 150% of the amount originally deferred, plus interest at the Contract Interest Rate compounded annually thereon, minus the sum of his previous payments and interest at the Contract Interest Rate thereon.

(9) Minority

In the case of a student who is a minor at the time of his first deferment, the Deferment and Repayment Contract will also be signed by his parent or guardian. Upon reaching twenty-one, the student will be asked to ratify the contract.

If the student fails to ratify the Contract, then on June 30 of the first year of his Payment Term which falls after the year in which the student reached twenty-one the parent or guardian will be liable to pay to the University an amount equal to 100% of the amount deferred by the student, plus interest thereon compounded annually at the Contract Interest Rate. A student who ratifies at age twenty-one will also have an option to discharge his future liability by an equivalent payment. Any such payment will absolve both the parent or guardian and the student of any further obligation under the Contract.

(10) Treatment of Program Data

Each Deferment and Repayment Contract will provide that income and other data supplied by the

Participant will be available only to the Yale personnel administering the program and to any successor in interest to Yale's rights under the Contract, and not to other Yale personnel, class agents, or other persons generally. Yale and any successor will be obligated to keep this information confidential except as disclosure may be necessary in legal proceedings to enforce any obligation.

(11) Negotiability of Contract

Although Yale does not presently plan to pledge or negotiate student contracts, it will have the right to do so. The primary purpose of this right is to make it possible to merge the Yale program into a larger privately or publicly established educational investment program.

(12) Periodic Surveys

Each Deferment and Repayment Contract will provide that Yale will have the right to circulate questionnaires among all participants in the Plan in order to evaluate its operation.

C. Allocation of Repayments Between Principal and Interest: Deductibility of Interest

It is our opinion that the Deferment and Repayment Contracts may allocate each payment between principal and interest in any reasonable manner, so long as the formula chosen insures repayment of the entire principal amount; and it is our opinion that amounts allocated to interest in accordance with such a formula will, under present law, be deductible for federal income tax

purposes.

One possible formula (which is subject to further perfection) is as follows:

(a) In the case of each Participant, for each $1,000 he deferred, $29 of each annual payment will be allocated to principal until the amounts allocated to principal equal the entire amount he deferred.

(b) In the case of each student, any amount paid in any year in excess of $29 per $1,000 deferred will be allocated to interest until the student has paid previously accrued and current interest, at the Contract Rate, on his principal amount.

(c) Thereafter, in the case of each student, all payments will be allocated to principal until the entire principal amount deferred by the student has been repaid.

(d) Thereafter, all amounts will be allocated to interest on the principal obligations of other students in the Group.

(e) Upon Group termination, the obligation of each Participant who has not completed repayment of principal will continue until principal has been repaid.

Yale University News Bureau

New Haven, Connecticut 06520
203-436-3441

Steve Kezerian, Director

For release to MORNING papers of SATURDAY, February 6, 1971 #187

New Haven, Conn., February 5: -- President Kingman Brewster, Jr., of Yale announced today a Yale Tuition Postponement Plan in conjunction with an across-the-board tuition increase.

The current cash cost of attending Yale next year will be $300 less than this year for those students who prefer to accept an obligation to pay their postponed tuition in proportion to their future earnings.

The tuition increase will be $350 next year, and there will also be an increase of $150 for room and board, so that the total amount next year for undergraduate tuition, room and board will be $4,400, or $500 above this year's cost. In addition to the option to postpone these increases, a student may also postpone another $300 of currently imposed charges.

The tuition increases are not out of line with Yale's competitors. However, the new postponement option was felt to be essential to allow Yale to continue its practice of admitting students without regard to their parents' financial circumstances.

The adoption of the tuition postponement option by Yale marks the first time that any college or university has attempted such major changes in the traditional pattern of tuition payment.

The unique feature of the Yale plan is that each individual's obligation rises and falls with his income after graduation rather than being a fixed indebtedness. Although the rate is the same for everybody, since it is keyed to adjusted gross income, those who earn more will pay more than their classmates in lower earning jobs.

The charge is computed as four-tenths of one per cent (0.4%) of annual adjusted gross income for each $1000 postponed. It is estimated at current interest rates that students would discharge their obligation in about 26 years. If, however, the average earnings of the group turned out to be lower than projected, or if Yale's cost of borrowing were greater than expected, then it might take longer for the group to discharge the obligation. The outside limit of the repayment obligation in any case would be 35 years.

Even after his obligation has begun, a participant may elect to terminate his contract by making a payment that brings his total payments to one and one-half times the tuition he postponed, plus an interest rate to cover Yale's administrative and borrowing costs. Also, any student may convert the long term charge against earnings into an immediate fixed interest obligation at any time up to six months before graduation.

The postponed obligation of a student who marries will be computed on the basis of his or her separate income, or one-half of the joint income, whichever is higher. For example, a housewife with no separate earnings will compute her obligations on the basis of one-half of the joint income.

"Frankly Experimental..."

President Brewster emphasized that "the tuition postponement option is frankly experimental. The effort is to find out what the problems and possibilities of such a device are. The time seems right since this year even a traditional tuition increase will hit students and their families specially hard in view of the decline in real incomes."

Yale's tuition plan will offer a practical demonstration of an approach to student aid and tuition charges which has been talked about in educational circles for more than a decade. Unlike a plan proposed several years ago by Professor Zacharias of M.I.T., Yale is not linking the tuition postponement option to an out-of-scale tuition increase.

"We do not for a moment believe that asking students to invest a small charge against their future income will or should allow us to raise charges anywhere near the full cost of education. It will not even close the budgetary gap we now face. However, it will, if it works, offer some light at the end of an otherwise totally dismal financial tunnel without reverting to a policy of admitting students according to their parents' ability to pay," President Brewster stated.

Even with the adoption of the tuition postponement plan, Yale's deficit for next year is likely to be in excess of $3 million despite severe cuts in academic and non-academic staff.

Yale has been encouraged to launch the tuition option experiment by various foundations, government officials, and leaders of other universities, President Brewster pointed out. He voiced the hope that others

would be encouraged to develop comparable plans which would make it possible for students to attend the institutions of their choice by investing a small part of their future income in the expense of their education.

Yale will help meet its current expenses by borrowing the amount of the tuitions postponed while it waits for student repayments. There is always some risk of loss if the student payments should fall short of the amount of tuition postponed, plus Yale's cost of borrowing. The income projections on which the payment charge is based is sufficiently conservative so that the University feels the risk of loss is minimal. In view of the novel aspect of the plan, however, Yale is seeking additional pledges from alumni interested in the plan to enlarge a reserve against future losses. In addition, the Sloan Foundation has contributed a grant toward the costs of planning and starting the program.

CARNEGIE COMMISSION ON HIGHER EDUCATION

1947 Center Street
Berkeley, California 94704
(415) 849-4474

April 5, 1971

he President
he White House
'ashington 25, D.C.

ear Mr. President:

I have reviewed with great interest the Higher Education pportunity Act of 1971 embodying your legislative program or higher education.

Your emphasis on the goal of removing economic barriers o higher education is certainly to be commended. And the ubstantial funding increases over 1971 proposed for student ssistance programs to remove these barriers is a clear ndication of the Administration's commitment to this goal. ven so, I wonder if the proposed levels of funding will be dequate to remove effectively the barriers. The Carnegie ommission in its revised recommendations (issued June 1970) uggested that $1.2 billion be made available for Educational pportunity Grants and that almost an additional $1 billion e made available for Work-Study grants. This is almost our times greater than the amount provided for these purposes n the fiscal 1972 Administration budget. This substantial ifference in proposed levels of funding may result in part rom different estimates of numbers of students requiring inancial assistance but it also reflects different estimates f individual need and the Administration's greater reliance n loans.

The Carnegie Commission recommends a maximum grant to a tudent with full need in the amount of $1,000 per year and, epending upon his educational costs, he could qualify for Work-Study payment up to an additional $1,000 per year. hus, the proposed Commission maximum for combined Educational pportunity Grants and Work-Study payments is $2,000, just ouble that proposed in the Higher Educational Opportunity ct of 1971. This maximum of $2,000 would be available nly to those demonstrating full need whose combined ducational and subsistence costs amount to at least $2,000. he Commission believes that a student from a low-income amily should receive enough money through grants and work- tudy payments to enable him to attend a low-cost college

near home and that reliance on loans should be required only if the student wishes to select a higher cost institution or an institution at a greater distance from home.

Certainly there is a need for obtaining more funds for student loans and the proposed NSLA could substantially increase the amount of resources available for loans. The elimination of the forgiveness provision for teaching, the extension of the repayment period, and the increase in individual loan limits, are all improvements in the loan program. I believe, however, that even more is required to achieve a good loan program for students. Warehousing may increase the amount of money available for loans but it will leave unchanged many of the present aspects of the loan program that make loans unattractive and to some extent impractical as a technique for financing much of a student's cost of higher education. The National Student Loan Bank proposed by the Commission in June of 1970 provides both a mechanism for increasing resources available for loans at the same time it makes possible certain repayment terms and conditions more suitable to the needs of students.

There appears to be a great deal of flexibility at both the administration level and the institutional level as to the ratio between grants and work-study payments that could be made to a student from a low-income family. While I support very strongly a work-study program, I do believe that there should be some basic grant that could not be converted to work-study payments. The Commission has recommended that an institution should be able to transfer up to 10 percent of the funds it receives for any particular student assistance program to some other phase of the student assistance program. This makes some flexibility possible at the institutional level and perhaps an even higher percentage would be desirable, but the administration proposal seems to suggest almost too much uncertainty in the relationship between work-study payments and educational opportunity grants.

Removal of the matching requirements from the educational opportunity grants and the possibility of waiving the matching requirements for the work-study program in hardship cases seem to me to be admirable improvements in those programs.

The possible extension of student financial assistance programs to students in proprietary schools is a desirable move in terms of our efforts to view postsecondary education more broadly than in the past and to give equal consideration to students in vocational and occupational programs. But the

limitation of the program to students who are in full-time attendance suggests that the program is still too narrowly focused on the needs of the traditional college student. There appear to be growing numbers of students, particularly from low-income families, who must pursue their postsecondary studies on a part-time basis and it would seem that these students, if they could demonstrate need, should be eligible for federal student assistance.

Assuming that the student assistance program would go a long way toward removing economic barriers to higher education, access cannot be substantially increased without creating new places for students, particularly at the community college level. In the next decade, it seems likely that some three million additional students will seek admission to our postsecondary institutions. While this represents only a 50 percent increase over our present enrollment, it is the same absolute increase in enrollment which we experienced during the last decade. That expansion would, perhaps, have been impossible without aid from the federal government for construction of new facilities. With increasing evidence of financial stringency at the state and local levels, the need for federal construction aid to colleges and universities may be even more serious in this decade. I doubt that the proposed interest subsidies for construction loans will be adequate for this purpose.

There is also growing evidence of the need for direct aid to institutions from federal funds. Professor Cheit, whose Carnegie-sponsored report on The New Depression was recently released, suggests that between $300 to $100 million deficiency already exists in higher education. The Commission has not recommended any program of general formula institutional aid, but we have recommended some $900 million in federal cost-of-education supplements to institutions enrolling students from low-income families. This would provide support funds for those institutions that are making the greatest effort to achieve the national goal of equality of access for qualified students, the new GI Bill of Rights.

I believe that an effective student assistance program, cost-of-education supplements to institutions, and a program of construction grants and loans are all essential elements of a balanced program to achieve greater access to higher education. Elimination of any of these elements in a program of federal aid will tend to decrease the positive impact which would flow from implementation of the other elements. Thus I would urge inclusion in the federal aid program of more funds for construction as well as for cost-of-education supplements. With these inclusions, and possibly some modifications in the student assistance program, the Administration's proposal would constitute a highly effective

federal program for higher education. With the addition of the National Foundation for Higher Education, the Administration's legislative program could go a long way toward creating the conditions necessary for higher education to expand and undertake desirable reform without loss of quality in the years immediately ahead.

Best wishes,

Clark Kerr

LUBBOCK CHRISTIAN COLLEGE
5601 WEST NINETEENTH STREET
LUBBOCK, TEXAS 79407

W. MATTOX, PH.D.
PRESIDENT

June 11, 1971

Senator Claiborne Pell
United States Senate
Washington, D.C.

Dear Senator Pell:

Your report for the Summer of 1971 has reached my desk and I am delighted to have been included in the mailing.

I especially want to commend you for your understanding and foresight in your higher education bill which would provide grants to students of low income families who need to attend college.

To emphasize the need for such legislation, Lubbock Christian College is in an area of West Texas in which the Mexican American people are multiplying in large numbers, while at the same time, they are on the lowest level of our economic structure. Very few of them complete high school, and very few of those who complete high school enter college.

We have about 50 of these students who would like to attend Lubbock Christian College this fall but who have no funds. The federal Economic Opportunity Grants are entirely inadequate and even so, our small grant was cut drastically for next fall. We made a trip to Washington and visited all the federal agencies and were unable to discover any funds. We did make application with the Economic Opportunity Office where we heard there was money, and we applied for assistance in carrying on this program, asking for aid for a special Mexican-American counselor to help meet the needs of these students during their orientation and adjustment to college period, but were unable to receive any allocation.

It is my feeling that these agency people feel these needs are being met, for for those in the field trying to render this service, it is another story.

Please continue to push in this direction and if we can be of any assitance, we will be delighted for you to call on us.

Sincerely,

F. W. Mattox

BROOKINGS, SOUTH DAKOTA 57006

OFFICE OF THE PRESIDENT

May 17, 1971

Chairman Claiborne Pell
Senate Subcommittee on Education
Washington, D. C. 20036

Dear Chairman Pell:

We are extremely happy that your Subcommittee on Education of the Senate Committee on Labor and Public Welfare is taking a very careful examination of the problem of Institutional Aid being made from the Federal Government. Certainly we have manifold problems these days in financing all governmental services, but we have a particularly acute problem in higher education in our state-supported institutions. We have heard a great deal about the problems of private schools of higher education but very little has been mentioned concerning our public problems. Here in South Dakota, for instance, our State legislature was not in a position to make any increases this year. We were already well below national level in salaries and operating expenses; thus making it a particularly serious problem for us. We happen to be a state with relatively few people and consequently, a small tax base. There are some who can say that this is not a problem of national concern; on the other hand, the thing that has kept our population base small is that we have been exporting young people. This has been particularly true of those that have had the advantages of a college education at our state supported institutions since we handle a large number of students in our state. These young people, consequently, go into the National Labor Market well prepared and we feel there is an obligation on the part of others to help in financing this education.

We trust that the mobility of our college students from this and from many other states will be given careful consideration by your committee as you consider this extremely important problem.

Sincerely yours,

H. M. Briggs
President

To the Honorable Members of the United States Congress from Nebraska:

The state of Nebraska is served by ten independent, fully accredited colleges and universities. This service extends back almost one hundred years. The presidents of all ten institutions appreciate the opportunity of meeting with our representatives in Congress. We express gratitude to the Congress for past acts and policies that have provided support for students and programs in the private sector.

We wish to call attention to the present state of independent higher education, both in Nebraska and across the nation. Trends that have been twenty years on the march now bring us to a critical present. Non-public education is entering a decade of decision, in fact survival. We point with pride to the vigor and quality of higher education in the United States, created in a large part by the existence of a dual system. Any study of higher education in other lands quickly indicates that the absence of a private sector has produced a monolithic system that does not serve its nation well.

It appears probable that the best efforts of the independent colleges will not be enough, if unaided. We, therefore, acknowledge the important role of federal programs over the past thirty years. Wise attention must be given to the present. If revenue sharing with the states is substituted for any part of federal assistance, appropriate safeguards must be introduced to make support available for both public and independent institutions. Absence of such safeguards could further restrict the flow of funds to the independent colleges. Recent decisions to terminate construction grants leaves many colleges with aging and incomplete facilities. The shrinkage of funds for libraries, equipment and general science purposes throws responsibility back on general budgets already pinched between the rising costs of operation and the lessening ability of the public to pay charges close to cost.

We hereby declare our desire to provide high quality, exercising the flexibility that the independent sector enjoys, being innovative and providing Nebraska with centers of initiative. We offer our services in whatever ways appropriate in support of proposals made in Congress, in the providing of information and in the education of constituencies.

P.H.

Senator Claiborne Pell
United States Senate
Washington, D.C.

Dear Senator Pell:

I noticed a brief description of your "higher education financing bill" in the New York Post last night. I think the idea is excellent, and indeed, I have proposed almost the same thing in a paper published in the American Economic Review. The only difference is that you plan to supplement welfare payments whereas I suggest a change in the criteria for welfare.

I am enclosing my paper which provides some theoretical and emperical support for your plan. Your proposal might also be extended to provide payments for high school students as well.

I would be happy to correspond with you further on my paper and your bill. I am also interested in seeing the bill as a whole, if you could send me a copy.

Sincerely,

Lewis C. Solmon

A Note on Equality of Educational Opportunity

By Lewis C. Solmon*

"It will be profitable as mere investment to give the masses of the people much greater [educational] opportunities than they can generally avail themselves of" . . . "General ability depends largely on the surroundings of childhood and youth."

Marshall-*Principles*

Most studies of equality of educational opportunity have begun by looking at the roles played by sociological factors and by various inputs of school systems in achieving the school's goals. Goals include increasing the incomes of students in their postschool lives or, in the shorter run, maximizing Scholastic Aptitude Test scores of students (see Samuel Bowles). Finis Welch concludes that the systematic differences in returns to schooling by states are determined by the multiple of quality of schooling and the value of the marginal product of education. James Morgan and Ismail Sirageldin report evidence of association between the amount a state spends per year on primary and secondary education and the subsequent earnings of people who went through those school systems. Some might conclude from the previous studies that the way to effect "equality of opportunity" in education for subgroups in society is to increase expenditures per student by raising teacher salaries and reducing classroom size in schools attended by these underprivileged groups (see James Coleman et al.,). Others might even use the significance of the race variable as an argument (incorrectly in my view) for busing students to reduce the proportion of blacks in the ghetto schools.

It is argued here that although higher salaries and smaller classes, in ghetto schools as compared to suburban schools, will move toward equating quality of schooling available for those who attend, equality of educational opportunity will not be achieved because of inability to act on an available opportunity. To achieve equality of educational opportunity for low income students, we must take cognizance of the different effects family income and opportunity costs (foregone earnings of students) have on decisions about schooling by families of different socioeconomic classes. Family income is important because its level affects the ability of the family to provide at home complements to in-school learning. The importance of opportunity costs arises because any amount (or percentage) of family income which must be foregone when a potential earner stays in school probably will hurt a poor family more (or in different ways) than will the same amount foregone by a wealthy family.

The latter point is based on the assumption of diminishing marginal utility of income. More precisely, it is asserted that the sacrifice of any *percentage* of family income becomes more "painful" as family income declines. In the present context, adjustments necessitated by a $300 reduction in income for a family earning $3,000 probably hurt a youth's ability to benefit from schooling more than does a $600 reduction (or even a $700 reduction) in income of a family earning $6,000.[1]

The calculations made in Table 1 show that a larger portion of family income must be foregone, on average, when a nonwhite or Southern family sends a child to school, compared to other families. If it is assumed that a family sending its teenager to school gives up the median income of 14 to 19 year olds, then a Southern nonwhite family sacrifices 26.56 percent of its median family income by so doing. The typical family in the

* City University of New York and the National Bureau of Economic Research.

[1] This argument is analogous to the argument for progressive taxation which asserts that in order to equalize the "burden" of the tax, higher income groups should be taxed at *higher* rates rather than at the same rate as all groups.

TABLE 1—FRACTION OF FAMILY INCOME CONTRIBUTED BY A 14 TO 19 YEAR OLD CHILD

	U.S. Total	U.S. Nonwhite	North-east	North Central	South Total	South Nonwhite	West
(1) Median family income	$5,663	3,169	6,195	5,898	4,467	2,319	6,342

United States as a whole gives up only 12.36 percent of its income by sending a comparable child to school. It is interesting to note that days attended per population aged 14 to 19 varies inversely with the percent of family income foregone by sending a child to school and varies directly with median family income.

These calculations are necessarily crude. However, the point to be made is still valid if the fraction of family income foregone were equal for different groups as long as the levels of incomes of the two groups are different. Table 2 attempts to refine the estimates of earnings foregone by replacing median income of those 14 to 19 with the difference between earnings of youths who were in school and youths not in school. The data here show almost identical shares of family income foregone in the four race-region classes. Of course, if students work during out of school hours they reduce the burden of lower family income but also reduce out of school time available to be spent on their studies.

Three completely different problems must be dealt with in order to bring about equality of opportunity in education. The usual point is that to improve quality of ghetto schools, the expenditures per student in these schools must be increased. However, the differential impact of foregone earnings points to a second problem. In order to get the poor to send their high school aged children to schools of *any* quality, the cost in terms of proportionate reduction in family income must be reduced for low income families. Perhaps direct payments to these families based on sending their children to school (rather than welfare payments based on the *number* of children) are the answer. This policy would reduce the immediate cost of the decision to enroll the child in school. This point may be minimized by claims that poor families can lessen the income loss by resorting to capital markets. However, capital markets are imperfect, with respect both to availability and cost of funds to the poor, and to the traditional dislike of many families to borrow at all.

It has been suggested that since the poor have lower opportunity costs than the rich, they should demand more schooling. That is, if both groups have the same demand curve relating opportunity costs (the price to the individual) and quantity of schooling, the price is lower for the poor and so, quantity should be larger. However, both lower

(5) (3) divided by (4).

income and lower rates of return are factors causing the demand curve of the poor to be lower than the demand curve of the rich. It cannot be argued that poor families should have a "longer run view" of the education decision and look at rates of return rather than merely at costs. Gary Becker (1964) has shown that rates of return are lower for nonwhites (usually the poor class) than for whites. Probably the poorer the family, the shorter its time horizon for decision making.

The differential impact of opportunity costs implies that children from poorer familes get lower quality education (or less opportunity to obtain equal quality education) even if they attend the *same* school as children of wealthy families. The loss of 10 percent of income for a family earning $3,000 has several implications: certain goods and services formerly purchased in the market will have to be produced in the home. According to Becker's theory of allocation of time (1965), as income declines when a family sends a child to school, household time is substituted for market goods in producing consumer utility. Probably, the student will have to reduce his nonschool study time in order to help with the household activities. Moreover, other members of the family will have less time to spend in assisting and encouraging the student. This lack of home stimulation has been demonstrated to be a problem in low income families which has lowered achievement in school of children from these families. Consumption of certain commodities will have to be reduced. These may include books, lamps, clothing, and nourishing foods, all complementary to schooling.

Pressure to take part-time jobs and increase household production, lower levels of complementary goods, and a less favorable home environment reduce the student's ability to get the most out of his school attendance. Compared to the student from the home having a high median income the poor student's opportunity to benefit from education has been reduced.

Finally, it has been suggested that since on average, poor black families have more children than wealthy white families have, the income sacrificed by sending any *one* child to school is less for the poor. Table 3 provides information on this point. Rather than using median regional incomes as in Tables 1 and 2, take median income for a nonwhite family with three or more earners ($5,357) and median income for all families with two wage earners ($6,671). This adjusts incomes to allow for more people of working age in a black family. If these are divided into earnings of the corresponding

TABLE 3—MEDIAN INCOME BY FAMILY SIZE AND NUMBER OF EARNERS

	U.S. Total	White	Non-White
Median Family Income When Number of Persons in Family is:			
2	4,651		
3	5,861		
4	6,289		
5	6,309		
6	6,093

2	6,671	6,911	4,099
3+	8,775	9,152	5,357
Population per Household	3.29	3.23	3.85
Average Family Size	3.65	3.58	4.31

Source: Census of Population 1960.

14 to 19 year old, the black family appears to sacrifice 12.13 percent of its income by sending one child to school whereas the *U.S.* average sacrifice is 10.49 percent. Although the difference has narrowed, the black family still gives up a higher percentage of family income. Moreover, as noted earlier, an assumption of diminishing marginalutility of any fraction of income implies that even equal percentage sacrifices will hurt a poor family more than a rich family.

Conclusions

Certainly attempts to buy higher quality teachers and to have them teach smaller groups will increase the educational opportunities of students from poor families. However, there are definite limits to the effectiveness of this policy. The cost in terms of proportionate reduction in opportunity cost must be reduced for poor families to move toward real equality. Children from poor families who attend school reduce family income by a larger percentage than do children from rich families. Hence, the poor family is likely to consider school a greater hardship and so is less likely to enroll its children. Moreover, any percentage reduction in family income (due to school attendance) is more likely to cause adjustments in living patterns that will hurt a student's ability to benefit from schooling if the family is poorer.

Incentive payments for poor families to send their children to school would reduce the differential influence of opportunity cost on the decision to enroll, would enable the greater availability of household goods which complement schooling, and would increase the rate of return to schooling for the children of poor families.

January 19, 1971

The Honorable Robert C. Byrd
United States Senator from West Virginia
United States Senate
Washington, D. C. 20510

Dear Senator Byrd:

Much of the current Federal Legislation relating to higher education has a "Maintenance of Effort" provision which requires an institution to show net educational expenditures for the current year to always exceed those of the previous fiscal year in order to be eligible for federal funding.

This provision has not been a matter of concern for most public supported institutions, but two years ago it became obvious that most privately supported institutions were facing a downward trend in enrollment and an upward trend in costs, which has now placed many private institutions in a financial bind or facing serious financial problems. Therefore, it is not good management on our part to continue deficit spending in order to qualify for federal funds and this was brought home to us last month when we were asked to send in a proposal under Title VI-A of the Higher Education Act of 1965 for equipment and materials. West Virginia was allocated some $70,000 of the total $7 million appropriation for this purpose and all colleges and universities in West Virginia were invited to file proposals for equipment and materials to improve undergraduate teaching by December 31, 1970.

Wesleyan's enrollment this current academic year is approximately 35 students less than last year and our costs continue to rise so we have naturally reduced our expenses considerably and upon completion of the appropriate forms for a Title VI-A grant we, of course, came out with a negative figure of some $19,000 expenditures projected for this year as compared to last year's expenditures and, consequently, are not eligible to apply for help when we need it most.

I believe the "Maintenance of Effort" provision is included in several other federal programs aiding higher education, and I know this is a fact for the Library Resources Program because we recently had to return $2,300 to the Federal Government because we were unable to maintain the required expenditures. To me this is false economy and certainly places most of the private schools at a disadvantage when our enrollments are gradually going down and our costs are going up. I sincerely hope that you will give this very serious matter your consideration and take early action to amend this provision if possible so that the private schools once again may be eligible for support under these federal programs.

Sincerely yours,

Herbert L. Sharp
Director of Development

February 2, 1971

Mr. Stephen J. Wexler
Counsel
Subcommittee on Education
United States Senate
Washington, D. C. 20510

Dear Mr. Wexler:

This is in response to your letter of January 25, 1971, to the Honorable Robert C. Byrd, in which you solicit my permission to include my letter to Senator Byrd on the policy question, "Maintenance of Effort," in some of the federal legislation designed to assist higher education.

We are pleased to have you include this letter in the hearing record and I hope some of the smaller, private, church-related institutions represented by the American Association of Colleges will be given an opportunity to add additional comments and testimony when the Subcommittee on Education is considering federal legislation affecting institutions of higher education.

We recognize that some criteria for federal assistance to institutions of higher education is necessary but in view of the present trend where fewer and fewer students are attending private institutions, the "Maintenance of Effort" provision makes many of the private institutions ineligible for federal support at a time when the support is needed most.

We appreciate your concern on this matter and we are pleased that the question will be considered by the Senate Subcommittee on Education.

Sincerely yours,

Herbert L. Sharp
Director of Development

March 26, 1971

Senator Claiborne Pell, Chairman
Subcommittee on Education
Senate Office Building
Washington, D.C.

Dear Senator Pell:

Press reports indicate that your Subcommittee is or until very recently has been holding hearings on the financing of public education.

The California Labor Federation, AFL-CIO, favors modernizing reclamation law as one means of lightening financial burdens on taxpayers and of improving the financial condition of education (see enclosed copy of California AFL-CIO News).

When giving away public lands the Congress allotted 94 million acres to the support of education between 1803 and 1966. Why not follow this historic example as we give away public water?

If there is still time, this Federation would like to submit a statement of this plan to your Subcommittee for inclusion in the printed record of your hearings. Please advise this office if this is possible.

Sincerely,

John F. Henning
Executive Secretary-Treasurer

Tunney Whacks Murphy's Plan To Bar Strikes

John V. Tunney, labor-backed candidate for the U. S. Senate, has sharply attacked proposals advanced by U. S. Senator George Murphy aimed at abolition of the right to strike.

In an address to the Los Angeles Federation of Labor last Saturday, Tunney described Murphy's statements as amounting "to the greatest peril to organized labor in California since right-to-work was defeated in 1958."

Tunney said that "Murphy, after much hemming and hawing in two recent speeches, has proposed the abolition of the right to strike."

Noting that Murphy has been "obscure in his proposal to set up all-powerful courts to force labor settlements," Tunney said:

"He hasn't spelled out the total authority of these labor courts and, so far at least, he's

Use Water Plan Funds for Schools, State Fed Urges

The California Labor Federation this week spelled out its support for government policies that would let all taxpayers share in the benefits that flow from the investment of public funds in federal projects that bring water to arid lands instead of letting the bulk of the benefits pour into the pockets of land speculators.

The State AFL-CIO's position was spelled out in a paper distributed at the Western States Water and Power Consumers Conference in Salt Lake City Monday and Tuesday, September 28-29, 1970 by Paul Taylor, Economist and Research Director for the State Labor Federation.

Asserting that "water is a pub-

Reagan-Backer Salvatori Tops List of Contributors

Henry Salvatori, a wealthy California oil man recently cited by Democratic gubernatorial candidate Jess Unruh as a significant potential beneficiary of Governor Reagan's 1970 tax shift plan, has just won another distinction.

One of the most comprehensive surveys of political contributions by corporation executives ever made reports that Salvatori, a director of Litton Industries and a member of Reagan's Kitchen Cabinet, was the nation's top individual contributor to Republican Party coffers during the 1968 political campaign of those in the survey.

The survey, compiled by the Citizen's

Reagan's Safety Bill Veto Spurns Workers: Henning

"Governor Ronald Reagan showed total disregard for the safety of California workers by his recent veto of a labor-backed bill that would have required the Division of Industrial Safety to investigate complaints of safety code violations or unsafe places of employment," John F. Henning, Secretary-Treasurer of the California Labor Federation, AFL-CIO, charged this week.

"The Governor's veto," Henning said, "mocks the tragedy of the alarming increase in the number of deaths and disabling injuries in the construction industry."

Last year, he pointed out, 21 more workers lost their lives than a year earlier and disabling injuries, in just the first three months of this year, were more than 25 percent higher than the same period last year.

The measure, AB 1383 was introduced by Assemblymen Leo McCarthy and Walter Powers at the request of the State Build-

Here's Where To Call To Help COPE Candidates

With the voter registration job successfully concluded, California trade unionists need to turn their fullest energies to bear on voter education and get-out-the-vote efforts during the few weeks remaining before the Nov. 3 General Election, John F. Henning, executive officer of the California Labor Council on Political Education, AFL-CIO, declared this week.

Henning wrote all affiliates last week to urge a maximum effort to mobilize the talents and energies of all women relatives of trade unionists in this campaign, noting that:

"Unless we get the story of Labor to the people of California we will be overwhelmed by Big Business on Nov. 3."

Volunteers are urged to call

Nixon's Top School Job Nominee Hit

Vigorous opposition to President Nixon's nomination of Sydney P. Marland, Jr. as U.S. Commissioner of Education was voiced by the California Labor Federation, AFL-CIO this week.

Terming Nixon's nomination "a direct affront to the teaching profession" and "a threat to the future of public education," John F. Henning, executive officer of the State AFL-CIO, called on all AFL-CIO affiliates in California to write or wire California's two U.S. Senators — George Murphy and Alan Cranston—immediately to urge them to oppose the Marland nomination.

Henning pointed out that AFL-CIO President George Meany has described Marland as "an outspoken enemy of the right of teachers to join to-

(Continued on Page 2)

Reagan-Backer Salvatori Tops List of Contributors

(Continued from Page 1)

Research Foundation of Princeton, N.J., reports that Salvatori and his wife contributed $90,000 to the Republicans.

It also reported that 11 of Litton Industries' 29 listed company executives in 1968—representing more than one-third of the huge corporation's top brass—gave a total of $151,000 to the Republican Party and nothing to the Democrats.

Litton Industries ranked 14th among the 25 top contractors in fiscal 1968 on the Department of Defense (DOD) contractor's list, the report said.

All told, the study said that officials of 49 companies that ranked among the top 25 defense, space, and nuclear contractors in fiscal 1968 gave at least $1,235,402 to political campaigns during the year and that Republicans received nearly six times as much of that money as Democrats. The survey said that $1,054,852 went to Republicans while only $180,550 went to Democrats.

But the importance of this survey for California workers—indeed for all U.S. workers lies not so much in the preeminence it thrusts upon Salvatori as a major Republican contributor as it does in the fact that it demonstrates the ease with which special interests can make huge donations to political campaigns, despite the fact that the Corrupt Practices Act of 1925 makes it illegal for any corporation to give money to candidates for the Presidency, the Vice Presidency or Congress.

The loophole is that the 1925 Act does not prohibit corporate executives from making political campaign contributions as individuals.

The survey points up the need for workers to study the record if they are to cast a vote in their own self-interest in the 1970 general election.

The record shows that California's incumbent Senator George Murphy, who enjoys oil man Salvatori's support, voted in favor of an amendment by Allen J. Ellender of Louisiana late last year that would have protected the oil industry's preferential tax treatment by boosting the oil depletion allowance back up to 27½ percent instead of going along with Senate Finance Committee recommendations calling for cutting it to 23 percent. The amendment was defeated despite Murphy's "No" vote.

And just last December, Murphy voted in favor of a one-sided attempt by reactionary forces to strip labor unions of their tax exempt status if they engaged in any political activity at the local state, or national level.

This amendment, known as the Fannin amendment, would have given the nation's big corporations virtually a free hand in the political field.

The immense influence exerted by the oil industry on the nation's political process was also underscored barely a year ago when a letter written in behalf of President Nixon to a county official in Midland, Texas, came to light.

The letter, written September 18 by White House aide Harry S. Dent, President Nixon's deputy counsel, said that testimony given earlier on tax reform by Nixon's Secretary of the Treasury, David M. Kennedy, which defended the House provision cutting the oil depletion allowance from 27½ to 20 percent would be "corrected very soon."

The letter said:

"The recent testimony given before the Senate Finance Committee is to be corrected very soon by the Secretary of the Treasurer. The President continues to stand by his campaign commitments.

"As you may know, the House did vote to lower the oil depletion allowance but this was an action of the House of Representative and not of the President."

According to the National Committee on Tax Justice, the continuation of the oil depletion allowance means that the federal government loses $1.6 billion in potential revenue each year.

With that kind of a tax loophole at stake, it's not surprising that big corporation executives should invest a million or so to protect it.

What's alarming is that many workers—those who in the end foot the bill for such tax loopholes—are taken in by candidates with records showing vote after vote against the workers' best interests.

Tunney Whacks Murphy's Plan To Bar Strikes

(Continued from Page 1)

latly refused to come right out nd say his proposal calls for o-strike sanctions against lao unions."

But, Tunney warned, the Republican incumbent is "proposing drastic and radical changes n American labor law."

Tunney, who has served three erms in Congress, said that hile it was not yet clear just ow far Murphy "wants to tip he balance against working en and women and in favor of ig corporations," one thing as clear:

"Murphy always has been on he attack against labor. Apparently he felt well enough ff with the salary and the redit cards from the Technicolor executive suite to vote gainst a minimum wage of 1.60 and against the extension f unemployment compensation nd other employee benefits."

Declaring that "Murphy has ways been on the side of onopoly business and against bor," Tunney charged that his pponent was apparently unching a new assault at a me when labor is hurt by rising unemployment, recession, nd the other no-win economic olicies of the Nixon Administration."

Top School Post Nominee State Fed Raps Nixon's

(Continued from Page 1)

gether in organizations of their own choosing" who has urged Federal anti-strike legislation for teachers.

The AFL-CIO Executive Council had unanimously urged President Nixon not to nominate Marland to the nation's top education post.

The position has been vacant since last June when Dr. James E. Allen, Jr. was fired following policy disagreements with the White House.

Marland has been president of the Institute for Educational Development since 1968, following his resignation as School Superintendent in Pittsburgh, Pa., after the American Federation of Teachers won a collective bargaining election.

Meany said that in Pittsburgh as well as in earlier posts in Connecticut and Illinois, Marland "took an uncompromising position against unions for teachers."

In Pittsburgh, Marland had opposed both the American Federation of Teachers and the National Education Association, holding to a declared policy of "no bargaining and no negotiating," Meany said.

Just last Spring, Marland urged enactment of federal legislation to deny teachers the right to strike. In a statement to the House Education and Labor Subcommittee, Marland suggested that "student rebellion . . . vandalism . . . obscenity" might be linked to the poor example set by teachers who have gone on strike.

While conceding that better pay and working conditions for teachers may have been "long overdue and justified," Marland complained that the outcome is that "public funds have been diverted to teacher benefits as against other school needs."

The Senate Labor and Public Welfare Committee, chaired by Senator Ralph Yarborough (D-Texas) is expected to take up the nomination within the next two or three weeks.

Seafarers' School

The Seafarers' Harry Lundeberg School of Seamanship at Piney Point, Md., graduates more than 1,000 recruits in a typical year. In addition the facility is responsible for upgrading about 800 seamen in the unlicensed ratings and preparing another 300 for examinations to qualify as licensed deck and engineering officers.

—3—

Labor Urges Use of Water Project Income for Schools

(Continued from Page 1)

lic resource," Taylor said:

"The money that finances its development is public money. The environment created by that development surrounds the public that lives within it.

"Public interest should guide development, not private pressures that destroy policy. The time has come to modernize the 160-acre statute, but not to destroy it."

In regard to the danger of imminent destruction, the State AFL-CIO Economist was referring to a measure currently pending in Congress which is backed by Senator George Murphy and Governor Ronald Reagan that would let land speculators reap vast unearned profits from publicly financed reclamation projects such as the Central Valley project which has brought water to thousands of acres of land along the East side of the San Joaquin Valley.

The hangup has been that large landholders have refused to comply with federal reclamation law which requires them to sign recordable contracts agreeing to divest themselves of excess acreage (acreage in excess of 160 acres per person or 360 acres for man and wife) within 10 years after receiving benefits from that project.

The California Labor Federation, Taylor explained, supports government purchase of excess lands at the pre-water price.

The State AFL-CIO pointed out that revenues from the sale or lease of such lands could be assigned to public purposes, including education, the Land and Water Conservation Fund, or used simply to replenish the hard-pressed national treasury.

Taylor, who was elected to the organization's Board of Directors during the two-day meeting, pointed out that the policy statement on Natural Resources adopted by the California Labor Federation's convention in San Francisco last month noted that "in California alone there are 900,000 acres owned in excess of the legal limit."

The Federation's policy statement urged "that a generous share of the revenues from resale or lease of lands so purchased be assigned to public purposes, particularly to education, to the National Land and Water Conservation Fund" and to public planning of a decent environment with open spaces and agricultural green belts.

It also urged the creation of a public authority with power sufficient "to plan land use effectively in reclamation areas and so to create an environment of quality."

Labor Urges More U. S. Aid to Schools; Hits Denial of Pay Hike to U. C. Faculty

A plea for "greatly increased federal financial aid to all levels of public education" and a condemnation of the Reagan Administration's singling out of the faculties of California state colleges and universities by denying them a five percent cost-of-living salary increase that was granted to other state employees were among the highlights of a policy statement on Education adopted by delegates to the California Labor Federation's Eighth Convention in San Francisco last month.

In emphasizing the need for more federal financial aid to education, the delegates pointed out that the federal government "is the richest source of funds" and that revenues for education "should be raised from progressive, rather than regressive taxes."

They emphasized that the costs of education have risen for a variety of reasons including population growth, inflation, and improvements in quality education standards. It also results from the fact that some 40 percent of today's youth are seeking college educations compared to two percent a century ago, they said.

Noting that the State Commission on Education estimated that in 1967-68 61 percent of local school revenues came from local sources, mainly property taxes, while only 34 percent came from the state and five percent from federal grants, the delegates said:

"With the generally recognized need to relieve rather than to add to the present burden of local property taxes, coupled with growth in student enrollment, inflation of dollar costs and the need to expand educational opportunities and to institute programs for children from low-income and minority groups, the necessity to rely increasingly upon state and federal sources is obvious."

They pointed out that "great inequities" exist between various school districts with the result that light tax burdens are imposed on some and heavy burdens on others. This is all the more reason why more federal aid is essential, they said.

Among other things, the delegates:

- Called for enactment of legislation extending collective bargaining rights to teachers and giving them a greater share in educational decisions.
- Defended the traditional right of dissent and academic freedom.
- Deplored the violence of "the microscopic minority of students who, by terrorism and vandalism, have defiled democratic processes."
- Pledged the State AFL-CIO's continued opposition to the imposition of tuition at the state college and university levels.
- Opposed the current "massive" cuts in the university and state college budgets.
- Called for enlarging such programs as Headstart, Teacher Corps, special classes in English, and school lunches.
- Urged the development of more realistic curricula in social studies to present the history and role of organized labor, minority, and low-income groups adequately.
- Urged expansion of adult education and labor education.

Hackler Named As Assistant to CWA President

Richard W. Hackler, a vice president of the California Labor Federation, AFL-CIO, and vice president of CWA District 9, has just been appointed as Assistant to the President of the CWA by Joseph A. Beirne.

Hackler is scheduled to take up his new duties in the CWA's Washington, D.C. headquarters in mid-November.

James B. (Jim) Booe has been elected by the CWA's Executive Board to succeed Hackler as Vice President of CWA District 9, a district encompassing the states of Washington, Oregon, California, Nevada, Alaska, and Hawaii, and part of Idaho.

'Nixon Economics -- A Cure More Painful Than Disease'

"We recognize fully that it is the bankruptcy of Nixon economics that is watering down our purchasing power and endangering our jobs. . . . It is possible that this kind of 19th century, blunderbuss economics may ultimately end inflation, but whether it does or not, the cost of the cure for millions who are jobless or working short-time is already more painful than the disease."—I. W. Abel, President of the AFL-CIO United Steelworkers in an address to the union's convention in Atlantic City, N.J., Sept. 28, 1970.

Volunteers Sought To Aid Quake Victims

The Peace Corps need 28 apprentice carpenters, eight architects and 10 civil engineers to help rebuild homes and schools wiped out by the massive earthquake in Peru that killed 50,000 and left 800,000 homeless on May 31, 1970.

Prospective volunteers in San Diego may phone (714) 293-5525; those in Sacramento (916) 449-3388; those in San Francisco (415) 556-8400; and those in Los Angeles (213) 688-3454.

Meany Stresses Urgency of Nat'l Health Insurance

Health care is "a basic human right" and the sooner Congress acts on national health insurance, the better it will be for the American people, AFL-CIO President George Meany declared in the course of an appearance before the Senate Labor & Public Welfare Committee to affirm labor's "complete, unequivocal support" for national health insurance and to stress the urgency of the problem.

But the Nixon Administration lost no time in denouncing national health insurance legislation as too costly and not the "proper" approach.

Under Sec. of Health, Education & Welfare John G. Veneman told the committee that the Administration "simply cannot subscribe to the idea that we must now break—utterly and totally—with the past."

The hearings, chaired by Sen. Ralph M. Yarborough (D-Tex.), marked the first public exploration of national health insurance in 20 years. Meany conceded that Congress will not be able to reshape the nation's health care system in the few weeks remaining to the 91st Congress.

But, he emphasized, "We do want action early in the next session. The need is too great and too urgent for Congress to delay acting on national health insurance beyond 1971."

He called on Congress to combine the best features of the "carefully thought-out" bills introduced by a bipartisan group of senators and by Rep. Martha W. Griffiths (D-Mich.) and numerous co-sponsors.

But he warned against a "medi-credit" bill, backed by the American Medical Association, as "legislative quackery designed to salvage as much of the old order as possible, and to do a little as possible about providing health care for all."

The Senate committee also heard strong support for national health insurance from Auto Workers Pres. Leonard Woodcock, who testified as chairman of the Health Security Action Council.

Woodcock said he had come to Washington despite the pressures of the General Motors strike because the health care bill is "vital to our members and to all working people." Private medical insurance, Woodcock said, has proved costly, wasteful and inadequate.

Meany restated labor's goals for a national health insurance program, including:

- Full coverage for "every man, woman and child in the nation."
- Comprehensive benefits, "including preventive, outpatient, inpatient and rehabilitative care."
- Financing "like social security with payments by employees at about the present scheduled Medicare rate, with the federal government and employers splitting the remaining payroll costs."
- Contracting for all medical services on a prepayment basis with groups of physicians and medical and dental societies.
- Free choice of physicians and of health delivery systems.
- Financial assistance for development of comprehensive health care systems.

The AFL-CIO's endorsement of the Griffiths bill early this year also applies to the legislation introduced by Yarborough, Sen. Edward M. Kennedy (D-Mass.), Sen. John S. Cooper (R-Ky.), Sen. William B. Saxbe (R-Ohio) and other co-sponsors.

Both "in their basic approach and fundamental philosophy," Meany noted, the House and Senate bills "are very close." He suggested that "by combining the best provisions of both, an even better bill than either could be enacted in the next Congress.

Reagan's Safety Bill Veto Spurns Workers: Henning

(Continued from Page 1)

ing and Construction Trades Council of California headed by James S. Lee and was strongly supported by the State AFL-CIO, Henning said.

The measure had passed the Assembly with no opposition and cleared the Senate with very little opposition.

In vetoing the bill, Reagan said:

"The present policy of the Division of Industrial Safety places response to complaints concerning unsafe working conditions in the highest priority category while reserving some discretionary judgment based on the imminency of the hazard and the complaint."

"That's all he said," Henning pointed out, "and in my book that doesn't show any concern for the workers whose lives may be lost or bodies maimed by the state's failure to adequately enforce safety standards."

During the veto session last week, the Assembly sought to override the Governor's veto but the bill fell six votes short of the 54 votes needed to override.

The vote was 48 "Yes" to 9 "No". All nine "No" votes were cast by Republicans and 16 other Republicans failed to vote even though they had voted favorably on the bill when it first passed the Assembly.

The bill would have made it mandatory rather than permissive for the Division of Industrial Safety to investigate complaints of unsafe places of employment or safety code violations. It was opposed by the California Merchants and Manufacturers Association and by the Director of the Department of Industrial Relations, William Hern, a Reagan-appointee.

I.A.M. Parley Urges Support For U.S. SST

(Continued from Page 1)

tric plants but at the factories of sub-contractors and suppliers in 43 states."

Noting that President Nixon has chosen to proceed with the production of two prototype aircraft, the resolution says that "the continuance of the funding of this phase of SST development is now up to Congress" and calls on "all local lodges to contact their congressmen and senators urging them to support and approve the necessary funds as an investment in continued world leadership for American aviation and America's future prosperity."

The Machinists' resolution also warns that Russia, France and Britain "are years ahead in the development of supersonic transport aircraft."

40% of Workers Women

Today nearly two out of every five workers in the U.S. are women. Most of these women are married; half are over 30 years old.

ADVANCING VOLUNTARY LEADERSHIP IN A CHANGING WORLD

Chamber of Commerce of the United States

LEGISLATIVE ACTION GENERAL MANAGER
HILTON DAVIS

202-659-6140

1615 H STREET, N.W.
WASHINGTON, D.C. 2000

June 16, 1971

The Honorable Claiborne Pell
Chairman, Subcommittee on Education
Labor and Public Welfare Committee
United States Senate
Washington, D. C. 20510

Dear Mr. Chairman:

The National Chamber appreciates this opportunity to present our views to your subcommittee as it develops a legislative program designed to assist colleges and universities in a period of financial stress.

The business community, as you know, has long been an advocate and supporter of higher education. Indeed, estimates are that business support for higher education increased from $150 million in 1949 to $375 million in 1969.

We have reviewed a number of higher education bills, specifically S. 659, your own bill; S. 1062, S. 1072, S. 1073, and S. 1074, by Senator Javits; and S. 1123, by Senator Prouty.

This review prompts, first, some general observations.

Although some people contend the current problems in higher education are entirely financial, the National Chamber believes that the financial problems of colleges and universities are symptomatic of deep-seated conditions, the cure for which is not massive doses of financial antibiotics, however ingeniously applied.

This, of course, does not deny that there is a fiscal problem in higher education. However, it does suggest a need for serious reforms, as well as financial aid.

Unfortunately, most of the proposed bills make little provision for educational reform -- reform which most thoughtful people, in and out of the profession, believe is critically needed. And the reforms that have been advanced are scant in details. We think programs and incentives for reform in higher education should receive high priority.

All of the bills seem to assume that virtually everyone should go to college. We think this is a highly questionable assumption. The dropout rate among college students, the incidence of drug use among college students, and other symptoms of disaffection among the young indicate there is something disturbingly out of joint in the notion that more and more young people should be encouraged -- and even coerced -- into going to college.

This in no way argues against development of relevant post-secondary education programs as enunciated by Representatives Green, Quie, and Pucinski, Senator Javits, and others on several occasions. The renewed interest in career or occupational education is clearly a step in the right direction. But college has been oversold. We have diluted the quality of higher education by confusing higher education with more education.

Much of the fiscal difficulty incurred by colleges and universities is due in large measure to the absence of cost-effectiveness thinking by college officials. The principal reason for this is that they have not been subjected to competitive pressures to develop more effective, relevant education for less money. The scorning of cost-effectiveness and reform in higher education is best illustrated by the demands for federal, "no strings attached" financial aid by higher education organizations. Clearly, performance-based accountability demands should be placed upon colleges and universities.

As for the legislation on which you are now working, we ask that you consider the following specific points:

Institutional aid: Institutional aid should not be unrestricted, but should be tied to conditions for reform and accountability. Higher education institutions should be encouraged to apply the principles of cost accounting to their operations. Certainly, institutions seeking aid should demonstrate they are operating as efficiently as possible. Taxpayers should not be asked to subsidize low productivity in the colleges.

Student grants: The National Chamber supports student assistance through loans and other means, but it does not favor federal student assistance grants, to "guarantee" higher education.

Guaranteed higher education will dull initiative and ambition, and eliminate the necessity for commitment or sacrifice. It will destroy what is currently, to some degree, a natural selection process which assures that the strongly motivated student will seek higher education.

College and university tuitions should be adjusted to levels more commensurate with the actual costs of providing such education. Tuition rebates or other desirable forms of assistance should be available, as alternatives to federal grants, to qualified students with limited financial resources.

Loans: More opportunities should be provided for students to secure low interest loans. It is essential in setting up such programs that banking associations be consulted. Use of private lending institutions should be encouraged.

Work study: We support Representative Edith Green in her emphasis on self-help. This is an area that has been too long neglected. Programs of social services, which many of our youth are requesting, could be expanded, providing both remuneration for students and benefits to society.

Aimlessness in our young is, unfortunately, far too prevalent. There is nothing wrong in working for an education; it is wrong, however, to foreclose opportunities for higher education for motivated young people.

Planning grants for community colleges: Support should be given to states to assist them in planning for the establishment of community colleges with adequate provision for occupational programs.

We recognize the many complexities inherent in higher education legislation. The action of the 92nd Congress will set the course, not only for the life of the Act, but for a generation. The choice is whether we will have dry-well legislation which puts precious resources into programs in sore need of reform -- or whether we will seize upon the current crisis in education to develop new directions.

We will appreciate your consideration of these recommendations and we request that this letter be made a part of the hearing record on this legislation.

Cordially,

Hilton Davis

GOUCHER COLLEGE

14 June 1971.

SUBJECT

COMMENTS ON THE DRAFT INTERNS FOR POLITICAL LEADERSHIP ACT OF 1971. (S.1410, H.R. 7187, H.R. 7248), 92d Cong. 1st Sess.

FROM

Brownlee Sands Corrin, Professor and Chairman of the Department of Political Science (since 1958), and Director of the Field Politics Center (since 1954), Goucher College, Towson, Md. 21204.

A. General Remarks

The interest and support for legislative internships by many members of the Senate and the House is well known, of long standing, and widely appreciated by institutions and members of the academic community in this country whose academic programs in government and politics emphasize a combination or balance between theory and practice. Since the early 1950's, Congressional and academic interests have been aided and abetted by financial and program encouragement from organizations such as the Maurice and Laura Falk Foundation of Pittsburgh and the Ford Foundation, professional groupings such as the American Political Science Association, the U. S. Congress itself (in the recent past) through monetary allocations to individual members for intern purposes, and from many individual donors to, as well as institutionally supported programs (e.g., Stanford in Washington). In my judgment, there is high value in continued and expanded financial support for such programs; and I appreciate the endeavors of the sponsors of both the Senate Bill 1410 and House Bills 7187 and 7248 to demonstrate their recognition of merits in internships as well as the usefulness of financial assistance.

It is with some trepidation, then, that I feel compelled to criticise the draft bills as they are presently written, and, at the same time, suggest some alternative directions. I am making these criticisms and suggestions in the belief that the sponsors have not had the opportunity to hear from the many individuals who have been involved in internships over the past twenty years and would welcome their views. Along this line, I note particularly that the two House bills have completed public hearings and I gather that the political internships were not discussed one way or another in those hearings. The same condition may well be true at the Senate subcommittee level. I consider this to be both astonishing and unfortunate at the least, and I would urge that the House Committee on Education and Labor and the Senate Committee on Labor and Public Welfare solicit the professional opinions and testimony of a number of distinguished members of the academic community who might well be classified as knowledgeable and experienced if not expert on the subject of internships. I have attached a list of some of those persons for use as desired by sponsors, Committees, and Staffs (See, Appendix A).

8. Suggested Modifications.

1. That the legislative internship support program, at the national level be extended in scope to meet high priority fund needs in a variety of types of internships.

   a. Internships in the offices of Senators and Members of Congress are but one form of legislative internship. There is a great value in committee and subcommittee staff internships and with the possible exception of positions requiring security clearance, such posts should be available for service as desired by committee members and their staffs, with selection the responsibility of each Committee.

   b. For some years, the newly named Congressional Research Service has conducted a modest but highly successful summer intern program within its divisions (e.g., Foreign Affairs Division). It has not received fund support and interns have served without pay. Congress might well consider not only financial support, but expansion of this program within and under the direction of the CRS, as well as internships with the General Accounting Office.

   c. Departments of the Executive Branch maintain Congressional Liaison offices and staff. An intern program for such offices under the direction of the Executive Branch would be most useful.

   d. Established media organizations and interest groups with Congressional representation have had interns on occasion. Congress might well encourage expansion of such programs through legislation which would clearly exempt such groups from tax liability on income used in intern programs involving legislative relations at the national, state, and local levels.

   e. The Congress should include in any legislation, support provision for a limited number of internships with the National Committees of both major political parties, and with the respective party organization groups in the Congress (e.g., Congressional Campaign Committee). Such internships should be in addition to existing fellowship arrangements with the program of the American Political Science Association.

   f. The Congress should provide support funds for two types of intern groups related to the District of Columbia government. One such group would serve as interns with the District under a District devised and supervised program. The second intern group would function as legislative/liaison interns in a combined program involving D.C. Committee Staff service and the Office of the D.C. Mayor, program operations to be under the initiative and supervision of representatives from the staffs concerned.

   g. The present White House Fellowship Program bears many functional and purpose relationships with legislative internships (as expanded). Any general legislative intern program should include opportunities or occasions when joint meetings and exchanges of views may occur.

   h. Legislative internships may be separated into academic year, summer, and quarter, semester, or January term periods.

   i. Individuals, as interns, whose interests, talents, and programs are particularly well suited to further legislative experience, may be considered for additional intern activity in some capacity or role that is different in form, type, and office of assignment from previous experience.

j. Intern selection should remain within the responsibility of the individual Senator, Member of Congress, committee, and other organization. Any such individual or grouping, however, would be free to utilize the facilities of a Congressional Intern Office for selection purposes.

k. A Congressional Intern Office should be established headed by an individual with appropriate academic credentials and intern management experience. This officer and a staff would bear responsibility for:

1) Development and implementation of an enrichment program for all levels and types of legislative internships in consultation with the intern's academic representatives, the interns, a joint Congressional Advisory Committee, and the executive-administrative intern group supervisors. Such a program would involve lectures, observations, symposia, debates, etc. on aspects of procedural and substantive operations, policy and political considerations, relationships with other branches, interest groups, independent agencies, and other bodies. Program design would be general and specific. Interns would not be expected to attend or participate in all aspects. For those aspects which meet any intern needs, it would be expected that the intern's office would release the intern from assigned responsibilities.

2) Arrangements for program space.

3) Information, planning, evaluation, coordination, and liaison assistance as desired by home institutions of interns, academic advisers and supervisors, intern offices and their supervisory personnel, and other bodies; except that no evaluations data on particular interns or specific data on particular intern activity of which the Office may be aware shall be released by the Office except to the intern supervisor and the intern's academic adviser, and then only upon specific written request.

4) The Congressional Intern Office and later noted HEW operations should replace the National Coordinating Agency which has a number of potential disadvantages and is subject to criticism as it has been defined in the draft bills (See, Criticisms, infra.)

5) Funds should be provided for the establishment of the Congressional Intern Office and the Office must maintain the necessary financial records and report annually to Congress on its operations and expenditures.

6) Each member of the Senate and the House, the National Committees, and the party Congressional Commitees shall be authorized funds up to the equivalent of one intern for a twelve month year.

7) The number of interns and supporting funds for the Congressional Research Service, the General Accounting Office, and the office of Mayor of D.C. shall be determined after consultation with representatives from these bodies. In my opinion, the major divisions of the CRS could utilize and benefit from financial support for a total of 40 interns. This, however, is merely an enthusiastic opinion.

8) Participating Congressional Committees and Subcommittees should be authorized two interns, one selected by the minority party committee members and their staffs, the other by the majority party committee members and their staffs.

2. That the legislative internship support concept at the national level be expanded to include important groups of persons not covered in the present draft bills.

   a. The drafts limit internship to undergraduate students in institutions of higher education. There is as great a need to provide for intern opportunities for graduate students; for the primary and secondary school teacher in the social sciences and for the academician in institutions of higher education whose training has not included operational experience in government and politics; and for certain well-qualified students recently completing a secondary school education. Draft legislation should be modified accordingly.

3. That the internship support concept cover a broader portion of the practical experience spectrum than legislative/political internships.

   a. The Congress should eliminate draft provisions regarding state and local government internship support and requirements (see, Criticisms infra) and substitute a provision whereby the Department of Health, Education, and Welfare is authorized to approve grants to American colleges and universities for the establishment of:

      1) Summer institutes on the operations and practices of state and local government and politics. Such institutes would be of three types: one for the accredited primary and secondary school teacher, or college/university academician, who has not had practical training in government and politics and whose teaching responsibilities include instruction in government and politics; the second for selected students at the undergraduate and graduate levels; and the third for qualified students who have just received their secondary school credential (via examination or graduation) or who have successfully completed the eleventh grade. The major emphasis in such institutes would be upon observation, participation, and study through field work, field trips, internships, briefings, interviews, and conferences with elected and appointed officials and career personnel in the legislative, administrative/executive, and judicial agencies, departments, and divisions of state and local government. Participants would receive as well appropriate academic instruction linked with their experiences in methods and techniques of problem analysis; in decision-making, administrative and legislative behavior and their analyses; in systems and communication objectives, techniques, and analyses; and in application projection of their institute experience. The institute format would follow the established patterns for academic institutes from proposal to reporting as required by H.E.W.

      2) January term, semester or quarter intern grants for state and local legislative/executive internships, whichever occur during state and local legislative sessions to graduate or undergraduate institutions with academic programs providing course and/or field programs in state and local government. Program to be under the administration and supervision of the Department of Health, Education, and Welfare and centralized in application and distribution by state or regional committees of participating academic institutions in the pattern established by the regional units of the Citizenship Clearing House-National Center for Education in Politics. It is expected that

interns will undertake academic courses related to and simultaneous with their internships, and that interns will have a general background in the social sciences, specific theoretical background in area of any project assignment, and a demonstrated interest and capacity as seen through curricular and extracurricular activities.

This program should be established on a state and local government matching basis. While we recognize the importance of state and local governments to the life of American citizens, the national government cannot and should not provide the total support, desirable as it may be to have such programs at the state and local levels. If state and local governments are unwilling to participate on a matching basis, implicitly such a condition suggests that the program has either an insufficient priority or enthusiasm to warrant establishment.

It is suggested further that the operational costs are of such potential magnitude that this program should be initiated on a pilot and limited number basis in selected jurisdictions, as well as draw on the previous experience of many institutions and groups with such internships.

3) U. S. Congressional state office internships. The possibility of internships in the home offices of Members of the U. S. Senate and House of Representatives offers an opportunity for legislative intern experience which has some parallels and unique and useful distinctions from such training/service periods in Washington, D.C. For certain students, they will have particular value when the intern may combine his internship with home institution course training which may parallel and supplement the internship. For others, there will be the advantage of research projects involving personnel, agencies, data, and resources related to state affairs and more accessible within the state than in Washington, D. C. For some others, intern experience is possible only within their home area due to commitments to family, costs, and other factors. And for a number of educational institutions which cannot maintain or arrange for a faculty supervision representative in Washington, the Congressional state office internship permits necessary academic supervision.

The allocation, selection, and funding of such internships would remain essentially the same as with Washington Congressional internships, with the Congressional Intern Office providing such services as desired.

4) Problem/issue institutes. Large numbers of bright, alert, competent, and humanity dedicated student persons with capacities for leadership in this society find more utility and social political value in the research and analysis of aspects of national problems as well as in the development of legislation and administrative regulations appropriate to problem resolution. The authorization of and support for summer institutes, again under the supervision of Health, Education, and Welfare, which focus upon field work and practical experience in a number of such problem issue areas would be of great value to this country and the students involved.

The program of such institutes would, of course, cross national, state, and local lines in many instances, as they would cross, similarly, executive, legislative, judicial, and party divisions of government. Improvement of environmental quality, drug abuse problems, utilization of ocean resources, the quality and operations of mental health institutions, dyslexia and public education, problems of political socialization in urban centers and their surrounding suburbs, the problem of communications in government and politics at international and national levels, problems of consumer protection, poverty/welfare/life style problems, state and local juvenile (so-called delinquent) supervision and control problems, civil-military relations problems, aerospace problems--are but some of the general subjects which would benefit from institute analysis as well as provide significant training for the participants. The latter should include qualified teachers at the primary and secondary school levels, qualified members of the academic community from institutions of higher education, undergraduate and graduate students, and possibly recent secondary school graduates and rising seniors. Specific criteria for participation would vary with the subject problem/issue of any institute--which should be single topic oriented.

An institute concerned with water quality standards, for example, might draw its participants from students with major training in biology and chemistry, political science, economics, law and sociology. In fact, a multi-disciplinary mix is necessary, for considerable effective teaching is accomplished by and between students as Harold Taylor so well states in his volume, Students Without Teachers. Along with background instruction in the nature and scope of environmental problems generally and water quality problems in particular, a considerable period would be spent in field sampling and laboratory testing of a particular situation or water area. Evaluations would be made then as to water quality in terms of established national, state, and local standards. Lack of standards, defects in enforcement, enforcement, modifying draft legislation and/or regulation, public interest levels, etc. would be considered and developed as appropriate, the entire institute process thus exposing the participant to individuals, agencies, and groups; the multiplicity of their interests, capacities, and power; their amenability to change and along what lines and under what conditions--in short, significant and practical learning about problem solving in public affairs.

5) Administrative/executive internships. There have existed for some years a variety of intern programs with agencies in the Executive branch of the U. S. government, a number as well at the state government level, and a smaller number at the local level. They have had financial and program development support from: foundations (e.g., Coro Foundation); professional organizations (e.g., American Society for Public Administration); academic institutions at the graduate and undergraduate levels; business and public utilities; Executive Departments (e.g., White House Fellowship, 1967 pilot undergraduate intern program of Governor of Maryland); international organizations (e.g., United Nations) and mixed corporations with an international character (e.g., Comsat); interest and pressure groups (e.g., U. S. Chamber of Commerce and the AFL-CIO);agencies within executive branches at all levels (e.g., U. S. Departments of State and Navy, and state and local public health departments, zoning and planning offices, and election board offices).

In many instances, however, the intern absorbs all of his or her costs for there is no appropriation for such a program. In other cases, transportation may be paid by funds available in the home institution. In a great number of cases the academic institution must bear supervisory and administrative costs, as must the receiving agency. Occasionally, the intern may be paid a sustaining amount through the device of an authorized but unfilled position for which there are appropriated funds. In general, the patterns of support cross a broad spectrum as do the patterns of effectiveness and quality of programs (some are no more than temporary employment although named internships), and their variety and emphases (e.g., two and three step administrative internships--with one summer in a real estate agency, a second summer in a planning and zoning office, and a third summer with a public housing agency or a legislative committee--versus a one year graduate intern fellowship with a specific agency).

There are, of course, public and academic needs for these combined academic/practical training programs. There is evidence to suggest that such experiences provide: encouragement for entrance of some qualified persons into public service; a range and depth of understanding of the nature and processes of government which far exceeds theoretical exposure and may permit more effective action by individual citizens within and outside government; and a sensitivity and awareness of particular societal problems as well as their possibility and means of resolution.

The Congress should give serious consideration to ways by which this category of internships may be encouraged, enlarged, and supported. Needs range from providing quick means with write-off of costs for internships in position areas involving security clearance--to authorizing an intern program officer within those agencies which may usefully accommodate a number of interns.

4. The cost structure of all government supported intern programs needs to be carefully defined, a sort of cost-purpose-benefit analysis is surely warranted. A Washington legislative intern program providing $75 a week per intern, and assuming an intern for each Senator and Representatives--amounts to about $2.75 million dollars a year in terms of participant support alone. Summer institutes of 7-10 weeks duration along the lines discussed would cost from about $90 to $110,000 apiece or more for participants, staff, equipment, etc. We need to know how much is presently expended through private and public funds, in what ways, with what objectives and purposes (and whether purposes and objectives are met).

5. The assumptions, presuppositions, objectives, purposes, and needs for intern support programs must be carefully defined. As noted under Criticisms, "political leadership" is an imprecise and vague term. It cannot serve as a purpose description. Internships, moreover, must be more than merely practical involvement, political or otherwise, if they are to have educational value. Sorting mail, typing letters, and checking lists all summer with occasional visits to the House, Senate, or some Committee is not an internship. An internship requires careful planning and supervision of an educational/service program by all parties (intern supervisor, educational supervisor, and intern).

6. My final suggestion is severalfold: first that this bill be recommitted; second, that given Congressional interest, an appropriation and authorization be made for study, evaluation, and recommendations regarding internships in 1972, and third, that any study include experience data as well as comments and suggestions from legislators; academicians; administrators; institute,professional organization institution, and agency representatives with extensive experience in field work programs (e.g., internships, field work, observations, field operations research, etc.).

C. Criticisms

1. The assumptions, purposes, objectives, and needs of the Interns for Political Leadership Act are unstated. Bill passage, including a 30 million dollar appropriation from public funds is certainly not warranted given such deficiencies.

2. An assumption exists in the Title IX, Part D title "Interns for Political Leadership" that there is a significant relationship between internship with elected office holders and later demonstrated political leadership action of former interns. Available experience data does not validate this assumption (See, Bernard C. Hennessy, Political Internships: Theory, Practice, Evaluation, Penn State Studies 28 (University Park, Pa., The Pennsylvania State University, 1970, passim). The former "legislative" intern may be better informed, have a more balanced picture of the theory and practice of government, and be more effective as a teacher, research person, legislative/administrative assistant and as a responsible citizen--than the individual whose education is confined to the classroom. The same values exist and justify support for the administrative/executive intern; or for the person with intern/field work experience in interest or pressure groups, party organizations, private and quasi-public corporate bodies, or for the person with individual/group field project research and analysis. Indeed, given motivation, an individual may achieve such qualities and political leadership without benefit of practical experience. Voluntary service, personal political activism, high verbal skill, charisma, perceptiveness--have and do produce political leaders in this country without benefit of internship. This leads to two further questions, which are, at the same time criticisms.

3. The key terms in the draft bills are undefined. What is meant by political leadership? A potential major party elected or appointed officeholder? A professional person in legislative/executive structures? An informed citizen? A community leader? Or does the term refer to good political leadership? And what is that? "Political leadership" is a pious and simplistic phrase like being "against sin" and "for Mother." If intentions cannot be more precisely defined and justified, bill passage is unwarranted.

4. The single-track "political involvement" (whatever that means) intern draft legislation fails to recognize: the at least equal priority of concern for, and values in, other existing types of "political" internships; the even greater priority of need in terms of institute and intern field training for categories of critical persons not presently being trained and in terms of critical problem areas in this society; and the necessity to justify its value in light of many on-going legislative intern programs.

5. The proposal that the draft "political" intern program is to be planned, developed, and administered by a private, non-profit agency possesses the most unsavory implications, raising at the same time a number of questions.

   a. Who is sponsoring such an agency?
   b. Who will administer such an agency?
   c. Does the agency presently exist?
   d. If the agency exists, what has been its experience or that of its administering personnel in internships?
   e. If the agency does not yet exist except on paper or in nuclear form, what are the justifications to favor it with a contract over other private and experienced and established organizations, or over an office for such purposes in the Congress?

f. What are the particular advantages for such a program in this private, non-profit agency? Private gift expectation? Tax advantage presently exists for individuals or groups contributing to foundations and academic institutions for internships and other types of field work. Centralization? Centralization is not an advantage. It is discriminatory. What are the advantages?

g. What is the extent and what are the sources of private funding in this proposed non-profit agency (National Coordinating Agency), if any?

h. What costs are to be borne by participating academic institutions?

i. What are the proposed agency conditions which the Senator or Representative must follow regarding accepting any intern, permitting specification and/or supervision of intern functions, evaluating any internship, etc.?

j. Does the non-participation of a Senator or Representative in this particular program tied to the NCA imply that the Senator or Representative is denied funds to set up his own internship in his or her own way? If so, the legislation is a cudgel for conformity and is discriminatory.

k. Who in the NCA will make decisions as to what institutions and individuals participate, and what are the criteria for participation and selection? Delegated legislation on this subject is not desirable.

l. Who evaluates the quality of performance of any intern, and under what criteria, standards, and in what terms (grades?, pass?, written critical evaluation? etc.)? The NCA? The latter would be unacceptable to most institutions unless the NCA possessed some accredited condition as an educational institution.

m. Section 934 specifies that the NCA shall prescribe the duration, terms, and conditions of internships. This removes from academic institutions the necessary authority to determine what is desirable in a program sense, and limits the necessary flexibility in internships to meet particular student needs as well as those of departments and programs in different educational institutions. Even with an assumption of the best of intentions, Section 934 permits both governmental and NCA interference and interposition in the academic processes.

n. Section 934 specifies further that "the cost of administration of a program may be paid by such Agency (NCA)." What administrative costs? Those of supervising faculty from home institutions of interns (if allowed)? Those of the NCA? What are the limits? What costs are authorized for what purposes, and for whom? As written, this portion of Section 934 is virtually a <u>carte blanche</u> prescription up to and including NCA personnel "observation and discussion trips to home institutions," dinners, cocktail parties, generous honoraria and expenses for "consultants" and speakers, etc.

o. The concept of "commensurate credit for work and achievement" as well as who grants such credit is troublesome. Does the NCA have a positive role in credit? It should not. Both the draft and the NCA appear to have an undesirable negative role, for it is not necessary (and it occurs in a number of cases) that credit be given at all. Is an institution not granting formal academic credit barred from participation? If so, this constitutes interference.

p. Does HEW have the authority to inspect, criticize, modify, or terminate program and administrative aspects, expenditures, or relationships with the NCA at any time? If not, it should.

q. What reporting and accounting basis and form must be followed by NCA and what are to be the frequency of such reports? Nothing is said about accountability or liability in these draft bills.

r. There is an unhappy odor of political gamesmanship in the current drafts. The buck is being passed to the Executive Branch as a repository for the many criticisms which may be levied against the bill by making the <u>Act</u>

permissive. "The Secretary is authorized . . ." The Secretary is placed on the horns of a dilemma. He may, as the legislation is drafted, refuse to implement the Act and the NCA (and in my judgment, for a variety of good reasons). If he does refuse, the political charge may be made that the Administration or the President is giving "another example of lack of concern for young p@ople, etc." (while fallacious and refutable, it is good for some political media mileage). If he accepts, the Administration bears the responsibility for all ills emanating from a bill which is not well thought out, considered, or drafted.

s. Finally, given the level of financing and the lack of certain limits as well as some peculiar specifications, it places the NCA in an unfortunate and undesirable power center position which may influence state and local elected officials, the academic community, and the Congress.

6. The draft Act fails to meet the need for intern involvement of many important groups--in limiting the participants to undergraduate college/university students. There is at least as great a need for the primary and secondary social science teacher and for the junior, community, and four year college/university instructor in the social sciences whose formal/informal training has not included operational experience in government and politics; for graduate students; and for persons with a secondary school degree.

7. The draft Act falls into the major trap of regarding practical political education in a hierarchical framework--interning first with local-state officials and then, after graduation, in offices of Members of Congress. While such an approach may have held academic popularity in the classroom twenty or more years ago, it does not do so, generally today--in the classroom or in the field. We are concerned with legislative and administrative behavior, with decision making, with political socialization, with communications, etc.--and you do not need to run through the tiers of government to develop awareness of the conditions which prevail at all levels and their limits and strength, a situation which is aided and abetted by the mixed federalism orientation which continues to expand in this country. The proposed Act ignores the successful experiences of many academic institutions (e.g., Mount Holyoke, Wellesley, American, Amherst, Morgan State, Goucher, etc. since the early 1950's) in intern arrangements with U. S. Senators and Representatives for persons without state or local experience, as well as that of organizations such as the American Political Science Association and its valuable Congressional Fellowship Program where a number of Fellows have not had exposure at the other structural levels (nor the need or desire to do so).

8. In this same hierarchy vein, it should be noted that the draft Act fails to recognize that the number of worthwhile intern positions available at the elected office state and local levels are quite limited in practice. A large number of local councilmen and state legislators do not want interns; neither know what to do with interns nor are willing to take suggestions; assign interns trivia functions which are of limited value; do not have staff persons to delegate intern supervision; do not have space or facilities to accommodate interns; or possess personal attributes, attitudes, and political records which produces participatory refusal by a potential intern, abandonment of internship, or irritated and deserved feedback to the academic supervisor. There are some state and local elected official internships of value, to be sure, but the more useful practical arrangements at these levels may be found with interest groups, with commissions and committees (even legislative committees), in issue field research, etc. Any national or private support for state and local academic internships should allow for and encourage a variety of practical experiences, and should be under the coordination, arrangement and control authority of the academic institution and its responsible academic personnel--and not that of a National Coordinating Agency.

9. The draft Act does not consider that the interests of potential interns may not lie with the U. S. Congress, or a City Council, or a Mayor, a Governor, or a President. (Note: I assume that when the act speaks of elected officials it may include a County Surveyor, a Comptroller, a judge, or a dog catcher--if these are elected officials.) A major in international relations might be better served and be of productive value to society by internships with the Chamber of Commerce and the AFL-CIO on trade policy, the joint Economic Committee of Congress, and the International Finance Corporation. A political science major with a concern for national legislation would have a more valuable experience with internships in a House or Senate committee or subcommittee, a Senator's or Representative's office, with a lobbyist or Congressional liaison office from the Executive Branch, with a National Committee or Senatorial Campaign Committee, or with the Congressional Research Service. A biology major could find greater value in an internship with a state agency concerned with water pollution standards, the Conservation and Natural Resources Subcommittee of the House, the Environmental Protection Agency, and a corporate or research organization concerned with environmental standards and/or technology. An urban affairs and planning major might require internships with a developer (e.g., The Rouse Company), a city government planning unit, a City Council committee or Councilman concerned with planning, and an appropriate executive agency or Member of Congress. The point is that educational internships should be devised and coordinated with the student's academic programs and interests and such arrangements are best arranged and supervised and evaluated by an experienced academic person on an individual basis in the curricular framework of the student's institution.

10. I need not elaborate, I think, upon the problems of Congressional internships. There is the problem of physical space. There is the problem of selection and supervision. There is the irritating problem of competing candidates--children of supporting constituents, volunteer candidates as opposed to paid candidates, candidates from competing institutions with practical political education programs, etc. There is the up-coming problem that intern candidates are not merely students (for the most part), but may now be constituents and voters. There is the problem that many candidates, while very fine people, do not have the background or training to be very useful to the legislator. Indeed, even candidates with strong backgrounds are often of limited value for an initial period.

Given these difficulties, there is still the need, however, for the legislator and his staff to make personal choices from a wide range of candidates--students, non students, etc. The legislator may desire a person committed to his or her Party, as well as to the legislator. The legislator may want an individual from a particular location in his or her State, or one who possesses a particular knowledge or competency, or one or more of a certain ethnic background or one who will be willing to work 70 hours a week or more. The legislator or other elected official must be free to make such choices (whether good or bad) in his or her own way (e.g., a screening committee of his or her own choice, via an administrative assistant, etc.). The draft Act appears to limit such freedom of action.

ADVANCING VOLUNTARY LEADERSHIP IN A CHANGING WORLD

Chamber of Commerce of the United States
LEGISLATIVE ACTION GENERAL MANAGER
HILTON DAVIS
202-659-6140

1615 H STREET, N.W.
WASHINGTON, D.C. 20006

June 16, 1971

The Honorable Claiborne Pell
Chairman, Subcommittee on Education
Labor and Public Welfare Committee
United States Senate
Washington, D. C. 20510

Dear Mr. Chairman:

COPY

The National Chamber appreciates this opportunity to present our views to your subcommittee as it develops a legislative program designed to assist colleges and universities in a period of financial stress.

The business community, as you know, has long been an advocate and supporter of higher education. Indeed, estimates are that business support for higher education increased from $150 million in 1949 to $375 million in 1969.

We have reviewed a number of higher education bills, specifically S. 659, your own bill; S. 1062, S. 1072, S. 1073, and S. 1074, by Senator Javits; and S. 1123, by Senator Prouty.

This review prompts, first, some general observations.

Although some people contend the current problems in higher education are entirely financial, the National Chamber believes that the financial problems of colleges and universities are symptomatic of deep-seated conditions, the cure for which is not massive doses of financial antibiotics, however ingeniously applied.

This, of course, does not deny that there is a fiscal problem in higher education. However, it does suggest a need for serious reforms, as well as financial aid.

Unfortunately, most of the proposed bills make little provision for educational reform -- reform which most thoughtful people, in and out of the profession, believe is critically needed. And the reforms that have been advanced are scant in details. We think programs and incentives for reform in higher education should receive high priority.

All of the bills seem to assume that virtually everyone should go to college. We think this is a highly questionable assumption. The dropout rate among college students, the incidence of drug use among college students, and other symptoms of disaffection among the young indicate there is something disturbingly out of joint in the notion that more and more young people should be encouraged -- and even coerced -- into going to college.

This in no way argues against development of relevant post-secondary education programs as enunciated by Representatives Green, Quie, and Pucinski, Senator Javits, and others on several occasions. The renewed interest in career or occupational education is clearly a step in the right direction. But college has been oversold. We have diluted the quality of higher education by confusing higher education with more education.

Much of the fiscal difficulty incurred by colleges and universities is due in large measure to the absence of cost-effectiveness thinking by college officials. The principal reason for this is that they have not been subjected to competitive pressures to develop more effective, relevant education for less money. The scorning of cost-effectiveness and reform in higher education is best illustrated by the demands for federal, "no strings attached" financial aid by higher education organizations. Clearly, performance-based accountability demands should be placed upon colleges and universities.

As for the legislation on which you are now working, we ask that you consider the following specific points:

Institutional aid: Institutional aid should not be unrestricted, but should be tied to conditions for reform and accountability. Higher education institutions should be encouraged to apply the principles of cost accounting to their operations. Certainly, institutions seeking aid should demonstrate they are operating as efficiently as possible. Taxpayers should not be asked to subsidize low productivity in the colleges.

Student grants: The National Chamber supports student assistance through loans and other means, but it does not favor federal student assistance grants, to "guarantee" higher education.

Guaranteed higher education will dull initiative and ambition, and eliminate the necessity for commitment or sacrifice. It will destroy what is currently, to some degree, a natural selection process which assures that the strongly motivated student will seek higher education.

College and university tuitions should be adjusted to levels more commensurate with the actual costs of providing such education. Tuition rebates or other desirable forms of assistance should be available, as alternatives to federal grants, to qualified students with limited financial resources.

Loans: More opportunities should be provided for students to secure low interest loans. It is essential in setting up such programs that banking associations be consulted. Use of private lending institutions should be encouraged.

Work study: We support Representative Edith Green in her emphasis on self-help. This is an area that has been too long neglected. Programs of social services, which many of our youth are requesting, could be expanded, providing both remuneration for students and benefits to society.

Aimlessness in our young is, unfortunately, far too prevalent. There is nothing wrong in working for an education; it is wrong, however, to foreclose opportunities for higher education for motivated young people.

Planning grants for community colleges: Support should be given to states to assist them in planning for the establishment of community colleges with adequate provision for occupational programs.

We recognize the many complexities inherent in higher education legislation. The action of the 92nd Congress will set the course, not only for the life of the Act, but for a generation. The choice is whether we will have dry-well legislation which puts precious resources into programs in sore need of reform -- or whether we will seize upon the current crisis in education to develop new directions.

We will appreciate your consideration of these recommendations and we request that this letter be made a part of the hearing record on this legislation.

Cordially,

Hilton Davis

Dear Senator Pell,

This brief letter is meant to tell you of my strong support for the bill proposed by Senator Mondale, S. 1161. It is a realistic and notable attempt to make post-secondary education available for more and more of our young people.

I urge you to support this bill and to urge your colleagues to do so, also.

Very sincerely yours,

Sister Joyce Rowland

June 18, 1971

The Honorable Claiborne Pell
United States Senate
Washington, D. C.

Dear Senator Pell:

It is becoming increasingly difficult for local and state agencies to fund Industrial Arts at the level it should be supported. There are more than 25,000 boys and girls enrolled in Industrial Arts classes in Mississippi each year and we feel that they are entitled to receive the best possible program our nation can offer in studying our Industrial culture and its technology.

We also feel there is a very definite need for clarification on the intent of Congress on the inclusion or exclusion of Industrial Arts in the 1968 Vocational Education Act. It is the feeling among many Industrial Arts educators that Congress did intend to include funding of Industrial Arts in the 1968 Vocational Education Act; however, at this point no funds from the Act have been used for Industrial Arts. It seems that the broadening of Vocational Education goals and the downward extension of the vocational program to the elementary school are creating, in principle if not practice, a duplication of educational effort in Vocational Education and general education.

I would like to request your consideration and support for the testimony presented by the American Industrial Arts Association on April 23, 1971, to the Labor and Welfare Subcommittee on Education of the United States Senate. This testimony was presented by Dr. Edward Kabakjian, Executive Secretary of the American Industrial Arts Association.

I would appreciate any assistance you might be able to provide. Thank you for your continued cooperation.

Sincerely yours,

Larry L. Godfrey

February 17, 1971

The Honorable Claiborne Pell
Chairman
Subcommittee on Education
United States Senate
Washington, D. C. 20510

Dear Senator Pell:

Before he began a brief leave of absence, Chancellor Heard asked me to respond to your request for comments on your bills S.366 and S.1969. I am happy to do so now.

Although its administration would be more complex than S.366, the plan provided in S.1969 is more advantageous:

1. It maintains the principle that the amount of scholarship aid offered students should take their financial need into account. Despite our extensive progress in this respect, economic disability remains a major barrier to the ambitions of many young people who seek and would profit from receiving a formal post-high school education. The mechanism proposed in S.1969 would effectively reduce the height of that threshhold.

2. The formula you suggest avoids the inequity to lower middle-income families of a fixed family income ceiling. Adjusting the scholarship payment by the amount of income tax paid introduces substantial flexibility without excessive complication. It is an elegant solution to the problem.

3. Additional flexibility is introduced by the provision of supplementary grants.

4. The cost of education allowances recognize the gap which separates charges to students and instructional expenditures. I hope that, if adopted, the ceiling on this allowance might be elevated, but for the present I take encouragement from the prospect that institutional grants for this purpose might be established.

5. In the long run, the wide availability of high quality post-secondary education will depend on a broad variety of forms of Federal support. Despite the political liabilities higher education has recently acquired, scholarship grants to students appear at this point to have high public acceptance. This condition escalates the importance of your proposal and its value to American higher education at large.

I understand that within the last few days you have introduced new legislation incorporating the provisions of S.1969, and I applaud that action. Your energetic and well-informed leadership on our behalf elicits admiration and gratitude from me and everyone in academic life who knows what you are doing.

With many thanks and best wishes,

Sincerely yours,

Nicholas Hobbs
Provost

THE FLORIDA STATE UNIVERSITY
TALLAHASSEE 32306

COLLEGE OF ARTS AND SCIENCES
OFFICE OF THE DEAN

April 8, 1971

Senator Claiborne Pell
Committee on Labor and Public Welfare
United States Senate
Washington, D.C. 20510

Dear Senator Pell:

Thank you for the copy of your remarks attendant upon the introduction of Senate Bill S. 659 and the opportunity you allow me to extend my comments concerning that bill. I welcome the chance to amplify my feeling as to the adequacy of the proposed "Educational Opportunity Grant".

Since 1960 in response to the "baby boom" which followed the Second World War, colleges and universities have been "bootstrapping" in an attempt to provide facilities and faculties in order to meet the social needs of more students. Concurrently, greater proportions of high school graduates have continued their education thus increasing the burdens and opportunities for colleges and universities. The students, however, typically arrive in advance of the funding of facilities and faculties; in a period of continuously rising costs the service institutions have had to provide an increase in the cost of higher education not borne by the student. Toward the end of the decade funding sources--federal, state or endowment--began to stabilize and increases in the operating costs of the institutions reflected sharp rises due to inflation and were transmitted to the student as a sharp increase in his costs.

At The Florida State University, for instance, student estimated costs have risen from $1700 in the 1967-68 academic year to $2100 for the 1971-72 year, a 24 per cent rise in the cost to the student in a four year period.

If we may take this university as a fair average of colleges in this country, then the cost to the student of higher education is almost double that proposed for the poorest people in our society under Senate Bill S. 659. For those whose family pay no federal income tax a $1200 grant would provide a grant of half the cost only of attending a state university although the grant might be utilized by certain offspring of very wealthy families who pay no federal income tax.

In most poor families a grant of half cost is likely to be the equivalent of no grant at all as support for the other costs are lacking. As the basic grant decreases with family ability to pay the same stricture applies to lower middle class families; that is, the aid offerred is not enough to meaningful to the student and will

ot result in significantly increasing his chances of attending the chool of his choice.

One other consequence would appear to follow from this concept. To ake the aid meaningful a student could be directed to a "low-cost" local nstitution, that is, a community college or junior college. This must nevitably lead to increased establishment and expansion of such institutions, uplicating facilities which already exist at the extant residential insti- utions. When one combines this new building with the present strain on ocal and state educational budgets, severe problems become apparent.

A second consequence follows from analysis of productivity of present nstitutions of this sort. The drop-out rate is extremely high, approaching 0 to 80 per cent of the entering class in the college parallel programs, hile the vocational-technical facilities of these institutions are urrently under-utilized as a result of student choice.

We face the distinct possibility of creating a two-tier system: one unded by the educational grant which you propose, for primarily local raining of disadvantaged students, and a (primarily) residential four ear system for wealthier students. Such a dichotomy seems to me to be o increasing polarization of class groups in a society already hyper- olarized.

If my analysis is in most part correct, and I believe the data will upport my suppositions, what might be done to modify S. 659 so that its bjectives, which have my full support, will be achieved? I would propose he following two modifications. (1) The level of support must be raised o that it truly represents an attempt to provide education as a matter f right. Given the realities of our present society, such a level should e almost double that proposed in S. 659. (2) The model of support might ery well be changed to conform to that of the post-World War II GI Bill. n such a model the student grant provides living expenses to the student hich would be constant at whatever institution he chooses to attend, ogether with an institutional grant covering the cost of tuition. Such an pproach would give the student a choice of institution not currently vailable and would avert the probability of construction of a dual system, ne for poor and another for economically well-endowed students.

Given the demographic curve, it would avoid the construction of new acilities which would contribute to under-utilization of already existing acilities, and would also allow the student clear choice not dictated by conomic necessity. As a marginal benefit it would also lead to more esirable "mix" of students on campuses, rather than a segregation by class eminiscent of the twenties and thirties.

In summary, I believe that the objectives of S. 659 are commendable ut the proposed means of attaining these objectives have some severe rawbacks. I urge consideration of an alternate model which has proved ffective in the past.

Sincerely,

Martin Roeder
